It takes a constitutional amendment to overhaul the antiquated and outmoded electoral college and at least four different methods of doing this are advanced in proposals to be before the Senate soon.

The goal of all is to end the unit-rule or winner-take-all system of counting each State's electoral vote and, instead, to divide this vote among all candidates more nearly according to their popular vote.

The two plans most likely to attract support are the so-called Daniel-Kefauver and Mundt-Coudert proposals. The Daniel-Kefauver plan has been reported favorably by the Senate Judiciary Committee and is expected to reach the floor in the next few weeks. Sponsors of the Mundt-Coudert and other proposals may offer their measures as substitutes when Senate debate begins.

Senators HUBERT HUMPHREY, Democrat, of Minnesota, and WILLIAM LANGER, Republican, of North Dakota, are advocating a simple nationwide popular polling for direct election of the President.

Senator STROM THURMOND, Democrat, of South Carolina, who as 1948 States rights presidential candidate picked up a package of electoral votes himself, is urging a reform which would retain the electoral college but

divide each State's electoral vote in proportion to the popular vote.

Here is a size-up of the two plans now chiefly supported:

THE DANIEL-KEFAUVER PLAN

Backed by Senators PRICE DANIEL, Democrat of Texas, ESTES KEFAUVER, Democrat of Tennessee and a score of other Senators, this plan would abolish the electoral college as such. It would retain, solely as a counting device, the present apportionment of electoral votes among the States. But electors as individuals or as a group would cease to exist.

A State's total electoral vote would be divided among candidates in direct ratio to their popular vote. If a candidate in New York or Ohio or California receives 42 percent of the popular vote, he would get 42 percent of that State's electoral vote, right down to decimal point figuring.

Say a State has 12 electoral votes and casts 2,400,000 popular votes. The Democratic presidential candidate receives 1,600,000, the Republican 600,000, and a third party candidate 200,000. Today the Democratic front runner gets all 12 electoral votes. Under the Daniel plan he'd get only the share the voters gave him—8. The Republican would get 3, and third party man 1 vote.

The Constitution now provides a candidate must receive 266 of the total 531 electoral votes. It has happened often that a candidate received a majority of the electoral vote while leading all other candidates, but without a majority of the popular vote. Three times a candidate won an electoral majority under the present system while actually running second in popular votes.

Senator DANIEL stipulates the winning candidates must have at least 40 percent of the electoral vote. If none has, the Presidency would be decided in both Senate and House, instead of the House alone, as happens now if an election majority is lacking. Instead of each State casting a single vote, as today, each Congressman would cast a vote—a more democratic system recognizing population differences among States.

Daniel plan opponents criticize chiefly one point—they say dividing the vote might lead to proportional representation. In fact, this is not what is known as "PR" or proportional representation as used in local elections in the United States—it might be called more properly a proportional counting plan.

But critics say that minor party votes are wasted now unless cast for the candidate of a major party. And that under the Daniel plan they would be cumulative from State to State across the country in a way to encourage development of minority parties. They see a threat to the two-party system.

Others say a danger would come, not in electing a President by the proportionate count, but in the pressure that would build up later to have Congressmen elected statewide rather than by districts, with each party getting a proportionate share. It is held this statewide cumulative process would let splinter groups elect Congressmen they cannot manage now in separate districts. Hence, it is contended, there is an encouragement to multiple parties and the danger of what has happened in France and other European countries.

THE MUNDT-COUDERT PLAN

This plan would retain the electoral college but would divide each State's electoral votes according to results in congressional districts.

That is, Presidential electors would be chosen the same as Senators and Representatives—two electors in each State chosen as are Senators, the rest elected by districts. The Mundt-Coudert plan holds to the requirement of a majority of all electoral votes for election.

This is the system favored by Jefferson and other Founding Fathers and many who came after them. In 1824, Missouri's famed Senator Thomas Hart Benton argued against the winner-take-all system of counting electoral votes:

"The intention of the Constitution is violated because it was the intention of that instrument to give each mass of persons, entitled to one elector, the power of giving that electoral vote to any person they preferred. In New York 36 electors are chosen. Nineteen is a majority and the candidate receiving this majority is entitled to count 19 votes—but he counts in reality 36 because the minority of 17 are added to the majority."

VOTES WASTED

Bring the figures up to date and the case is the same today. In 1948 Harry Truman's nearly 3 million votes in New York won him nothing whatever; the State's 45 electoral votes went to Thomas E. Dewey.

The Mundt-Coudert plan also would bring the Senate into a determination of who is President if no candidate gets an electoral majority.

The chief flaw charged against the Mundt-Coudert scheme is that unfairness results because of the unequal sizes of congressional districts. Houston often is cited as having roughly one-sixth the State's population but it has only one of the 24 Texas congressmen. The 11th Indiana (Indianapolis) District has more than 550,000 population but the Ninth Indiana District has only 260,000. The Dayton district in Ohio has twice as many persons as the smallest Ohio district.

The Mundt-Coudert answer is to urge a stronger law forcing States to make their congressional districts more nearly the same size—in the past legislatures often have dragged their feet on reapportionment.

No plan is without some objections from the constitutional experts. But there is wide agreement for the need of change to wipe out the inequities and dangers of today's electoral college system.

[From the Washington Daily News of January 25, 1956]

SOMETHING NEW AND HEALTHY—ELECTORAL COLLEGE OVERHAUL MEANS SHOT IN ARM FOR UNITED STATES

(By Charles Lucey)

America will see a brandnew kind of presidential election and democracy will get a healthy shot in the arm if the ancient electoral college system is overhauled.

Americans don't vote directly for a President now, of course.

They choose electors in each State and the electors cast the State's ballot for the front runner in the popular vote of that State.

Sometimes the margin is paper thin. Yet the winner takes all—and millions voting for the other candidates in effect see their votes wasted so far as the national count is concerned.

Each State has as many presidential electors as it has United States Senators and Representatives—New York 45, Pennsylvania and California 32, Ohio 25, Tennessee 11, and so on.

TWO PLANS

The constitutional amendment proposed by Senator KARL MUNDT, Republican, South Dakota, and Representative FREDERIC COUDERT, Republican, New York, would divide each State's electoral votes on the same basis as Senators and House Members are elected. That proposed by Senators PRICE DANIEL, Democrat, Texas, and ESTES KEFAUVER, Democrat, Tennessee, would ignore congressional district lines and divide each State's electoral vote in direct mathematical proportion to what each candidate received statewide.

First result of all this is that millions of voters in effect now disfranchised would see their votes actually count for the man they prefer.

New vigor would be given the two-party system and almost certain more voters would have a part in choosing a President. In many States today—this is true especially in the South—voters do not bother to vote because one party nearly always wins and determines the State's voice under the unit rule.

But if the Republicans knew they had a chance on a congressional district or proportional-count basis to pick up odd votes in the South even though they could not carry a whole State, there would be incentive to extend and broaden the two-party system.

The same would be true of the Democrats in some normally Republican northern States.

TRUE INDICATION

A presidential campaign would become more truly national in scope instead of the present concentrated efforts in the big States and cities.

A presidential candidate knows today if he can carry New York or Pennsylvania or Ohio by even the barest margin he gets the entire electoral package. So he devotes most of his time to such States. Under a congressional district or proportional division of electoral votes, in which he would get a fair share of votes cast, there would be inducement for spreading a campaign more evenly over the whole country.

A major evil of today's presidential elections—kow-towing by both major parties to splinter or minority groups—would be ended. Today's winner-take-all system lets the pressure blocs in close States claim they have the number of votes needed to tilt such States. For fun? Not at all—for hard-boiled pledge and promise of what is to be delivered after the election by the winner. It's a what-do-we-get-out-of-it kind of democratic process.

Take away the system which gives the State's entire block of electoral votes to the top runner and the pressure group which has 100,000 votes in New York or Chicago cannot claim its 100,000 is more potent than the same number in Nebraska or Indiana.

NO MORE ARGUMENT

For many years an argument put forth for a presidential candidate was that "he can carry Ohio" or "he can carry New York." The large States have dominated the choice of men to go on the national tickets. Those who would do away with the winner-take-all system say it would give able men from lesser States a reasonable shot at the highest office in the land.

Altogether, proponents of all plans say reforming the electoral college system would bring more people into the active working of American democracy at the highest level. The country could stand it. In 1952 some 61,000,000 voted for Messrs. Eisenhower and Stevenson—the highest total ever—yet an estimated 37,000,000 eligible voters stayed home.

The case for electoral reform is old—but few roads are harder to travel than those leading to constitutional amendment. Altogether, since within a very short time after adoption of the Constitution, nearly 200 proposals for a change in the electoral system have been made in Congress.

Most recent was in 1950, sponsored by Senator Henry Cabot Lodge, Republican, Massachusetts, and Representative Ed Gossett, Democrat, Texas. This plan, forerunner of today's Daniel-Kefauver proposal, passed the Senate but was lost in the House. Some of the old lines of opposition would hold in a new test this year, but there have been important conversions, too.

BREAK NEEDED

Amending the Constitution requires a two-thirds vote in both Houses of Congress and subsequent ratification by 36 of the 48

States. Once the dam breaks the process sometimes is completed rapidly. It needed only a year to get three-fourths of the States to approve electing United States Senators by popular vote. It needed a year to get the Prohibition amendment into the Constitution and 10 months to get it out. It took 4 years to ratify the no-third-term amendment.

Today Hill sponsors of the differing plans are seeking a compromise. If there is no compromise all plans may fail; if there is, one may get through. The Senate leadership is ready to give the green light for floor debate.

None of the measures would affect the 1956 election. But reform could be ready for 1960 if what a Senate committee wrote 20 years ago were to be heeded:

"The only object of an election is to accomplish the will of the people.

"If we permit a system to prevail that thwarts that will, we will trifle with one of the most serious purposes of government. Under our present method, then and now, that will of the people will be clearly thwarted."

WHAT HAS HAPPENED

The following table shows what has happened in the last four presidential elections under the present electoral college system and how major party candidates would be affected under proposed electoral reform plans. Electoral totals under reform plans exclude those electoral votes that would have gone to minor party candidates.

	Popular vote	Electoral vote (present system)	Daniel-Kefauver plan	Mundt-Coudert plan
1952				
Eisenhower	33,666,062	442	290.4	375
Stevenson	27,314,987	89	236	156
1948				
Dewey	21,969,500	189	221	203
Truman	24,104,836	303	258	289
Thurmond	1,169,000	39	52	39
1944				
Dewey	22,066,078	99	223.8	214
Roosevelt	25,602,505	432	294.7	315
1940				
Willkie	22,304,755	82	214.6	182
Roosevelt	27,243,466	449	313.3	344

[From the Washington Daily News of January 31, 1956]

LET THE STATES CHOOSE

The movement in Congress to modernize the electoral college actually is two movements. Backers of the Daniel-Kefauver bill want the vote for President in each State to be represented precisely in the electoral count, making the State as a whole the unit for that purpose. Senator MUNDT, Republican, of North Dakota, and Representative COUDERT, Republican, of New York, seek to make the congressional district the unit, except for the two electoral votes which correspond to the United States Senators, and let the winner take all at the district level.

Either plan would be so great an improvement over the present method of electing a President that this newspaper would welcome it enthusiastically, as would—we believe—most of the members of the public who think the existing system unfair and antiquated. In fact, our analysis of recent presidential elections shows that the net totals nationally would have been about the same under both methods.

Now, backers of the two reforms, aware that neither may have enough support to win, are discussing a compromise that would permit each State to choose either of the methods of computing its electoral vote for President.

This seems reasonable enough.

The important thing is to make sure that the people's choice always will be elected to the Presidency, and prevent pressure groups from dictating nominations for the office, as is an ever-present danger under the existing system.

Eightieth Anniversary of Society of Ethical Culture

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. LEHMAN. Mr. President, on January 10 of this year the Society of Ethical Culture celebrated its 80th anniversary. The society's contributions in the field of education, settlement work, child study, housing, race relations, and labor, have been many and truly significant. This organization has always represented the best ideals of America.

At this point I should like to make reference to a speech delivered on that occasion by Mr. Sidney H. Scheuer, a friend of mine of many years standing and vice president of the American Ethical Union. His speech is a thoughtful commentary indeed upon the American scene.

On the same occasion, Mr. President, congratulatory messages were received from President Eisenhower and Gov. Adlai Stevenson. I ask that the text of the speech by Mr. Scheuer and the messages from President Eisenhower and Governor Stevenson be printed in the Appendix of the RECORD, in recognition of the 80th anniversary of this fine organization, the Society for Ethical Culture.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

TELEGRAMS SENT TO THE DINNER OF THE ETHICAL CULTURE SOCIETY AT THE WALDORF ASTORIA HOTEL, JANUARY 10, OPENING THE 80TH ANNIVERSARY CELEBRATION OF THE ETHICAL CULTURE MOVEMENT

My warm greetings to the members and friends of the New York Society for Ethical Culture as you mark your 80th anniversary. I know of your splendid work in the service of human need and wish you many decades more of great achievement.

ADLAI E. STEVENSON.

To the members of the Society for Ethical Culture I extend warm greetings on its 80th anniversary. It is gratifying to know of the society's work, over the years, in social service, education, and citizenship training. All of you have my warm best wishes for the continued fruitfulness of your efforts to advance the well being and happiness of your fellowman.

DWIGHT D. EISENHOWER.

SPEECH DELIVERED BY SIDNEY H. SCHEUER

The celebration of an anniversary affords an occasion for nostalgia and stock-taking. Therefore, let me pause briefly to describe the general character of the founding group of Ethical Culturists as I knew them. They were a dedicated band of men and women who found in their ethical faith a new vehicle and inspiration for enriching their lives, for serving their community, for creative citizenship, for making their lives more meaningful. They were enthusiasts and worked at their ethical culture every day of the week.

Their backgrounds were varied. The majority perhaps stemmed from German stock but the membership included people of widespread national origins. Their careers covered almost every activity; these included publishers and editors, educators and businessmen, all the professions, liberals and conservatives and middle-of-the-roaders. It was an effective mixture. Members knew one another rather well and mixed socially.

The Sunday platform was the fountainhead of the society. Our leaders, then as now, accorded it central importance. The inspirational character of the Sunday meetings was high; the subject matter and presentation followed a consistent pattern. Group activities multiplied and a high percentage of members participated.

Almost from the inception, new approaches to education were recognized as the most hopeful transforming potential in modern society. Throughout the life of the movement significant educational contributions have been made at all levels—Sunday school, elementary, secondary and adult. Our Ethical Culture schools today offer privileged opportunities to students and continue to enrich the bloodstream of educational theory and practice.

These founders and their followers enjoyed widespread attention and high respect in the community. Government officials, religious leaders, educators, labor organizations, and newspapers continuously acknowledged the value of the society's work and its beliefs.

We should be grateful to this courageous group for their leadership and the loftiness of their thinking. I commend to you a study of their views and insights, what they had to say on the meaning of life, immortality, love and marriage, ideals, spiritual progress, suffering, religion, government, labor, and world affairs. Their views stand the test of time better than most other statements on these subjects made by religious leaders of the day. They reflect profound erudition and truly prophetic vision. We have leaned heavily on the foundations they laid and in our time have added immeasurably to the structure. During the 10 years which have elapsed since we gathered to celebrate our 70th anniversary, our leaders and trustees have carried the movement forward in important ways. It has been a difficult period but nonetheless vital advances have been made.

We are living in an age in which conformity has come to be regarded as being almost identical with trustworthiness, and we ethical culturists are essentially nonconformists. Therefore we carry heavier responsibilities now than we have at any period in our movement's history. We are living in an age in which American institutions are changing radically; in a time in which bigness of industry, of government, of labor, of the arts, tends to obliterate the still, small voice of wisdom, dissent, critical judgment, and courageous independence. Worship of the bigness to which I refer affects almost every phase of American life.

Taxes are an important element in accelerating the trend toward bigness. They have become a dominating influence upon the morality and purposes of people. They pervade politics and government, industry and education, our cultures and our religious thinking in ways which are not always pleasant to contemplate.

The operations of large foundations have played a role in changing American institutions. Some of these, more especially in

recent decades, have been created with the dual purpose of maintaining control and domination of large industrial corporations and at the same time avoiding inheritance taxes by providing that all the profits and dividends be used for philantropic, educational, and religious purposes. They possess vast power to influence the American way of life. Their support of opinion-creating media can be troublesome. Moreover, poorly directed or undirected financial support of education and research without definite goals is not in itself good. Indulgence in the oversimplified belief that organized research in depth and quantity inevitably produce formulations for the foolproof guidance of life, science, government, and industry is equally disturbing. This hunger for prescription and formula is being carried to absurd extremes in all aspects of American life. I do not underestimate the good that such foundations have done and can do, but I see increasing possibilities for unwise, indeed unworthy, employment of their resources which should not be ignored. They are tax-exempt, self-perpetuating organizations and as such their activities are matters of public concern, and warrant the continuing consideration of each of us. The recent witch-hunting investigation of foundations, under the chairmanship of Representative CARROLL REECE, served to impede a constructive and unbiased study which I am confident all concientious foundation trustees would welcome.

Educational, religious, and philanthropic bodies have become enormous operations and as a result must curry favor of businessmen in order to gain support. This is another phase of the bigness trend. It is symptomatic of our times; it is symptomatic of our worship of bigness, of business success and of our willingness to be practical in soliciting and accepting financial assistance, sometimes with indifference to other basic considerations.

Political parties too must seek the support of both business and labor in order to conduct modern campaigns. Large-scale advertising and public-relations methods have been adopted. Techniques successfully employed in the marketing of trademarked consumer products have, with suitable alterations, been used with the result that officials in and out of office are continuously manipulated to produce contrived impacts upon the public. The emphasis is to popularize rather than to educate and inform. It is a disturbing development and a rather degrading one which I hope will be repudiated in time.

This weakness for oversimplification is reflected in the average citizen's consideration of complicated national and international affairs. He reads headlines, listens to columnists and becomes increasingly impatient for quick solutions which of course are not attainable. This sometimes gives people in other countries an impression of arrogance which I am certain is not intended; and this rather superficial attitude is further reflected in the quality and influence of our international thinking and upon the freedom of action of our statesmen. They are continuously compromised by such thinking—indeed to a degree they themselves show inability to rise above the general desire for foolproof, quick, and final solutions and what might best be described as the blow-by-blow concept of dealing with international life.

The popular acceptance of the meeting at the summit as a substantial and creative accomplishment reflects this character of evaluation. Sometimes I fear we suffer from the serious malady of being taken in by our own propaganda. Some thoughtful and competent observers feel we missed a rare opportunity to speak to the people of the world on that occasion over the heads of their governments, and have them hear and understand the true voice of America as interpreted by our President. Such a pronouncement might have ranked with the most influential in the history of our country. This might have been the occasion for reassessing and reappraising democracy, its meaning and purposes in this 20th century and of convincing mankind how these serve humanity. Moreover, specific proposals and discussions at the summit there and then which led to tangible commitments might have been more realistic than the deferment which occurred. Instead we accepted a superficial show of good will and by preference allowed the tangibles to be postponed for later consideration.

I have mentioned a variety of changes in American institutions and our way of life. The list is not all-inclusive by any means but will suffice to make my point. The pace of change since World War II has been more rapid perhaps than during any like period in our history. What should you and I do about it? Should we be complacent and indifferent? Are we helpless? Indeed not. The fact that such changes are becoming increasingly apparent is their most hopeful aspect. Consciousness of what they are, what is good and what is bad about them can be our strongest resource. To exaggerate, to take undue advantage, to misapply, to go too far in any direction or in any phase of American life generates self-correction in our society; and if you believe in the effectiveness of the democratic process as I do you will be confident that some of the extreme swings of the pendulum which I have indicated will settle down to more balanced positions. The McCarthy censure illustrates the point I am making. The very excess creates the process of reexamination and change but this will not occur without vigilant, thoughtful, and devoted application to the redefinition of values. You and I cannot abdicate. We must do our job as citizens and as ethical culturists. If the day of balancing the pendulum is to be speeded, we must express our views to our fellowman through our lives and our organized activities.

Before leaving this subject, I would like to speak briefly too about the current religious revivals, the campaigns for identification with the three big religions. They tend to cast doubt upon the worthiness of our ethical culture dedication. They are being promoted as necessary to the accomplishment of our country's spiritual strength and world peace; as if religious spirit and religious conduct can be stimulated on a seasonal or annual basis; as if men educated in the 20th century should all adopt an unquestioning faith, should uniformly believe in religious leaders because they are members of the cloth and regard them as interpreters of His word and as trustees in their relationship with their God. These revivals, I suspect, are not born of deep individual conviction and therefore, I fear, will not accomplish enduring results. They appear to be another manifestation of the promotional psychology of the craving for identification and for bigness. I doubt revivals so stimulated will impress or influence world opinion. In making this reference, I do so with deepest respect for the people of integrity and conviction who believe in their creedal faiths and carry their ethics and philosophy into their lives. They, of course, contribute indispensable strength.

What about the next 80 years? I believe the world will be a better place to live in and that it will be here and not blown to bits; however, I can safely say this because none of us here tonight will be able to say I was wrong. But I will risk something more meaningful—I am confident that well within 20 years mankind will be doing much better with its opportunities and we in this country will play a more creative role, will recapture our greatness and contribute mightily to the perspective and vision of mankind.

We ethical culturists believe that the great men of our civilization are more frequently than not unsung heroes, modest figures who are rich in wisdom, selfishness, character and competence; people who leave the world a better place to live in and whose presence radiates in all directions and in mysterious but enduring ways. We have great belief in people and in the quality of the American people, in their deep responsiveness to calls upon their better selves. Our citizenry expects and hungers for lofty and creative leadership. We miss great opportunities to serve our time and ourselves when it is lacking. This has always been true; this always will be true. We never forget that government and institutions are no better than the people who man them.

I think the first 80 years of ethical culture is but a small measure of what our future should be. On all sides we feel urgent interest, need and desire for assistance in organizing groups and societies; and the work of our leaders has contributed mightily to this accomplishment. There are fourteen full fledged recognized societies in the United States, members of the American Ethical Union, and an equal number of affiliated groups who are on the way, we hope, to becoming societies. Had we the means we could be training many more leaders and then we could help service these and other groups who urgently need assistance.

There is an unfilled religious need in America—a vacuum consisting of many religiously unaffiliated people throughout the length and breadth of this land—indeed the world—who are calling upon us for help. There is terrific power for good in this group which is being dissipated. These conscientious and thoughtful people want to join with others and are eager to do so with integrity and conviction. They will not become members of creedal religions. We are the only organized fellowship available to such people. Some of you may agree with them or some of you may not. You might question how important it is if they do not affiliate or why they can't find satisfaction in one of the orthodox faiths. It may not be important to those who raise such questions, but it is vital to those who cannot honestly accept belief in the gospel or in the creeds and yet have an urge to identify themselves with like-minded people, dedicated to all that is best in human existence. Throughout the world we learn of similar needs in India, Japan, and Europe. As a result, in 1952 the first International Humanist and Ethical Union conference was held and another is scheduled for the summer of 1957. I hope many of you will be able to attend. Moral ferment of such persistent character should be nourished. The world can ill afford to discourage such valuable strivings. Unfortunately the large American philanthropic foundations have not yet recognized this need; they have until now confined their assistance in the field of religion to the divinity schools of the three big faiths. Our small leadership training program could be enriched and expanded greatly if the urgency of our need and the services we perform were recognized by such foundations.

The financial endowments which our New York Ethical Society holds have been bequeathed to us by our founders and their successors. These have made possible much of what we have been able to do, but they are not adequate to the increasing demands which are made upon us. They offer inspiring, tangible testimony of the confidence of our predecessors in the enduring need for carrying forward ethical culture. Anniversary funds raised previously have been largely consumed; they must be renewed in this 80th year and in generous dimensions. We move in a new cost era and it is a commonplace which we all recognize that the dollar buys less and less each year, and religious leaders and staffs must be paid living

compensations. In order to meet this responsibility we must develop our talents for giving, for sacrifice, for perspective. All of us can afford to become more talented.

Ethical membership cannot be delegated. It is, or should be, a most demanding commitment. Every leader and every member is a spokesman. Our ethical society is continuously called upon for infinite services in the community, especially where conflicting interests, creedal, industrial, interracial are involved. The assistance and judgment of our professional and lay leadership are constantly being drawn upon to serve, whenever others are found to be less acceptable or less useful. We are trusted and needed.

The question I ask members here tonight is: How important and how basic do you feel is your membership in this society? To sympathetic friends I ask: Would you want our community to be without such a facility available to those who can find no other answer? Would you have those who need us drift into secularism, crass materialism, cynicism or, indeed, pure politicalism?

If we address ourselves to these questions and evaluate them as we should against other claims that are made upon us we will, I am sure, say that this Ethical Society is a most fundamental necessity. We will conclude that it goes to the very roots of life and helps create people of integrity and dedication, of greatness, grandeur, and magnificence—qualities which are none too abundant in the world today. Our ethical movement has contributed its share to the supply of such people and all of you know many of them who have been and are ornaments of civilization. Every dollar spent in strengthening our movement can mean more to our times than equal expenditures for palliatives or to promote conformity.

Our work justifies the necessity of what we do, have done, and plan to do. Like the Society of Friends, we have a claim on the community as well as the community having a claim on us. We have not asserted this often enough or in sufficiently constructive and organized manner. But first I ask each of you to reexamine his or her pledge, to question himself as to whether or not he has done all he can or should do.

You will find pledge cards at your places. Please fill them out and hand them to the young ladies who will gather them. Some of you have already contributed; if so, perhaps you will be willing to fill out a card which reflects your gift—it may encourage your neighbor. I need not assure you that we never call out names or read cards—so if only because we do not follow this unpleasant coercive practice your society should be amply rewarded.

I am confident that we will raise the modest $150,000 we need if you will all make up your minds that this is a must—that it is one of your primary responsibilities—a responsibility which should not be deferred and should not be forgotten tomorrow—that it is an investment in mankind—that it is our way of making our influence felt in the establishment of a better world.

It Doesn't Work Here

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "It Doesn't Work Here," written by Merle Thorpe, published in the American Legion magazine for February 1956. The article deals with the subject of Communist experiments in this country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT DOESN'T WORK HERE

(By Merle Thorpe)

Communist leaders have told us again and again that communism and capitalism cannot exist together. And they are right. Coexistence has been tried, time and again, right here in America. It has never worked.

There have been 75 communistic experiments in the United States. All were based on the idea of common ownership of land and equal sharing of the products of labor. They were not organized by nitwits nor crackpots, but by the finest minds of their day. Nor was there anything but cooperation on the part of government. Yet all failed, and for the same reasons.

Those who have examined these reasons discovered valuable material in connection with present-day discussions of world conquest, Iron Curtains, and coexistence. They observed how these colonies lived and died. All died young, discredited and in debt, their members disillusioned. All died from the same ailment. All, that is, except those few which adopted the ways of capitalism.

They all would fail again today in a fair and open trial. They failed not because of lack of intelligence nor ability nor money not tangible assets nor substantial sponsorship.

Robert Owen, who founded New Harmony in Indiana in 1825, had the sympathetic ear of John Quincy Adams, the President-elect and upon invitation, spoke before the Congress of the United States.

The North American Phalanx, founded near Red Bank, N. J., in 1843, was endorsed by Horace Greeley.

Brook Farm in Massachusetts was promoted by the capable pens of Ralph Waldo Emerson, Bronson Alcott, and Margaret Fuller. It was the most brilliantly intellectual of the communistic settlements. There Charles Dana, later the great editor of the New York Sun, transplanted trees and shrubs, and Nathaniel Hawthorne shoveled manure. The food was often scanty, consisting of graham bread stewed with milk, but the table talk was full of protein. It was rich with "alert sallies and quick retorts * * * pat allusions * * * shrewd witicisms" from the lips of members and such guests as Emerson and Greeley.

Brook Farm consisted of 200 acres of land, was well financed, and entered into with enthusiasm by 115 members. This ambitious project lasted 5 years.

The 75 experiments were inspired by many different motives. Some were religious. Others had a sincere desire to improve the social and economic lot of the poor and underprivileged. Their geographic locations were even more varied than their motives.

The Shakers established 4 communities in Massachusetts, 2 in New York, 2 in Maine, 2 in New Hampshire, and 1 in Connecticut. Massachusetts also had its Brook Farm, its Hopedale, and its Fruitlands. Indiana had Harmony, New Harmony, Blue Springs, and Forrestville. Ohio had its Yellow Springs, Kendal, Zoar, and Snowberger communities. Pennsylvania was the site of two Rappite experiments and of another at Ephrata. New York had more than one Fourier project along with its Shakers, a Franklin Community, Haverstraw, Coxsackie, Oneida, Skaneateles, and the Ebenezers.

Frances Wright founded a Communist community called Hashoba in Tennessee. The Phalanx movement, a form of Fourierism, went west as far as Illinois and Wisconsin. None of the settlements was hampered by trying to till rocky, barren land. All chose fertile soil, many the finest river-bottom land.

Geography seems to have nothing to do with the failure of communism in America.

The movements excited Americans most in the 40 years from about 1820 to the beginning of the Civil War. Several groups had foreign origins. They came to America because it offered freedom of action. They could set up their little circles without governmental interference or restrictions.

New Harmony was the first nonreligious experiment of any great size. Its founder, Robert Owen, had made a fortune operating textile mills on a profit-sharing pattern. With this experience he envisioned a social revolution which he said would "give the death blow to a tyranny which, for unnumbered ages, has held the human mind spellbound in chains of such mysterious forms that no mortal has dared approach to set the suffering prisoner free." These words were sloganized by modern Marxists into the rallying cry, "Workers of the world, arise! You have nothing to lose but your chains!"

The start was auspicious. Owen had bought 30,000 fertile acres, along with cabins, stables, and other farm buildings. This domain was at the confluence of the Wabash and Ohio Rivers.

Owen's business success in Scotland had won him the confidence and patronage of British nobility; and he came to America with prestige that admitted him to the House of Representatives, where he delivered more than one lecture. President James Monroe, President-elect John Quincy Adams, the justices of the Supreme Court, and all Cabinet members were present to hear him.

In public lectures, delivered in many places, Mr. Owen invited the industrious and well disposed of all nations to emigrate to New Harmony. Within 6 weeks after the purchase of New Harmony 600 persons had gathered there, and in less than a year the population was more than 900. Many intellectuals of the day were Owen converts. Yet there was no harmony in New Harmony. Even table manners degenerated. Parents complained that their children were deprived of food because of the piggishness of others.

As one experiment after another proved a failure, the leaders, grasping at straws, fell back upon the practices of capitalism. One of the most curious and complicated of these was the time store set up at New Harmony. On the wall hung a clock and beneath it a dial. When the customer entered, the storekeeper set the dial to check the time. The merchandise was sold at cost and paid for in cash. The storekeeper was paid for the time he spent on showing the merchandise and making the sale. He was not paid in money, but in labor notes. These were printed promises that the bearer would do 2 hours of work for him or bring him 12 pounds of corn. Change for these notes was not dimes and quarters, but small tickets representing 5, 10, and 15 minutes of labor.

The time store was established to do away with inflation and to make sure that labor was paid for with labor. It closed, its founder complaining of the difficulties of the arrangement and of the lack of common honesty among the customers.

The founder of the North American Phalanx was Albert Brisbane, an able writer, who in 1840 had published the Social Destiny of Man. Bisbane was a disciple of Francois Marie Charles Fourier, the French creator of a communistic system which became known as Fourierism. Bisbane's book caught the interest of religious, liberal, and antislavery groups and was the fount of much social-revolutionary excitement.

The experiment got underway as a result of Brisbane's promotion, and it hung on to life for about 12 years. Old members left, and new members were recruited; but the group never attained the size its founders envisioned. It finally broke up because, one

member wrote later, "it lacked the faculty of agreement" and lacked management—men with the ability to lead, to organize, and to keep production at high levels through the enthusiasm of members.

Bronson Alcott found Brook Farm not idealistic enough and withdrew to establish another community, known as Fruitlands, at Harvard, Mass. It lasted through the pleasant weather of the summer of 1843. As cold weather approached, members left on one pretext or another, and with the first frosts the Alcott family, according to Bronson's famous daughter, Louisa May, was left without food or fuel. So Bronson loaded his household goods and his family into a borrowed wagon and went back to Concord.

The Amana Society in Iowa and the Oneida Community in New York State still survive, but both turned from communism to capitalism when their common efforts for equal rewards failed.

Each communistic group had some distinguishing feature. Oneida stood for complex marriage and an experiment in eugenics, although it was not called eugenics. The Skaneateles Community held the orthodox view of marriage and encouraged normal family relationships. The Communists of Ephrata, the Rappites, the Snowbergers, and some others required lives of celibacy. The Zoarites and Jacobites might marry or not, as they chose. The Ebenezers permitted marriage "when the guiding spirit consented."

Religious views and practices differed widely, from complete nonreligion to strict belief in every word of the Bible. Governing authority was sometimes vested in one leader, sometimes in a committee, sometimes in a town meeting type of free-for-all.

But whatever their differences might have been, all the Communist groups in America held to one guiding principle: Common ownership of all property and equal division of the products of members' labor. Volumes have been written on these experiments and all students of these efforts attribute failure, with minor variations, to one cause:

Human beings, created as they are, and feeling as they do, will work for those for whom they care, but not so hard or not at all for those for whom they do not care.

Even religious fanaticism, it was found, could not overcome this universal attribute of human behavior. Nor could the hope of reward at the end of some five-year plan.

The only way, it was pointed out, that a communistic settlement could even approximate production equal to bare living standards was by force, by compulsion, by spies, by fear, by liquidation.

If Khrushchev were given enough land and people in the United States to equal the population and area, say of Iowa, and permitted to organize it after the modern Russion pattern—make it 100 percent communistic—it would not work. If he would turn over comparable population and area for the United States to organize a capitalistic society in Russia—it would work, and would probably wreck the hopes of Moscow and Leninism for years to come. Most readers will recall that Lenin was forced to try a modified capitalistic experiment in 1921, in order to put bread in the mouths of his people. It did so well that when Stalin came into power he put a stop to this "temporary retreat" from the principles of socialized living.

When people are given a free choice between communism and capitalism, they will always, in the end, choose the opportunity to get on and up in the world.

A capitalistic experiment in the Ukraine would ring the death knell of Moscow and Leninism. And the Russians know it. Hence the Iron Curtain, rigid barrier to information from capitalist countries. Hence incidents like this:

A Polish-American sent a Sears Roebuck catalog to his mother and father in the old country. They passed it around the community and it caused so much astounded and incredulous comment that the police paid them a visit.

"Give us that book we've been hearing about," they ordered. "It's nothing but a piece of dirty, capitalistic propaganda."

A communistic experiment in the Dakotas would not last out the year. The Non-Partisan League is evidence of that, although it only got its feet wet in the practices of the Kremlin.

The American members of these communistic experiments again and again deserted their ideological islands to try their enterprise and resourcefulness in the free air of competition. It is a sad commentary that the hegira started with the first cold breezes from the north and empty larders and woodboxes.

Within 2 years Robert Owen divided the town of New Harmony into building lots, and sold them to individuals. Fifteen years later one of the original members returned to the town and said of his visit. "I was cautioned not to speak of socialism. (Social experimenters at that time used the words socialism and communism interchangeably.) It was unpopular and with good reason. The people had been wearied and disappointed by it, had been filled full with theories until they were nauseated. * * * An enthusiastic Socialist would soon be cooled down at New Harmony."

A member of the Yellow Springs group described the failure of that short-lived communistic experiment: "The industrious, the skillful and the strong saw the products of their labor enjoyed by the indolent, the unskilled and the improvident. * * * It was useless to remind all parties that the common labor of all ministered to the prosperity of the community. Individual happiness was the law of nature, and it could not be obliterated."

Students of communistic enterprises in the United States, with few dissenting voices, find the cause of failure best expressed by William Bradford, governor of Plymouth Colony, the earliest comunistic experiment on these shores. His eyewitness account, of Plymouth Plantation, reports that "the young men did repine that they should spend their time and strength to work for other men's wives and children. And for men's wives to be commanded to do service for other men, as dressing their meat, washing their clothes, etc., they deemed it a kind of slavery, neither could many husbands well brook it."

Without doubt this is why Marxist leaders have contended in and out of season that capitalism and communism cannot exist side by side.

If modern Communists were less concerned with propaganda and more with truth, they would have to say that communism fails in any free society because it won't work without the whip, without the secret police, the spies, and the threat of punishment or death—just because human nature is what it is.

Kipling created an imaginary experiment in which "the strong shall wait for the weary, the hale shall halt for the weak," and gave, in verse, the same reason for failure that appears in all the American communistic experiments.

"But till we are built like the angels, with hammer and chisel and pen,
We shall work for ourselves and a woman, for ever and ever, amen."

Not that Americans are selfish. The record, any way you read it, shows them to be generous beyond measure. The old cliche, "generous to a fault," applies. By some persons and peoples it has been counted as a weakness. Americans give, and with relish, because what they give has been won in the open field of contest. The spirit of rivalry is the strongest fiber in our national life. The chance to get on and up in the world and to have and to hold the rewards, if any, make impossible any successful frontal attack upon us by the protagonists of communism. The case histories of America's communistic experiments show clearly the impracticability of so-called coexistence.

Tribute to Leonard D. Long, Builder of Cities

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 7, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Leonard D. Long, Former Newsboy, Climbs to Noted Builder of Cities," which was published in the Anderson Independent of February 6, 1956. The article concerns Leonard Darlington Long, who has built thousands of homes in Puerto Rico, South Carolina, and many millions of dollars of construction in Georgia. I have known Mr. Long for many years, and I know what an outstanding citizen and builder he is.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEONARD D. LONG: FORMER NEWSBOY CLIMBS TO NOTED BUILDER OF CITIES

(By Frank A. Dickson)

Leonard Darlington Long, Charleston builder who ranks among the leading home constructors of the Nation, reports that his motto is: "Give a man an opportunity to own a home and he will automatically become a progressive citizen concerned with the problems of the community."

He amounts to such a firm believer in this motto that he, as president of the Long Construction Co., has developed in Puerto Rico 11 gigantic projects at a cost of no less than $66 million during the past 10 years, earning him the title of "Builder of Cities."

"My experience developed from contact for so many years with people who did not own homes and now do," the South Carolinian declares, "is that the ownership of a home is the best anitdote aganist communism."

In addition to making an invaluable contribution to the economic development of Puerto Rico during the past decade through his solution of the acute housing problem, Long has instilled initiative among the population of that country who with their fighting spirit have won over apathy and jealousy.

The Long enterprises in Puerto Rico have provided employment for 7,000 laborers of the land, and these workers have not only drawn millions of dollars in wages but have obtained a sound preparation in the completely new field of construction there, which now holds first place among the industries in Puerto Rico.

Yet at the age of 12 Long was a newsboy, selling copies of the two newspapers published in the Florida town of Pensacola, where he resided with his parents.

The famous builder is closely associated with South Carolina although he was born in a large, old farmhouse on an orange grove operated by his father in the section of Florida known as Orlando. He is a descendant of one of the oldest families of South

Carolina, and a small community on the South Carolina-North Carolina border carries the name of Long as a means of tribute to Leonard's grandfather, John W. Long.

The schooling of Long came to an end in the fifth grade, but his determination to make himself useful in the world led the youth to obtain a self-education even if it involved sacrifices and privations.

For 3 years, beginning at the age of 12, he held jobs as an usher in a movie house, a helper to the motion picture machine operator, an elevator boy, a helper to the sign painter doing the advertising for the theater, and finally a timekeeper for a large sawmill in Bagdad, Fla., where he formed the decision to enter carpentry.

Soon becoming a first-rate carpenter, young Long worked with his father and other contractors in Tampa and received the highest salary given carpenters, $21.60 weekly.

Within a few months, he gave up the trade of carpentry for a dollar-a-day position.

He took up work as an apprentice in an architect's office, making tracings of building plans. In his ambition to learn architectural drawing he enrolled in a course in architectural and mechanical illustration offered by the Fred W. Dobe School and the International Schools.

Due to the rapid advancement in his work, Long earned appointment as architectural supervisor of the firm Francis J. Kannard, which built the People's or Tom Bank, a 12-story steel structure in Tampa. Another accomplishment to his credit during his connection with the architect's office was his collaboration in the design of buildings for the Spanish Center Club, the Italian Club, and others in Tampa.

Deciding to establish a company of his own following his association with his father in the construction of buildings, Long engaged in the Colonial Drive development in Orlando, where he bought, sold, and constructed houses, selling them on installment payments.

That was slightly more than 40 years ago, and Long still follows the practice of the large-scale building of houses to be sold on installments to persons unable to pay cash. His records show that he has constructed far more than 30,000 housing units, in Puerto Rico and also in the United States, particularly in several Florida cities and Atlanta, Ga., and Charleston in this State.

Long built the Darlington Apartments, a 14-story structure with 612 apartments, in Atlanta, and also the 18-story Howell House, having 540 apartments. While in Charleston he became owner of another Darlington, 12 stories with 156 apartments. Total cost of these buildings: $14 million.

Among the greatest achievements in Long's career is Puerto Nuevo, which, in Puerto Rico, is the largest low cost home project in the world and contains 4,500 units—all concrete houses with water, lights and sewer connections. Erected at an expense of $18 million, they consist of 2 bedrooms, living room, kitchen, bath, and porch, and sold for $4,000 each, payable in a 20-year period.

Long, who was backed by the former governor of Puerto Rico, Jesus Pinero, devoted all his efforts toward the rapid development of Puerto Nuevo, because he recognized the urgency to solve the pressing housing problem for white-collared employees.

A self-sufficient city, Puerto Nuevo has modern schools, churches, parks, post offices, public health units, internal revenue offices, police headquarters, lodges, civic clubs, and important commercial centers.

The progress has been so amazing that the valuation of the property, residential as well as commercial, has increased at least 25 percent in a direct benefit to persons who purchased homes from the constructor at a relative low cost.

How Long, with unbreakable faith first in God and then in himself, came as a benefactor to Puerto Rico and founded Puerto Nuevo, and also the Caparra Terrace and Caparra Heights developments, is a story dating back 8 years when the Puerto Rican government was not meeting with any success in its fight against the housing problem.

For one thing, there was lack of economic means, and the second drawback was the absence of confidence in the Puerto Rico investors on the sale of houses built under huge projects.

Despite these discouraging conditions, Long, inspired by the support of Pinero and endowed with foresight and a complete faith in himself, launched a program never tried by a government and private initiative: The mass production of homes for the white-collar class, which forms the largest population of the island.

Long's strong will scored an amazing triumph, leaving open to the local constructors the path to the mass production of homes. "Long was the inspiration of our engineers and constructors," Mariano Arroyo Suarez of Puerto Rico states. "Long educated, opening the way of hope, and leaving to Puerto Rico an achievement that will endure and be an eternal monument to his memory."

The Caparra Terrace project, costing $20 million has 1,515 duplex buildings which have helped to solve the lack of homes for families who come to San Juan, sometimes from the United States and others from the interior of Puerto Rico.

The apartments constructed of concrete with floors of first-class tile, are composed of three comfortable bedrooms, living room, kitchen, bath, and porch. Caparra Terrace, boasting broad concrete streets, lights, sewerage, aqueduct service, plus elementary schools, churches of all religious sects, and numerous commercial centers, is matching Puerto Nuevo in its growth.

In the area of Puerto Nuevo and Caparra Terrace is the attractive Caparra Heights development, which was the first initiated in this section by Borinquen Home Corp., one of the subsidiary corporations of Long Construction Co. It is a development of 531 homes especially designed for a family of higher income than those of Puerto Nuevo and Caparra Terrace.

The concrete houses feature three bedrooms, living room, hall, dining room, kitchen, bath, and porch, and the sale of the homes fluctuated in accordance with the type of construction and the size of the lot, ranging from $7,200 to $11,000.

Caparra Heights has a commercial center constructed by the Long organization, and the center includes markets, a post office, a drug store, soda fountains, an electric appliance store, a vegetable market, a gas station, an elementary school, a Catholic church, and also several park areas, which the Government has not developed in spite of requests by the people.

Besides Puerto Nuevo, Caparra Terrace, and Caparra Heights in Rio Piedras, the Long Construction Co. has developed the following projects in Puerto Rico: Bayview in Catano (258 units), Villa Turabo in Caguas (369 units), Villa Grillasca in Ponce (720 units), Mayaguez Terrace in Mayaguez (508 units), San Juan Darlington (312 apartments), Rio Piedras Darlington (122 apartments), Ponce Darlington (122 apartments), and Ramey Air Base Homes in Aquadilla (575 units).

By the telephone in his office in the Darlington Building in Miramar, Long communicates with his business offces in the island and in the United States, all of which he orients and directs from San Juan.

The favorite hobby of this giant of the construction industry, who climbed the ladder of success from newsboy to builder of cities, points to his intense mission of helping his fellow men through his life work.

"My one and only hobby," Long says, "is building houses—to provide homes for families who want and can have them but lack the money to buy."

The International Labor Organization

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. REECE of Tennessee. Mr. Speaker, the United States Government has actively supported the International Labor Organization, a specialized agency of the United Nations, for many years. Our delegation has included two governmental representatives, a representative from industry, and a representative from organized labor.

The unique feature of the ILO is its tripartite organization. The governing body consists of 20 government representatives, 10 employer representatives, and 10 worker representatives. For many years, the employer representative of the United States delegation has been Mr. Wiliam L. McGrath, of Cincinnati, Ohio, the president of the Williamson Heater Co.

Until 1954, the Russians and the other satellite countries had not participated in the ILO. They decided to participate at that time which, of course, they had the right to do, inasmuch as they are members of the United Nations. This action has created a crisis for the ILO. It is obviously impossible to maintain its tripartite character with Communist countries participating in its work, as there are no free labor representatives appointed by free labor unions in Russia, nor are there any private employers. The entire Russian delegation, including the so-called employer and labor representatives, are actually Soviet officials.

Mr. McGrath has reviewed this situation and has reluctantly come to the conclusion that the United States should withdraw from participation in the ILO and grant it no further support. This matter is of immediate import because, at this session, the Congress will be asked to raise the ceiling for the United States contribution to the ILO from $1,750,000 annually to $3 million.

For the benefit of my colleague, I am inserting in the RECORD Mr. McGrath's report, and I hope that it will be given very careful consideration:

MEETING OF THE INTERNATIONAL LABOR ORGANIZATION GOVERNING BODY IN GENEVA, SWITZERLAND, NOVEMBER 9 TO NOVEMBER 18, 1955

(Report by W. L. McGrath, president, the Williamson Co., Cincinnati, Ohio; United States employer delegate, 1955 and 1954, ILO annual conferences; United States employer adviser, 1952, 1951, 1950 and 1949, ILO annual conferences; member ILO governing body)

In my brief address to the governing body of the International Labor Organization at the close of its November 1955 session in Geneva, Switzerland, I made the following statement:

"It is my intention to recommend not only to the employers of my country that they refrain from sending delegations to the ILO until such time as the situation created by participation of Communist so-called employers in the ILO is cleared up, but also that the United States Government do likewise."

Upon my return to the United States, I formally recommended to the National Association of Manufacturers and the United States Chamber of Commerce that under present circumstances they not only refrain from nominating employer delegations to annual ILO conferences, but also cease to participate in ILO industrial committee meetings or other ILO meetings for which they nominate United States employer representatives.

I likewise addressed a letter to the President of the United States, urging that our country forthwith withdraw from participation in the International Labor Organization and withhold from it any financial support whatever, unless and until the Communist issue within the ILO can be clarified and resolved.

THE COMMUNIST ISSUE IN THE ILO

What is the Communist issue? It is simply this:

In the ILO, the employer delegation from each country is supposed to represent free associations of employers, and the worker delegation is supposed to represent free associations of workers; by contrast to the government delegation, which represents government. But are there free associations of employers or workers in Communist countries? You know the answer as well as I do.

Therefore, when, at the 1954 conference, Russia, which had long been absent from the ILO, came back as three countries, the Soviet Union, the Ukraine, and Byelorussia—reinforced by five satellites, namely, Bulgaria, Hungary, Poland, Albania, and Czechoslovakia—the question of the eligibility of Communist so-called employer and worker delegations became paramount.

It was obvious that Communist employer and worker delegations represented, in fact, neither employers nor workers, but were simply agents of the Communist Party, echoing and reinforcing the government delegations from the Russian and satellite countries.

This completely violated the original concept of the ILO constitution, which assumes that each country will send to ILO conferences workers and employers, respectively, who are free to speak independently of their governments on behalf of their constituents.

The employer delegations of the free countries in the world therefore challenged the right of the so-called employer delegations from Communist countries to participate in the conference. A block of worker delegates representing free trade unions likewise challenged the eligibility of so-called worker delegations from Communist countries. I said to the conference on that issue:

"What will remain of the tripartite nature of this body, if we admit a solid block of votes, none of which represent free workers or employers, and all of which are under the direct dictation of the Kremlin?

"I charge that the purpose of the attempted reentry of Russia into the ILO is that of disrupting this organization and using it as a springboard for Communist propaganda.

"Unless steps are taken to preserve the tripartite structure of this organization, it is my intention to recommend to my Government and to the employers of the United States that they refrain from sending future employer delegations to this conference."

My position was thus clearly stated at the 1954 conference.

The conference voted, however, by a substantial majority, that Communist so-called employer and worker delegations should be accredited.

This, however, by no means settled the issue; for basic principles remained unchanged.

Realizing that something would have to be done to attempt to quiet continuing employer objections, the governing body, at its November 1954 meeting, voted that there should be placed on the agenda, for consideration at its March 1955 meeting, a resolution to the effect that the governing body should establish a tripartite committee "to examine article 3, section 5, of the constitution, which provides for the appointment of worker and employer representatives, and make proposals for such amendments as would insure that worker and employer representatives could only be appointed after nomination by organizations of workers and employers which are free and independent of their governments."

It was presumed that this might lead to the amending of the ILO constitution in such a way as to disqualify Communist so-called employer and worker delegations.

But at the March 1955 meeting of the governing body, when the issue came up for actual determination, the courage to face it squarely was lacking. The governing body abandoned completely any suggestion of amending the ILO constitution, and instead passed a watered-down resolution to request the Director General to arrange for the preparation of a report covering the membership of the ILO regarding the extent of the freedom of employers' and workers' organizations from government domination or control—the report to be prepared by a committee of independent persons specially appointed for that purpose by the Director General.

It was at that stage that I personally became very doubtful indeed as to whether the ILO would ever have the courage to purge itself of the Communist elements which it had admitted contrary to the original principles of its constitution. I voted, however, for the above proposal, in the hope that it might possibly lead to constructive action.

It was with this background that we went into the annual ILO Conference in June 1955.

At this conference representatives of the free employers, still firm in their insistence that Communist so-called "employer" delegations could not possibly represent free associations of free employers, naturally did not elect any Communist "employer" representatives as employer members of Conference committees. The Communist "employers" who had put their names up for election thereupon appealed to the entire Conference for placement upon the committees to which they had failed to be elected. The Conference as a whole voted that they should be seated on these committees.

Everyone at the ILO knew what these Communist so-called employer representatives were. They were simply agents of the Communist Party. Putting these men in the ILO employer groups which were supposed to represent viewpoints of employers as contrasted to workers or governments, was as ridiculous as if the National Association of Manufacturers or the United States Chamber of Commerce were asked to put Communist agents on their boards of Directors. Nevertheless, such was the action taken by the 1955 ILO Conference.

The United States Employer Delegation thereupon withdrew from participation in the 4 committees upon which Communist so-called employers were seated; continuing to participate, however, in the other committees and in the Plenary Session of the Conference.

There was considerable talk, at the 1955 conference, to the effect that since the Director General had in fact appointed a committee to study "the extent of the freedom of employers' and workers' organizations from government domination and control" (as directed by the governing body at its March meeting) and this committee was supposed to submit its report to the governing body at its November 1955 meeting, no attempt to resolve the Communist issue should be made at the conference itself. The obvious way out of a difficult situation was to "put it off until November."

But upon my arrival at the November 1955 meeting of the governing body, I found the report of this committee was not ready. We were told that it was in the process of completion, and would probably be drafted in final form by about the end of January 1956.

This news was, as near as I could judge, what the majority of the ILO governing body wanted. They had no desire to come to grips with this issue. Governments especially welcomed anything that would enable them to postpone and delay.

The crucial point as to timing was this:

The November 1955 meeting of the governing body was the last possible time at which, under the ILO constitution, the matter could be put on the agenda of the 1956 conference.

Failure to take action by the governing body at that meeting would therefore make it impossible for the matter to come up as a formal agenda item before the entire conference until June of 1957.

By that time Communist "employer" (and "worker") delegations from Communist countries would have been accredited for 4 consecutive years—and in the face of that accepted fact, it would be well nigh impossible to unseat them.

Recognizing this situation, I pressed, at the November 1955 governing body meeting, for immediate definitive action.

I pointed out that if the committee report was complete by February it could be discussed by the governing body at its March 1956 meeting and governments would have plenty of time to study it before June. Therefore, I insisted, there was no reason why, if the governing body wanted it done, it could not be put on the formal agenda for discussion at the 1956 conference.

Toward this purpose I prepared a draft resolution to the effect that the committee report should be reviewed at the 1956 conference and in light of its disclosures steps should be taken to amend the constitution in such a way as to preserve the tripartite structure of the ILO. (See appendix A.) To me this was an entirely reasonable and procedurally possible approach. It was an approach which, if accepted, would have enabled me to believe that the ILO wished to face and solve the problem. But, as matters developed, it was impossible to gain any concerted support for any such resolution.

A compromise was then suggested, to the effect that the governing body might put the committee report on the agenda of the 1956 conference in such a way that the conference would not actually have to deal with it at all, but could merely refer it to a committee for further discussion (see appendix B), but even as to this proposal no agreement could be reached.

If this proposal, which was far more indirect than mine, had proved to be generally accepted, I would have been glad to go along in hope that it would lead to some definitive action. But since even this was unacceptable, I felt that I had arrived at the end of the road. I became convinced that the ILO had no sincere intention of resolving the Communist issue. The attitude of the governing body majority was to stick their heads in the sand and let matters take their course.

I therefore reviewed the entire issue in a brief address to the governing body, concluding with the statement quoted at the beginning of this report. My complete address is attached hereto as appendix C.

If we are simply to accept the present situation in the ILO, the end result is, to my mind, inevitable. The Communists, with 8 nations to our 1, and 32 votes to our 4, will remain firmly entrenched and will progressively dominate the ILO. It will become merely an international forum for the dissemination of Communist propaganda,

financed to at least 25 percent by the taxpayers of the United States. In fact, at its next session, our Congress will be asked to raise the ceiling for the United States contribution to the ILO from $1,750,000 a year to $3 million a year.

At annual ILO conferences Communist orators, outnumbering ours in the ratio of 32 to 4, will tell the representatives of 69 nations about the decadence of the free enterprise system, the superiority of the Communist system, the exploitation of the working man by the American capitalists, and our greed and desire for war. These speeches will be reprinted by the ILO and circulated all over the world. One cannot imagine a better ready-made vehicle for the promotion of Communist indoctrination. Do we want to continue to finance this Communist operation?

The future of the ILO, unless strenuous corrective measures are taken, has been well foretold by the history of the World Federation of Trade Unions.

According to Sir Alfred Roberts, United Kingdom's worker delegate to the ILO, following World War II, when the World Federation of Trade Unions resumed sessions, there was an agreement with the Communist unions, who were members, that political issues would be outlawed so that mutual progress could be made on behalf of the welfare of labor.

But the ink was no more dry on the agreement than the Communists set out to use the WFTU as a springboard. They blocked and obfuscated any accomplishments, while they made the most of any opportunity for political propaganda.

Within 18 months they had completely destroyed the usefulness of the WFTU. The free trade unions of the world were thereupon compelled to pull out, which they did, and form their own organization—the International Confederation of Free Trade Unions.

There is a time that calls for action. In my opinion, that time is now.

If the ILO does not have the courage to stand by the initial principles of its constitution, and is simply going to temporize and beat around the bush and let things ride and allow time to pass until it becomes internationally recognized as a Communist-dominated organization, I think the time to get out of it is today.

On the other hand, it is barely possible that sufficiently forceful action might yet spur the ILO into an effort to prevent that organization from being taken over and destroyed by the Communists. The strongest action that can possibly be taken is financial action. The withdrawal of United States support and participation "until such time as the situation created by the participation of Communist so-called employers in the ILO is cleared up" might effect the desired result.

It is on the above basis that I recommend the course of action which I have outlined in this report.

APPENDIX A

PROPOSAL FOR WHICH SUFFICIENT SUPPORT COULD NOT BE GAINED (SEE REPORT, P. 7)

The governing body—

1. Recalls that its resolution adopted at the March 1955 session provided for a report to be made by a committee of independent persons regarding the extent of freedom of employers' and workers' organizations from Government domination and control, with the understanding that every effort would be made to submit the report to the governing body by the end of October 1955;

2. Recognizes with regret that this report will not be available for consideration at its present session;

3. Repeats its belief that the maintenance of the tripartite system of representation which is a unique feature of the ILO, is essential to the effective functioning of the Organization;

4. Reaffirms its desire to consider at the earliest possible time, in the light of the results of the report, whether any and if so what steps might be taken as a matter of urgency to deal with the situation disclosed therein;

5. Expresses the view that the subject matter of the report is of critical importance to the Organization;

Decides—

1. That notwithstanding the failure to submit the report to the present session of the governing body for its consideration, the agenda of the 1956 International Labor Conference shall nevertheless include consideration of the report and of steps to be taken by the Organization to preserve the integrity of the tripartite composition of the ILO, such agenda item to be expressed in the following terms:

(a) Consideration of the report of the committee on the extent of freedom of employers' and workers' organizations,

(b) Consideration of the steps to be taken by the Organization, including if necessary the revision of sections 1 and 5 of article 3 of the constitution to preserve the tripartite character of the ILO.

2. That the governing body, at its March 1956 session, will consider and discuss the report for the purpose of defining and clarifying the scope and nature of the conference discussion.

APPENDIX B

COMPROMISE PROPOSED FOR WHICH SUFFICIENT SUPPORT COULD NOT BE GAINED (SEE REPORT, P. 7)

It is agreed that the governing body will submit to the 1956 conference a report, with or without proposals or resolutions, on the subject of the extent of the freedom of the employers' and workers' organizations from Government domination or control, to be referred to the resolutions committee or to the selection committee or dealt with in any other way which the conferences may think fit to adopt.

Agreed further that the state members be informed of the above decision.

APPENDIX C

SPEECH BY W. L. M'GRATH AT ILO GOVERNING BODY MEETING, NOVEMBER 18, 1955

Immediately prior to the 1954 International Labor Conference a bloc of 3 Communist countries, exercising their right as members of the United Nations, chose to join the ILO. The exercise of this right could not in any way be challenged.

Because of the complete inability of these 3 nations to send legitimate employer and worker delegates to the ILO, since there are no free employers or free workers in those countries, it was obvious that instead of the usual 2 government, 1 employer and 1 worker delegates, these nations instead would have 4 government voting delegates.

Coupled with the fact that 5 other nations which had been members of the ILO for a number of years and which are now under Communist domination, this meant that there would be a bloc of 8 Communist controlled countries in the ILO—8 countries with a total voting strength of 32 votes, all of which would be government votes, when they are only entitled to 16 government votes—2 per country.

Now the views of the free employers of the world were made perfectly clear at the 1954 Conference. We believed then and we believe today that all so-called employer representatives from these totalitarian countries should be disqualified from sitting in any of the councils of the ILO.

We therefore challenged the credentials of these men who would come into what had been a free employer group of the ILO. We challenged these credentials on the very fundamental ground that violence would be done to the constitution of this organization if it forced Communist government agents into the employer group. As all in this room know, the 1954 conference refused to sustain our challenge which was put forth as vigorously and as sincerely and as persuasively as possible.

What has happened since then?

At its first session following that conference, in November 1954, this governing body at Rome, decided that at its March 1955 session, it would consider a resolution providing for the appointment of a governing body committee, the terms of reference of which would be to make proposals for such amendments to the ILO constitution as would insure that worker and employer representatives could only be appointed after nomination by organizations of workers and employers which are free and independent of their governments.

At its next session in March 1955, the governing body did not adopt such a resolution. Instead, it decided to request the director general to arrange for the preparation of a report covering the membership of the ILO regarding the extent of the freedom of employers' and workers' organizations from government domination or control. It also decided that this report would be prepared by a committee of independent persons, and, because of the extreme gravity of the situation, it was understood that every effort would be made to submit the report to the governing body by the end of October 1955.

At the same time, the governing body decided that it would consider immediately in the light of the results of the report, whether any, and if so what, steps might be taken as a matter of urgency to deal with the situation disclosed therein.

Following the March, 1955, session of the governing body, the 38th International Labor Conference was held in Geneva in June, 1955. At this conference, despite the universal opposition of the free employers, so-called employer representatives from Iron Curtain countries were seated as deputy members on four conference tripartite working committees. This decision was reached in total disregard of the autonomy of the employer group who, through established procedures of the Organization, had elected their representatives to serve on these committees. That decision breached these traditional and accepted procedures. Neither the constitution of the ILO nor the standing orders required the conference to vote these Communist representatives seats on the conference committees as deputy members.

Following this decision, I withdrew from partcipation on the four working committees in question. I did this because I felt that positive action was imperative in order to emphasize the need for maintaining a stand on principle on behalf of preserving not only the tripartite structure of the ILO but its very existence as well.

We are now at the first session of the governing body following that conference. The sixth item on our agenda is the report of the committee on the extent of the freedom of employers' and workers' organizations. The report of this committee is not before us for consideration notwithstanding the urgency with which the entire matter was viewed by the governing body in March, 1955.

If the organization sincerely wished to face this issue and resolve the problem we have had for over 18 months, it would hasten to bring the matter formally before the earliest possible session of the international labor conference, and take remedial steps to correct the situation.

Even though the report of the committee on freedom is not before us, this governing body session could place the matter before the 1956 conference. In my opinion, such action would not prejudge the contents of that report in any way, because on such an important issue as this—which the governing

body itself has found to be urgent—only the conference can take remedial measures. Therefore, there is no valid reason why, even though we do not have the report, the conference should not be presented with this issue at its 1956 session.

Apparently, however, no further urgency is attached to this problem. There is no inclination to take this course of action which has the merit of bringing about prompt conference consideration, but more importantly, telling the world the ILO governing body recognizes it as a problem, and is willing to do something about it.

We are soon to face the 1956 conference. What will happen then? For one thing, we can look forward to the grim fact that Communist so-called employers will again be seated on the working committees of the conference. That course has already been charted, and the precedent established. The deterioration of the ILO's tripartite structure, begun at the 1954 conference, will be further advanced because the organization will have refused to take steps to purge itself of a threat to its very existence.

My deep concern over this matter has been repeatedly expressed, not only in the governing body and conference, but in the United States as well. I have prepared detailed reports on each conference and governing body session I have attended, and in these reports I have endeavored to focus attention upon the serious matters of principle that are involved.

Rather than compromise in the slightest with my position, demonstrated by my withdrawal from the committees of the 1955 conference, I find that in view of all the above circumstances, there is no further constructive purpose to be gained by the continued participation of United States employers in the ILO.

Accordingly, it is my intention to recommend not only to the employers of my country that they refrain from sending delegations to the ILO until such time as the situation created by participation of Communist so-called employers in the ILO is cleared up, but also that the United States Government do likewise.

Congress Might Consider Removing Penitentiary Sentence as Major Penalty for Income-Tax Evasion

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Knoxville Journal, Knoxville, Tenn., which, I think, will be of interest to my colleagues.

The editorial follows:

CONGRESS MIGHT CONSIDER REMOVING PENITENTIARY SENTENCE AS MAJOR PENALTY FOR INCOME-TAX EVASION

Debtors' prisons, several hundred years ago, were fixtures in every English-speaking country and they have gradually faded from the scene in all countries which we in our day refer to as civilized.

As matters now stand, there is only one debt for which any citizen may be sent to prison and that is one for income tax. Of course as a technical matter, criminal prosecutions in these cases are based on charges of fraud which puts them in the category of theft, but still it is a matter of debt to the Federal Government which is involved.

The history of income tax prosecutions has been interesting in this way—they have been most successful when the Government sought them as a means of bringing defendants to book for crimes other than the one actually involved in the court proceedings.

The late Al Capone's case could be used as typical of all these cases in which the Government sought conviction for one thing but actually had another in mind. In the thirties, the reader will recall, Capone and other hoodlums in the rackets thriving under prohibition got out of hand. They bought their protection from a multitude of local governments and these in turn thwarted the efforts of the Federal Government to enforce the laws. In the meantime, gangsterism developed to a point where it threatened to supersede government itself.

Then some bright individual thought of the income tax and Capone was finally sent to Federal prison, and the public was relieved of his evil presence, not by law officers armed with guns but by accountants laboriously checking his income.

Since the time of that noted case, a succession of gansters, murders, dope peddlers, and all kinds of public enemies have been put away by Federal courts on the basis of charges sustained that they evaded payment of income tax.

But while the Government has been highly successful in the use of income-tax prosecutions as instruments of punishment for other assorted crimes, the history of such prosecutions in cases involving citizens in other categories has been replete with failure on the Government's part. In such cases, where well-known citizens are involved, who are unimpeachable as to character and reputation in any other respect until they become defendants in income-tax cases, failure to convict is almost a certainty.

A variety of theories is offered by the public for this being the case. One is that Federal juries are prejudiced in favor of any defendant because they consciously or unconsciously resent the burden of taxation which modern government lays upon all of us. Another theory is that the Internal Revenue Service is frequently unfair and arbitrary where the taxpayer is concerned, and in addition the tax laws themselves are an invitation to confusion and honest error.

Most of us don't know enough about the facts in any case to justifiably disagree with either the charges of the Government or the findings of the courts. All we can sensibly do is to look at the results, which indicate that there is something wrong with the existing system.

It occurs to us, and we suspect has to many others, that Congress could well reexamine its policy in this vital part of the income tax situation, with the thought in mind that the ultimate purpose is to collect all the revenue due the Government and that sending citizens to jail, or trying to do so, has not proved a successful approach to this goal.

What would be the effect, for example, or revising the law so that when a taxpayer was found cheating, instead of facing any threat whatever of a penitentiary term, the Government would be empowered to inflict a spectacular penalty in money? Generally speaking, those citizens who attempt fraud to keep from paying their taxes are persons to whom money is of transcendent importance. That must be the case or they would not be willing to risk going to jail to keep it. Individuals of this type, it seems to us, would be more greatly deterred from criminal action by the threat of a confiscatory penalty than they would by the penitentiary risk, which, rightly or wrongly, the Government now finds it difficult to enforce. If the penalty against the suspected taxpayer were made a matter of money only, rather than one of being locked up, Federal juries might be more strongly impelled to give the Government, rather than the taxpayer, the benefit of the doubt.

A Statement of Principles, 1956

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement of principles as published in the January 28, 1956, edition of Protestant Church Life, the official publication of the Protestant Council of the City of New York. Our southern friends will note that we, too, have segregation problems. We approach them and attempt their solution without name-calling, threats of secession, or even interposition. We accept the law of the land and in good spirit will abide by it. Our Catholic friends may strongly oppose the principles enunciated under the heading of "Gambling"—my Jewish coreligionists will split down the middle on those principles. But all concede that a discussion thereof will be in the interests of good will even though it does not bring about complete agreement.

The statement follows:

A STATEMENT OF PRINCIPLES, 1956

Believing that faith without works is dead and that Chirstian people have a duty in giving effect to Christian principles in society, the legislative committee of the Protestant Council of the City of New York believes that the churches have a right to speak and act on political issues which affect the moral standards of New York City. In setting forth major principles as guides for 1956, the committee has endeavored not to be exhaustive, but to deal with only those matters which have been subjects of discussions, in order that the borough divisions of the Protestant council and the constituent denominations may consider the same with unanimity.

1. Discrimination: It is the conviction of the committee that discrimination on account of a person's or group's race or religious or national origin is both un-Christian and un-American. Particularly is the committee opposed to the discriminatory practices current in the area of housing. Progress has been made in legislation relative to discrimination in publicly assisted housing. The committee favors legislation to create a commission to study the extent to which segregation and discrimination in private housing are practiced in New York State and to make recommendations for bringing it to an end.

2. Housing: One of the requirements for wholesome family relations and stable community life is adequate and decent housing. The prevalence of overcrowded and substandard dwellings and slum areas are major evils which are a menace to good health and moral well-being, as well as a blight upon responsible citizenship. To help overcome these evils, the committee is in favor of the continuation, for the time being, of Federal and State subsidies for the construction of housing for low-income groups. It urges private industry, with support from the Government, if necessary, to provide more housing units for middle income groups; it supports legislation for a commission to investigate the urban blight of slums in metropolitan areas; it recommends a more adequate program of new housing construction planned to meet all the problems involved: overcrowding, slum clearance, rehabilitating buildings not yet at the substandard stage, and the relocation

of families displaced by such a housing program.

3. Gambling: The legislative committee reaffirms its contention that gambling is a social and moral evil which has a disruptive effect upon the community and social structure, and is destructive of personality. Furthermore, the committee believes that bingo is a specially vicious type of gambling which appeals to and feeds the instincts of greed and social irresponsibility. Accordingly, bingo has no place in the revenue-raising of the church. When employed it is detrimental to the principle of Christian stewardship. Therefore, the committee, being opposed to the legislation enacted in 1955 by which it is proposed to legalize bingo for religious, charitable, and other nonprofit organizations, will use its influence to defeat similar legislation during the legislative session of 1957.

4. Sabbath laws: The committee believes that observance of Sunday as a day of rest is not only in conformity with religious principles, but is sound as a matter of health and morals and an appropriate subject for legislation. If special provision can be made, however, without insuperable administrative difficulties, for those who actually observe a different day as their holy day, the committee would not oppose such action.

Keeping a merchandising office open on Sunday to take care of orders in response to advertisements on radio or television or in newspapers appears to the committee to be just as serious a commercialization of the Sabbath as actually keeping the store doors open, and it is unfair to the small storekeeper who observes the Sabbath laws. The committee favors legislation to prohibit such activities.

5. Alcohol and narcotics: The use of alcohol and narcotics is a cause for great alarm. The committee urges programs of education and legislative regulation to reduce the menace to our society caused by both the sale and the use of alcohol and of narcotics. Specifically, it is in favor of legislation—

(a) To curb the drinking driver;

(b) To prevent the extension of legal hours and conditions of sale or the increasing of the number of legal outlets for alcoholic beverages, and to increase to 21 the age of persons to whom alcoholic beverages may not be sold;

(c) To implement the mandatory instruction in schools on the harmful effects of alcohol, narcotics and habit-forming drugs;

(d) To curb liquor advertising;

(e) To support and foster the local option approach to the granting of licenses for sale and distribution of alcoholic beverages;

(f) To place upon the beverage alcohol industry a greater share of the cost of the beverage alcohol traffic to society in terms of its contributory part in increasing the rate of mental ailments, industrial absences, motor vehicle accidents, juvenile delinquency and broken and destitute homes;

(g) To provide:

(1) More adequate facilities for the care and treatment of narcotic addicts;

(2) A better follow-up system for those who have been convicted as narcotic victims and released; and

(3) Stricter enforcement of the laws which prohibit the sale of narcotics and a more severe punishment for "pushers."

6. Juvenile delinquency: Believing that a juvenile delinquent is the product of his total environment and that his antisocial behavior is a reflection of a failure on the part of the home, the church, the school, and society in general to help him know the abundant life, the committee feels that the emphasis in legislation should be directed primarily to a prevention program. Better housing, more stability in homes and families, less necessity for mothers to work, a more uniform method of treating cases coming before the children's courts, more adequate probation facilities and machinery for closer cooperation among church, home, and court, are felt to be positive steps in this complicated field.

7. Family laws: The family is the basic unit in society and the preservation of its ties is a Christian duty. Present laws relating to marriage, divorce, and other family relations are confused and antiquated and in some cases actually encourage fraud. The temporary commission on the courts has proposed helpful changes in the court structure, but does not have power to deal with the entire problem. The committee favors the creation of a temporary State commission to study existing laws and procedures relating to the family and to recommend changes. It does not favor liberal divorce. It believes there is opportunity to strengthen the bonds of marriage through providing conciliatory services in courts dealing with family relations.

Officers of the Future—For Ships of the Future

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Rear Adm. Gordon McLintock, United States Maritime Service, Superintendent of the United States Merchant Marine Academy, at joint meeting of the Propeller Club, Port of New Orleans, and the National Defense Transportation Association, at New Orleans, La., January 10, 1956:

OFFICERS OF THE FUTURE—FOR SHIPS OF THE FUTURE

Thank you Mr. Turman, Mr. Chairman, Mr. Mayor, Mr. Kelley, distinguished guests, members of the Propeller Club and the NDTA, and ladies and gentlemen. May I express to you my thanks and appreciation for the opportunity to address you at this luncheon jointly sponsored by the Propeller Club of the United States, Port of New Orleans, and the National Defense Transportation Association, both of which organizations render such great service to American shipping and the allied industries.

I am glad to say I am far from being a stranger to New Orleans. For some years I ran between New Orleans and Los Angeles, Mexico, Montevideo and Buenos Aires, in the Pan American Petroleum & Transport Co. I passed for second mate in New Orleans. In addition I have the Mississippi River pilot's license from South Pass to Destrehan, some 30 miles above New Orleans, which I have kept current, although I should hate to have to use it again without some preliminary breaking in. I certainly hope you have straightened out the South Pass Bar so that ships no longer have to make that oblique approach with a hard right rudder at the crucial moment. Among my friends of those days were Mr. P. J. Dromgool, our marine superintendent; Mr. Cecil N. Bean, supervising inspector of the Steamship Inspection Service, who was one of the signers of my application when I took the examination for that service; Capt. Harry Koch, who for some years has been vice president of the Avondale Marine Ways, Inc., and is now also president of Koch-Ellis, Inc. In recent years I have made more friends and in addition have had the pleasure of meeting many of your shipping and transportation executives in the course of their visits to New York.

I am very grateful for the opportunity to meet with you here in New Orleans to discuss one of shipping's valuable assets—the United States Merchant Marine Academy. There has always existed a strong link between the shipping and transportation interests of the gulf region and Kings Point, extending back to the time our basic school was established at Pass Christian in 1943 to cope with the increased demand for both merchant and Naval Reserve officers during World War II. This bond has become strengthened as more and more of our graduates have entered your employ as officers abroad your ships, and as a number of them, having become chief engineers and masters have been promoted into your shore employ. As an example I need only to invite attention to your Propeller Club of New Orleans vice president, Capt. J. W. Clark, and vice president of the Delta Line, a graduate of the Merchant Marine Cadet Corps, class of 1940; Mr. Bartley W. Farrell, vice president, Standard Stevedoring Co., class of 1945; Capt. Richard E. McNeeley, River pilot and secretary, Crescent River Port Pilots, class of 1943; Mr. Erik F. Johnsen, operations manager, States Marine Line, class of 1945; Mr. Lawrence J. Hill, average adjuster, C. A. Sporl & Co., class of 1943; Mr. David M. Brown, Jr., southern representative, the American Waterways Operators, Inc., and president of the Kings Point Alumni Chapter here, class of 1944; and other distinguished graduates too numerous to mention at this time.

The merchant fleet is one of our country's greatest assets. We prepare our cadets to be the servants of the merchant fleet in peacetime and in time of war.

I do not intend to go into what I am sure would be repetitious details of when the Academy was established, why it was established, the construction of its buildings, or the record of its accomplishments during World War II, or the details of its wartime courses. I do believe, however, that you will be interested in knowing a little more about what we are doing now in the way of training officers for a career at sea in the merchant marine, with a collateral status as Naval Reserve officers. Also you will be interested in knowing what our courses of the future will embrace insofar as we can see the picture at this time.

During World War II the courageous and heroic actions of Kings Pointers serving aboard merchant ships in war zones throughout the world won well-deserved credit for themselves and the corps from distinguished military leaders—Fleet Adm. Chester W. Nimitz paid us a handsome tribute when he visited Kings Point and afterward sent me a photograph of the signing of the Japanese surrender on board the U. S. S. *Missouri*. He had written underneath: "In recognition of the part the cadet-midshipmen of Kings Point played in making the above scene possible." From Gen. Douglas MacArthur, the following telegram:

HONSHU, HOKKAIDO, JAPAN,
October 16, 1945.

SUPERINTENDENT, UNITED STATES MERCHANT MARINE ACADEMY,
Kings Point, N. Y.

I have directed that the surrender sword of Vice Admiral Ugaki, who commanded the Japanese naval forces of northern Honshu and Hokkaido, be forwarded to the United States Merchant Marine Academy at Kings Point, N. Y., as a memento of the valiant service rendered by the sons of the Academy in our struggle in the Pacific.

MACARTHUR,
Commander in Chief, American Forces, Pacific.

Many a Kings Pointer spent long days and nights in a lifeboat after being forced to abandon ship after torpedoing. Many of them were lost with their ships right off the mouth of the Mississippi during the early days of the war. The percentage of casualties sustained by the merchant marine during the war was nearly as large as the 4 percent experienced by the Army and Navy. Kings Pointers numbered only 3.6 percent of the entire complement of the merchant marine but the Academy is proud of the fact that her sons won 6 percent of the Distinguished Service Medals for outstanding acts of heroism. Two hundred and twelve Kings Pointers paid the supreme sacrifice in combat action during the war.

The Academy was formally accredited by the Middle States Association and has since then awarded the bachelor of science degree. We did not seek accreditation per se; we sought to graduate a highly professionally trained and well-rounded officer, and we were awarded the accolade of accreditation because of the successful manner in which we were accomplishing our mission. We believe that today's merchant-marine officer must be judged in terms of his general education, his physical superiority and good practical ability, his belief in democracy, his attitude toward America's leadership in world affairs, his readiness to serve his country as well as his developed professional abilities to perform new and complex shipboard duties as he enters upon his sea career. We endeavor to inculcate in him and to foster and mold the qualities of courage, loyalty, and integrity. In the confused and critical years which lie ahead he will be called upon to use more than a little of each. Education is essential. At the same time, without character and leadership, nothing is of any avail.

The young man who is admitted to the Merchant Marine Academy prepares for a definite goal: If he is to become a deck officer, he takes one specified curriculum; if he aspires to be an engineering officer, he takes another. In order to assist in promoting a proper working relationship between the deck and engine departments and to increase the efficiency of the ship as a whole, our deck cadets are given the rudiments of what we call engineering knowledge for deck officers, and similarly our engine cadets are given elementary instruction in the rudiments of navigation, etc.

To enter the Academy, he must take a competitive scholastic examination. To be eligible for consideration for appointment he must stand well up among those taking the examination. Then he is accepted for appointment within the population-determined State quotas and on the basis of demonstrated ability and promise. It is not believed the new permanency bill for the Academy will fundamentally change this procedure.

All of our cadet-midshipmen, so called, must become accepted in the Reserve component of the Navy as a condition of their appointment to the Academy, and upon graduation they receive commissions as ensigns in the Naval Reserve.

I believe it is typical of a Kings Pointer that he is forehanded and efficient and knows how to obey and to command. It is necessary that our cadets learn to discipline themselves in order that they can discipline others. It is essential for a merchant officer just as it is for a naval officer. We have been complimented on the appearance of the Kings Point cadets. I want to tell you that except for our regular Saturday morning inspections we have no drill periods in our curriculum, and the high standard which observers have been good enough to attribute to us comes, I believe, from that esprit de corps which is an integral part of every Kings Pointer.

You will note that in much the same way that the United States Military Academy is referred to as West Point, the United States Merchant Marine Academy is, because of its location in the village of Kings Point, known as Kings Point, and the cadets as Kings Pointers. Less than a mile away is the much larger village of Great Neck, and but for this accident of geography we might easily have been known as Great Neckers.

The Academy has enjoyed, indeed has been inspired, by the encouragement and cooperation it has received from the shipping industry.

The individual steamship companies and the organizations in which they are grouped demonstrate an active interest in the Academy and are most cooperative. I would like to take this opportunity to thank you gentlemen here, representing the steamship companies of the gulf area, for your demonstrated interest in our cadets during their course of training and for the employment opportunities you havo offered them and continue to offer them upon their graduation. Knowing that most of you are active in the Propeller Club I should also tell you how much we appreciate the fine resolution with respect to Kings Point, and merchant marine officer training, sponsored by your group at the American Merchant Marine Conference in October last year.

For the betterment of Academy courses and the devolopment of new ideas for the program, the advice and recommendations of the industry are sought. This applies not only to steamship operators but to companies related to maritime activities or serving the industry with machinery, boilers and a variety of other equipment. A great many of these companies have responded most generously by giving us equipment and a number have stimulated interest on the part of cadet-midshipmen through the establishment of prizes for award at graduation.

I must also mention the assistance and encouragement we have always received from the armed services—the United States Merchant Marine Academy has always enjoyed a close liaison and the full cooperative support of the Navy, the Army, the Air Force and the Coast Guard, and the citizenry. When President Eisenhower was inaugurated the Navy very kindly transported our entire student body by ship to Washington, D. C., in order that it might participate in the inaugural parade. In addition, the Navy offers our first classmen the opportunity of making training cruises in naval vessels from time to time.

The Army has given Kings Point, as a Federal Academy, pride of place in the Armed Forces Day parade line of march in New York City immediately behind West Point.

These are of course highlights, but there is a constant interchange of helpful information and a continuing readiness on the part of the armed services—the Army, Navy, Air Force and Coast Guard to help Kings Point achieve its mission in every possible way.

On the 10th anniversary of the dedication of the Academy, President Eisenhower sent a congratulatory telegram which expressed the hope that "The United States Merchant Marine Academy continue in the years ahead to prepare young Americans for leadership in our modern merchant marine."

Senator Lachèvre, head of the French Senate Committee for Merchant Marine Affairs visited the Academy last year in connection with a French program to coordinate all of their scattered training schools in one Federal institution. He appeared to be very favorably impressed with Kings Point, and in fact his concluding comment was: "c'est magnifique!" We were constrained not to disagree with him. Subsequently we received a very nice letter from the French Ambassador to the United States, His Excellency Maurice Couve de Murville.

The enrollment at Kings Point is approximately 750 in residence, with a class, the third class, of about 220 at sea. We take in something over 300 cadets each year and each year graduate in the neighborhood of 200—that is to say, 100 deck officers and 100 engineer officers. While no one knows better than you, gentlemen, the fluctuations of the maritime industry and the varying periods of overemployment and underemployment, it is generally agreed that on a long-range basis a minimum of 1,200 replacement officers are required annually. Of this number, the Federal academy and the State maritime academies are now providing nearly 500. It will be seen, therefore, that opportunity for advancement from the ranks remains open for outstanding, unlicensed personnel. At present, the balance of the annual required replacement is furnished from the unlicensed categories—some 700.

I should like, here, to pay a tribute to those officers of the merchant marine who have come up "through the hawsepipe." This includes some of our outstanding merchant marine officers. There are always a goodly number of cadet-midshipmen at Kings Point who have come from before the mast, and naturally they are among our best, having chosen the sea as their profession and then having done something about bettering themselves.

In our studies of the background, educational and empfloyment experiences, of the young men who come to Kings Point, we have noted with satisfaction that the number of candidates who have had previous service aboard a ship is increasing from year to year. In our present plebe class, which entered the Academy last August, 41 of the 300-odd entering cadet-midshipmen, or 12 percent, had previous sea experience. It is interesting to note, too, that in this class over 100 of the young men have near relatives who have served in either the merchant marine, Navy, or Coast Guard as a career. We believe this to be a good sign, indicating that men of the sea are influencing the careers of their sons and nephews, bringing to the profession men with salt water in their veins.

We are not completely satisfied with the number of candidates from the sea. We are making every effort to increase the percentage and have begun a program which we hope will lead to a still greater number of applications from young men who have already gained experience at sea and have found it to be the career of their choice. We are embarking upon a program to distribute press releases concerning scheduled entrance examinations to officials of all seamen's unions. These releases include general information regarding basic eligibility requirements and tell how one can obtain additional detailed information about entering Kings Point. We will attempt to secure space in various union periodicals for the purpose of regularly and periodically presenting information about entrance requirements. We are going to endeavor to arrange, through union officials, for the display of Academy posters and information on bulletin boards in union hiring halls. Finally, our cadet-midshipmen themselves, when they go aboard ship during their second year, will be better prepared in the future to tell the story of Kings Point and its opportunities to any qualified young men with whom they are shipmates.

We do, as many of you know, credit an applicant who has had previous sea experience with a bonus of five points on the competitive scholastic test and, in addition, a waiver in age is granted up to age 23 for men who have been in the merchant marine and in the Armed Forces. It has been suggested that this allowance be increased. Our problem here, however, is the danger of accepting a young man who does not have the ability to complete the program. It would be quite unfair to a young man if we accepted him for appointment, knowing ourselves that his standing in the examination indicated his inability to keep up with the course of study.

It is our hope that a good percentage of the young men serving aboard ships of the American merchant marine today will set Kings Point as their goal. We hope they will continue to study at sea, prepare themselves for the competitive examination as well as in those subjects that constitute the courses of study at the Academy. The United States Maritime Service Institute formerly conducted courses for men at sea, but it is our understanding that they are now being successfully handled by the Maritime Studies Institute in New York City, a private organization.

Reverting to our curricula and training procedures, I should like to say that in keeping with postwar trends, extensive use is made of training aids, both audio and visual, but mention of the practical aspects of the curriculum is hardly complete unless reference is made to the conventional laboratories, such as the drafting room, navigational chartroom, physics, chemistry, thermodynamics, strength of materials, and hydraulic laboratories. Certain special laboratories, however, are also provided: the gyro lab, the planetarium, the steam and diesel laboratories, the engine repair laboratory, and the electrical laboratory. The electronics laboratory deserves particular mention. Here the deck cadet-midshipmen are taught theory and practical use of radiotelephones, depth finders or "fathometers," radar, and loran.

At the Academy we are alert to changes within the industry which indicate the desirability of changes in our curriculum. For example, indicative of a new marine trend, there will be a gas-turbine powered converted Liberty ship operating next summer. We have offered gas turbine instruction for some time, and this ship the *John Sargent*, will have a Kings Pointer, Mr. William Van Cott, as her chief engineer.

Our preparations for nuclear training are further illustrative. On November 11, 1955, addressing the Society of Naval Architects and Marine Engineers at its annual meeting in New York, the Honorable Clarence G. Morse, the Maritime Administrator, said: "This very week we have invited proposals and prices from manufacturers covering a nuclear propulsion plant for a merchant ship. We are asking them, contingent on congressional approval and funds, to furnish us with a nuclear propulsion plant to be fitted in a tanker-type vessel by June 1959. We are also asking them to submit other proposals for design studies and developments for a nuclear propulsion plant which may offer greater technical and economic advantages for the purpose of having a second ship in operation by June 1961."

Anticipating developments such as these, we at Kings Point have long been planning the program which will be required to train the officers of the future for the ships of the future. Our first task was to determine the qualifications required of the engineering officers of these nuclear ships-to-be. Fundamentally, the marine nuclear engineer will need to be a well-qualified steam engineer with "something plus," and this something plus will involve additional education in nuclear physics, nuclear engineering, and practical experience in the operation of a reactor. The responsibility of the Academy then is to produce engineers with a sound knowledge of marine steam propulsion plants, a background in nuclear physics, and study in nuclear engineering.

For the past 14 years we have been in the business of training marine engineers, and the competency of our graduates is a matter of record. As early as 1949, we undertook to develop in our cadet-midshipmen an interest in nuclear energy, and at that time we sponsored at the Academy a public forum, the Citizen in the Atomic Age, with Maj. Gen. Leslie R. Groves as the principal speaker. Since that time, we have arranged for a number of exhibits on atomic energy, including a permanent panel display showing the schematic flow of nuclear power from the point of its generation in the reactor, through the heat exchangers, to the turbine, to the generator, constructed by Westinghouse and given to us by the Hayden Planetarium; a model of a nuclear-powered merchant ship, provided through the courtesy of the Newport News Shipbuilding & Dry Dock Co.; a model of the *Nautilus* loaned by the General Dynamics Corp.; a power reactor exhibit loaned by Babcock & Wilcox; and a research reactor model provided by the American Machine & Foundry Corp.

In 1950 we gave our first course in the fundamentals of nuclear energy to a selected group of cadet-midshipmen. Since that time there has been an increasing demand on the part of the young men for this course which as it is now given, includes a detailed study of the atomic structure and atomic particles, of electrons, protons, and neutrons, of radiation instrumentation, of nuclear reactions, and of that most important of all known reactions—the fission of uranium—235.

As I said previously, our courses must be geared to the needs of the industry. It now seems that a nuclear-powered merchant ship may be authorized. We are now prepared to undertake the nuclear engineering phase of our program. In preparation for this day, several members of our engineering faculty have been doing graduate study in the field of nuclear engineering. With the beginning of the new term, in March, we hope to offer a course which will treat with nuclear theory, reactor types and construction features; fuel and fuel elements, shielding problems; types and characteristics of coolants and coolant pumps; heat exchangers; radiation control; radiation detectors and permissible dosages; safety devices and instrumentation; shielding and insulation; radio-active waste disposal; operation, maintenance, and permissible repair procedures as applied to shipboard operation of a marine nuclear powerplant.

Ultimately, the training in reactor operation will need be a part of the engineering program at the United States Merchant Marine Academy. As more and more atomic reactors power our merchant fleet, the number of engineers trained in their operation must be expanded. At that time, the Academy should have its own training reactor in operation. While that day is still far in the future, we must continue to look ahead and plan in order that we may have ready "the officers of the future to man the ships of the future."

A year or two ago, Mr. Jimmy Jemail, the inquiring photographer of the New York Daily News, asked me what I thought about flying saucers. I managed to get around that one by telling him that if and when flying saucers came into general use Kings Pointers would navigate them. I should like to say now, but in a more serious vein, that when atomic ships make their appearance, Kings Pointers will definitely operate them—not exclusively—but certainly well in the van.

Thank you, gentlemen.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. ROGERS of Texas. Mr. Speaker, I would like to call to the attention of the Members the third in a series of articles on mental health. This series was prepared for the Amarillo Globe-Times by two of the paper's fine writers, Louise Evans and Mary Tom Rasco. The articles deal with a problem that is not peculiar to one State, but is of national concern.

The article is as follows:

THE MENTALLY ILL CAN BE CURED—KANSAS LEADS WAY IN REHABILITATION

(By Louise Evans and Mary Tom Rasco)

You are ill. Not unconscious from an automobile wreck, not in delirium from a high fever. Just ill. Too sick to go to work.

Your family or your friends take you to the police station where uniformed police surround you. Strangers on a jury decide whether you are entitled to go the hospital. Maybe you spend a few nights in the jail while you wait to go to some faraway town.

When you reach this hospital, no doctor or nurse bothers to see you or even asks what hurts. You are assigned a place in a ward so crowded that the beds are standing edge to edge—even the attendants have to crawl over them. Maybe you only get a mattress on the floor. There are 3,000 persons into an area built for 1,800.

In the daytime you can join the rocking-chair brigade, lined up along ahe corridor, where you rock and look at the wall. Or you can sit on the floor with your head bent to your knees, hoping to shut out the sights around you.

Perhaps the nights are worse. Others much sicker than you are in that ward, and their frightening actions make a thought pound like a pulse in your head, "I'll be like that soon—I'll be like that soon."

You have nothing of your own. If you're a woman, you have a shapeless dress exactly like those on every woman patient you see. If you're a man, you can't even have a pencil or paper, nor pictures of your children in a wallet, nothing to comfort and remind you what it was to be well.

Bath day comes once a week, maybe. There are 3 kinds of food—1 for the doctors, 1 for the attendants, 1 for you. You know which one is the worst.

Sometimes you get some medicine or a treatment, but no one explains how it will help you, so you sweat out in terror the new sensations.

Would you get well? Or would you quit trying—and dutifully die to make way for another patient?

Or if you are mentally ill—for it is only in the United States hospitals for the mentally ill that such a way of life can be found today—would you close your mind to all reality and eventually forget even the feel of freedom, the look of your child's face, the warmth of a friend's hand?

ATTENDANTS UNTRAINED

When Gov. FRANK CARLSON, of Kansas, appointed a special committee to look into the Kansas State hospital program after the exposure of the shocking conditions in 1948, it reported some interesting facts:

More Kansans had been committed to State hospitals for the insane than had graduated from the State university and teachers colleges between 1866, when the first hospital was opened, and 1946. Approximately 45,000 Kansans had been committed. Of this number, slightly more than one-third, 17,000, had been discharged as improved; 15,000 had died and the remaining 23,000 were either in the institutions, had been transferred elsewhere, discharged as unimproved, or had run away. (A like study of Texas long-term statistics might be just as interesting.)

In 1948, as 1 doctor describes: "There was 1 nurse (in Topeka Hospital) and she was dying of cancer. There were 120 attendants, none of whom were particularly trained for his job. The attendants worked 12 to 14 hours a day, many slept in the same wards

in which they worked. Naturally they had to use penal colony techniques to care for the 1,800 patients here. On one day, there were 100 patients under restraint (straitjackets), screaming in pain and fear.

"There was no occupational therapy, no recreational therapy except a movie once a week and an occasional square dance for some of the improved patients. Patients got ice cream once in a year—on the Fourth of July. Later, when the first outdoor picnic was held for some of the patients, they seemed reluctant to eat the sandwiches. Finally one asked the question that seemed to be pervasive: 'If we eat these now, does that mean we won't get any supper?'

"If a patient assigned to a job around the hospital made the mistake of doing a job particularly well, he might remain in the hospital for a long time because it was cheaper to keep him there than to hire someone from the outside to do the job. At least one patient was in the hospital 23 years, long after he was cured, because he could take excellent care of the powerplant."

(The same plan for patient labor is used in Texas today.)

Yet by 1955, the Topeka Hospital was a model training hospital for workers in mental health, and along with the other State hospitals of Kansas was racking up a record—the only State system in the United States where hospital population had steadily gone down for 5 years.

BEYOND THE CALL OF DUTY

Let's take a look at the hospital where this remarkable recovery of the mentally ill has been established.

The Topeka State Hospital, not far from the downtown business area, is formed of a group of beatup, red brick buildings, some of them more than 75 years old. Screens are in need of repair, doors sag, floors are rotted. Kansas has voted a half-mill property tax to renovate and modernize its buildings in the next decade, but it didn't build in 1949, when the new program was started.

Instead the money went into salaries for personnel and into treatment of the patients. In 1949 Kansas stood at the foot of the class—48th—in salaries for staff personnel. It has brought such payments steadily upward, but frankly, as pointed out by Dr. Alfred Bay, superintendent of the Topeka Hospital, even today salaries for trained personnel is not far above the average paid in other States, some of whom have only untrained personnel.

So high salaries alone won't account for the high morale one sees here. There is a feeling of pride. These Kansans are winning the battle against mental illness, and like soldiers in battle they are giving services beyond the call of duty.

A second reason for the high morale comes from the training which the workers are receiving under the research program of the three-way plan participated in by the Menninger Foundation, Winter Hospital (Veteran's Administration), and the State hospital system. (We will tell you of this joint training program later.)

TRAINING FUNDS VOTED

Kansans had a choice to make in 1949. It could build more beds for mental patients—the Topeka hospital had 1,800 individuals crowded into accommodations for 1,400.

(Texas has 16,500 patients in accommodations built for 10,500.)

It could tackle the problem of the rising rate of mental patients in the population by voting bond issue after bond issue, erecting human warehouse after human warehouse. During 5 years, it would have taken almost 2,500 more beds to hold the patients who came for treatment had there not been a high dismissal rate.

Kansas chose instead to forget the warehousing method and get into the business of rehabilitating its mentally ill.

First move was to vote a million dollars for the training of personnel. In Topeka the Menninger Foundation hospitals and the Veterans' Administration hospital, Winter, were examples of what could be done if one had trained personnel instead of custodians in charge of psychiatric hospitals.

The Topeka unit was turned into a training hospital, and slowly the men and women trained there sifted out to the other hospitals. It is notable that in the year after the first psychiatrist was sent to Larned Hospital, the cost per patient released began to drop and decreased steadily.

In fact, the Topeka hospital is the pilot program for the State hospital system. Techniques tried there are polished to perfection and transferred to the other units. The only out-patient clinic where patients are treated by psychiatric teams in outer offices in the State hospital system is here, and it is estimated it saved the State 33,000 days of hospitalization in 1954.

The newly established Children's Unit is a center for experiments in techniques, while its young patients are being led into normal channels of activity. Neurological diagnosis and surgery are conducted in Topeka.

From this hospital, located in the State capital, it is hoped to springboard the first traveling clinics, staffed by psychiatric teams that will go into other Kansas communities to inaugurate and support preventive mental health programs—to stave off eventual hospitalization of that 1 in 10 Americans predicted by the National Association for Mental Health.

FAMILIARITY HELPS

Since 1949, basic changes have been made in the organization of State hospital work. Today there are four sections in the hospital, each headed by a psychiatrist. A patient who enters Topeka State Hospital stays in one section until released; the familiarity of the same faces and the same rooms has treatment value. No longer are there "back wards" to which the more seriously ill can be banished and the threat of which once hung over each frightened, tense patient.

The hospital staff applies the bit of knowledge that too few of us recognize: even the incurable psychotic is rarely "violent," and, if so, the periods of violence are infrequent. Topeka personnel are trained to watch for the always-present signs of approaching disorder. Only then is the patient led off to the "closed" rooms of the ward.

Patients in a mental hospital have the usual physical ailments, too. Physical medical work therefore plays a big part in the hospital routine. The county medical society furnishes consultants for these ailments. In Topeka, the mental patients who have tuberculosis are housed in a cottage on the grounds.

IMMEDIATE ENTRANCE

There has been one definite pattern established in the Topeka hospital—as the number of employees has gone up, patient discharges have increased. After five years, the Kansas State hospitals have managed to reach the level of 1 staff member equal 2.11 patients. In hospitals of 8 surrounding States, the employee-patient ratio is 1 to 3.71. Hospital populations are increasing in those States, falling in Kansas.

Probably the most heartening news from Kansas is that emergency patients can be accepted immediately. Such waiting lists as exist on any given day are those which are in process of being examined. (A lot of mentally ill Texans are being held in jails because Texas State hospitals are so overcrowded that waiting lists are lengthy.)

Now, this successful Kansas program has cost money in operating budgets. In Osawatomie, the per patient cost went from $1.29 in 1949 to $3.50 in 1954; in Larned, from $1.40 to $3.20; and in Topeka—the training hospital—it has increased to $4.99. But in that same period, the rate of dismissals at the hospitals have increased 3 to 1.

In spite of all those figures you see on the costs of illness to industry through lost working days, on the economic waste of incapacitated manpower, no one has ever been able to establish the worth of a human being. What statistic is one going to balance against the increased cost of care which results in men and women being returned to active life, and children given a second chance after a false start?

Something to Think About

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. OSTERTAG. Mr. Speaker, President Eisenhower and Prime Minister Eden rendered a great service to freedom's cause when, in their Declaration of Washington, they pinpointed, for the benefit of uncommitted nations, the difference between communism and liberty under law. I am one who believes, by and large, that we in the West place far too much emphasis on what the Reds have to offer, and far too little on what freedom has to offer. Any neutral nation which really cannot make up its mind between communism and freedom does not need foreign aid so much as it needs a psychiatrist. The President and the Prime Minister pointed out why.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an excellent editorial on this point from the Buffalo (N. Y.) Courier Express of February 3, 1956:

DECLARATION OF WASHINGTON WARNS AGAINST RED WILES

Whether or not the Declaration of Washington will go down in history with the 14 points, the Atlantic Charter, and other famous statements of international policy, this must be said for it: President Eisenhower, Prime Minister Eden, and their advisers gave the so-called uncommitted nations—specifically the recently colonial and newly sovereign countries of Asia and Africa—something to think about.

The something was a balance sheet setting forth the comparative records of the Western democracies and the Communist dictatorships in the matter of making good their promises of independence and self-determination. These quotations from the Declaration of Washington tell much of the story:

"During the past 10 and more years 600 million men and women in nearly a score of lands have, with our support and assistance, attained nationhood. Many millions more are being helped surely and steadily toward self-government. Thus, the reality and effectiveness of what we have done is a proof of our sincerity. * * *

"During this period of notable cooperative progress in the free world those who assert the supremacy of the state and deny the inherent rights of man have also been active. Millions of people of different blood, religions, and traditions have been forcibly incorporated within the Soviet Union, and many millions more have in fact, although not always in form, been absorbed into the Soviet Communist bloc. * * *

"Any free nation that may be persuaded, by whatever threat, promise, or enticement, to embrace communism will lose its independence and its people will forfeit their rights and liberties."

Real Bread Is Back

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. LESINSKI. Mr. Speaker, I have come across an article in the Catholic Digest for February 1956 which I, as a father, as an American and as a Member of Congress, recommend that everyone in this country should read. The article, entitled "Real Bread Is Back," discusses the plans being carried out to return to the white bread we eat the most nutritious element in wheat, the wheat germ.

Nature has supplied us with all of the food elements essential to the human body. Too often the food industries of our country, in attempting to produce greater volume and more dollars, cast out these essential elements and bring in substitutes. When are we going to learn that in spite of the progress that has been made in chemistry in this country, we can never duplicate nature in its entirety? The man-made product might be close or similar; it might resemble the natural product in many respects, but it can never achieve the end of completely duplicating all the primary and secondary elements of nutrition that nature has produced. We need not wonder why we as Americans have finally taken a back seat to Russia at the winter Olympic games; the Russians do not know what chemically treated white flour is.

It is gratifying to note that after all these years our bakers and nutrition experts have rediscovered the element which made bread the staff of life.

I believe that the article, which I quote below, illustrates quite vividly that what we in this country need is a more complete diet and less concentration on volume and dollars.

The article is as follows:

REAL BREAD IS BACK

(By James C. G. Conniff)

Your grocery store will soon have a white bread more nourishing than whole wheat. In vitamin E alone, which helps prevent heart disease and is essential to its rapid cure, the new bread is seven times richer than anything now on the market.

It is made from wheat-germ flour, and it will cost no more than your present loaf. Bakers once said that such a flour could not be stored. They now call it the most revolutionary breadmaking development in 2,000 years.

In a blindfold test made by 270 Chicago women, 2 out of 3 found the new bread better tasting. At Ann Arbor, Mich., a baker changed over to wheat-germ flour without advertising the switch. His sales jumped 280 percent in 3 years. An Evanston, Ill., baker says that wheat-germ flour is so rich that he needs less milk in baking with it. When a big national bakery test-marketed wheat-germ bread in Macon, Ga., sales gained 30 percent in 90 days.

Delighted bakers officials are testing it further in Texas and Florida. Plans for nationwide marketing are now being made.

Biochemical experts at the University of Chicago and the Wisconsin Alumni Research Foundation have found that wheat-germ flour has more protein, and fewer calories and carbohydrates than its nearest rival, enriched white flour. That should prove good news to everyone who must watch his weight.

Its vitamin content (including niacin, thiamine, riboflavin, needed to help build stronger bodies) is far higher. The new flour has heavier concentrations of the mysterious "trace elements" (traces of other minerals and acids that aid vitality). The wheat germ itself, a mere 2 percent or 3 percent of the flour's total volume, seems also to account for its creamy texture.

Not all nutritionists agree that wheat-germ bread really tastes better. Some of them are of the opinion that some additional tinkering must be done with the flour formula. But Dr. Philip H. Derse, of the Wisconsin Alumni Research foundation, thinks that if the slightly yellow wheat-germ flour were baked in a smaller, less airy loaf, the bread would become as attractive to the palate as it now is to the eye. In short, good baking is all that is necessary to make the new bread taste good.

The lasting quality of wheat-germ flour is another matter that positively invites the baker to do right by it. It can be stored for more than a year in temperatures ranging from 55° to 90° F. Fresh, tasty loaves have been baked from flour 4 years old.

The wheat germ itself looks like a dark pinhead at the base of each grain. In it is packed all the nourishment that has made wheat the staff of life since biblical times. Yet for nearly a century this vital speck has been extracted from commercial white flour. That is standard practice both in this country and most of Europe.

An oil in the wheat germ, heated by the high-speed steel rollers of modern milling, softens the germ, so that it mills flat rather than crumbled. If left in, these oily flecks soon make the flour rancid, so millers sift them out. Farmers used them to fatten livestock. Health faddist sprinkle them on their breakfast cereal.

Hogs and faddists thrived. Ordinary citizens were left with a loaf of white bread attractive in appearance but lacking in nourishment. Laboratory animals fed on it died. Since about 1940, there have been various moves to put back into white flour the good things God put into the wheat kernel. Bakers in most States are now required by law to restore artificially to their bread the vitamins and minerals the millers sift out. But this "enrichment" program puts back only a small proportion of the vitamins that were in the wheat kernel.

Besides, "enrichment" has done almost nothing to slow the decline in bread consumption. Half a century ago, our forefathers ate 210 pounds of bread a year. We eat less than 150.

But because of two seemingly unconnected events, this unhealthy trend may be reversed. The first event was a Sioux City, Iowa, banker's $500,000 gamble that a wheat-germ flour could be milled to make a bread like the kind he ate as a boy. Millers laughed at the idea, but the banker, Dan T. Hedges, went ahead with the experiment anyway in mills he owned himself. It was a magnificent try, but it failed.

About all the banker got for his money was a fat pile of reports showing that no matter how you prepared it, wheat-germ flour always spoiled too fast to be marketable. Sadly, the banker wrote off his half-million-dollar fizzle. That was more than 50 years ago.

Our story jumps now to the prohibition era and Morris, Ill., where a miller had taken over a padlocked brewery. The massive aeration system there was ideal for making beer, but too powerful for cleaning wheat. The great gusts the machine produced would simply blow the wheat away. In converting, therefore, the miller hooked up only part of it.

Then, one day in 1930, the mill superintendent decided that he could clean the wheat better by using the whole aeration system and providing controls. He was overhauling the plant anyway, so why not try it? The controls kept the wheat from blowing away, all right, but those giant gusts of air also cooled the steel rollers. When the superintendent checked the grist for the usual flattened wheat germs, he found none.

Thereupon, he did a bit of research with a microscope, and discovered that the air-cooled rollers had kept the wheat germ from softening; it had crumbled like the rest of the grain. To the superintendent, this meant pure disaster. Since he couldn't sift out the pulverized wheat germ, he was sure that the flour would spoil. The owner had already put too much money into the overhaul to make another change, so he stored the unusable flour and closed the mill.

Months passed, and a casual check revealed that the stored flour had somehow not gone bad. So the miller reopened his plant and tried to market the strange product, wheat-germ flour. But bakers refused to handle it because of its reputation for spoiling. Disgusted, the miller packed his flour off to a warehouse, shut down his mill, and steered clear of old breweries from then on.

In 1935, a newspaper-circulation man in Chicago ran across the peculiar story and felt his pulse rate leap. He at once got samples of the stored flour. When tests showed that the stuff was really wheat-germ flour and that good bread could still be made from it, he moved fast.

First, he bought up the miller's interest in the process. Then he leased the converted brewery in Morris. Last, he went to an attic in Sioux City, Iowa, and got the dust-covered bundle of wheat-germ-experiment reports his grandfather had stored there long ago. (Yes, he was the grandson of Dan Hedges.)

Having come from a banking family, he knew where to lay hands on needed money. Over the last 20 years, Dan Hedges Brown, named after the wheat-germ pioneer, has poured $2½ million into that abandoned brewery to perfect the process the superintendent stumbled onto. Now that wheat-germ flour seems to be on the brink of being accepted nationally, Dan expects to raise production from 800 to 1,600 hundredweight sacks a day. That should be enough to at least prime the pump for national demand.

Dan Brown found pretty much the flour he was after within the first year, but that does not mean that he found a smooth path ahead. The years just before the Second World War were heartbreaking. Though he is still vigorous at 57, his face shows the strain of getting wheat-germ flour patented in 29 countries while at the same time fending off undesirable customers. He had to cope with Nazi agents, quietly curious emissaries from a fast-arming Japan, and the bully boys of Benito Mussolini, all of whom were ready to pay a high price for his fabulous toughener of troops.

But Washington had asked Dan not to do business with a possible enemy. Our Government, though slow in taking action, was enormously interested in the process. It was just about to undertake the long, delicate job of winning bakers over to making the new bread for our own Armed Forces when

war came. Pearl Harbor shelved the whole project.

And when the war ended, the big baking chains and their supply mills showed no enthusiasm for the new flour. Although Brown proved to them long ago that they could convert standard milling equipment to wheat-germ manufacture in a single swing shift, without loss of production, the mills hung back.

However, there are hopeful signs of a change of heart. The powerful trade publication, Northwestern Miller, for example, had fought Dan Brown for years. Then last October it published an enthusiastic article about the new flour, citing the number of mills being licensed to produce it. Other publications are following suit. National advertising will do the rest.

Russian efforts to get control of Dan's formula have put a cloak-and-dagger note into the story and added gray hairs to his head. Not long ago, some engineers from Amtorg, the Soviet trade commission, began phoning him at odd hours. Finally, they laid their cards on the table: $5 million held available in a New York bank as a down payment on the secret of wheat-germ flour.

Dan rejected the offer. Of course, he did not want the Russians to starve, but he knew that our Government doesn't like to see vital discoveries handed over to a possible enemy. Much of the Red Army's endurance comes from the highly nutritious black bread the Russians have been eating for generations. Their desire for this new capitalistic white bread was natural enough. But why help strengthen the Russian Army?

Dan knew perfectly well that the Communist leaders would probably use the wheat-germ bread to boost their own prestige among the Russian people. And he could imagine the propaganda victory the Reds could score by handing it out among undernourished people in the free world. It made better sense to Dan that our surplus wheat, properly milled, should reach those who need it under United States and United Nations rather than Soviet auspices.

And then there is the matter of our own national health. Recent disclosures about the shocking state of American muscles have caused President Eisenhower to emphasize publicly the need for more participation in sports and exercise. But there is a nutrional aspect to the matter too, which wheat-germ bread can do much to remedy.

Through Dan's friend Msgr. Luigi Ligutti, the wheat-germ discovery has been brought directly to the attention of Agriculture Secretary Ezra Taft Benson. Long talks between Dan and the Secretary have helped put the prestige of Mr. Benson's Department behind wheat-germ-flour promotion.

L'Osservatore Romano, the Vatican newspaper, recently ran a glowing article about wheat-germ flour. The paper hailed its discovery as good news for humanity. Monsignor Ligutti, the Holy Father's permanent representative for agriculture in the United States as well as director of the National Catholic Rural Life Conference, saw to it that the story went out over Vatican radio, too. He had copies sent to every pastor in Italy's 25,000 parishes and to all bishops throughout the world. "I've been trying to help Dan sell this wheat-germ idea," he says, "for many a long year."

Dan Brown hopes that a big byproduct of his better bread will be a better understanding among people everywhere.

With this thought in mind, through a trust named in memory of his grandfather, he is giving away all but 10 percent or 12 percent of the royalties on his process. Groups like the 4-H clubs, the American Legion, Dan's college fraternity Psi Upsilon, and Chicago's Shrine hospital will eventually share millions. The Archdiocese of Chicago and Franciscan missionaries will divide 7½ percent of Dan's income in perpetuum.

Future of Women in Business and Politics

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a speech delivered by Mrs. Lucile M. Wright, of Jamestown, N. Y., before the American Association of University Women of Jamestown:

I have been asked to speak to you tonight on the future of women in business and politics.

I have no crystal ball into which I can gaze and foretell what the future will bring to women in general. I can, however, say to you that each new year brings more and more qualified and capable women into positions of prominence in every field of endeavor. The number, however, is far too small for us to do more than be considered a rare bird when we invade the world outside our homes.

Leave us face it, men are here to stay. You have all heard the story—viva la difference.

My point is, men will continue to make their contributions to the workings of this world, but women have their own great and wonderful contributions to offer side by side with the men and if we can put these contributions to their fullest use we will have fulfilled our duty to ourselves and to our country.

I am reminded of an insurance advertisement which states, "The future belongs to those who prepare for it." I would like to add, "The rosy future for women in business and politics is here today if we would avail ourselves of the opportunities made possible for us by fearless women pioneers."

The same characteristics and qualities that make a woman valuable in the home, make her valuable in active community work or in the business and professional world or in politics. She is conscientious, she wants to get at the truth, she wants to do a good job. She approaches problems with sympathetic understanding, she is tireless in her efforts when an ideal is to be preserved. When a woman offers these qualities, she complements the talents and abilities which men bring to any task. We need not argue which is superior—it is enough to emphasize that women have invaluable contributions to make and a woman should be given every opportunity to prove her worth; a great loss is suffered when she is denied that opportunity. A woman will attack a problem with honesty, integrity, and unselfishness. She has great courage, unswerving persistence, and dogged determination.

Considering the fact that women control the wealth of this country, they have not asserted themselves as much as they should, nor have they demanded the representation in local, State, and Federal Government to which they are entitled, and which they could have if they so chose.

Few of us are represented by our own sex on boards of directors of corporations. Of all the railroads in this country, only one, and that one very recently, has placed a woman on the board of directors. I am referring to the New York Central Railroad and Mr. Young who selected Mrs. Lila Wallace, editor of Readers Digest, to lend the "woman's touch" in railroading. Mr. Young explains that he did not select Mrs. Wallace because he wanted a woman who could run a railroad—he states—"I wanted an intelligent woman who could make top decisions—not only about the housekeeping of a railroad, but corporate decisions where a woman's intuitive sense would make a valuable contribution."

Only a comparatively few years ago women were forced to fight for the many rights we take for granted today—the right to assemble—the right to vote—to serve on juries—even to be able to work with dignity. The right to work and have respect given her as a worker, we owe to those who have paved the way for us, a sincere vote of thanks.

Even today in this wonderful country of ours where freedom such as is enjoyed no place else in the world there are many laws which are highly discriminatory against women and children and until women are ready to assume their rightful place in the political life of their community and shoulder their obligations to their community and to their Government these sad conditions will continue.

We all know about scores of women who have been highly successful in the business world.

We have come to expect to read of outstanding women in the professions of law and medicine, science, and the arts. We all know many, many women who have that built-in radar system better known as sixth sense, a quality absolutely necessary in a top-flight secretary. These are the girls on whom the great and the near great depend so completely.

A friend of mine in personnel work was interviewing women for the position of secretary to a very exacting executive. The salary was excellent but the work exhausting. The girl who got the job gave this for her answer when she was asked what she considered her special qualifications for the job—"I can look like a woman, and think like a man, act like a lady and work like a dog."

The remarkable courage displayed by MARGARET CHASE SMITH, our beloved Senator from Maine, who is respected and admired by men and women alike throughout the Nation is without precedent in the annals of American Government. Her statement to the Senate on June 1, 1950, entitled "Declaration of Conscience" came from the heart. Mrs. Smith spoke as a woman, as a United States Senator, as an American. Senator SMITH was deeply concerned about the serious national condition prevalent at that time. That she would dare to openly criticize her colleagues in the United States Senate would have meant political suicide to a more timid soul. MARGARET SMITH hit the nail on the head when she stated, "I would like to speak briefly and simply about a serious national condition. It is a national feeling of fear and frustration that could result in national suicide and the end of everything that we Americans hold dear. It is a condition that comes from the lack of effective leadership in either the legislative branch or the executive branch of our Government. Today our country is being psychologically divided by the confusion and the suspicions that are bred in the United States Senate to spread like cancerous tentacles of 'know nothing, suspect everything' attitudes." Pursuing her declaration further, Senator SMITH offers this suggestion, "I think that it is high time for the United States Senate and its Members to do some soul searching—for us to weigh our consciences—on the manner in which we are performing our duty to the people of America—on the manner in which we are using or abusing our individual powers and privileges." That display of 20th-century courage, as MARGARET CHASE SMITH stood, the lone woman Senator surrounded by her male colleagues, will go down in the annals of history. The high and the mighty, the great and the near great listened, were momentarily stunned but broke into tumultuous applause which had

its reverberations around the world. MARGARET CHASE SMITH, the woman, has done much to immortalize the female of the species.

The women of the world and more particularly the United States, who have attained the coveted high positions in the business world, those who are serving as legislators in the States, in the House of Representatives, in the Senate, as judges, as ambassadors, as Cabinet members, as officers in our Armed Forces, to mention a few categories, have earned the respect and admiration of the men with whom they work.

The Honorable ROBERT C. BYRD, of West Virginia, made the recent remark concerning the sympathetic understanding of women, "A man never gets so far down nor so high up in the world that some woman does not love and comfort and usually sustain him."

It was Walt Whitman who said, "A man is a great thing upon the earth, and through eternity—but every jot of the greatness of man is unfolded out of woman." Woodrow Wilson stated the same thing in a different way when he said, "No man ever amounted to a snap of the finger who was not constantly surrounded by a bevy of admiring females." Surely we need no greater proof than this—that women deserve the support of women.

Women by their very nature shy away from the old-time ward healing, barroom type of political controversies. They are however more of a crusader than their brothers. Why aren't we doing so well politically?

Women have had the vote for 35 years yet they have barely scratched the surface of effective political activity. To be sure, women are doing precinct work by the millions, but their record in public office, however heartening outstanding examples make it, is still slight. Perhaps this is because women are just beginning to realize that politics isn't a sordid activity, its the science and art of government. The successful housewife or homemaker can be the successful politician. The practical principles you apply in your home management can be applied to any of the public service jobs which you choose to do. A woman usually can better afford to assume jobs in community service than a man. They can work on commissions, serve on boards, serve as mayor and councilwoman without salary, jobs which are so desperately needed in small communities. Running a city is much like running a house. As mayor of a city, you call in an expert if you must build a sewer system, as a housewife you call the plumber if the kitchen sink needs fixing. It is the woman who has the personal and first hand knowledge of such important issues as the pay of schoolteachers, safety standards in stores and industrial plants. Sanitary standards, health laws, the legislation that governs what sort of water, meat, milk, and ideas flow into our homes are problems which the women are much more aware of than men. They buy the family's pot roast and veal cutlets, they flutter over the children's health. Kitchen and refrigerator have been their domain for generations, why not apply it to the public good.

Last but by no means the least, I will touch on the spiritual qualities of women. In doing so I must pay tribute to the Honorable FRANCES P. BOLTON, Representative from Ohio. This respected woman legislator explains the philosophy that has guided her for more than 15 years in the House of Representatives. Quote—"Just as the individual must examine his own soul before he assumes duties which involve others, so must we who are women go deep into our hearts and minds to ascertain what it is that we have which is so vital to the full purposes of the Infinite. Once weare convinced and aware that only as we take upon ourselves these broad aspects of our womanhood can we hope to see the dawn of peace, the day of light; only then shall we give richer meaning to citizenship in this free land of ours." Unquote.

I could not think of a more fitting credo for any woman planning to enter the field of politics.

The future of women in business and politics is here today—it is up to you to accept the challenge. What are you going to do about it?

In order to try to keep my own feet on the ground and remaiff calm when pressure builds up and the situations become tense I quietly murmur to myself this prayer: God grant me the serenity to accept the things I cannot change, courage to change the things I can, and wisdom to know the difference.

The Radioactive Fallout and Radioactive Strontium

EXTENSION OF REMARKS
OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit a speech delivered by Dr. Willard F. Libby, Commissioner, United States Atomic Energy Commission, which was delivered at Northwestern University, Evanston, Ill., January 19, 1956. I feel that these remarks will be of great value to the public in general and particularly to the membership of this House.

The speech follows:

THE RADIOACTIVE FALLOUT AND RADIOACTIVE STRONTIUM

(Remarks delivered by Dr. Willard F. Libby, Commissioner, U. S. Atomic Energy Commission, at Northwestern University, Evanston, Ill., January 19, 1956)

The radioactivity which falls out of the atmosphere after the explosion of a nuclear weapon is called the radioactive fallout. In the ordinary atomic bomb, for example, for each 20,000 tons of TNT equivalent of explosive energy about 2 pounds of radioactive materials are produced. In these 2 pounds are some 90 different radioactive species varying in lifetime from a fraction of a second to many years. This mixture of radioactivity decreases in radioactivity in such a way that for every sevenfold increase in age the total radioactivity is decreased tenfold. Thus the radioactivity by 7 hours after the explosion has decreased to one-tenth the radioactivity of 1 hour, and in 49 hours to one one-hundredth, and at 2 weeks to one one-thousandth, and in 3 months to one ten-thousandth, and so forth.

The conditions of fallout are largely determined by the amount and type of material vaporized into the fireball of the bomb itself. A bomb fired in the air contributes such a relatively small amount of matter to the cloud that the particles formed after dissipation of the enormous energy released are of necessity very tiny and therefore very slow in settling. The result is that most of the radioactivities are expended in the air and the area over which the fallout occurs is rendered very large indeed, extending to the ends of the earth in minute although detectable amounts.

A bomb fired on the surface of the earth, however, may have an appreciable portion of its radioactivity reprecipitated within relatively short distances, while bombs fired beneath the surface of the earth may place essentially no fallout radioactivity in the atmosphere. Therefore, the question of the area of contamination to be expected from nuclear weapons cannot be answered categorically without specifying the degree of contact of the fireball with the surface of the earth and probably also specifying the characteristics of this surface. Obviously water would differ considerably from soil in its ability to precipitate radioactive fallout. The coral in the southern Pacific islands used for the larger United States weapons tests will under the great heat decompose to form calcium oxide which will then rehydrate to form calcium hydroxide, which in turn will absorb carbon dioxide to form a crust of calcium carbonate. Obviously such a complicated series of chemical reactions will make the fallout particles from the great tests at Eniwetok differ from what would be observed if the same weapons had been fired over ordinary sand or granite rock. We cannot imagine all of the details in which the nature of the soil will affect the local fallout, but it is clear that the effects will be substantial.

In the weapon test operations great care is taken to insure that no danger results from fallout. Criteria are used which are meant to insure that this be so. However, it is well to note that it is from the test operations that we have learned what we do know about the problem of civilian defense against fallout. We must speak of test experience for it is the only source of experimental information about the phenomena of radioactive fallout.

The radioactivities resulting from the burst of a nuclear weapon can be classified as follows: (a) Radioactivities induced in the environment, and (b) products dependent directly on the nature of the weapon. The environment can be made radioactive only by neutrons, but all nuclear weapons involve large numbers of neutrons, some of which are certain to escape into the surroundings.

Taking air bursts first, our problem is—what do neutrons do to air? The answer is simple, they make radioactive carbon, C^{14}, half-life 5,600 years. Fortunately, this radioactivity is essentially safe because of its long lifetime and the enormous amount of diluting carbon dioxide in the atmosphere. The cosmic rays themselves make neutrons, which, of course, make radiocarbon. In fact, the earth has on its surface a total of 80 tons of radiocarbon from the cosmic radiation. Now, since each neutron forms 1 C^{14} atom of mass 14 times the neutrons mass, this corresponds to 5.2 tons of neutrons, and we see that this enormous number of neutrons would have to be produced and escape in order that nuclear weapons would just double the feeble natural radioactivity of living matter due to radiocarbon. Such an increase would have no significance from the standpoint of health. The atmosphere itself contains only 1½ percent of the total carbon with which the cosmic ray produced radiocarbon is mixed, the main part being dissolved in the sea, so we expect that nuclear weapons could produce a short-range rise in the radiocarbon content of the carbon dioxide in the atmosphere, which later would decrease as the atmospheric carbon dioxide mixed with the sea. Therefore, only 1½ percent as many neutrons would be required to double the natural radiocarbon content of atmospheric carbon dioxide for this time before mixing with the sea could occur, or about 78 kilograms, or 170 pounds of neutrons. To orient ourselves, the 20,000 tons of TNT equivalent atomic weapon involves the fission of 1 kilogram of uranium or plutonium and the liberation of about 10 grams of neutrons. If all of these neutrons escaped into the atmosphere it would obviously require 7,800 such weapons to double the radiocarbon content of the atmospheric carbon dioxide even with no mixing with the sea, and

about 520,000 with complete mixing. These correspond to explosive energies of 156 and 10,400 metagons of TNT, respectively, if all neutrons formed escaped. A reasonable escape figure might be 15 percent so we can expect that nearly 1,000 megatons of fission would be necessary just to double the atmospheric radiocarbon content, and that about 66,000 megatons would be necessary for the same effect on a long-term basis.

The interchange between the atmosphere and the sea water, which is constantly taking place, would deplete and remove the excess radioactive carbon dioxide. Now it is known from measurements of the radioactive hydrogen-tritium—which also is made in the atmosphere by the cosmic rays—that this interchange is slow. In fact, we learn that the radioactive water which is formed by the burning of the tritium made by the cosmic rays is not diluted by more than the top 100 meters or so of sea water in its lifetime of about 18 years. The carbon dioxide dissolved in this water is about equal to the total in the air. In other words, a dilution by more than the twofold which corresponds to the dissolved carbon dioxide in the top 100 meters of ocean water would take longer than 18 years. However, the dilution by this factor of two would occur essentially immediately within a matter of weeks or months. Therefore, we would have to double our estimates for even the short time scale activation of the atmosphere to reach the enormous figure of 2,000 megatons of fission required. Thermonuclear weapons, of course, also involve neutrons. For a given energy release they produce somewhat more neutrons than fission weapons; however, the order of magnitude of atmospheric activation would not be greatly different. So our estimates apply to all nuclear weapons. The essential point is that the atmosphere is difficult to activate and the activities produced are safe. In addition to carbon-14 there are a few others produced in low yield—they include tritium and very short-lived products but none is produced in sufficient amounts to be hazardous.

For weapons fired on the surface the activation of the surface materials is a possibility, but in general it appears that most of the neutrons form stable isotopes and that the amount of radioactivity produced, at least with ordinary surface materials, is relatively small. The principal radioactivities produced by nuclear weapons are produced in the weapons themselves, and not in the environment.

Turning now to the radioactivities naturally produced in nuclear weapons themselves, probably the most important is radioactive strontium, 28 years half-life. The reasons that this is so important are that strontium is chemically similar to calcium, which is one of the main mineral constituents of the body. Bone consists principally of calcium phosphate, and for this reason radiostrontium, like calcium, is deposited in the bone. The amounts of ordinary nonradioactive strontium naturally present are so small that the radioactive strontium will follow ordinary calcium into the body. The second reason that radioactive strontium, Sr^{90}, is an important fallout radioactivity is that it has a long but finite lifetime—28 years half-life, 40 years average life—and thus has a persistent effect. Third, because of its bone seeking property it stays in the body a long time, and fourth, the probabilities of body ingestion can be high. Finally, the fifth reason for its importance is that Sr^{90} is produced in high yield in the fission reaction—about 4 or 5 percent of all fissioning atoms yield this isotope.

In order to orient ourselves about this, let us consider the maximum permissible concentration recommended by the National Committee on Radiation Protection for AEC workers for radiostrontium—one microcurie for the standard man—whose body is taken to contain 1,000 grams of calcium in total. The maximum permissible concentration is of course well below any level at which one would expect any damaging effects to appear. On the basis of experiments with animals, statistically observable increases in the number of bone tumors should not be expected to appear at less than 10 times this level. As we go above this figure the chance for bone tumors occurring increases rapidly so that the likelihood of bone cancer with 30 to 40 times that figure is appreciable.

Let us consider in some detail the mechanism by which this most important fallout radioactivity produced in nuclear weapons might be expected to enter the human body. The first point is that from the point of view of fallout there are two essential classes of nuclear weapons—the high-yield megaton weapons, and the lower yield kiloton weapons. All nuclear weapons produce atomic clouds which rise to heights dependent upon the energy released, and the clouds from the megaton class of weapons rise rapidly up through the tropopause and pass into the top layer of the atmosphere which we know as the stratosphere. This part of the atmosphere is essentially isolated from the lower layer in which we live, the troposphere, and where all of our normal winds and storms, etc., occur. Therefore, radioactivity produced in megaton weapons is placed largely immediately in the stratosphere while the smaller kiloton weapons produce clouds which in general do not reach into the stratosphere, but stop near the tropopause—the imaginary boundary between the stratosphere and troposphere—and have the bulk of their radioactivity left in the troposphere.

In the troposphere where rain occurs any particulate matter will be washed down in a period of days or weeks. It is easy to show, for example, that one-tenth inch of ordinary rainfall will probably remove essentially completely all particulate matter except for that which is so small as to be almost of molecular dimensions. In other words, for one-tenth of an inch of rainfall one can be quite certain that the air between the layer in which the rain originates and the ground is washed clean of fallout activity, except for the minute fraction which may be so small as to move with the air out of the way of the falling raindrops as they make their way toward the earth; and even this tiniest fallout material is likely to be precipitated also for it will migrate rapidly by molecular-type motion and in this manner is likely to absorb itself on other particulate material and so be rained out. For these reasons, tropospheric radioactive fallout does not stay in the atmosphere for more than a matter of weeks. It may make 2 or 3 trips around the earth in a given latitude before being entirely removed, but its lifetime in the atmosphere will be a matter of weeks.

This is in very sharp contrast to the material which is placed in the stratosphere by megaton weapons which appears to stay there for a matter of years. Perhaps 10 years is a good average, at least for the weapons fired to date. It is well to bear in mind that this conclusion may be dependent upon the nature of the material carried up in the cloud, but our present experience indicates that the fallout from megaton weapons which does not occur essentially in the first few hours or days, and is therefore deposited mainly locally, is deposited only at a very slow rate corresponding to an average time in the stratosphere of about 10 years. As a result of this long residence time in the highest layers of the atmosphere, the winds mix and distribute the radioactive material broadly over the earth and one finds when the fallout does finally find its way down into the troposphere where the rain and snow wash it out, that the rates of precipitation are relatively uniform over the entire earth's surface.

Returning now to radiostrontium—at the rate of 1 kilogram of fission for 20 kilotons of TNT equivalent, 2 megatons of fission energy would be equivalent to very nearly 1 millicurie of strontium-90 per square mile of the earth's surface, or about 79 disintegrations per minute per square foot of the earth's surface. The average soil of the earth has about 20 grams of calcium, which is in form available for plant metabolism in the top two and a half inches for each square foot of area. Now recalling the maximum permissible concentration level of one microcurie per standard man and noting, as we will show later, that in order that this concentration not be exceeded, the top soil of the earth should not contain any more radiostrontium than would correspond to ten times the concentration in the human body which is just permissible, i. e., one microcurie per 1,000 grams of calcium, or 2,200 disintegrations per minute per gram of calcium, we find that 11,000 megatons of fission energy would produce this average level of radioactivity. Actually, as I will indicate later, there can be a concentration of strontium-190 in the soil about ten times greater than the recommended maximum permissible concentration before one would expect man living in such an environment to accumulate a maximum permission concentration. Referring to my remarks of a few moments ago, the 11,000 megatons would yield a Sr^{90} content in humans just equal to the Maximum Permissible Concentration (MPC); at less than ten times this value, or below 110,000 megatons energy equivalent, statistically observable incidence of bone tumor should not appear; but at 30 to 40 times the MPC, or 330,000 to 440,000 megatons, the likelihood of untoward effects would be appreciable. Even the lowest of these figures is very far in excess of the total energy released to date.

High yield weapons fired near the surface have a portion of their activity deposited in and on particles large enough to fall out in the first few hours or days. Thus we have three kinds of fallout from high-yield weapons: The first, or local, which is due mainly to large sized particles. This may cover a considerable area depending on winds mainly. In the February 15, 1955, release of the Atomic Energy Commission which described the experience in the Marshall Islands in the Castle test series in the spring of 1954, some 7,000 square miles were described as being contaminated by this type of fallout. The second fallout from the high yield weapons is that portion which resides on the small particles, but which never reaches the stratosphere and thus stays in the troposphere until it is carried down by rainfall or settles out. There is thus a band of fallout in the same general latitude as the test site; the material may circle the earth 2 or 3 times before being precipitated, but does fall out within the first few weeks. However, a large part—half or more depending on firing conditions—of the radioactive yield from high yield weapons resides in the third category which is the fallout which occurs from the stratosphere itself. Of course, some of the large local fallout may form particles which were lifted into the stratosphere, but which were so large and so bulky that they fell out rapidly anyhow. The finely divided material which reaches the stratosphere apparently stays there for years in the main. A slow leakage through the tropopause into the troposphere occurs with apparently something like 10 percent per year descending. Measurements of the strontium-90 content of soils, rain and snow, and biological materials on a worldwide basis have all shown that strontium-90 fallout occurs all over the world at rates which are not too dissimilar from one another, except that there is a tendency in the middle latitudes in which the tests are conducted for an extra

fallout presumably of the tropospheric variety described above. Since the completion of the Castle series of tests, this worldwide rate of fallout has approximated one and one-half millicuries of radiostrontium per square mile per year. We thus see that radioactive fallout from the stratosphere is a very slow process. This is very fortunate indeed, since the high-yield weapons thus have a major part of their radioactivity dissipated in the atmosphere in a harmless way if they are fired in the air or on the surface.

The fallout apparently occurs in the final step by a washing down of the tropospheric air by rain together with direct falling. The radiostrontium descends from the stratosphere into the troposphere by the processes of diffusion and falling, and is then caught up by the tropospheric weather and in a matter of a few days is deposited. Reasonable estimates for the middle latitudes give the average life in the troposphere to be about 1 week.

The radiostrontium comes down mainly in raindrops, although fine morning mists and fogs may be particularly effective in this regard also, as well as surface contact and direct falling. It descends on the foliage and on the soil. That fraction of it which falls on plant leaves has a good chance of being absorbed directly into the plant—much in the way the most modern leaf fertilizers operate. The Eniwetok tests were conducted on coral islands and as a result their fallout may be largely water soluble. In any case, direct measurements of the radiostrontium content of alfalfa and other crops show them to be appreciably higher in radioactivity than the soils on which they grew, strongly indicating a leaf assimilation mechanism to be important. The rain falls and carries radioactivity, but when it runs off to the rivers and the seas it is nearly pure due to the action of the soil in absorbing the fallout, so that rivers are essentially free from radiostrontium. Lakes and reservoirs have a content which corresponds approximately to their surface areas only. The radiostrontium is absorbed in the top 2 or 3 inches of soil and held there very tenaciously. Plowing, of course, buries it more deeply, but it appears that in unplowed soil the radiostrontium does not move in a matter of 2 or 3 years.

The researches on radiostrontium conducted by the Atomic Energy Commission have been extensive. They have consisted of sampling soils on a worldwide basis. The actual sampling was done by Dr. Lyle Alexander of the United States Department of Agriculture, Beltsville, Md. Dr. Alexander with great skill and care has repeatedly collected series of soil samples for study, analyzed them chemically and submitted them for measurement of radiostrontium content to the Health and Safety Laboratory of the New York Operations Office of the Atomic Energy Commission, the Lamont Geological Observatory of Columbia University, and the Enrico Fermi Institute for Nuclear Studies at the University of Chicago. Direct fallout collected on gummed papers, milk and cheese, alfalfa, animal meat and bone, and even human bodies has been extensively studied. On the basis of the information so obtained, it is possible to say unequivocally that nuclear weapons tests as carried out at the present time do not constitute a health hazard to the human population—insofar as radiostrontium is concerned and it is believed with good reason that radiostrontium is likely to be the most important of the radioactivities produced. It is well to note that since radiostrontium is assimilated in the bones it constitutes essentially no genetic hazard, because its radiations do not reach the reproductive organs.

The milk and cheese radiostrontium content is not as high, relative to that of the grass which the cows eat, as one might expect. There appears to be a discrimination against the fallout material such that the calcium in milk and cheese is roughly one-fifth to one-tenth as radioactive with radiostrontium as the grass that the animals eat. There are various possible physiological explanations of this and the conclusion itself may not be completely certain, but the data available to date indicate this to be true. In addition, the plant uptake of radiostrontium from soil does discriminate somewhat against radiostrontium as compared to calcium. The calcium taken up from the soil into the plant has in general about one-half the radiostrontium content that the soil calcium has. These two results protect the human population against ingestion of radiostrontium, since milk and cheese are the principal sources of calcium in the human diet. We find, therefore, the the radiostrontium content of human bodies is the lowest of all animals measured and is lower than the average soil and the average foliage by ten-fold. The Sr^{90} to calcium ratio in young people—whose bones are still forming—corresponds to about one one-thousandth of the maximum permissible concentration recommended for adults: one microcurie per standard man containing 1,000 grams of calcium. The average soil in the United States is about ten-fold higher, whereas abroad the radiostrontium content in other areas of the world not subject to the local test fallout is about one-third of that for the United States.

The surface air itself contains radiostrontium due to the fallout from the stratosphere and corresponding to the average time between rainstorms in which it can collect. Filtration of air at sea level discloses radiostrontium on filters if the filters are fine enough, even in periods when bombs are not being tested so the only fallout is from the stratosphere reservoir from the high yield weapons. Measurements in the Antarctic on snow samples collected there show that the fallout rate there in January and February 1955 was comparable with that observed in the middle latitudes.

Finally, though the main part of the radioactivity from high yield weapons fortunately dissipates in the stratosphere, the small but very significant part which falls out within a few hundred miles of the site of the explosion for weapons fired on the surface constitutes a very real hazard and nothing I have said this evening should be interpreted otherwise. The weapons tests are conducted with great attention to this and the other dangers and every effort made to protect against misadventure. What we have learned from the studies I have described—which by the way have been conducted under the name Project Sunshine—is that these local precautions should be entirely adequate and the worldwide health hazards from the present rate of testing are insignificant.

Conjuring a Fantasy

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. DAWSON of Utah. Mr. Speaker, during the past 2 weeks, spokesmen for southern California interests, trying to steal water which belongs to the 4 States of the upper Colorado River Basin, have created a new bogie man. Despite overwhelming, expert evidence to the contrary, these spokesmen are challenging the engineering soundness of Glen Canyon Dam. This, despite the fact that within the past 10 years geologists on the payroll of southern California have recommended building this dam.

For the information of Members, I am submitting an editorial on this subject, published Wednesday, February 1, 1956, in the Deseret News, Utah's leading evening newspaper:

CONJURING A FANTASY

Human gullibility being what it is, the transparent publicity stunt of California's Representative CRAIG HOSMER may well leave many newspaper readers and television viewers with the impression that Glen Canyon Dam and its reservoir could be ruined by the presence of chinle shale in the river canyon walls.

But Congress isn't likely to be impressed. Even the busiest Member of Congress must know by now that southern California is determined to keep all the water of the Colorado River flowing downstream and will stoop to any tactic to prevent its use in the upper basin.

If that had been in doube before, the Hosmer stunt made it perfectly clear.

What Mr. HOSMER attempted to show in most spectacular advertising-agency fashion was that chinle shale tends to crumble in water. He went on from that long-known fact into a spectacular flight of fancy in which he saw canyon walls collapsing "in slides of earthquake proportions," the reservoir turning into a sea of mud, and perhaps even the dam itself falling.

A less honest attack is difficult to imagine. Mr. HOSMER knows, if he listened to or studied the voluminous testimony given to Congress on the matter, how much chinle shale is located in the area in question, and where it is.

He knows that the only significant outcropping of chinle that would be reached by waters of the Glen Canyon Reservoir are in three areas 60 miles upstream from the dam, in country that is flattened out, and could not cause crumbling of canyon walls.

He knows that at the damsite itself, the chinle is covered by 700 feet of solid sandstone.

He knows, or should know, that 15 miles downstream from the damsite, near Lees Ferry, there is an outcrop of chinle at water level. The river has been flowing over it for centuries. Above it tower vertical sandstone cliffs 2,000 feet high. What Mr. HOSMER speculates would happen if lake water touched such shale hasn't happened in untold centuries where the abrasive action of running water has had a chance to dissolve the shale and sweep it away.

Like so much of that previously little-known slick rock country, chinle shale has only recently come to general public attention, mainly because Charley Steen's uranium strike happened to be in that formation. But it has long been known to the geologist and was considered in all the painstaking engineering and planning preparing the way for Glen Canyon Dam.

The rock, made up of limestone, shale, sandstone and the weathered remains of volcanic ash, in varying proportions, was laid down in the earliest mesozoic age. That was the day of dinosaurs and flying reptiles. It was also a day when the desert lands of the Southwest were forested, as witness the fact that the petrified forest remains are found chiefly in that formation.

As the Bureau of Reclamation has pointed out, chinle shale is present in the area of other dams on the San Juan and elsewhere and has never caused any particular trouble.

It has not been many years, as Congressman DAWSON recently observed, since men of dim vision insisted that Hoover Dam could not be built, and if it were built it would

not stand, and if it did stand there would never be a market for its power.

Mr. HOSMER of California is either a very dim-visioned man or one whose vision has been deliberately warped by the selfish interests of his own constituents. Either way, one confidently trusts Congress and the administration will promptly brush away this latest diversionary and delaying tactic.

Cost of Congress

EXTENSION OF REMARKS
OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of February 2, 1956:

COST OF CONGRESS—HOUSEKEEPING OUTLAY RISES AS STAFFS GROW AND PROBES MULTIPLY—LAWMAKERS LOOK INTO GRAIN BINS FOR PAKISTAN, LOCAL LAND PROBLEMS IN OKINAWA—CAPITOL'S WORDS ARE COSTLY

(By James A. Reynolds)

WASHINGTON.—A deep hole in the ground here is heralding a significant Washington uptrend: The cost of Congress, like the expense of running the rest of the Government, is heading higher.

The hole, two blocks from the Capitol, marks the basement excavation for the Senate's second office building, to be finished by 1958. Though this new building will bear a $20.6 million price tag, its dollars-and-cents meaning is much more than a matter of big bills for steel and concrete.

Joining the Senate structure will be a 50 percent bigger House office building, for which ground will be broken this year, and an extension of the Capitol itself, on which work has begun. Together these projects will ease a growing office-space strain for lawmakers and their staffs. Legislative experts say the added space may permit a sizable expansion in the number of congressional help. And staff salaries constitute the biggest single item in the legislative budget.

NO ROOM FOR MORE HELP

"There's no room now for any more personnel," says one authority, Dr. George Galloway of the Library of Congress. "Every nook and cranny in the Capitol is filled. But you may see another sharp rise in the cost of Congress after the new office buildings are finished."

The pressure for legislative expansion has already been dramatically evidenced. Congressional staffs grew 60 percent, to a total 3,250, between 1945 and 1955. That's among the most significant sides of a cost climb that also includes pay raises for lawmakers and their aides, more office space and multiplying investigations in this country and abroad.

Past and prospective growth have the same basic stimulator. Congress is broadening its activities in somewhat belated reflection of the widening responsibilities the Government's far bigger executive branch has shouldered in recent years.

Foreign aiders propose to build grain bins in Pakistan—and Senators delve into charges of collusion in awarding the contracts for the bins. The Federal Housing Administration tightens its housing credit curbs—and a House committee jumps to investigate the effects on home builders and buyers. Military men set up bases on Okinowa—and Congressional probers journey there to study local land problems.

A RENEWED DRIVE

Right now, with Federal spending expected to turn upward again after 3 years of decline, there's a renewed Capitol Hill drive to create a joint Congressional committee on the budget to make a closer check on the administration's Budget Bureau. Despite some House Appropriations Committee opposition to such plans, at least one Capitol insider reckons the legislation stands a better chance of passage now than in the past.

And the Senate Rules Committee recently approved a plan to create a new joint Senate-House committee to keep watch on the Government's supersecret Central Intelligence Agency. Both chambers themselves, of course, must still okay the proposal.

The cost of running the Federal Government's legislative branch is, to be sure, relatively mild. It makes up less than one hundredth of 1 percent of the Government's total expenditures. And it figures out to only about 33 cents a year for every man, woman and child in the land.

But the trend is clearly up. A little over $53 million is budgeted for direct costs of running the Senate and House for the fiscal year starting next July. That's only a tiny rise from the $52.9 million expectation for this fiscal year, but it is more than double the $24.2 million of a decade ago. Even in the New Deal era of Government growth, the costs hovered around $12 million a year. Back in 1900, the amount was only $4.4 million.

Of the direct costs, 1 dollar out of every 4 goes for such items as travel, postage, telephone and telegraph bills and stationery, and even these are on the rise. The House has just voted to raise each Congressman's present free allowance of 2,700 minutes per year in long-distance calls to 3,000 minutes, and to boost the 12,000-word annual limit on Government-paid telegrams to 20,000 words.

MORE PAY PER PERSON

The other $3 of every $4 in direct costs are taken by salaries. And while Congress has more and more people to pay, fatter pay per person also accounts for a big part of the cost climb.

This year Representatives who envy Senators their high-paid administrative assistants will try again to get similar treatment. A Representative's clerk now draws a maximum of $12,131 a year, while a Senator has three top aides, one of whom can make $14,800. Representatives want one assistant who may get that same $14,800. The change would tack over $1.1 million a year onto the $14.6 million provided in the fiscal 1957 budget for help for Representatives.

The lawmakers themselves are faring much more handsomely in the salary department than they did some years back. A Representative now is paid $22,500 a year, up from $10,000 a decade ago.

There's been a sharp uptrend, too, in the pay needed to attract higher-caliber congressional committee staffs to handle the increasing complexities of big Government.

"Committees now hire specialists, where a decade ago they merely hired clerks," says Dr. Galloway.

Congressional investigations also reflect the Government's multifarious activities, though pure politics, of course, sets the lawmakers digging into some subjects. Already this year the Senate has been asked to approve probes into such diverse fields as world disarmament, Federal penitentiaries, juvenile delinquency, patents and trademarks. These and other Senate investigations will cost more than $2 million.

In last year's session Congress authorized nearly $5.6 million for probes, and during the session one authority counted 116 Congressional inquiries. In 1955 hearings, a House committee found out the Navy in 1954 had a 60-year supply of canned hamburger. Other investigations covered the effect of atomic blasts on the weather, baby adoption practices and Communist infiltration in half a dozen areas.

From 1789 until the Teapot Dome scandal in the 1920's, says one authority, there had been only some 300 congressional investigations all told, while "now there are almost that many in each Congress."

The urge or need to investigate is generally sending more and more lawmakers overseas. While this election year will surely bring a lull in the tide, close to 200 Senators and Representatives traveled abroad last year. Some of these went on purely personal trips—at their own expense—but others went on official business, looking into such things as minimum wages in Puerto Rico, civil defense in Europe and point 4 aid in the Middle East, South Asia and Central America.

Not all this travel money, to be sure, comes out of the legislative budget. Some expenses are paid out of lawmakers' own pockets, from State Department or other agency funds, or from counterpart funds that are put up by foreign lands to match United States aid dollars.

BIG AND LITTLE ITEMS

The direct costs of running Congress cover myriad big and little items.

Fifteen skilled machine stenographers take down every word uttered on the floor or in committee hearings, and black-jacketed motorcycle messengers rush the notes to transcribers. Cost of this reporting service is nearly $2 million a year. Outside help is often called in when the regular reporters can't handle the load.

Purchase and maintenance of long, black, chauffeur-driven limousines for such bigwigs as the Speaker, Senate President pro tempore, and floor leaders will cost $79,780 next fiscal year. This is $8,240 more than was allotted in fiscal 1956.

Congressmen may record speeches for rebroadcast back home. This so-called joint recording facility will cost $50,900 in fiscal 1957.

Senate stationery will cost $184,600; in the House, the stationery will be $525,000.

The so-called indirect costs of Congress are even bigger and even more diverse. Besides the $53 million fiscal 1957 budget for direct operating expenses, nearly $70 million more is allotted for such indirect essentials as new construction, maintenance of buildings and grounds and printing Congressional documents. Lumped into this category are nearly $11 million for the Government Printing Office, $10.6 million for the Library of Congress and $253,000 for the Botanic Garden, just west of the Capitol Grounds.

THE SENATE'S RAILROAD

There's $3,500 allotted for the little monorail railroad which shuttles between the Capitol and the Senate Office Building. This subway is designed primarily to help Senators at work in their offices get quickly to Senate rollcalls. Representatives, who are younger and presumably more vigorous, must walk to the Capitol. Besides, it takes much longer to call the roll in the 435-Member House, so speed isn't as important.

By far the largest indirect sum, $47.8 million next fiscal year, goes to the Architect of the Capitol, J. George Stewart. He'll use most of the money for the new congressional buildings, including $20 million to start adding a 40-foot extension to the front of the Capitol—a change under consideration for more than 50 years.

Of the Architect's remaining money, "repairs, works of art" will cost $2,000. That goes for work of the kind required this fiscal year when a vandal tossed a book through the 83-year-old Capitol painting of the Battle of Lake Erie.

The architect must also pay his 1,000-member staff to clean the Capitol's 65 crystal chandeliers, dust the billboard-size paintings, and bathe the bronze and marble statues of such historical figures as Huey Long, Jefferson Davis—and the bust of one-time Vice President Adlai Stevenson, grandfather of the Democratic Presidential hopeful.

CONGRESSIONAL PRINTING

Congressional printing is a sizable item at $9.3 million in the new budget. Printing hearing transcripts normally cost about $2 million a year, with costs of the CONGRESSIONAL RECORD close behind. Each page of the RECORD costs about $84, and last session the RECORD carried 11,329 pages of congressional proceedings and 6,314 pages of Appendix, plus index and daily digest.

The RECORD of a typical day's proceedings may include names of hundreds of people up for Senate confirmation as Foreign Service officers, Coast Guard officers, and postmasters. And on one recent day the Appendix contained such entries as a 4-page reprint of a magazine article titled, "Bette Davis—Her First Quarter Century on the Screen Demonstrates the Power of Her Will." The article lists all 68 of the films in which Miss Davis has appeared, along with their other leading players, release dates and plot summaries.

Printing bills, resolutions and amendments costs about $750,000 a year. Congressmen last year offered 11,908 measures, but this year's total should be about half that, since 1955's bills are still "alive." Some of those bills would repeal the income tax, designate the rose as the national flower, and depict the Mt. Rushmore Memorial on the dollar bill.

SOME ECONOMY MOVES

The cost of Congress isn't going up without sparking some moves to hold it down. Two congressional groups are studying ways to cut the printing bill. One, the Joint Committee on Printing, expects to have a report ready soon. The other, a House Administration Subcommittee, aims to eliminate what a spokesman calls "overproduction, waste, and duplication."

Says a staff member: "Some of the suggested methods of cutting costs include reducing inventories in House and Senate documents rooms, changing House rules to permit joint sponsorship of bills, a practice now permitted in the Senate; and reducing the number of documents printed per Congressman if study indicates he won't need them anyway."

Chairman BURLESON (Democrat, Texas), of the parent House Administration Committee, now trying to pin down amounts spent by individual world-traveling lawmakers, says his committee tries to do its part in holding down the cost of Congress: "I'm like the comptroller in a big corporation. It's not exactly the way to be popular."

Affiliated Young Democrats of New York

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the legislative program of the Affiliated Young Democrats, Inc., of New York, for the year 1956. This program was adopted by the organization on January 3 at a meeting at its State headquarters in New York.

This organization is doing splendid work under the able leadership of its State president, my good friend Harold R. Moscovit. Mr. Moscovit is a great organizer and has done a successful job in building up the Affiliated Young Democrats into a solid organization working for better government and civic responsibility.

The legislative program of the Affiliated Young Democrats is as follows:

NEW YORK STATE LEGISLATIVE PROGRAM OF THE AFFILIATED YOUNG DEMOCRATS, INC. OF NEW YORK FOR 1956

The inauguration of Governor Harriman at Albany last January marked a return of the government of our State to the traditional democratic ideals which characterized previous Democratic administrations of our State under the leadership of such great Democratic governors as Alfred E. Smith, Franklin D. Roosevelt, and Herbert H. Lehman.

A year ago we predicted that Governor Harriman would give our State courageous leadership toward the enactment of a program commensurate with the needs of the people. The first year of his administration has proven his great abilities for leadership and administration, and his devotion and dedication to the larger public interest. It is no surprise that his success as governor of this State, and the versatility of his talents should have drawn such national attention for his elevation to the Presidency of the United States. Our party is fortunate in the number of highly able and experienced men from which it may choose a candidate to present to the American people next fall as the next President of the United States.

Governor Harriman's administration at Albany has been hampered by the Republican control of both houses of the Legislature, and by the obstructionist tactics of the Old Guard Republican legislative leadership. Despite their knowledge that such control comes only from gerrymandering legislation enacted in an attempt to prevent the people of the State from attaining the democratic concept of majority rule which underlies our American way of life and our constitutional system, Republican leaders have attempted at every stage of the game to thwart and obstruct the enactment of the Governor's program. Their failure in accomplishing this has been due to the courageous insistence of the Governor to take the major issues to the people in order to expose these Republican leaders; and to the effective roles which have been played by the Democratic minority leadership of the Senate and the Assembly.

Much still remains to be accomplished, and we pledge ourselves, however, to devote our every effort to the enactment of the following program, which we proudly submit.

1. Reapportionment: A major objective of our program is the enactment of legislation reapportioning both congressional and legislative seats in fair proportion to population, so that all segments of our State may be fairly represented both in Albany and in Washington. Only by such reapportionment can the popular will ever be effected.

2. Presidential primaries: We urge the amendment of the election law to permit the members of the major political parties to indicate their preferences for President and Vice President, and to elect delegates committed to such candidates. In order to achieve an equitable reflection of the vote in this State for President and Vice President, we also urge the enactment of legislation permitting the allocation of the State's vote in the electoral college between the different candidates for President and Vice President in direct proportion to their respective shares of the popular vote.

3. Primary elections: As Democrats, we are irrevocably committed to the proposition that government belongs to the people, and that people should have the fullest possible participation in the selection of those who fill high public office. We favor the direct primary in the selection of candidates for statewide office as well as in the selection of national candidates. We again advocate that the candidates of the major political parties for United States Senator, governor, lieutenant governor, attorney general, and comptroller be selected in statewide primaries.

4. Voting machines in primary elections: We advocate again the mandatory use of voting machines in primary elections.

5. Help the aging: We commend Governor Harriman for having convened a statewide conference to consider the problems of the aging. We recommend that the legislature take advantage of what has been learned in the new science of geriatics to give our older fellow citizens the opportunities for the full, happy, and useful enjoyment of the years that lie ahead of them.

6. State housing and building commission: Enactment of a law creating a State housing and building commission, by combining the Joint Legislative Committee on Housing and Multiple Dwellings with the State Building Code Commission, thereby eliminating duplication, reducing cost of promulgation, simplifying interpretation and clarifying enforcement of the housing and building construction laws.

7. Dairy industry: A major concern of our State is the economic health of our great dairy industry. We urge the adoption of measures, fair to processors, distributors, and consumers to insure the continued stability of that industry.

8. Rent control: The recent Republican administration whittled away the rent-control laws, and succeeded in exacting from tenants of both commercial and residential buildings excessive rent increases. The Republican majorities in the legislature succeeded in preventing Governor Harriman from enacting his full rent-control program. The rent-control law enacted at the last legislative session was an unsatisfactory compromise. We urge that the legislature enact measures to recontrol and roll back rentals which have been so increased. We also recommend that the rent control laws be strengthened and be extended so as to include garages and other presently decontrolled space, to prevent further unjustified increases in rents, and to restore services in apartment and tenement houses which have been curtailed or suspended.

9. Housing: 10 years after the end of World War II, housing throughout the State continues to be inadequate. The approval by the electorate of the new bond issue for low-cost housing was a much needed measure, and we urge a speedy execution of the program approved by the voters; also, action in the middle-income housing. We urge a greatly expanded slum-clearance program.

10. Discrimination: The activities of the State Commission Against Discrimination require a more vigorous administration, and the powers and jurisdiction of the commission should be permitted to investigate all violations of the law, and its jurisdiction should be extended to all phases of discrimination.

11. Labor: We advocate immediate repeal of merit-rating in the Unemployment Insurance Fund, a practice which discriminates small business and seasonal industries through unfair rebates to large corporations. We also favor amendment of the unemployment insurance law to make its benefits available to firms employing one or more workers, to extend its benefits to wives and dependent children, and to reduce the

minimum period of employment required to qualify for its benefits to 16 weeks. We also advocate an expansion of the benefits under the Workmen's Compensation Law by increasing the maximum benefits to $36 a week, and by extending the duration of its benefits to 26 weeks.

12. Communism: We abhor communism in all its manifestations, and approve all action necessary to root it out and expel it from our State. We are opposed to the employment of Communists in our National, State, and local governments. The danger to our democratic way of life does not come only from abroad, but from those misguided citizens and resident aliens who call themselves Americans but who have lent themselves and their energies to the Communist aggressors who seek to undermine our democratic system and make our country another Soviet. We must take all possible steps to meet this danger from within, but we must apply traditional American methods in doing so.

13. Civil service: The recent Republican administration, with the full cooperation of the Republican legislature, made many raids on the civil-service system of the State and took many positions out of the protection of the civil-service laws. We urge the immediate extension of the civil-service laws to repair the incursions of the Republican political raids. We also urge a reexamination of the State salary system to insure that civil-service salaries will keep pace with the cost of living, and to improve the working conditions of State employees.

14. Family court: The administration and enforcement of our laws relating to the family are scattered throughout the courts of the State in a meaningless and wasteful patchwork. Divorce, separation, and annulment are in the supreme court; adoption proceedings are in the surrogate's court; parternity cases are in the court of special sessions; support cases and children's court problems are in the domestic relations court; other matters going to the core of family life, are in various criminal courts. A proper consideration for the problems of the family, and a better utilization of community resources, require that all of these matters relating to the family be placed within the jurisdiction of an integrated family court, to be established within the supreme court, and having adequate resources of an investigating, counseling, and psychological character to permit such family court to cope with the family problems that have intensified under the stress of modern living, and to strengthen the family as the solid foundation of our way of life.

15. Temporary commission on the courts: We strongly support the recommendations of the temporary commission on the courts for the modernization and more efficient administration of our court structure, and urge the continuance of the commission until the completion of its work.

16. Education: A comprehensive school construction program, with the support of the State and the utilization of State resources, should be developed so as to relieve the present overcrowding in our schools and to modernize the school system. Local communities should be given greater freedom to make greater improvements in the development of their educational systems. Additional State aid is required, and should be given, to meet the requirements of an overburdened school system.

17. State aid to municipalities: The sympathetic approach of the administration of Governor Harriman has already resulted in a new approach and a reevaluation of the fiscal relationships between the State and local communities. We favor speedy resolution of this problem of equalization. We also urge that the spirit of home rule be reflected in determining the taxing powers of local communities, and that the Republican policy of requiring the imposition of nuisance taxes by municipalities be replaced by sound and honest approach to the problems of municipal finance.

18. Motorist: We support the enactment of a compulsory automobile insurance law; the exclusive allocation of funds collected in gasoline taxes and motor-vehicle licenses to to the development of the State highway system; extension of the gasoline tax to industrial users of gasoline to the same extent that it is now imposed on motorists; requirement of annual safety inspections of motor vehicles by State agencies, and annual examinations of motor-vehicle operators.

19. Bingo: We strongly favor a referendum to determine whether bingo, off-track betting, and lotteries shall be permitted in the State on a local-option basis.

20. Eighteen-year-old vote: We again urge, as its original sponsor, the extension of the right to vote to 18-year-olds. Now a law in Georgia and Kentucky.

21. Public health: We advocate encouragement of prepayment plans for meeting the cost of medical care by giving aid to sound voluntary plans now in existence and stimulating the development of new plans; development of centers for the rehabilitation of the physically handicapped; a program of State aid for the training of medical and nursing personnel to meet the present critical shortage of physicians, nurses, and technicians; establishment of State programs for the care of the chronically ill; expansion of State's facilities for the mentally ill to correct the overcrowding and present inadequate facilities in our State mental hospitals.

22. Securities dealers: We believe that persons engaged in the investment of other people's money should demonstrate their qualifications for such responsibility by examination, and to this we advocate the establishment of a licensing system for securities dealers and investment advisers.

23. Conduct of political campaigns: We favor the establishment of a commission to adopt a code of ethics for the conduct of political campaigns.

24. Narcotics: We favor the taking of such legislative action as will effect, in cooperation with Federal authorities, as will stamp out the narcotics traffic, and will be aimed at those who traffic in narcotics. We favor greatly increased facilities for the cure and correction of narcotic addicts.

25. Juvenile delinquency: We favor the programs to combat juvenile delinquency, which have been activated under the leadership of Lieutenant-Governor De Luca and Commissioner McCloskey. Our greatest asset is our youth, and we must spare nothing to protect our young people and to combat juvenile delinquency. The State's facilities for delinquent boys and girls must be expanded, and additional funds must be made available for the probation bureaus of the criminal courts which have been so successful in coping with the problem under their hitherto limited appropriations. We also favor an expanded rehabilitation program for those young people in correctional institutions. We also urge an intensification of the drive upon those, who, through their traffic in pornography and narcotics, have a primary responsibility for juvenile delinquency.

26. Permanent personal registration: We favor a mandatory statewide system of permanent personal registration at once.

27. Public power: We strongly advocate, in connection with the development of St. Lawrence and Niagara power, safeguards in the marketing of such power, with preferences to municipalities and public utility districts over the public utility companies, and with State ownership of transmission lines.

28. Civilian defense: We recommend that the Civilian Defense of New York State be placed under the jurisdiction of the Federal Government, with the cost to be borne by the Federal Government, and that the program be coordinated through the State government.

29. Minimum wage law: We favor the enactment of a statewide minimum wage law of $1.25 an hour.

30. State taxes: We favor a reduction of State taxes to the greatest extent compatable with a solvent State government.

31. Legislative sessions: We urge that a printed record be published and made available to the public of the full proceedings of both houses of the Legislature, so that the public may be fully informed of what goes on in Albany.

Reserve Roadblocks in the Defense Department

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. EDMONDSON. Mr. Speaker, on January 23 I called the attention of the House to the unexplained delay in the adoption of the Air Reserve technician plan.

In the Air Force magazine for February 1956, there is a further discussion of what are appropriately called Reserve Roadblocks. Under leave to extend my remarks in the RECORD, I wish to include this article for the information of all concerned. Evidence is mounting on all sides that our Department of Defense is not giving to the Reserve program the attention it urgently needs, for the security of our country.

RESERVE ROADBLOCKS

In the 9 months since the National Reserve Act became law, millions of words have been written about the posture of the reserve components of the armed services. Almost everyone who has made an evaluation of this posture in public print has concluded that the Reserve program is "lagging." The word may be descriptive of the Army Reserve program, but it is a far cry from what actually has been transpiring in the Reserve program of the Air Force. For, far from lagging, the Air Force Reserve program has been making excellent progress. And yet strange things are happening in the Department of Defense which could cause the Air Force Reserve program to slip—and badly.

The Reserve program of the Air Force contemplates a total of 349,000 officers and airmen. Of this number, some 114,000 are individuals earmarked for specific slots in the active establishment. Progress toward the goal has been noteworthy, particularly since last August when the Air Force initiated procedures to assure that all reservists would be in a "ready" category, instantly available in the event of mobilization.

The heart of the Air Force Reserve program is combat capability—not months after M-Day, but on M-Day. To help achieve this capability, six pilot training wings of the Air Force Reserve were converted to combat wings. A program was launched to produce 3,000 skilled reserve navigators. Seventeen Air Guard wings, which had a dual bomber and interceptor mission, were relieved of the bomber responsibility and assigned exclusively to Continental Air Defense Command for employment on M-Day. The mission of the guard was enlarged to include 4 air resupply groups and 4 air transport squadrons.

In the Pentagon, studies were made of the Air Force requirement on M-Day for individuals by occupational specialty and grade. Recently Continental Air Command was given this M-Day requirement for both officers and airmen—by grade and skill. Thus, the Air Force knows now, based on the current war plan, what its individual needs will be in the event of mobilization.

Another important step taken was the development of a selective assignment program. Under this program, airmen released from the active establishment, who have an obligation to serve in the Reserve are assigned selectively to the Reserve units nearest their homes. These men, while not required to join the units, are urged to do so both to increase the combat capability of the units and to reduce their remaining service obligation. One year with an active reserve unit will finish their total military service obligation. One year with an active Reserve unit they are carried in the Ready or Standby Reserve—subject to call—for 2 years. It is estimated that by next June 30, some 29,000 of these airmen finishing 4-year active-duty tours will have been selectively assigned. The majority are expected to join Reserve units.

The Reserve program of the Air Force has made such good progress, in fact, that last month a subcommittee of the House Armed Services Committee complimented the Air Force for what it had done these last 9 months. And this progress seems to have been made in spite of, rather than because of, the Department of Defense.

Take, for example, the matter of facilities. Beginning with fiscal year 1951, the Congress appropriated certain sums to be spent for the construction of Reserve facilities. No single aspect of the Reserve program is more important than facilities. Without a place where training can be given, or without airfields from which to fly, it is almost impossible to attract participants.

For the current fiscal year, Congress authorized the expenditure of $32,049,500 for the construction of flying centers and Reserve centers. But those who control the money in the Defense Department have thus far released only $2,078,000 of these funds. The amount released was for the construction of flying locations, although the sum directed by Congress for this purpose was $26,558,500. So far, Defense has not released any money for the Reserve centers, although $5,491,000 was earmarked for this project.

Recently, Assistant Defense Secretary Carter L. Burgess notified the Air Force that Defense had developed certain guidelines it wanted the Air Force to follow in its Reserve training program.

The first guideline directed that the number of prior servicemen in pay-drill status, who had just joined the Reserve following active-duty tours, be substantially reduced.

This would hit directly at the selective assignment facet of the program. It would mean asking the units to forego, in large measure, upgrading combat capability built around these technicians whose highly developed skills are still fresh.

It is an acknowledged fact that Air Force skills become rusty after a man is separated from active duty, unless he works at them on a fairly regular basis. The weekly and monthly Reserve training assemblies were designed for just such a purpose—to prevent skills from becoming rusty. To achieve an acceptable degree of combat capability requires frequent training periods both for units and individuals. If the Defense guideline prevails, the end result will be a lowering of combat effectiveness.

Another guideline called for eliminating the week-night drills from all elements of the Reserve, except for school periods for certain technicians.

This would hit squarely at the specialized training program. This is the program that trains reservists in the skills need to satisfy almost all of the mobilization requirement for individuals. More than 5 years of effort have gone into building this night-time specialized training of individuals. A conversion of the program to the 1- or 2-day per month concept, which Burgess asked, could have a damaging effect on the willingness of individuals to take training.

The Burgess document went beyond merely directing that certain procedures be adopted in the Reserve training program. It put the Defense Department squarely in the operating business. For it set forth to the last man the numbers of officers and airmen who could participate in pay-training status, how many drills and days of active duty they could have, average number of days allowable for transition of newly assigned pilots, etc.

The document established a ceiling of 52 Air Guard officers who might serve on active duty under section 5 of the National Defense Act and section 252 of Public Law 476. And it further directed that these officers should be included within the active Air Force approved strength and paid from active Air Force funds.

The officers referred to are called to active duty and assigned within the Air Force as specialists in matters involving the Air Guard. While neither law provides specifically the source of pay for these officers, Public Law 476 did state that while on active duty under section 252 these Air Guard officers should be considered as additional members of the staff they were assigned to.

If the Burgess document is peculiar in that it would serve to reduce combat capability, it is made more peculiar by the fact that it is directed to the Reserve program of this fiscal year. In 5 more months this fiscal year will have ended. Further, it was issued months after Congress had appropriated for the support of this fiscal year's Reserve program and almost 18 months after the program had been submitted by Air Force to the Defense Department for approval.

There are other indications that Defense is placing roadblocks in the way of the Air Force Reserve program.

The Air Force has hoped for more than a year to institute an air technician program in its Reserve, similar to that in effect in the Air Guard for years. The Civil Service Commission has approved the plan, subject to approval of Defense. The program, which provides that key members of the unit are hired for full-time duty on a civilian employee basis to substitute for assigned active-duty people, would save millions of dollars annually and return to the Air Force for assignment against worldwide commitments hundreds of officers and airmen. Almost everyone concerned with the Reserve program believes in the air technician plan implicitly. The Defense Department's own Reserve Forces Policy Board has approved the plan. But the Department itself has not given its blessing.

As long ago as last April the Air Force asked Defense for approval of 36 additional drills for rated people in the Reserve and Air Guard in order that they might better meet their minimum annual flying time requirements. Defense has kicked this request around for months, and its most recent suggestion was that 10 additional days of active duty be given to all members of both Reserve components.

There is an old saying to the effect that "what you do speaks so loud, I cannot hear what you say."

If this is true the actions of the Defense Department with respect to the Air Force Reserve program would appear to belie the Department's announced public policy that it is striving for a truly Ready Reserve.

Integration at Grassroots

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Judith Crist, which appeared in the February 5, 1956, issue of the New York Herald Tribune. The author describes the successful practicing-democracy project, begun in 1952 by Manhattan school districts 12, 13, and 14, under the leadership of Assistant Superintendent Truda T. Weil:

INTEGRATION AT GRASSROOTS—SCHOOL FILM TELLS INTERVISIT STORY

(By Judith Crist)

Among the many proposals and projects to end the residential segregation which is reflected in the city schools, one has been tried and, after 4 years, found so successful that its participants are now ready to tell their story to the Nation.

On Wednesday the film story of the intervisitation project of school districts 12, 13, and 14, entitled "Let Us Break Bread Together," will be shown and plans made for its national distribution by interested organizations. The 16-millimeter 30-minute color movie is a documentary of the answer that educators, parents, and children have found to one of the Nation's most pressing social problems.

FOR "TOGETHERNESS"

The project began in 1952 under the leadership of Assistant Superintendent Truda T. Weil, who is in charge of the three Manhattan districts, which extend through the Harlem, Inwood, and Washington Heights areas of the borough. Some of the schools in the area have all-white or all-Negro enrollments because of the residential segregations and on the periphery of both white and Negro areas there has been a growing Puerto Rican population.

Because segregation, isloation, rejection, and acceptance all play a part in human relations, Miss Weil set as the motto of her districts, Neighbors Working Together, and, in keeping with the motto, as a phase of "togetherness" the intervisitaton project was begun.

The program, Miss Weil explained, is designed to help children rid themselves of prejudices and untruths about superiority or inferiority of any group. The community, supervisors, parents, teachers and pupils confer, work and intervisit so that they may better plan for the interaction of peoples of all races and religions in the building of a district, a city, and a nation.

There are two things the program was not. It did not involve taking busloads of children from one neighborhod into another simply to get an interracial atmosphere—a recent proposal, incidentally, that some officials regard as a quick and easy road to integration. Above all, it was not a matter of children from different backgrounds making expeditions to see how others live—as some field trips seem to be.

A basic tenet in the project is that by knowing each other, through work and play, that people understand each other.

It started out with one class in each of two schools visiting. This year there are classes from 14 schools and for the first time first-graders, at public school 98, on West 212th Street, and at public school 133, on

East 130th Street, are joining fifth- and sixth-graders in the exchange of visits.

CHRISTMAS AND ALADDIN

The principals planned the program with the teachers, and parents joined in carrying it out. In each case a school in a predominantly white neighborhood was paired with one from a predominantly Negro one and the classes went to work on a specific project.

Sixth graders from public school 132, on Wadsworth Avenue, and from 186, on West 145th Street, which has a Negro and Puerto Rican population, decided to study various aspects of Spanish customs, life, and history. Parents and teachers accompanied the classes to the Hispanic Museum and to the Puerto Rican food market. The youngsters celebrated a Mexican Christmas at public school 186 and enjoyed Aladdin and His Wonderful Lamp at public school 132.

Another pair chose to study the music and dances of Latin America. A third, of fifth graders, took as their theme Music Is Fun, going to concerts together, taking up instruments, giving joint musical programs.

There were hesitations on both sides. "I believe every one is all right," a white mother said, "but what about the social implications of all this mixing children together?" And from a Negro parent, "Why should I make my child believe that he is going to be accepted when I know that when he grows up he is going to be hurt? I might as well spare his feelings by letting him live with his own now and help him later not to be hurt too much." Some children too were hesitant.

IT IS WITH PRIDE

But teachers planned carefully, the communities considered the problems, and the program evolved. The youngsters learned to know each other's communities. Beyond the school-sponsored project, there have grown friendships, not only between children but between parents. It is with pride that the story has been put on film.

"In these districts," Miss Weil said, "integration begins at the grassroots with proper human behavior. The stereotype patterns of common beliefs that have grown up through the years being dissipated by knowledge and understanding rather than through verbiage. In this way, we believe, the idea will be fostered that America is a blend of cultures and that it is our differences as well as our common desires and ambitions which will make this Nation strong. In planning, working, and sharing experiences, our children are practicing democracy."

Prayer in the United Nations

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. BECKER. Mr. Speaker, on January 5, 1955, I introduced House Concurrent Resolution 23 to bring about the open expression of prayer in the United Nations at their Assembly gatherings. I have continued pressing for action on this resolution and hope that it will be reported out early in this session.

I was very happy to learn through an article appearing in the New York Herald Tribune, December 30, 1955, that our representative to the United Nations, Ambassador Henry Cabot Lodge, Jr., through the various delegations of the United Nations, is taking action to bring about prayer in the United Nations Assembly. Under unanimous consent, I insert this newspaper article in the CONGRESSIONAL RECORD at this point together with my copy of letter complimenting the Honorable Henry Cabot Lodge, Jr.:

LODGE CALLS FOR PRAYER TO START U. N. ASSEMBLY

(By John Molleson)

UNITED NATIONS, N. Y., December 29.—Henry Cabot Lodge, Jr., today made public his proposal that each meeting of the U. N. General Assembly open with an audible prayer, to be offered by a priest from any of the faiths which have believers in the U. N.

The chief American delegate said he had sent letters urging an Assembly invocation to each of the 75 other member states, including 16 newly admitted nations. "The fact that many new members have been admitted to the U. N. prompts me to propose afresh that future meetings of the General Assembly be opened with prayer," he said.

A United States spokesman said that more than a dozen replies had been received to the letter, which was mailed December 21. Most of the replies favor the invocation, a small number are noncommital, and none is opposed to the idea, he said. The names of the responding nations were not released.

Assembly meetings now open with a moment of silence which can be used for prayer or mediation. In his letter Mr. Lodge urged "that God be openly and audibly invoked in the conviction that we cannot make the U. N. into a successful instrument for God's peace without God's help—and that with His help we cannot fail."

The American delegate proposed an invocation in accordance with any one of the religious faiths represented here. There is probably no single thing that the U. N. can do which will so move and touch millions of people around the world, and will give them such confidence in the United Nations," he said.

With its wide representation of different beliefs and degrees of belief, the U. N. has avoided appeals to a specific God and has confined its show of devotion to a carefully nondenominational mediation room, an enclosure in the main lobby of the General Assembly hall, now chiefly visited by tourists.

JANUARY 11, 1956.

Hon. HENRY CABOT LODGE, Jr.,
United States Representative, United States Mission to the United Nations, New York, N. Y.

MY DEAR MR. AMBASSADOR: I, together with many people, congratulate you on taking some forward steps to bring about the expression of audible prayer at the sessions of the United Nations, and your statement made on December 29 spells out the reasons in no uncertain terms.

I have felt very keenly about this ever since the United Nations came into being and have used every method at my command to bring this about, including the introduction of a resolution, House Concurrent Resolution 23, copy of which is enclosed. I have felt that it would be an excellent expression if the Congress adopted this resolution, and I firmly believe that it would add additional strength to the position you have already taken.

The argument that has been advanced that there are many different types of religion represented at the United Nations can be easily answered by a prayer properly drawn that could well represent the thinking of all God-fearing people regardless of their manner of worship.

It is my sincere hope that this resolution will receive favorable action at this session, and I know the American people are taking and will continue to take every possible means to assist you in bringing into the United Nations the Prince of Peace because, without His help, I fear there is little hope of the United Nations accomplishing the results we all desire.

Sincerely yours,

———.

Mr. Speaker, I am positive that the passage of House Concurrent Resolution 23 by both Houses of Congress will certainly lend great weight to the efforts of our Ambassador to the United Nations.

Statement of Hon. Timothy J. Murphy, Commander in Chief, Veterans of Foreign Wars of the United States

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of my valued friend, Hon. Timothy J. Murphy, commander in chief, Veterans of Foreign Wars of the United States, before the House Committee on Veterans' Affairs, Tuesday, February 7, 1956:

Mr. Chairman and members of the House Committee on Veterans' Affairs, I should like, first, to tell you how much I appreciate the meeting today, especially when we remember that the work of a conscientious Member of the Congress is endless. The fact that you are giving up some of your valuable time to receive me indicates both courtesy and a very real interest in the work of this committee. It is a fine compliment to our organization.

You will note I am accompanied this morning by a large group of my comrades. We are meeting in a conference of national and department officers which is an annual event in Washington. Department commanders and other officers from every State are here to represent the membership of their departments. Our national officers, national council of administration, and major national committees made up of leaders from all parts of the United States, are also here meeting with our department leaders. It is a real privilege for our folks to visit this committee in session. I am proud of our leaders and am sure they reflect credit upon our organization. I hope before this day is over you will have an opportunity to meet many, if not all, of them.

May I take the liberty of pointing out, as many of my predecessors have, that the Veterans of Foreign Wars of the United States was founded in 1899 by returning overseas veterans of the Spanish-American War. Our membership is now composed of approximately a million and a quarter members in nearly 10,000 posts in every State and Territory and some foreign countries. Membership is restricted to men who have served in the Armed Forces of the United States on foreign soil and in hostile waters during a war, campaign or expedition for which a campaign medal has been issued and are either native or naturalized American citizens.

Many national leaders have held high office in our organization and I am pleased to acknowledge one of our able past commanders in chief, Gen. B. W. (PAT KEARNEY), as a distinguished and longtime member of this committee. A former member of the com-

mittee, and one of your able colleagues in the House, JAMES E. VAN ZANDT, is also a past commander in chief of our organization. Our common purpose, "To honor the dead by helping the living," is well expressed through our home for widows and orphans in Eaton Rapids, Mich., and in our national rehabilitation service, which offers free representation and counsel in the presentation of claims by any veteran or dependent regardless of membership in the VFW.

One of our day to day contributions toward making America a better place to live is an extensive community service program which had the active participation last year of more than 8,000 Posts and 4,000 Auxiliaries involving approximately 500,000 separate projects. This is only one phase of a service-to-others program which is continually conducted on a nationwide basis by the Veterans of Foreign Wars. I have taken the liberty to point this out in order to establish an understanding of the nature and purposes of our organization and because I take pardonable pride in these achievements.

One of the most important problems that always confronts your committee is the question of cost. In recent years some of my distinguished predecessors, in appearing before this committee, have presented in detail some significant aspects of costs with respect to the veterans benefits program in relation to other activities and programs of the Federal Government. I shall not attempt to burden the record today with a repetition of all this pertinent information. I should like to remind you of a most comprehensive discussion of costs of veteran benefits which was made by Past Commander in Chief James W. Cothran, of South Carolina, when he was commander and appeared before this committee on February 17, 1953. I am sure the record of that hearing is still available to members of your committee.

Indicative of the undue concern over the cost of veteran benefits has been the recent studies and investigations of programs and spending for veterans. The Hoover Commission on Government Reorganization devoted a substantial share of its investigation to the hospitalization and medical treatment program for veterans and the operation of the Veterans Administration. If the recommendations of the Hoover Commission in this field should be adopted by the executive and legislative branches of our Government the results would be a limited hospital program for only those veterans who can establish proof—beyond a doubt—of service-connected disabilities for which they are in need of medical treatment. We think it can be assumed that if this objective is reached the next step would be to abolish special medical treatment for veterans and deal with them on the same basis as other citizens in need of treatment.

Inasmuch as the Hoover Commission went over the veterans hospital and medical treatment program with a fine toothed comb, a decision apparently was reached to set up and authorize another investigating body to delve in other pertinent aspects of the veterans benefits program. Consequently, the President's Commission on Pensions was created and directed to make a searching study of compensation and pensions to ascertain whether the existing benefit payments are in line with the present-day policies and trends, and particularly in relation to Social Security and other forms of old age and retirement benefits. This Commission was initially asked to report not later than November 1, 1955, but because of the complex nature of the studies the authority has been extended and it is expected that the Commission's report and recommendations may be forthcoming some time this spring.

It is distressing to those of us particularly concerned with the welfare of our veterans and their dependents that the executive branch of the Government should consider it necessary to make special studies and investigations of the veterans benefit program, when the Congress is so well equipped by experience and tradition to make such investigations as may be deemed necessary in the operation of government and the expenditure of public funds. This committee, or its subcommittees have, from time to time, conducted inquiries into aspects of the veterans benefit program and the operation of the Veterans' Administration that have been of great value and have resulted in improvement of the benefit program and the operation of the agency.

Before discussing new legislation I should like to express the appreciation of my organization for the accomplishments of this committee in the first session. You held hearings on 111 separate bills which resulted in 18 new public laws. That in itself is an enviable record but, in addition thereto, you made invaluable studies and investigations of various phases of the veterans program. Your committee print No. 31 is the best factual record in existence on operation of the VA hospital program. Your committee print No. 27 entitled "Nonbed Betterments," revealed a startling condition which had been overlooked or ignored and which resulted in an immediate repair and renovation program, together with a long-range replacement program. The urgency of this matter was clearly revealed when the House Appropriations Committee increased by $16 million the budget request for repairs and renovation in fiscal 1956. I am sure you will not accuse me of having a faulty memory when I say that I cannot recall many instances in which the Appropriations Committee has forced additional money on the Veterans' Administration. Your inquiry into the home loan program has revealed hidden dangers to veterans in the nature of possible deficiency judgments and has exposed flagrant abuses of the program by unscrupulous builders and real estate brokers. All this would not have been possible, Mr. Chairman, without the services of your excellent staff, which I am told does not have a superior in any committee in either branch of the Congress.

Our national legislative committee, together with our national security and American sovereignty committees, met and established a five-point program of top priority objectives taken from some 400 resolutions approved by our 56th national encampment. At this point, with the permission of the chairman, I should like to insert for the record a copy of this five-point program.

In this program first consideration has been given to the security of the United States. I am sure that it is also the first concern of the members of the committee and every patriotic citizen. Concern for our security also requires a concern for those who are called upon to bear arms in defense of that security. It is for this reason, and because of the very purpose of our organization, that we maintain a continuing interest in the veteran-benefit program. I want to pledge to your committee the assistance and cooperation of our organization in all efforts to improve that program.

I know that our viewpoints are not always the same, Mr. Chairman, but I am not discouraged by that fact. Honest disagreement contributes to complete analysis and sound conclusion and whatever our differences we have always had a fair and impartial hearing before this committee. I shall not attempt to discuss our 5-point program in detail. I shall devote most of the legislative aspect of my remarks to the subject of a separate and liberalized pension program for the aging group of World War I veterans. However, there are 2 or 3 legislative proposals which I find to be of grave concern to veterans as I travel about the country and I shall take time to briefly discuss these matters.

NATIONAL SERVICE LIFE INSURANCE

There seems to be a continuing nationwide interest among World War II veterans on the question of reinstating national service life insurance. Thousands upon thousands of our World War II veterans dropped their national service life insurance because of a financial inability to bear the cost of something for which they did not have a present need. After several years have gone by and their family life and economic situation changed, many of them realize it was a mistake to drop this insurance and believe that they should be given an opportunity to reinstate. There is considerable misunderstanding about the cost of reinstatement if it should be authorized by legislation. I think many of these veterans believe they could, if permitted to reinstate term insurance, continue it with the same premiums that prevailed when the policy lapsed.

Nevertheless, it is my recommendation that legislation be enacted at an early date which would give World War II veterans an opportunity for a period of at least 1 year to reinstate national service life insurance. Otherwise, I think, the demand will continue and may be granted by the Congress at a time when increased age will jump the cost to the point that it will not be advantageous to many veterans. If such legislation is enacted, widespread publicity should be given by the Government to the fact that until a given date, World War II veterans could reinstate national service life insurance, providing they meet the requirements for reinstatement. Those requirements and the terms of reinstatement should be fully explained. This legislative proposal has the support of a Veterans of Foreign Wars national encampment resolution.

EDUCATIONAL AID FOR ORPHANS

Another legislative proposal—endorsed by our national encampment—is educational aid for the orphans of servicemen who lost their lives during service in World War II and Korea. It seems only reasonable and fair that where the serviceman made the supreme sacrifice for his country and was, therefore, denied the opportunity to take advantage of educational aid to better provide for his dependents, his orphans should be given consideration in his place. There is legislation already pending before your committee on this subject, which was introduced by your chairman. I hope the committee will give favorable consideration to this legislation in the near future.

CONTINUANCE OF EDUCATIONAL AID

Another matter of concern among veterans and the parents of teenagers which I am finding in my travels is the question of whether young men inducted into military service on or after February 1, 1955, should be denied educational aid and assistance from their Government after release from active duty. The Veterans of Foreign Wars in national encampment has gone on record advocating the continuance of educational aid for veterans who are inducted into the service on or after February 1, 1955, as long as authority to draft remains on the statute books. In other words, the Veterans of Foreign Wars believe that regardless of whether service is in peacetime or wartime, if young men are to be subject to Selective Service, provision should be made for educational aid at Government expense. I would like to point out that one of the compelling arguments behind this decision of the Veterans of Foreign Wars is the fact that under our present discriminatory Selective Service Act, with its exemptions and the limited demand for recruits, not more than 1 out of 8 young men are inducted into service. Those drafted

have no greater obligation to the country than those who are excused from service, and, therefore, should be given some special consideration.

GRAVES VISITATION PROGRAM

I realize the Veterans' Affairs Committee does not have jurisdiction over legislation which would authorize gold-star mothers and wives of servicemen buried in American cemeteries on foreign soil to visit those cemeteries at Government expense. However, I should like to enlist the active support of all members of your committee in helping to obtain favorable action on legislation pending before the Armed Services Committee which would accomplish this objective. A Defense Department report on this legislation recommended it should be delayed pending further improvements and landscaping of said cemeteries. It was my privilege to visit many of those American cemeteries in Europe last November and I found them to be in excellent condition. I urge prompt and favorable action on this legislation during the present session of Congress.

Mr. Chairman, I have tried up to the present time to be mostly pleasant and I have been sincere in what I have said. It is necessary, however, to say some things that are not quite so pleasant. The Veterans of Foreign Wars has been disturbed by the increasing frequency and ferocity of the attacks on the veteran-benefit program. An often hostile press echoes and reechoes distorted and half-true statements. It was Nazi Propaganda Minister Paul Goebels who said that by constant repetition that which is false is accepted as true, and that which is misleading is accepted as accurate. With no intent to draw a parallel with Herr Goebel's philosophy, let me cite as an example, the following quotation from the 1957 budget message:

"The number of patients in Veterans' Administration hospitals is expected to increase 1.4 percent over 1956 to a daily average of 111,500. Almost two-thirds of these hospital patients and most of the 17,000 veterans in Veterans' Administration homes are receiving treatment for conditions which are not related to their military service."

This statement is technically correct, but is more expressive for what it omits than for what it contains.

It suggests to uninformed persons that two-thirds of the Veterans' Administration hospital facilities are occupied by persons who may not be deserving of Government hospital care. What are the facts behind this terse budget message statement?

Of the present average daily patient load of 113,585 veterans (of which 38 percent are service connected) the Veterans' Administration reveals that 62,386 are neuropsychiatric, and 14,385 are tubercular patients. Regardless of the humanitarian aspect of this problem it is clear that the public health and safety requires their isolation and treatment. Even the American Medical Association has conceded this point and I cannot help wondering why more details were withheld from the budget message.

I am inclined to think the tendency to deny, or begrudge, assistance to veterans because of the absence of a proven service-connected disability is overdrawn and not in keeping with reality. I am sure, Mr. Chairman, that members of your committee can agree that thousands upon thousands of veterans successfully rendered a full measure of duty in training and in combat without making any effort to establish for future use a record of disabilities incurred in service. It is reasonable to believe that many veterans today are suffering from residuals of conditions which actually had inception in the service. Hundreds of thousands of veterans served long periods—many of them for years—in strenuous basic training and maneuvers, plus long, deadly periods of combat in the various theaters of operations without acquiring a proven service-connected disability. Consider the fact that some 827,000 World War II veterans, in the absence of service-connected disabilities, were given the privilege of also serving in the Korean police action.

Let us take a look at the 1957 budget request for old-age assistance under the Social Security Administration. The request estimates the average number of recipients per month will be 2,516,000; the average monthly payment $51.79 and the total expenditures, including State and local contributions, $1,563,600,000. The Federal share is estimated at $802,500,000. The budget message reveals a kindly attitude toward this program as shown by the following excerpt:

"For a large group of needy people not receiving OASI benefits, public assistance remains the only public resource. * * * To avoid hardship to present public-assistance recipients, I propose that the present formula for determining the Federal share of assistance payments be temporarily extended."

In contrast, it is interesting to note that the budget message reflects a deep-seated fear about the high cost, both present and future, of the veterans compensation and pension program, even though the total amount requested for pensions for all veterans and all dependents of all wars in 16 different categories is only $975,357,471. This includes pensions to dependents of veterans of the Indian Wars, Mexican War, and even those paid on account of the yellow-fever experiments. This total request for veterans pensions is one-half billion dollars less than will be paid to nonveterans under the old age assistance program and only slightly more than the Federal contribution to that program. In making this comparison, Mr. Chairman, I did not include the cost of compensation because even our sharpest critics frequently concede that the Government should reward disabilities incurred in service—although some would attach an income limitation.

However, a comparison of all payments to veterans, their widows, orphans, and dependent parents under both the compensation and pension programs, with payments to nonveterans under the public-assistance program, is most interesting. The budget request for veterans compensation and pension, both disability and death, is $2,907,000,000. Total estimated expenditures for public assistance is $2,641,400,000. The latter figure includes Federal, State, and local funds for assistance and administration. The Federal share is $1,344,500,000. May I indulge in a little humor, Mr. Chairman, to suggest that perhaps what is needed is a constitutional amendment to provide that no person shall be discriminated against on account of having served in the Armed Forces in time of war.

PENSIONS

This brings me to a discussion of veterans' pensions. There are those who advocate repeal of the pension program, others who think it should be continued in its present form or with greater restrictions, and those who feel the program should be liberalized and expanded. In considering these viewpoints I believe it would be helpful to again make a comparison with the old-age assistance program. In that program payments are made on the basis of need. The amount of the payment varies according to the needs of the individual and the maximums established by the various States. In the calendar year 1954, average monthly payments in six States were more than the $66.15 paid veterans in pensions under part III. The high was $90.50 per month in Colorado and the low $28.04 per month in Mississippi.

To qualify for a part III pension, veterans of World War I, World War II and Korea must be permanently and totally disabled, unemployable and must meet strict income limitations. It is, therefore, obvious that if veterans' pensions were repealed, the result in many cases would merely be to transfer the cost from one agency of the Government to another. The minimum pension rate under part III is only $14.36 per month more than the estimated average payment for old-age assistance. Therefore, veterans who could qualify for old-age assistance if they were not receiving a veteran's pension are only receiving an average of $14.36 per month on account of their wartime service. Certainly this does not justify extravagant charges that the veterans' pension program threatens the solvency of the Nation.

World War I pensions

Everything that has been said on the general subject of pensions is applicable to the aging World War I group. In addition, we feel that the World War I group, because of age and economic factors, is entitled to special consideration. For this reason we have called for a separate World War I pension program as a top priority objective of the Veterans of Foreign Wars. In support of that position I should like to call the attention of your committee to changes that have occurred in the economic and social life of the Nation in the past 25 years.

In 1930 there were 720 company pension plans in the United States covering less than 2½ million workers. Prior to 1938 most of these plans did not guarantee anything to the worker since the company could use the pension fund for emergency purposes. The Revenue Act of 1938 provided that amounts paid by the company into the pension fund could not be deducted as business expenses unless irrevocably committed to pension purposes. For this reason it was 20 years after World War I before any real progress was made in establishing company pension plans in American industry. Later, in 1949, the United States Supreme Court held in the Inland Steel case that pensions were deferred wages and a proper subject of collective bargaining. This accelerated the formation of company pension plans until they now number more than 17,000 and cover more than 12 million workers.

Company pensions, estimate

Year	Number of company plans	Number of workers covered
1930	720	2,400,000
1935	1,090	2,600,000
1940	1,965	3,700,000
1945	7,425	5,600,000
1950	14,330	8,600,000
1951	14,000	9,600,000
1953	17,000	12,000,000

Source: Social Security Administration.

It seems fairly certain that our younger veterans of World War II and Korea will enjoy participation in these private pension plans while benefits to World War I veterans will be insignificant by comparison.

Paralleling the growth of the company pension plans has been the old-age and survivors insurance program. The Social Security Act of 1935 was revised in 1939 to establish the present OASI system. Major revisions were also made by amendments in 1950, 1952, and 1954. About 69 million people are now insured. Approximately 9 out of 10 jobs are now covered. The amendments of 1954 included 10 million additional persons in occupations that were formerly excluded. It seems clear, however, that this latest expansion of OASI is of no benefit to some 544,000 World War I veterans who have already passed the age of 65.

It seems equally clear that World War I veterans in general will receive from OASI only a fraction of the benefit that will accrue to World War II and Korean veterans. This is borne out by a recent study con-

ducted by the Public Affairs Institute under a grant from the E. G. Shinner Foundation of Chicago. The report of that study, published in 1955, states that by 1980, 75 percent of retired, aged persons will be receiving benefits under the OASI program. It seems probable that 452,000 surviving World War I veterans, whose average age will then be 84.4 years, will mostly be in the group of 25 percent not receiving benefits.

Further evidence that today's aged persons are in tragic financial circumstances is provided by a survey of the Bureau of OASI in 1951. According to the survey, 25.7 percent of men retired under the program and 31.2 of the women had no assets.

A report entitled "Economic Needs of Older People" may be of interest to the committee. The 533-page report, released by the 20th Century Fund only a few days ago, reveals that 20 percent of persons 65 or older receive public assistance, 33 percent receive benefit from OASI or similar public or private retirement programs, 30 percent have jobs or are wives of wage earners; 5 percent are in homes or hospitals, and the remaining 12 percent have income from personal savings, insurance, investments, relatives, or, and this is the shocker, veterans' benefits.

It is quite apparent that very few aged persons in our present day society have resources of their own. It is equally apparent that various programs which provide old-age security will create an entirely different situation by the time World War II and Korean veterans reach old age. The evidence of this is clear and convincing. I hope it will serve to reduce the circulation of cost projections based on Spanish-War or World War I experience.

RECOMMENDATION

I strongly recommend that your committee give careful consideration to legislation which would set up a separate and liberalized pension program for the aging group of World War I veterans. I suggest a separate pension program for this older group of veterans on the basis of careful study and consideration which has been given this problem by our national staff and our national and department leadership in all parts of the Nation. World War I veterans represent a few more than 3 million of the presently estimated 22 million veterans in the United States.

The President, in his budget message, attempted to project the present part III pension program into the future and estimated an annual outlay of $6 billion by the year 2000. Consequently, any attempt to liberalize the pension program for the older group of World War I veterans which would, at the same time, include the other groups, would raise a hue and cry in the public press and among the commentators that would pale into insignificance the attacks heretofore made against veterans' benefits.

Our 1955 national encampment held last August, adopted a resolution calling for a separate and liberalized pension program for the aging group of World War I veterans. Our national council of administration, in meeting last September, adopted a motion authorizing and directing our national legislative committee and national legislative director to proceed forthwith in reaching a decision and causing to be drafted a specific separate and liberalized pension program for World War I veterans and that said objective should be given a high ranking priority. Our legislative committee, assisted by some other national committees, have been working out an agreement as to the type of pension program which the VFW should recommend to the Congress. In preparing my statement in advance I did not have the benefit of the discussion and action of our national committees but I am sure that our national legislative director either is prepared, or will be prepared in a few days, to offer for introduction a separate pension bill for World War I veterans behind which we hope to mobilize the weight and prestige of the Veterans of Foreign Wars.

I think I can say, without fear of successful contradiction, and I believe that statistics submitted in this statement will support my contention, that our aging group of World War I veterans will be the last group of veterans that will need or expect a general pension program in their declining years. I have sufficient faith and confidence in our people and in the growth and future prosperity of the United States to believe that our younger veterans in the World War II and Korean groups will, in the great majority of cases, be cared for in their declining years through increased earnings, social security, and public- and private-pension programs. It seems to me that if a grateful nation has been willing and able to provide a modest pension program for the aging and ailing veterans of the Civil War and the Spanish-American War, it should be willing and able to do no less for our comrades of World War I.

That illustrious and revered General of the Armies John J. Pershing was credited with saying that Sgt. Alvin C. York, of Wolf River, Tenn., was the greatest soldier in World War I. The exploits of Sergeant York were so fantastic that Hollywood made a feature picture of his life and war experiences. York has become a legend among veterans. I should like to point out to this committee that notwithstanding all of Sergeant York's achievements, heroism, and decorations, he did not acquire a proven service-connected disability. Consequently, Alvin York would only be entitled to assistance from his Government in time of need through a non-service-connected pension or hospitalization and medical treatment on a non-service-connected basis if and when a hospital bed is available.

It may be of interest to point out that Alvin York found it necessary to apply for and was granted a non-service-connected disability pension in 1938. He was awarded a pension of $30 per month on the basis of permanent and total disability, unemployability, and under an income limitation. His pension was withdrawn when his income improved. Sergeant York is still disabled and unemployable and without appreciable income and, consequently, again applied for a non-service-connected disability pension in 1954, but was denied because of a dispute over income. Recently he has filed a new application for a non-service-connected pension and I am hopeful the skill and ability of the Veterans of Foreign Wars in handling claims for veterans will be fully utilized in favorably presenting Sergeant York's case to the Veterans' Administration for adjudication. It might be of interest to this committee and the American people to know what one of America's great war heroes thinks of a separate and liberal pension for World War I veterans. Here is a statement to which Sergeant York recently affixed his signature:

"I believe in the traditional and historical policy of the payment of pensions to aging and disabled veterans which has been followed by the United States Government since the days of the Plymouth colony. It is more honorable to provide modest pensions for our war veterans who are in need of a helping hand rather than to put them on the public-assistance rolls. It costs little, if any more, to pay these old veterans a pension than it would to take care of them under some form of public aid. The aging group of World War I veterans should have a separate and liberalized pension program to take care of those who will not be adequately cared for by some other type of income. No doubt there are many World War I veterans, like myself, who are today suffering from conditions which actually started in the service but which are not subject to unquestionable proof. I hope the Veterans of Foreign Wars will be successful in convincing the Congress and the Administration that there should be a separate and generous pension program for veterans of World War I that will closely approximate the same consideration which has been given to veterans of the Civil War and veterans of the Spanish-American War.

"Sgt. ALVIN C. YORK.

"This January 26, 1956."

We recognize that all veterans of World War I did not render unique and outstanding service comparable to Sergeant York. We do maintain, however, that in World War I, as well as in other wars, there were thousands upon thousands of unsung heroes who rendered a full measure of effort and devotion without eyewitnesses paying particular attention to their sacrifices and heroism. We do not believe that the absence of a proven service-connected disability should deny a helping hand to a disabled or old veteran from his Government in his hour of need. Consideration has been given by many of our leaders and our national staff as to whether length and type of service should be a more important factor in the award of pensions. I am sure that their decision in this matter will be reflected in the bill which we expect to offer for introduction.

I want to apologize to your committee and to my comrades for the length of my statement, and, at the same time, may I commend you for your patience in hearing me out. Our able legislative director, Comrade Omar B. Ketchum, who is always at our right hand, may wish to mention some other phases of our program which I have neglected. I know he will want to place in the record a more comprehensive outline of our complete legislative program. I am sure it is unnecessary for me to sing the praises of Comrade Ketchum to your committee, but I do want you to know that we have faith in his judgment and integrity. The services of Comrade Ketchum and our Washington office are available, if we can be of assistance to you.

In conclusion, may I remind you that our annual dinner honoring Members of Congress who have served in the Armed Forces is scheduled for tonight in the big Sheraton Hall dining room of the Sheraton-Park Hotel, beginning with a hospitality hour in the same location at 6:30 p. m. We are arranging a beautiful background, a good steak dinner, wholesome entertainment, and a minimum of speeches, with our usual early adjournment. I shall look forward to seeing you as honored guests at our dinner, and I want to take this opportunity to again express my sincere appreciation to you, Mr. Chairman, and to each member of the committee, as well as your fine committee staff, for the splendid cooperation we have enjoyed in the past and the privilege of coming before you personally with this statement.

LEGISLATIVE OBJECTIVES OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES, SUBJECT TO THE JURISDICTION OF THE HOUSE COMMITTEE ON VETERANS' AFFAIRS, 1955–56

The following legislative objectives are based on resolutions adopted by the 56th national encampment of the Veterans of Foreign Wars of the United States, and recommendations of the VFW national legislative committee:

RESOLUTIONS

Compensation program

1. To provide $200 per month for total disability, $180 for 90 percent, $160 for 80 percent, $140 for 70 percent, $120 for 60 percent, $100 for 50 percent, $80 for 40 percent, $60 for 30 percent, $40 for 20 percent, and $20 for 10 percent in wartime cases, with 80 percent thereof in peacetime cases (Res. 17).

2. To increase the rates of compensation for disability due to combat by 25 percent of the existing rates (Res. 341, 216).

3. To provide that any combination involving the loss or loss of use of any 2 members or the loss or loss of use of a hand or a foot together with the loss or loss of use of an eye shall be rated as 100 percent disability, and to permit the statutory award for each disability and for combinations (Res. 267).

4. To provide that the disability steps of 40, 30, 20, and 10 percent shall entitle the individual so rated to a proportionate amount of allowance for dependents (Res. 194).

5. To provide that where adequate medical evidence is shown of residual disability from tuberculosis that the veteran be rated on this in addition to the statutory award of $67 (Res. 234).

6. To provide that except for fraud service connection which has been in effect for 10 or more years shall not be severed (Res. 1–g).

7. To provide that any physical disability, including dental disabilities, or any neuropsychiatric or psychiatric disabilities having been found within 5 years from date of discharge shall be presumed to have been incurred in service unless rebutted by affirmative evidence of prior existence where it is shown that claimant was at any time held prisoner by an enemy nation during military service in a period of hostilities (Res. 270).

8. To provide that a person not dishonorably separated from active service in the Armed Forces of the United States shall be considered to have remained on active duty for benefit purposes during the interval between the technical time of discharge and up to the point when such individual, under normal and customary travel conditions, has had time to arrive home, in the absence of clear evidence of misconduct of such service person (Res. 191).

9. To provide that in any instance where the Service Department fails to certify that death was due to willful misconduct, the VA shall be bound by the certification of the Service Department (Res. 1–h).

10. To provide compensation for unemployability due to inability when official records show superimposition of neuropsychiatric disability due to combat (Resolution 1–d).

11. To provide that psychosis developing within 5 years after separation of a wartime overseas veteran from active service be deemed to have been incurred in active service for the purpose of hospitalization, medical treatment and disability compensation (Resolution 199).

12. To provide that diseases of the central nervous system shall have a statutory period of 3 years to manifest themselves to a 10 percent degree (Resolution 343).

13. To include chronic bronchitis as service connected if shown within 1 year following wartime service, provided that the veteran concerned served overseas (Resolution 335).

14. To provide that when a woman lives with a veteran for a continuous period of years up to the time of his death, or bears children by him, such woman shall be recognized by the VA as the widow of the veteran (Resolution 1–f).

15. To provide compensation for fourth child in lieu of wife when satisfactory evidence of divorce or death is received, through amendments to Public Law 877 and Public Law 339 (Resolution 170).

Pension program

1. To provide a separate and distinct pension program applicable to veterans of World War I and that said program be consistent with their attained age, disabilities, employment opportunities and with pension history (Resolution 7–51–167).

2. To provide pension for veterans of all wars who are permanently and totally disabled at the rate of $90 per month, or $105 at age 65, and $150 where the veteran is in need of regular aid and attendance (Resolution 271).

3. To place individuals (and their survivors) who served in the Armed Forces of the United States in the Moro Province, including Mindanao, and in the islands of Leyte and Samar, between July 4, 1902 and December 31, 1913, in the same status for pension purposes as those who served during the Philippine Insurrection (Resolution 56).

4. To provide equal benefits to World War II and Korean conflict widows, on the same basis as benefits now being granted to the widows of World War I veterans (Resolution 215).

5. To increase pension payable to holders of the Congressional Medal of Honor from $10 a month to $100 a month (Resolution 43).

6. To provide that for VA purposes any disability with which the holder of the Congressional Medal of Honor is afflicted shall be presumed to have been incurred in service (Resolution 2–b).

7. To authorize pension upon the basis of campaign service (Resolution 2–c).

8. To make eligible for pension the widows and children of veterans who served in combat, or had campaign service (Resolution 2–d).

9. To amend extension 5, 1945 schedule, to provide that total and permanent disability shall be taken to exist regardless of degree of disability when a veteran otherwise entitled can show that he is unable to obtain employment by reason of attained age (Resolution 253).

10. To provide pension to any veteran who had campaign medal service if permanently and totally disabled, regardless of finding of willful misconduct (Resolution 2–f).

11. To grant non-service-connected pension to all veterans who have, or have had, syphilis, if otherwise qualified (Resolution 342).

12. To provide that disability incurred during active service as the result of the unauthorized handling of duds shall not be deemed for pension purposes to have resulted from willful misconduct (Resolution 2–e).

13. To provide that a veteran otherwise entitled to compensation or pension shall not be considered to be following a substantially gainful occupation if and when his income derived from employment does not exceed the Federal minimum wage (Resolution 2–g).

14. To strike from pension laws the word "employability" (Resolution 60).

15. To increase the income limitations applicable to non-service-connected disability and death pensions from $1,400 to $2,000 for a claimant without dependents and from $2,700 to $3,000 with dependents; and to exclude from this consideration all returns from insurance whether Government or commercial insurance (Resolution 252).

16. To provide the proceeds from life insurance policies used to pay medical or hospital expenses shall not be considered to be income for VA pension purposes (Resolution 255).

17. To provide that all income exemptions flowing from applicable State laws shall be honored by the VA for pension income purposes (Resolution 433).

18. To permit a veteran to waive a portion of any type of retirement benefit so as to meet the VA income limitations governing non-service-connected pension (Resolution 2–h–136).

19. To authorize retroactive pension for waiting period applicable to rating of pulmonary tuberculosis cases (Resolution 138).

Hospital, medical, and domiciliary care, and facilities program

1. Advocating maximum use of VA hospitals (Resolution 3a).

2. To make available monthly reports showing the number of veterans who have applied for hospitalization and been found eligible but who have not been physically admitted (Resolution 3–c, 24).

3. To give combat veterans and overseas war veterans, who are unable to pay for hospitalization priority for admission to VA hospitals in the order named, next only to veterans who are in need of hospitalization for service-connected disabilities (Resolution 3–d).

4. To expedite construction of all authorized hospital units and to authorize construction of additional hospital units in areas of the country where the veteran population indicates the greatest need (Resolution 3–e).

5. To construct intermediate hospitals for the treatment of chronic diseases adjacent to existing hospital units so that they may be operated under one management and with one staff of physicians (Resolution 3–f).

6. Opposing the attitude of the American Medical Association and the Hoover Commission toward veterans' affairs, and all groups, who seek to limit the medical, hospital, or domiciliary programs of the Veterans' Administration (Resolution 3–g; 6).

7. To provide a 1-year presumption of service incurrence of dental defects as to those who served overseas in time of war (Resolution 3–h).

8. Recommending:

(a) That veterans suffering from nonservice connected tuberculosis, neuropsychiatric, and chronic long-term disabilities, as well as those suffering from emergency conditions be eligible for hospitalization.

(b) That in relation to contract hospitalization for non-service-connected cases, the VA be given the authority to negotiate a contract with private institutions to the end that veterans suffering from tuberculosis, neuropsychiatric and chronic conditions be hospitalized in private hospitals or a State or county hospital at VA expense if there are no VA beds available; and further, that the Congress give serious consideration to authorizing the VA to give contract hospital beds to those cases deemed by the VA to be in danger of life or health or are considered medical emergencies when there are no VA beds available.

(c) That the definition of a war veteran as presently defined be amended to include any veteran with active service under honorable conditions for which a campaign or expedition medal was authorized.

(d) That the possession of a private hospital insurance contract, entitling the veteran to treatment in a private hospital should not preclude the veteran to hospitalization by the VA.

(e) That VA form 10–P–10 be changed to give greater prominence to the affidavit of inability to pay for hospital and medical care and that all veterans who execute the affidavit be informed of the significance thereof, and that such affidavit shall be accepted as sufficient proof of applicant's inability to pay (Resolution 62).

9. To provide legislation that states simply and clearly the conditions under which a veteran, unable to prove service connection for his illness or disability may obtain hospitalization in a VA hospital (Resolution 264).

10. To provide chiropractic services to veterans (Resolution 143–428).

11. To provide outpatient treatment for part III pensions (Resolution 207).

12. To eliminate addendum VA form 10–P–10a to application for hospitalization (Resolution 286).

13. To provide appropriate care of veteran NP patients (Resolution 417).

14. To provide Congressional Medal of Honor veterans with complete medical, surgical, and dental care, regardless of any other requirements (Resolution 195).

15. To require sending emergency cases to nearest VA or service hospital (Resolution 314).

16. To establish an arthritic center at Hot Springs, Ark. (Resolution 42).

17. To open domiciliary medical beds at Camp White (Resolution 263).

18. To increase number of beds at Davis Park VA hospital (Resolution 302).

19. To provide Federal aid for capital expenditures at State veterans' homes (Resolution 46–162).

20. Opposing any plan of organization which seeks to take the hospitals, the medical service, or any other essential function of the Veterans' Administration from the jurisdiction of the Administrator of Veterans' Affairs, and the placing of this function under the jurisdiction of any other Federal agency (Resolution 250).

Education and training program

1. To provide educational benefits for children of war veterans whose death was due to service or who have a service-connected disability of such severity so as to preclude their participation in any of the training programs provided by existing laws (Resolution 5–a).

2. To make it mandatory that additional service connection be granted any veteran who, while training under the provisions of Public Law 16 or Public Law 894 suffers additional disability as a result of carrying out the recommendations of a training instructor or a training officer, and with the further provision that any veteran qualifying under this law whose disability was incurred prior thereto shall be entitled to consideration under this act if claim is filed within 2 years from date of enactment (Resolution 5–b).

3. To extend educational and vocational rehabilitation benefits to veterans who have been denied on the basis that they have received discharges under other than honorable conditions and later have their discharges corrected to read "under honorable conditions," but have passed their delimiting date under applicable laws, with the further provision that these veterans have 2 years from enactment of such legislation or 2 years from correction of discharge, whichever is later, in which to make application for such benefits (Resolution 5–c).

4. To extend the educational benefits of Veterans Readjustment Assistance Act of 1952, Public Law 550, during the period of time the Selective Service Act is effective, and to make eligibility to these benefits retroactive so as to cover those members of the armed service terminated after January 31, 1955 (Resolution 285).

5. Endorsing S. 533, a bill to increase the education and training allowances under Public Law 550 and Public Law 894 (Resolution 345).

GI insurance program

1. To provide that any veteran who has been granted a national service life insurance contract shall not be denied the privilege of reinstating any lapsed contract or contracts because of the condition for which service connection has been granted (Resolution 8–a).

2. To amend Public Law 23 so that veterans whose term periods have expired would have the same right to obtain new insurance as they had before the passage of Public Law 23 (Resolution 8–b).

3. To amend Public Law 148, 83d Congress, to provide reinstatement privileges within 3 months after the expiration of the insurance (Resolution 8–c).

4. To provide that a veteran adjudged incompetent at time of separation from service, or within 120 days thereafter, shall have indemnity protection until adjudged competent (Resolution 8–d).

5. To authorize national service life insurance protection to those who can meet good health requirement and who, prior to April 25, 1951, had sought to obtain such protection but were denied same because of noninsurable health (Resolution 8–e).

6. To provide that if a veteran has been declared permanent and total for insurance purposes for a period of 5 years or more and has attained the age of 60 years, he shall be presumed to have remained so disabled for insurance purposes and no longer subject to automatic review by the Veterans' Administration to determine whether he has regained his ability to follow a substantially gainful occupation (Resolution 266).

7. To permit reinstatement of United States Government life insurance and national service life insurance (Resolution 287).

GI loan program

1. To continue the direct home-loan program with increased appropriations to insure the availability of mortgage credit in rural areas (Resolution 14–a).

2. Opposing any increase in the present 4¼ percent interest rate on GI home loans and urge a return to the 4-percent rate as soon as the fiscal policy of the Federal Government and the availability of mortgage money insure adequate financing at the reduced rate (Resolution 14–c).

3. Opposing any transfer of functions of the VA loan program to the FHA or any other Federal agency, either by legislation or administrative action (Resolution 14–d).

4. To extend the home-loan guaranty provisions of Public Law 346, 78th Congress (Resolution 74).

5. To require that builders give enforceable written guaranty in the form of insurance, bond, or escrow money to protect veterans with respect to roofs, foundations, plumbing and heating systems, and structural defects in houses on which the VA guarantees loans (Resolution 222).

6. To amend Public Law 702, 80th Congress, as amended, to eliminate the 50-percent requirements in the act and provide for a grant to be made to eligible veterans for the total cost of the construction, remodeling, etc., including the cost of the land, of specially adapted housing, said grant not to exceed $10,000 (Resolution 232).

7. To provide adequate loan funds to enable a greater number of worthy and qualified veterans to become established on farms on a sound basis (Resolution 333).

8. To amend title III, Public Law 346, 78th Congress, as amended, so as to extend filing dates in cases where veterans affected by termination date need new homes due to being forcibly evicted by reason of eminent domain (Resolution 410).

Protection of veterans' benefit program

1. Declaring state of emergency with respect to veterans' benefit program and directing vigorous action to meet and terminate the emergency (Resolution 400).

2. Opposing Hoover Commission recommendations relating to VA hospitals and veteran preference in Federal employment, and other attacks on pension and compensation program (Resolutions 37, 48, 55, 115, 217, 311, 313, 347, 349).

3. Opposing any program which has for its purpose the combining of social-security benefits with VA benefits, and the abolition of the Veterans' Administration as an independent establishment of the Government (Resolution 153).

4. Opposing the extension of rights, benefits, and privileges granted World War II veterans to citizens of the United States who entered the armed forces of governments allied with the United States during World War II and to their dependents (Resolution 85).

5. To investigate the American Medical Association to determine whether the stand taken by the association on the veterans' hospital program is motivated by selfish interest (Resolution 213).

6. To reestablish the Federal board of hospitalization (Resolution 258).

7. To establish a standing Committee on Veterans' Affairs in the United States Senate (Resolution 57).

Veterans' Administration affairs

1. To advise the Administrator of Veterans' Affairs that improved administration of the VA would obviate demands for further studies of veterans' benefits and investigation of VA procedures (Resolution 4–a).

2. Calling on the Administrator of Veterans' Affairs to speak more forcibly on behalf of veterans and their dependents concerning beneficial legislation pending before the Congress, this being an obligation of the sacred trust inherent in his high office (Resolution 4–b).

3. Recommending that the Administrator of Veterans' Affairs organize within the VA a board answerable only to his office for the purpose of hearing complaints and making decisions on the legality and justness (or unjustness) of VA regulations (Resolution 4–c).

4. Recommending that the Administrator of Veterans' Affairs take affirmative action to correct noncompliance with the spirit of Public Law 361, 77th Congress (Resolution 4–d).

5. Recommending cancellation of VA regulation 1028 (A) since it is diametrically in conflict with the avowed intent of section 3, Public Law 144, 78th Congress (Resolution 4–e).

6. Recommending that since the schedule of disability ratings employed by the VA, 1945 edition, has been amended, supplemented, and explained by so many miscellaneous VA directives that its present application creates untold, unnecessary confusion, this schedule should be brought up to date, immediately (Resolution 6–f).

7. Recommending that since the VA has been directed by Public Law 311, 83d Congress, that ratings of total and permanent, and total disability, in effect for 20 years shall not be disturbed, the Administrator of Veterans' Affairs notify each veteran entitled to this benefit that his claim has been so adjudicated (Resolution 4–g).

8. Opposing recommendations that the degrees 10 percent and 20 percent be stricken from the VA's schedule of disability ratings, 1945 edition (Resolution 4–h).

9. To amend VA general regulation 525, section B, paragraph 4, so as to permit inspection of any outpatient treatment file by the accredited representative holding the appropriate power of attorney (Resolution 38).

10. Endorsing the continuance of the guardianship program of the Veterans' Administration (Resolution 165).

11. Recommending that R. & P. No. 1228 be amended in such manner that no penalty be assessed for any period prior to July 22, 1954, and that the Veterans' Administration be required to include a warning notice with each pension check sent to a veteran or dependent (Resolution 201).

12. To establish a sufficient number of intermediate beds for aging and chronically ill veterans (Resolution 238).

13. Recommending additional facilities and hospitals to shorten the travel distance for those needing hospitalization and treatment which would help to speed up their recovery by enabling them to have more prompt attention (Resolution 241).

14. Recommending issuance of identification cards to veterans receiving shock-producing drugs (Resolution 242).

15. Urging the Administrator of Veterans' Affairs to immediately initiate and carry to its logical conclusion a comprehensive study of the relation of amputations to subsequently developed circulatory disturbances (Resolution 247).

16. Urging the Administrator of Veterans' Affairs to direct all hospital managers to provide private rooms for the use of the

clerks in interviewing individuals during the preparation of forms 10–P–10 and 10–P–10a (Resolution 256).

17. Recommending elimination of VA Deans' committees (Resolution 259).

18. Recommending that training of residents in VA hospitals be limited to the training of qualified doctors who are permanent employees of the VA, who intend to make a career of service in VA hospitals, and who will engage to serve a reasonable number of years in VA hospitals subsequent to the completion of such training; and that the number of such trainees be expressly limited to those whose services can be utilized by the VA when training shall have been completed (Resolution 260).

19. Recommending to the Administrator of Veterans' Affairs that doctors' qualifications be based upon State license laws and that doctors who are not specialists be utilized in all places where their services can be accepted; and that such licensed doctors as may be employed under this recommendation by the VA be not required to serve as resident surgeons (Resolution 261).

20. To provide that hypertrophic arthritis found anywhere in the body shall be considered as merely a progression of the arthritis started by trauma where service connection has been granted for traumatic arthritis (Resolution 268).

21. To have the VA administratively modify the provisions of Extension 2a 1945 Rating Schedule so that a veteran shall be rated totally disabled effective as of the day on which he enters a hospital for treatment of service-connected disability; and provide that periods during which a veteran is on furlough from a hospital where he has been admitted for service incurred disability shall be considered for rating purposes the same as though the veteran actually had remained in the hospital (Resolution 269).

22. To establish uniform effective dates under veterans' regulation No. 1148 (a) and VA regulation 1213 (a) (Resolution 272).

23. Protesting combining of outpatient clinic with VA hospital, Wilkes-Barre, Pa. (Resolution 284).

24. To pay salaries of the medical members of the VA in accordance with, and on the same basis as, the Army, Navy, Marine Corps, and the United States Public Health Service, and be given the same consideration in regard to quarters, subsistence and retirement pay (Resolution 344).

25. To implement circular No. 19 by issuing clarification in concrete form setting forth the extent that circular No. 19 will be placed into effect as pertaining to particular offices or committee assignments within a service organization (Resolution 401).

26. To supplement circular No. 19 by specifically prohibiting both medical and dental employees of the VA from holding any elective or appointive office in the American Medical Association or Dental Association (Resolution 405).

27. To provide sufficient funds with which the VA may and shall put to work an adequate staff of experts, especially nonmedical specialists experienced in industry, whose job it shall be to develop a more satisfactory, comprehensive and realistic disability rating schedule (Resolution 409).

28. Urging the VA to institute a change in procedure in their present training program of doctors so that as a result of such a change those physicians receiving specialized instructions will be required to serve at least 2 years in VA hospitals in part payment for training received at VA expense (Resolution 418).

29. Opposing consolidation of VA regional offices (Resolution 426).

30. Requesting the Administrator of Veterans' Affairs to furnish the director of national rehabilitation service, VFW, quarterly, a report on the results of the general review of disability claims, containing the following items: (1) Number of cases reviewed; (2) number of physical examinations ordered; (3) number of claims confirmed and continued; (4) number of claims wherein there was an increase or decrease in disability benefits; (5) number of service connections severed; and, (6) number of cases wherein disability benefits were terminated, according to the respective regional office jurisdictions (Resolution 434).

Charley Beneman, Newspaper Man, Makes His Last Deadline

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an item taken from Army Times regarding the recent death of Charley Beneman, an associate editor for that publication:

THIRTY

(By Les Honeycutt)

Charley Beneman would have yelled long and loud about being put to rest on deadline day.

Charley was a newspaperman, accustomed to making deadlines. He died last Saturday and was buried this Tuesday, our deadline day. The pain that was his partner could make Charley miss a deadline only by putting him flat on his back. Otherwise Charley would—and did—get to his desk. This week he did not make it.

For the record, Charles H. Beneman, 35, was an associate editor of Army Times since the Washington Times-Herald was purchased by the Washington Post 18 month ago. At the Herald, he was known as Charles Henry Beneman. He made sure the name Charles Henry did not stick when he came with us.

"Charley's the name here," he emphatically told other ex-Herald staffers who came to work with us. But except for the modification in surname and middle name, Charley had not changed.

Afflicted by pain as he was, Charley was still a hustler; a newspaperman who edited sometimes-rough copy into a flowing, vivid picture that told a story better than any halftone could; an imaginative makeup and picture editor; above all, a man who worried more about other people's pains than he did his own.

And his own pains were beauts. In honesty, he didn't always smile through them. But he never quit. Witness a week ago Tuesday:

Charley called in and said he'd be a little late. He was hurting. But it was deadline day and the hurt couldn't keep him from coming in to make up our front page and worry whether we had enough space for page one story jumps. He came in and finished the job. And then apologized that he didn't feel up to sticking around any longer.

It was his last day in the office. We visited him a few days later when the doctor gave the go-ahead signal. His first words: "I'm sorry to put you to this extra trouble. I wish there was something I could do." He spoke of a friend of his—a woman who was momentarily expecting a baby. "I hope her labor pains aren't too severe."

He was being fed intravenously when he said it.

Well, Charley won't be at his desk across from us anymore eating his prized cheesecake with morning coffee that had to be steaming hot; he won't be talking about the Cincinnati Reds, a baseball team he adopted many years ago even though he never got close to the city, but they were underdogs, Charley's friends; he won't be challenging reporters to start writing English, and then telling them how to; he won't be calling our stockroom for the 1956 calendars which, it turned out, he didn't need because his time was up; he won't be sympathizing with others whose temporary miseries were mere colds or hangovers, while the perpetual knife in his cutup stomach was slashing everything to pieces except his heart; he won't be doing any of these things.

But, even after a replacement is at his desk, that littered piece of mahogany will stand as a monument to him.

Things won't be the same down here without him.

Operation Canned Goods Huge Success at Alameda

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. MILLER of California. Mr. Speaker, the employees at the Naval Air Station, Alameda, Calif., are always looking for the opportunity of serving the less fortunate.

They have done it again.

While most people were too stunned to recognize the plight of the Christmas flood victims the NAS group had gone into action.

The best way to tell the story is to make available to you the article that appeared in the January issue of the Bulletin, organ of the Naval Air Station Association edited by Jack Griffith.

OPERATION CANNED GOODS HUGE SUCCESS AT ALAMEDA

(By Betty Godzinski)

You load 10½ tons and what do you get? Well, in this case you get the warm feeling of knowing that you did something more constructive than just expressing sympathy for the plight of the Christmas week flood victims. You sent them 10½ tons of canned goods to prove that you cared. NAS Alameda's canned foods drive, sponsored by the Naval Air Station Association, was spontaneous but notable for its enthusiasm, efficiency, and dispatch.

It all began on Tuesday morning when everyone had returned from the New Year weekend. "Joe," said Art Thurston, "what do you think of the idea of the association sponsoring a canned foods drive on the station for the flood victims?"

Joseph Manfre was all for it. "Sounds like a good idea to me," he said. "Let's get on with it." President Thurston then telephoned Mr. Harold LaJeunesse to get the approval of the station command. In less time than it takes to tell it, the green light was given.

Things happened fast after that. After obtaining Captain French's approval of the project, board meetings were called and the motion passed. Details of the drive were ironed out quickly and efficiently by people who knew that the hungry cannot wait. By quitting time that afternoon, thousands of pamphlets announcing the drive had been

handed out to both civilian and military personnel urging all hands to participate. On Wednesday large bins to hold the food were set up at strategic spots all over the station and further plans were made for the Salvation Army to accept the food for distribution in the Yuba City-Marysville area. Thursday morning the food started to pour in and the contributions were collected and packed. Shortly before noon on Friday, the 16 flats piled high with cartons of food were formally accepted for the Salvation Army's distribution by Senior Capt. Lawrence R. Smith, secretary of the northern California and Nevada division. By 3 o'clock Friday afternoon all the food was in Marysville ready for distribution. Even for an organization which never has believed in letting grass grow under its feet, that was fast moving.

For a little while on Friday it looked like the shipment might be delayed because the planes which the Salvation Army had at its disposal were busy flying bedding to the flood areas and could not take the food that day. Then Comdr. R. C. Corlett, who was acting commanding officer of the station, assigned two Navy cargo planes to fly the food so that it was a station project from start to finish. It was an operation shared by both civilian and military personnel and the cooperation of everyone was outstanding and heartwarming.

Senior Captain Smith was very pleased at the amount of food contributed. He said that it was quite evident that such response could only come from the hearts of those deeply concerned with the sufferings of others. Since food was a high priority item it would be distributed immediately. Just that morning Captain Smith received word from Marysville that the Salvation Army had to buy canned peas and corn to feed the people so our gift could not have come at a more opportune time. The food was distributed in several ways. In Marysville there is a swank night club which, in happier times, was filled with music and laughter. Now it is filled with mothers trying to soothe hungry, frightened children and old people bewildered by the terrible torrents which have swept away the homes of a lifetime. Here the Salvation Army has set up a kitchen for mass feeding. To those who have some means of cooking for themselves, food parcels will be issued. One thing is certain; the food went directly from its source to its destination and when we sat down to our own dinners on Friday night we knew that some of the food which we had contributed only that morning was being served in Marysville that night.

No Iron Britches

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. ASHLEY. Mr. Speaker, every so often in the voluminous mail which we receive we find a letter which in its content and expression warms the cockles of our heart.

Today we have heard prolonged debate on the new mechanical stamp-vending machine which is equipped to express thanks to those making use of it.

It seems to me that much of the debate which we heard is set forth succinctly and with appropriate seriousness in the letter from a constituent which reads as follows:

DEAR GOVERNMENT: I've read and heard about the proposed $4,000 robot stamp sales thing, which promises to say "thank you."

Need I say, Government, that the idea leaves me cold, unless the gadget may be rigged to tip its silly top and add, "Sir," "Madam," "Miss," or "buster," as the case may be, to its vocabulary.

I am unable to imagine myself hipping about, all titillated because a machine spoofed me, nor can I visualize people making polite replies to an iron smart-aleck.

For 4-cent first-class postage, I vote "yes," if needed to defeat deficit, but for mechanical amenities to glorify a deficit—Omigosh.

I still love you, Government, so long as you are Republican, and I'll not despise you when and if you become mildly Democratic, but iron britches and iron curtains supply no need so far as I know.

Respectfully,

EDWIN BARGER.

A Little Patience Is Needed Here

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. SCHWENGEL. Mr. Speaker, a recent editorial in the January 9 issue of the Fairfield (Iowa) Daily Ledger suggests the exercise of patience in solving the matter of farm surpluses. I commend it to the attention of my colleagues who would expect miracles in the change from a wartime economy to production for peacetime needs. Progress is being made in the working out this problem and certainly patience will be rewarded through the sound program designed to reduce the surpluses still further.

The editorial is as follows:

A LITTLE PATIENCE IS NEEDED HERE

Administration leaders say that in the last year and a half they have moved five and a half times as much of the surplus crops from Government warehouses as had been moved in a similar period by the previous administration.

The announcement of the fact seems to indicate that the farm policy is going to be built around reducing the surpluses rather than increasing subsidies which would only pyramid them.

It is our guess that the soil-bank plan will be adopted in some form. But it will go farther than that. It is rather clear that Secretary Benson is warming up to the plan suggested by Howard Hill, president of the Iowa Farm Bureau Federation of paying farmers rental for land that is put into soil building crops. But, more important, he is insisting that it be tied to some plan to use up the surplus now in Government warehouses.

The plan which was first suggested by Dave Livington of Washington, Iowa, of paying farmers in stored grains at a reduced price is gaining a lot of acceptance in administration circles. However, we suspect that many farmers will regard this as too slow, even though they may admit that it is sound.

We've been living in a world where every individual with a problem has been looking to the Government to solve it for him before sunrise day after tomorrow. There's not much disposition to work our way out of difficulties. A little patience and more general acceptance of the principle that what's good for all is good for each would help.

State of the Nation—January 1956 and the Democrats

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I herewith call to your attention and that of all the distinguished Members of this legislative body a front-page article appearing in the Christian Science Monitor for Friday, February 3, 1956, by the distinguished correspondent Joseph C. Harsch.

It follows:

STATE OF THE NATION—JANUARY 1956 AND THE DEMOCRATS

(By Joseph C. Harsch)

The month of January was a cold and bleak one for the Democratic Party of the United States.

The Democrats had expected some poaching on their old New Deal preserves.

They had not expected what actually happened.

When the various proposals President Eisenhower sent to the Congress during the fabulous month of January are added up they total an Eisenhower-proposed legislative program for election year 1956 which gets into almost all the areas of the Truman-proposed legislative program of 1948.

Here are the items of similarity:

1. In 1948 President Truman proposed new laws to halt rising prices. In January of this year Mr. Eisenhower raised the subject of standby controls over installment credit for the purpose of keeping prices from rising.

2. In 1948 Mr. Truman proposed a Federal health program. In January Mr. Eisenhower proposed expanded action in the field of Federal health.

3. In 1948 Mr. Truman proposed new Federal aid to education. In January Mr. Eisenhower proposed extended Federal aid for school construction.

4. In 1948 Mr. Truman proposed new civil-rights legislation. In January Mr. Eisenhower proposed an investigation into alleged denials of civil rights.

5. In 1948 Mr. Truman proposed an increase in the minimum wage. Mr. Eisenhower proposed an increase last year, and Congress acted upon it.

6. In 1948 Mr. Truman proposed a revision of the immigration laws. This is a standing Eisenhower proposal, repeated in January.

7. In 1948 Mr. Truman favored extension of Federal grain-storage facilities—the thing the farmers thought they needed most at that time. In January Mr. Eisenhower proposed a list of various benefits for farmers.

These are the overlaps of the Truman 1948 and Eisenhower 1956 programs. There is, of course, a vitally important difference of degree. The areas coincide. The programs, for the most part, do not.

There is only one item on the 1948 Truman list which does not appear on the current Eisenhower list. That is housing. In 1948 Mr. Truman wanted Federal housing aid to overcome what he called the housing crisis. This January Mr. Eisenhower proposed a slowdown in the housing program as a protection against inflation. In the meantime, of course, there has ceased to be what could be called a housing crisis.

In 1948 the Truman proposals were tossed into a special session of the Congress, summoned after the conventions, which, of course, refused to act on them and adjourned. Mr. Truman stumped the country

on this issue of nonperformance by the Congress, and won the election.

Mr. Eisenhower has sent his proposals to the Congress in January of election year, giving it plenty of time to act and supporting the proposals by a budget which would provide more money for these projects than was allocated to them under the last Truman budget. The Republican candidate this year may well be able to run on enactment of many of the Eisenhower proposals.

The sum total of all this is what the Democratic Party strategists had not anticipated. They knew that some of the old Truman program areas would be expropriated by the Republicans of 1956, but they never anticipated that all of them (except for the obsolete housing issue) would be taken over.

What the Democrats are to do about it is not an easy question for them to answer. They can't be "against" projects which have been Democratic stock in trade for nearly 8 years. The Stevensonians are so committed to a middle-road program in the image of Eisenhower that they dare not try to move further to the left.

In effect, the leading Democratic candidate, Adlai E. Stevenson, appears to have little choice except to promise to carry out something like the Eisenhower program—more efficiently and more effectively than Republicans can carry it out.

Of course, in both parties the extreme positions are open for exploitation. There are Democrats to both left and right of Stevenson, just as there are Republicans to both left and right of Eisenhower (although more to right than to left). But the professional politicians doubt that there is much profitable picking to be done in those far areas when the majority of the voters appear to be fairly contented with things as they are.

More and more, it looks as though Mr. Stevenson and the still-unnamed Republican candidate will vie with each other over who can best execute programs in agreed areas of concern.

Postal Rates

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. MULTER. Mr. Speaker, I am pleased to call attention to the following editorial that appeared in the New York Journal-American of February 3, 1956. It accurately portrays the sentiments of the majority of Americans:

POSTAL RATES

The disposition of the Congress, as interpreted by Chairman TOM MURRAY of the Post Office Committee of the House of Representatives, is to reject a proposed increase in postal rates.

We think this would clearly and properly serve the public interest in the matter.

It is true that President Eisenhower drew his recent picture of a balanced Federal budget largely on the presumption that Congress would go along with his recommendation for higher postal rates.

It would now appear that the presumption was not soundly based, and the same thing goes in some degree for the recommendation.

The idea that the postal service must of necessity be rendered at a profit does not fit any part of the pattern of our national experience. It makes its real and better profits in other vital ways. One of the reasons, and a very big one, that America has been progressive and prosperous to a degree without precedent in the history of the world is that the postal service draws the far corners of the country together swiftly, accurately and at small cost.

This has put life into the vast resources of the nation for information and instruction. It has put energy and sinew into business and industry. It has quickened the whole pace of our national life. If it is a subsidy, it has been in the good interests of all the people.

Imports of Frozen Tuna From Abroad Threaten Domestic Industry

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. TOLLEFSON. Mr. Speaker, a most timely article by one of my constituents, Mr. Charles F. A. Mann, was published in the February issue of the magazine Diesel Progress. The article points up the tremendous damage done to the American industry by the increasing imports of frozen tuna from abroad. It shows the need for immediate remedial action by Congress.

The article follows:

DIESEL AND EQUIPMENT INDUSTRY FACE LARGE LOSS IN MARINE SALES UNLESS EXISTING FISH IMPORT SITUATION CORRECTED

(By Chas. F. A. Mann)

Due to the strange workings of our foreign policy laid down after the end of World War II, one of the unique shipbuilding industries of the United States faces virtual extinction. The Pudget Sound yards, particularly the highly specialized wood and diesel yards at Tacoma, that have turned out in the past 15 years nearly 1,000 ships of every size from the smallest landing craft and midget minesweepers, to trollers, purse seiners, the largest and most complex tuna clippers ever built, and lastly the largest fleet of nonmagnetic minesweepers ever built in one city, $34 million worth, face a crisis due to the Department of State's insistence we lean over backward and give North Pacific Ocean fisheries over to Japan and let them dump their frozen whole fish into our west coast canneries by the boatload.

In a nutshell, to placate Japan and keep them leaning in the proper direction at the conference table, the huge Pacific coast fisheries centered at Los Angeles, San Diego, the Columbia River, and Puget Sound, are being squeezed out of existence. The past year wound up with about 70 percent of the total poundage of all species of tuna used by southern California canneries coming from Japan in the form of frozen whole fish by the boatload. This, despite the fact that the tuna clipper fleet has spent a year of limping production, with weeks' and months' delays at the docks waiting to be unloaded; four price cuts for the raw frozen fish, and frantic efforts to alarm the Eisenhower Government that the huge investment of tuna clippers, the large payroll of fishermen, and the financial structure under which these $350,000 clippers are put together deteriorates daily.

And no new tuna clipper construction in Tacoma yards, long the major building center for the southern California fleet, for the past 4 years. The whole tuna fleet is aging rapidly; no new construction and normal losses by accidents and retirements is causing a steady shrinkage. Tacoma at the peak prior to World War II's ending, had 11 boatyards employing around 800 of the highest skilled shipbuilders in the Nation. Today there are 4 yards in active operation with a force of 350 skilled workers, which faces further reduction to 150 within the next 4 months unless their major peacetime customer, the fishing industry, can be gotten back on its feet.

To make matters worse, the tuna fisheries are not the only branch of the fishing industry that sustained the wood and diesel yards. The same attitude toward throwing open the Pacific fishing industry to Japan, with its low labor costs and huge army of eager fishermen, has also struck the once vast north Pacific salmon industry square in the face. Japan, with huge fleets of mother ships and smaller net boats, is roaming the whole North Pacific Ocean, as far as the Gulf of Alaska, and a great drop in all salmon runs in western Alaska streams has suddenly taken place, with the inevitable result in great losses to the trollers and purse seiner fleets, and consequent vanishing of this branch of work for the boatyards, and reduction in the market for diesels and equipment.

Because of the peculiar and potent tie between the Tacoma boatyards which have turned out the majority of the southern California tuna clipper ships, and the California tuna industry, and the fact that a great many of the California clippers are owned in part or totally by Tacomans, the coastwise aspect of the case, coupled with the great financial ramifications involved, have already alerted Congress, and several hearings of its committees have been held last fall and winter, to lay down the policies necessary to give speedy relief to this situation. Never before in west coast history has competition of foreign raw fish been the cause of a situation that prevails today. Excerpts from the testimony given by the American Tuna Boat Association before the Senate Interstate and Foreign Commerce Committee hearing in November tell the glaring realities that bring on this crisis:

1. In 1948 approximately 9 million pounds of frozen tuna were imported from Japan. In 1955 it will almost hit 170 million pounds or more than 70 percent of all tuna canned in southern California canneries.

The domestic tuna fishing industry cannot exist one more season on a mere 30 percent of the total raw fish market.

2. These figures are more striking in the face of an actual decline in imports of Japanese canned tuna that bypasses American canneries as well as American tuna fishermen.

3. The picture grows more complex when one considers the tremendous annual increase in canned tuna consumption by the United States market. The present rate of growth indicates that if all Japanese tuna, both canned and frozen raw for processing in California plants were stopped, the wood aid diesel shipbuilding industry would have to construct over 100 giant-size clippers with from 3 to 6 diesel engines each, and costing an average of $400,000 a piece at today's market prices for materials, equipment, and labor—just to catch up with delayed replacements and added capacity of the fleet to produce raw fish enough to supply today's high and constantly rising demand for canned tuna products.

4. Employment in the tuna fleet is down to an even 2,000. When one considers that the average annual income of every tuna fisherman and officer, under the complex share system, exceeds $12,000 per man, the magnitude of the effect on the economy of the west coast grows more striking.

5. Profits on sales of American-caught tuna are down to one-tenth of what they were in 1948. So they buy no new diesels or no new ships.

Basically it is a simple question of our do-good global foreign policy already wrecking

one of America's and the world's unique and highly mechanized industries. All it takes is a drastic percentage limit on imports of Japanese frozen tuna—a limit to the gross annual consumption in the United States of America that can be imported from Japan or anywhere else, on a fixed percentage basis, so our own complex tuna fisheries and shipbuilding industry can survive and maintain its pool of skilled talent, the finest on earth, and the outlets for the fantastic line of equipment and engines it uses, open.

Forty million dollars worth of shipyard and equipment orders can go on the books in 90 days if Congress will shut off Japanese raw-tuna imports. Another $15 million of the same type of shipyards orders will go on the books in 4 months if Japanese fisheries are pushed back 700 miles from the Alaska coastal waters. Meanwhile, the Tacoma Shipyard Association, the solid core of the building industry of the Northwest, has banded together and launched a campaign to alert all components of the complex fishing, shipyard, diesel engine and equipment industries to unite and tell Congress this month they will not sit idly by and let international politics ruin a great industry with national ramifications in 300 industries, besides the basic shipyard and fishermen's own payrolls which have helped build the whole west coast.

Here is a call to the diesel and allied industries to save a portion of its great market by direct appeal to every Congressman and Senator.

It Is Necessary to Hope

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article by Messrs. Joseph and Stewart Alsop, which appeared in the New York Herald Tribune of February 5, 1956. In it is described a recent talk with Dr. Arnhost Heidrich, former Secretary General of the Czech Foreign Office:

IT IS NECESSARY TO HOPE

(By Joseph and Stewart Alsop)

WASHINGTON.—In the Eisenhower-Eden joint declaration there is a single reference to the "hundred million people in what were once 10 independent nations" who are "compelled to work for the glorification of the Soviet Communist State." But the reference is purely formal. No one thinks any more that any serious attempt will be made to loosen the Soviet grip on the satellite states. Even so, it may be worth describing a recent talk with Dr. Arnhost Heidrich, former Secretary General of the Czech Foreign Office. One of these reporters first interviewed Dr. Heidrich in the gilded Czernin Palace, in Prague, in the spring of 1948, a few weeks after the Communist seizure of Czechoslovakia. The interview was a memorable one. Dr. Heidrich was quite astonishingly frank, warning the reporter that the Soviet appetite would by no means be satisfied with Czechoslovakia. Then, toward the end, he turned the interview around. Would there soon be war between the Soviet Union and the United States? The reporter replied that he thought not—a long period of armed tension seemed more likely.

"Then," said Dr. Heidrich, "there is nothing left. I must escape."

Escape he did. He now lives, with his wife (who escaped also) in a small house in the Washington suburbs, where he leads the strange dusty life of a political refugee. Perhaps once or twice a year, Dr. Heidrich and the reporter who interviewed him in the Czernin Palace meet again to chat about the world. It is always a rewarding experience, since Dr. Heidrich has a remarkable insight into the world situation. But it is also, somehow, rather sad.

Dr. Heidrich, a chunky, stout man with an odd resemblance to the late W. C. Fields, tends to judge the present by the past. He often reverts to the time when he went to Moscow with the Czech delegation which was brusquely warned by Stalin against joining the Marshall plan. As secretary of the delegation, Dr. Heidrich took notes of the conversation in the Kremlin. He recalls how, in a moment of expansiveness after delivering his ultimatum, Stalin told the cowed Czechs a good deal about his plans for the world.

"Our first task," Stalin said to the Czechs, "is to tear down the power positions of the United States, both in Europe and Asia. Once this is done, England and France will be too weak to resist the pressure."

Dr. Heidrich is convinced that the Soviets have never wavered an inch from their purpose of dominating all Europe and Asia, however much their methods may have changed. He sees last summer's summit conference at Geneva as just another means to the same end.

"Geneva—a catastrophe, a disaster," he says, with a sharp, chopping gesture of both arms. "Every year they gain something, but now is much worse. Before, you had something. They feared your bombs. But now, nothing. They know since Geneva you will not use your bombs. They have nothing to fear."

He pauses a moment, placing his fingers together in a judicial gesture.

"Always before I am wondering, how can the West win this cold war? So many advantages on the Soviet side. Flexible. They decide—they act. No public opinion. If the people must sacrifice, the people sacrifice. But at least they were afraid of you, and now no longer. Now I do not see at all how the cold war can be won."

How about the "liberation" policy for winning the cold war, about which so much was heard in 1952? Dr. Heidrich smiles thinly, and picks his words carefully. "Mr. Dulles has said that the time will come when Soviets realize control of satellites is more anxious than advantageous. I am very pessimistic. Skeptical." But, he adds quickly, the President's Christmas message to the satellite people was good. "People who live under such conditions are always happy to have occasion to hope."

Yet, surely by now, the more intelligent Czechs must realize that Czechoslovakia will not be freed? Dr. Heidrich's short arms fall heavily into his lap, and for the first time his round, oddly merry face looks drained and old. He shrugs again. "To live it is necessary to hope," he says. Then he gets heavily to his feet, says farewell with elaborate courtesy, and starts off on the long walk to the small house where his wife bakes delicious little cakes, and where hope lives stubbornly and illogically on.

Imports of Frozen Tuna Threaten Domestic Industry

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. TOLLEFSON. Mr. Speaker, the current issue of the Diesel Progress carries some striking figures relative to imports of frozen tuna and the impact thereof upon domestic industry. These imports have done great damage to American fishing and shipbuilding industries, and threaten to destroy important segments of them. I place these figures in the RECORD for the information of the Members of Congress:

ONE OF AMERICA'S UNIQUE INDUSTRIES FACES DESTRUCTION—UNLIMITED IMPORTS OF FROZEN TUNA HAS STOPPED TUNA CLIPPER CONSTRUCTION, IDLED THE GREAT PACIFIC TUNA FLEET AND STOPPED PURCHASES FROM 300 SUPPLIERS SCATTERED OVER ALL PARTS OF THE NATION

HERE ARE THE FACTS

1. Imports of frozen tuna: 1948, 9,143,000 pounds; 1955, 172 million pounds.

2. Percentage of United States consumption imported: 1948, 2.8; 1955, 72.4.

3. Imports of canned tuna: 1948, 8,302,000 pounds; 1955, 32,162,400 pounds.

4. Domestic producers' share of the United States market: 1948, 91.4; 1955, 46.1.

5. Index of fishermen's earnings: 1948, 100; 1955, 60.

6. Index of prices paid for fish to American producers: 1948, 100; 1955, 69.4.

7. Index of profit on sales to processors: 1948, 100; 1955, minus 44.2.

8. Decline in the bait boat fleet: 1952, 210 vessels; 1955, 165 vessels, a decline of 21 percent and 14 percent in capacity in just 3 years.

9. Japanese high seas tuna fleet: 1951, 272 vessels; 1955, 436 vessels, an increase of 60 percent and 151 percent in capacity in just 4 years.

10. Only four United States tuna clippers commissioned from 1953–55.

A GRIM PICTURE FOR A GREAT INDUSTRY

With per-vessel production off 30 percent; our share of the market down to less than 50 percent of consumption; vessel employment down 20 percent; share earnings down 40 percent and profits changed to losses.

Imports of tuna are up 1,300 percent and the foreign share of our market is now past 50 percent. All while consumption of tuna in the United States of America has grown rapidly.

The great Pacific fleet, the most efficient and highly mechanized fishing vessels ever created, involves not only the operating and owning personnel, all of whom work on shares, but the north Pacific shipyards that produce these magnificent diesel ships; diesel engine builders and supply and equipment industries scattered in 35 States all face a total loss of their great market in the fishing industry.

Immediate action by Congress and the administration is necessary to save the industry from ruin.

Ills of the tuna industry are already pressing hard on the great salmon, crab, halibut, and herring fisheries of the Nation.

Farmers Reply to the Question, Will Soil Bank Work?

EXTENSION OF REMARKS
OF

HON. GEORGE H. CHRISTOPHER
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. CHRISTOPHER. Mr. Speaker, this House voted by a substantial majority last year to discontinue the sliding scale of parity price supports and return to 90 percent on the basic commodities. Had the Senate taken similar action, much of the suffering and loss of income on the farms of this country that has taken place during the past year would have been avoided. It is to be hoped that when the Agricultural Committee of the Senate reports out the measure it is presently considering, they will concur with the action the House took last year.

The soil-bank plan proposed by this administration, if taken in conjunction with 90-percent price supports for our basic commodities, with a production payment covering meat, milk, eggs, poultry, fruit, and vegetables equal to the difference between the price at which these commodities sell on the market and 90 percent of parity, this difference to be determined by the Department of Agriculture, such a program would relieve the agricultural situation and put the farming industry back again on its feet. The farmer has always demonstrated that he was willing to accept production controls, if it would give him an income that would permit him to meet his fixed overhead, and have enough left over to feed, clothe, and educate his family. The vote last year on wheat-acreage allotments demonstrated that fact quite clearly. No matter what such a program costs, it will be cheap compared to what will happen if this situation is permitted to continue until it breeds a depression such as we had in the early thirties.

The American farmer is honest, industrious, and patriotic. He has always answered the call of his country when he was asked to produce food and more food. He was told not so long ago that food would win the war and that it would also write the peace. At his country's call, he expanded his production and although his sons were drafted into the army; with the aid of his wife and daughters, he kept the food and fiber coming in from the American farms in the volume required to feed and clothe our military forces, our factory workers and our allies, who were engaged in the conflict.

When the war had been won and the peace had been written, the farmer received no reconversion payment such as industry received; no depletion allowance of 27½ percent as has been allowed and is still being allowed the oil, gas and mining industry. But he was told by those whose duty it was to protect him that he "had been living in a dream world" and that nobody expected it to last. Someone in the Department of Agriculture, over the signature of Secretary Benson, wrote a letter praising a magazine article that branded the farmer as an undesirable citizen and compared him to a hog with its jowls in a trough. If accepting a Government subsidy brands the farmer as a hog, then business and transportation should share the disgrace along with him, because for every subsidy dollar the farmer has received, business and transportation has received 39 subsidy dollars during the same period.

The farmer has always fed and clothed this Nation better than any nation was ever fed and clothed in the history of the world; and the only charge brought against the farmer today is that he is doing his job just a little too well.

Industry and business responded nobly to its country's call, producing the steel and the armament that their country needed. But check the difference in the way this country rewarded the patriotism shown by industry and the way it has rewarded the same patriotism evidenced by the American farmer. It is true that between October 17, 1933 and November 30, 1953, the Federal Government has taken up a tab for losses on agricultural products amounting to $1,194,800,000. But during that same period, the Government picked up a tab for business in reconversion payments amounting to $40,787,864,000; with subsidies to shipping and airlines amounting to $5 billion more. So it is evident from these figures that business, transportation, and industry received 39 times the amount in post-war adjustment than has gone to agriculture. These figures are taken from Government Subsidy Historical Review, under date of June 3, 1954, obtainable from the House Committee on Agriculture. The foreword is written by the Honorable CLIFFORD R. HOPE, of Kansas, who was chairman of the House Committee on Agriculture at the time these figures were compiled.

There is no valid reason why the farmers of the United States should not be paid parity prices for the food and fiber that feeds and clothes this Nation. Every other segment of our industry is receiving cost of production, plus a profit—a profit that is sometimes more than a reasonable profit. It would be to the interest of the entire economy to have a prosperous agriculture in this Nation.

The farmer is not only a producer, he is a consumer; and the best market in the world today for the products of American business and industry; and why anyone would seek to force him to accept the role of an inferior citizen is beyond my comprehension.

I am appending hereto, statements by a number of farmers in my home State which will give the reader an idea how farmers in Missouri feel about the present plight of the American farmer, and what they think should be done about it. These men are good, solid, reasonsible farmers and are good citizens. They are not radicals by any stretch of the imagination. I hope my colleagues will read their views on this situation. I think we can all do so with profit to ourselves and our country.

Let me close, Mr. Speaker, by saying that regardless of what the farm program turns out to be, unless we have 90 percent of parity price supports for all farm products, the program, however good it might otherwise be, will fail to correct this situation. Prices are of the utmost importance.

Four hundred thousand farmers have already been forced off of their farms. The need is imperative and must be met now, not in 1957 or 1958, but now, or thousands more will share the same fate before 1956 becomes history.

The statements referred to follow:

FARMERS' REPLY TO THE QUESTION: WILL SOIL BANK WORK?

Last month we ran results on a questionnaire sent out to a number of farmers. It created so much interest that we include here the results and comments of a second such survey. The 19 questions listed below all pertain to the soil-bank plan. They were sent to about 150 farmers. Returns were amazing. The fact that most every set of questions was returned, gave evidence that farmers were fully aware of the much ado about farm affairs. Their answers also indicated that they are considerably more alert on the problems of low agricultural income than some given them credit for. Below is a sample questionnaire with a tabulation of the answers.

SAMPLE QUESTIONNAIRE

1. Should soil bank be voluntary? Voluntary, 68; compulsory, 18.

2. Should grazing be allowed of acres diverted to soil bank? Yes, 39; no, 46.

3. Should farmers be allowed to harvest grass seed from acres diverted to soil bank? Yes, 42; no, 43.

4. Should farmers be allowed to harvest hay crop from acres diverted to soil bank? Yes, 31; no, 54.

5. Should farmers be required to mow acres diverted to soil bank? Yes, 48; no, 32.

6. Should farmers spend all the money received from Government under soil bank agreement on soil building practices on these diverted acres? Yes, 11; no, 71.

7. In normal years approximately half a million acres of Missouri cropland lies idle. Should these acres be included among those receiving payment under the soil-bank proposals? Yes, 22; no, 64.

8. Some farmers feel that they need more acres to profitably utilize their machinery and time. Do you have acres that you can afford to keep out of production? Yes, 38; no, 48.

9. Have you acres that you would plant in grass under such an agreement? Yes, 58; no, 24.

10. Have you acres that you would plant in trees under such a proposal? Yes, 8; no, 81.

11. In your opinion what would be desirable number of years for duration of such soil-bank agreements with farmers? Thirty-four answered 3 years and under; 34 answered 5 years; 6 answered 10 years; 1 answered 10 to 15 years.

12. Should soil-bank proposal include your best land? Yes, 3. Your poorest land? Yes, 23. Both? Yes, 59.

13. Should a limit be placed on the number of acres farmers could lease to Government? For example a farmer might desire to lease his entire farm to Government. Favor limit, 50; no limit, 37.

14. You have fixed costs such as interest, insurance, taxes, etc. What, in your opinion, would be a fair payment per acre for keeping cropland idle under a soil-bank agreement? Twenty-eight answered $15 per

acre of cropland or less; 11 answered $16 to $26 per acre of cropland; 26 answered $26 to $35 per acre of cropland; and 7 answered $35 to $100 per acre of cropland.

15. Do you consider the soil-bank proposals as a farm program with the idea of the Government leasing enough land to cut production to the point that farm prices will rise as a result of farm commodities becoming scarce on the market (yes, 18), or do you consider it merely as a conservation measure that is only a part of an overall farm program? Yes, 56. Both? Yes, 7.

16. How much would the Government be required to pay you per acre before you would be willing to lease them your entire farm? Eight answered $10 per acre or less; 26 answered $11 to $25 per acre; 19 answered $25 to $40 per acre; 16 answered $40 to $100 per acre.

17. In your opinion, will the soil-bank payments be adequate to compensate for low prices farm commodities are bringing at the market? Yes, 11; no, 75.

18. Do you feel that the soil bank is the answer to the farm problem? Yes, 10; no, 72; partially, 7.

19. You do not know exactly what type of a soil-bank proposal will be considered by the next Congress. In view of what you do know about the soil-bank proposals, how do you think it would fit into your own personal farm operation? Fill in oyur remarks in the space below.

Included are typical answers to this question.

Phil M. Smith, Williamsburg, former State director of the PMA, stated: "Don't think the soil-bank plan will answer the farmers problem. Most family-size farms need every acre of their productive land now to make a living and won't be interested in renting any good land to the Government. Plenty of marginal land can be rented but that will not cut production or be much of a soil-conservation measure. The soil-bank plan will not fit my personal farm operation. On 640-acre farm I have 320 acres of cropland and need it all to furnish feed for my livestock. From past experience would say that the soil-bank plan is impossible to administer so it will achieve the desired results."

Senator George Spencer, of Columbia, chairman of the Missouri Senate Agriculture Committee, asks, "How is a reduction in grain acreage going to help hog and beef cattle prices?" Senator Spencer pointed out that the soil-bank prospects have not increased grain-future prices.

Lawrence Laney, Pleasant Hope, has a dairy and poultry farm. He explained: "I doubt if it would help me as I buy more grain than I produce. I do think it would help the grain farmer if enough acres are taken out of production. It could hurt the dairy farmer if idle acres are allowed to be grazed or mowed for hay."

AVERAGE PAYMENT TOO SMALL

Frank Rea, of Branson, raises beef cattle and hogs. He remarked: "I think the soil bank would have very little direct effect on my operation as I pasture my entire acreage. If the acres diverted to grass are pastured and hay mowed off them, there would be a tendency to increase cattle numbers. If $750 million was the annual cost of the soil bank and each of 6 million farmers took part, the average would be $125, a magnificent sum for the easing of the price squeeze we are getting now. Even two or three billion dollars were put into it, the average payment to each farm would be too small to be of material assistance in itself. If the reduced production resulted in something near a shortage, then the increased price for the smaller production might materially increase the farm income. A big enough drought might do the same thing, and if both came together, some people might long for some surplus."

State Senator James P. Kelly, of Trenton, writes: "My own operation is mostly grass so it wouldn't be of much help to me personally. If it works, or is to work, it must be considered only a segment of a many-sided operation."

Raymond Roberts, Moberly, said, "I would be in favor of a try for any program that would tend to bring the production and demand into closer balance. I believe that there would be a better chance of the soil-bank proposal doing permanent good if the payments were made in surplus commodities instead of cash."

W. F. and Donald E. Rages, of Smithton, are partners. Donald said, "I don't think any such plan will be adequate to alleviate the present plight of the average farmer caught in a 'vicious high cost-low farm price-squeeze.' It seems to me that any farm leader, farm organization, or Agriculture Department official advocating the soil-bank plan as the solution to the present farm problem is either unacquainted with the situation as it exists and affects the average farmer or is completely indifferent to the welfare of the farmer and to the welfare of the whole American agricultural economic structure."

LOOK TO THE BIBLE

Dalton Brown, of Walnut Grove, believes something must be done to check surplus and to rest and save soils. He said, "I believe the farm plan as found in Leviticus, chapter 25, verses 1 through 7, would be the solution to the surplus problem." This is the Bible story where the Lord told Moses that for 6 years they should sow their fields, prune their vineyard, and gather in the fruit but during the seventh year they should rest the land.

Leslie L. West, of Elvins, comments, "I don't believe the soil-bank plan will work to much of an advantage on smaller farms. It may work on farms of several acres. Farmers will have to have 100 percent parity on livestock as well as crops to operate and stay in business."

Jim H. Witten, Trenton, remarks, "I am against governmental controls in general. However, the farm-price situation being what it is, will draw a farm program of some sort out of Washington. I think the soil-bank plan would have less controls attached to it than any other program."

FIRST NEED IS FAIR PRICE

Paul S. Schenk, Memphis, said: "What the farmer needs is a fair price for his products to enable him to carry on his own soil bank. To demand this price it appears we must accept some sort of production control. What in agricultural vocabulary is termed 'surplus' in industry and defense is termed 'stock piling'."

Edwin Brunner of Argyle explained, "It would help the big farmer and not the little farmer."

HOW WILL SMALL FARM EXIST?

Cyrus Crowder, of Sweet Springs, writes: "I could use a few acres in permanent grass but no trees. I have enough trouble with brush now. What I want to know is: How is the acreage going to be based? If it is on crop acres, how is the small farmer going to exist? I don't believe in cutting a small farm to where farmer must have another income to live decently."

Virgil Hitt, Greenwood, remarks, "I think now is the time to take some of it (land) out of production."

T. C. Howard, Elsberry, said: "I think the soil bank program is a fine thing for the future generations." He explains that what is needed now is a plan where we can live, pay taxes, and interest, and plan for the future.

Hilton Bracey, Portageville, writes: "This is the silliest proposal to come up in recent history—but we will probably get it anyway."

Forrest T. Lilley, Elsberry, is a livestock and grain farmer. He remarked: "The soil bank might replace the tenant farmer. One hundred percent of a Government payment might well be more attractive (to landlords) than 50 percent of a crop and the risks involved. The basic need in Missouri is for help for the livestock producer."

J. Roy Jeffress, Shakelford, comments: "The farmer needs help now, not next year. The young farmer could be out by that time."

L. W. DeMoss, Louisiana, explained, "I think soil bank O. K. for long-range program but farmers are in need of something to bring in cash immediately to prevent bankruptcy."

NO HOPE FOR REAL SOLUTION

Morris Horn, Labadie, writes, "What we are concerned about now is how we can get enough for our production to meet current expenses and keep from losing a life's work. It's the price of hogs, cattle, eggs, and cream that we are worried about. It seems to us that Benson and company should have been more concerned about prices farmers were getting, instead of accusing far-thinking farm leaders of being 'prophets of doom and gloom' when these leaders were pointing out the fact we were headed for trouble; instead of talking about the 'mess' they had inherited; instead of telling the farmer he was 'pricing himself out of the market.' Had they wholeheartedly supported and administered existing law and authority we would not now be in this extreme condition. Now, all of a sudden in an election year and like a bolt out of the blue sky 'no problem is more urgent.' It is this hypocrisy that has caused us to lose all faith that anything will be done for the family-type farmer in time."

Ed Derks, Stanberry, writes, "I believe the soil bank program will soon cut surplus if they (farmers) are paid enough for taking land out of production."

W. P. Hunter of Sikeston grows cotton, corn, beans, wheat, and cattle. He said, "If this soil bank land is to be grazed it would bankrupt the cattle man." He feels there should be no limit to the amount of payment to any individual farm or to any individual landowner or tenant.

Bernard Leonhard of Portage Des Sioux writes, "I am in a little different position than most grain farmers because I grow seed corn and I have an irrigation system on my farm. Due to the fact I have irrigation I have been growing single cross corn, also inbreds for the seed corn company. My gross income from my corn acres this year was $137 per acre. Since I have only 100 acres of cropland and a family of six children to support I certainly cannot afford to leave any of my acres in a soil bank unless I will be paid very well for it. I do not think the soil bank will solve the farmer's problem any more than acreage allotments have solved them. Farmers will naturally try to grow more on the acres they have left to farm so probably we will produce nearly as much as we are producing now."

Chriss J. Koening, Belle, explains, "With the machinery I have I could only afford to have a small percent of my land to rest at a time. It would not cut production much in my case."

S. T. Cooley, Centralia, states: "I do not think the soil bank is the answer to our farm problem but so far it is the only thing that Mr. Benson has come along with. I am in the same fix as every other Missouri farmer so am willing to go along with the soil bank program and hope it will help solve our farm problem."

Elmer Nienhiser, Blackburn, explains: "I am a family-size farmer. The soil bank would not fit in my present operation at all. I have a very small corn allotment. I need all the grassland and feed for my present setup. It seems to me the soil bank pro-

gram would fit in best for large farm operators, or farmers that have been depleting their farms, or part-time farmers. This could also include farmers that are more or less retiring."

Charles D. Miller, Memphis, explains: "The soil bank would not do on my farm as I am a grass farmer and run calves for feeder market." Miller favors production payments as a means of improving farm purchasing power.

Dwight Dodge, Hamilton, said: "The soil bank will help the larger farmers and hurt the small ones."

Hugo Schnakenberg, Cole Camp, points out the danger of some rich landlords renting their farm to the Government for more money than a renter could afford to pay. He describes the proposal as "just something to make the rich richer and the poor poorer."

John B. Ezell, Marshall, comments: "I can see no indication that the idea behind the soil bank is to retire me and eliminate my production. The idea of retiring certain acres about my farm would merely subject me to harassment and added costs; also it would be impossible to use the remaining acres to the best advantage. For instance, who is to build and pay the costs on the fence that will be necessary to keep the cattle from breaking in?"

Charles A. Myers, Brunswick, explains that most farmers do not have more land than is needed for them to get along. "The problem is how to get in enough money to meet necessary expenses," he said.

Elmer W. Haas, Rolla, writes: "I could not profitably keep out of production cropland and still have an economical farm unit whereby machinery and time would be fully utilized."

Don Sparks, Dixon, said "Some large owners who rent their farm might lease them to the Government. In my own case, with a large family of small children, I must increase production and use all available acres to keep up with the rising cost of living."

Everett Jose, Hartsburg, has 473 acres consisting of about 200 acres of Missouri River bottom land. He said, "The bottom land becomes overgrown with willows, cottonwoods and all types of weeds if not cultivated for a year or two. It would have to be kept mowed. I think this should be considered in the compensation allowed."

N. B. Tinnin, Hornerville, remarks, "The soil bank to me is just a political idea to get farmers thinking about something other than the low prices they are receiving for their commodities."

William Marshall of Nelson replied, "The whole soil bank program is a thin political primer to whitewash the United States farm economy."

Why can't Congress solve the farm problem, MFA President Heinkel asked? Any cost of a real plan would be cheap compared to a depression, which is in the making, he warned.

The 10 Commandments of Maturity

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MULTER. Mr. Speaker, I am pleased to call the attention of our colleagues to the following words by Rabbi Norbert L. Rosenthal, of Temple Israel, Tulsa, Okla., entitled "The 10 Commandments of Maturity":

THE 10 COMMANDMENTS OF MATURITY

To thyself be true.
To thy family, be affectionate.
To thy neighbor, be generous.
To thy community, be serviceable.
To mankind, be just.
To every living creature, be compassionate.
To the world, be courageous.
To the past, be understanding.
To the future, be hopeful.
And to God, be humble.

—*Rabbi Norbert L. Rosenthal.*

TEMPLE ISRAEL, TULSA, OKLA.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Edison's Anniversary

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, February is a most unusual month in that it is during this month that we celebrate the birthday anniversaries of many of the most outstanding men and women of both this country and the world as a whole.

February 12 is, as we all know, the anniversary of one of the greatest of all Americans—Abraham Lincoln. But I wonder how many of us also realize that February 11 is the birth date of another great American—Thomas Alva Edison. Many citizens of New Jersey are particularly aware of this fact, for Edison was one of the most distinguished men ever to live in New Jersey.

In this connection I was most pleased to learn recently that one of the most leading members of the clergy in Trenton, N. J., Dr. Andrew Christian Braun, had visited at the former Edison home with George E. Stringfellow and that, as a result of the visit and its impression on him, he intended to build his sermon around the life of Edison on Sunday, February 12, 1956.

I have a copy of that sermon, as well as an editorial from the Trenton Times on Edison's anniversary, and I should like to include them as a part of my remarks.

The editorial and the sermon follow:

[From the Trenton (N. J.) Times]

EDISON'S ANNIVERSARY

It is indeed noteworthy that the 109th anniversary of the birth of Thomas A. Edison is to be observed next Sunday in the St. Paul Methodist Church. A sermon especially prepared by the Rev. Andrew Christian Braun, pastor of St. Paul's, ably presents highlights in the career of the distinguished inventor whose life for so many years was associated with that of New Jersey.

Edison's part in the development of applied science was altogether remarkable. But also, like Benjamin Franklin before him, his commonsense philosophy was such as to inspire thousands of his fellow citizens with the ability to face human problems with courage, dignity, and intelligence.

The name of Edison will always loom large in the annals of this State in which he laid the foundations for so many of the miracles of modern life. It is appropriate, therefore, for Jerseyans to recognize his vast contributions and to pay honor where honor is so clearly due.

THE LIGHT BRINGER OF MODERN TIMES

(By Dr. Andrew Christian Braun)

"In the beginning God created the heavens and the earth. The earth was without form and void and darkness was upon the face of the deep; and the spirit of God was moving over the face of the waters. And God said, "Let there be light"; and there was light." (Genesis 1: 1–3 R. S. V.)

Glenmont, in Llewellyn Park, West Orange, N. J., was the beginning. Here on November 14, 1955, through the courtesy of former Gov. Charles Edison and George E. Stringfellow, his faithful associate, my wife and I enjoyed 24 hours of enlightening pilgrimage.

At Glenmont is a 23-room house, a many-gabled mansion, which was the home of Mr. and Mrs. Thomas Alva Edison from 1886 until they passed away. While seated in the comfortable second-floor living room, the private retreat of Thomas and Mina Edison, I looked through the broad picture window and this sermon began to take form.

My mind let loose its leash, and I reconstructed the influences which made Edison the light bringer of modern times. I could see the humble beginnings in Milan, Ohio, on February 11, 1847. Indeed, February is a month of illustrious beginnings, many under humble circumstances. Mendelssohn, Longfellow, Lindbergh, Caruso, Dickens, Charles Lamb, Roger Williams, Susan Anthony, Lincoln, and Washington were all February babies.

When Thomas Edison was born in 1847, the seventh child of Samuel Edison, the father was operating a small lumber mill. At 5 years of age this boy showed the curiosity for which he was later famous, by persisting in sitting on a nest of duck eggs and patiently waiting for them to hatch. At 7, he began one of the shortest school careers in history. Because his teacher called him "addled," his mother, Nancy Edison, took the boy out of school and taught him herself. Before he was 10, he was reading Gibbon's Decline and Fall of the Roman Empire, Parker's School of Natural Philosophy, and comparable works.

The vicissitudes of his eager quest for knowledge led in adult life to 1,093 patents, including the motion-picture machine, a carbon transmitter for telephone, electric lighting and power, electric railways, the phonograph, improved telegraph and induction wireless telegraphy, improved storage batteries, electric motors, dynamos, modern cement kilns, and the mimeograph, just to name a few.

Space will not permit adequate treatment of his life. However, let us examine our text and illustrate it from Edison's life. This text was suggested by a quotation from the Christian Herald, of November 22, 1916. Here I read, "Mr. Edison does not hesitate to declare his belief in the existence of God as seen in nature and in His providence." He says, "Too many people have a microscopic idea of the Creator. If they would only study His wonderful works shown in the natural laws of the universe and in nature herself, they would have a much broader idea of the Great Engineer and His divine power. Indeed, I can almost prove His existence by chemistry. The true man of science finds what the first verse of the Bible declares, that 'In the beginning God created the heavens and the earth.'"

Let us consider this text under three heads:

I. THE FOUNDATION—"IN THE BEGINNING GOD"

The revised standard version suggests that the universe was created ex nihilo. Here we behold the priority of God. The Hebrew puts it "bereshith," in the beginning—God. The Bible makes plain that life began in goodness. Therefore, we can move forward with calm courage and confidence. The Hebrew word "bara"—to create—proves for me that no mechanistic, evolutionary theory can make sense. In all this I must say that the Bible is not intended to be a textbook on science. Those who wrote it were not scientists in the modern sense. They were rather poets. As such they saw the answer to the riddle of the universe. They did not ask, "What was the process of creation?" Rather they asked, "What was the purpose?" As consecrated poets they were inspired to declare that God, the Creator, was before all and in all.

God is the first cause. God is Creator, Redeemer, and Sustainer of the universe. God makes and dethrones kings and commoners. James Anthony Froude, in his essay on The Science of History, says, "One lesson, only one, history may be said to repeat with distinctness: That the world is built somehow on moral foundations; that in the long run it is well with the good; in the long run it is ill with the wicked." God is the foundation of the world which He created and we cannot lay any other foundation without ruining our lives. So Edison called God "the Great Engineer."

II. THE ACTIVATION—CREATED

Some words do not have terminal facilities. "Created" is a word which seeks a complete predicate. There is power for and power over something or someone else. The word "created" should lead every child of God to greater vision and vaster victory. I recall a comment of Bishop Arthur J. Moore to the effect that when the early church fathers came together after the resurrection of Jesus, they talked about their powers; but when modern churchmen come together, they talk about their problems.

Let us draw on the power of God by consecrating ourselves to Him. Consecration of self, service, and substance explains the far-reaching results of Edison's efforts. Edison constantly poured his profits back into his experimentation for the world's good. Do we? Are we tithers of self, service, and substance for God and His children?

The Founding Fathers indicated that certain truths are self-evident. One of these truths is that there is a God. Second, that all men are created equal. Now all men are not born equal, only in dignity and rights—before the law. Men are not physicaly or materially born equal. But all men are equal in the sight of God, their Creator. There are individual differences in God's creation but all share equally in His love and care. His concern for us is equal. For this reason we are considered equal, even before the law of the land. Let us enunciate this doctrine, illustrated in the life of Edison, to all our citizens today.

III. THE GENERATION—CREATED THE HEAVENS AND THE EARTH AND LIGHT

God created this wonderful atomic world. Back in 1883, Edison discovered these electrons flowing out of the hot filaments of his early lamp. This was later called the Edison effect. It is the basis of electronic tubes found in the telephone, radio, and television.

Certainly Edison has enlarged our conception of light. In Masonic language we say

that man most desires light. In the physical sense, back in 1879 most homes were lit with smelly kerosene lamps or candles. Only a few had gas lights. Streets in the cities were lit by glaring arc lights. But Edison kept saying, "Let there be electric light and there was electric light." In consideration of October 19, 1879, many visitors have stood bareheaded before the memorial tower in Menlo Park. On that date, Edison found a filament which, when enclosed in a vacuum bulb, would give light without being consumed. The original lamp using a carbonized cotton sewing thread burned for 40 hours.

Time and space will not permit a full treatment of the Sunday interview at Glenmont of Bishop William F. Anderson with Thomas A. Edison in which Edison stated, "One thing is certain, the universe is permeated by intelligence. I do believe in a future life and I have so declared." Edison's belief in God, though not the orthodox belief, was nevertheless the result of sustained thought and investigation in the physical realm. Edison always referred to Christ as the Saviour. The Sermon on the Mount was his favorite passage of scripture and he thought its practical truth would be worthy of the emulation of the people of America.

Space does not permit a full treatment of the spiritual life of Edison. But let us close with a true story. Edison on several occasions went fishing off Sandy Hook. On Robbins Reef was a lighthouse tended for many years by Mrs. Katie Walker. She tells how one night her husband, who had been the lighthouse keeper, caught cold which turned to pneumonia. When her husband died she buried him on the mainland. In her own words, she says, "Every morning now when the sun comes up I stand at this porthole and look toward his grave. Sometimes the hills are brown, sometimes they are green, sometimes they are white with snow. But they always bring a message from him. Something I heard him say more often than anything else. Just three words: "Mind the light."

Edison minded the light and so must we. Three days before he died, Edison was still making plans for future experiments. His probing, searching mind was the despair of his doctors. He inquired of this drug and that. The black camel of death never had a more alert victim. Finally, Edison performed his last "great experiment" on October 18, 1931. He was 84 years of age.

I have stood before the large canopied bed from which Edison spoke his last murmured words to Dr. Hubert S. Howe, his physician, "It is very beautiful over there." Across the decades since that day, he speaks through every incandescent bulb to our souls, "Mind the light."

Treasury Rejects Charge Swiss Dodge Watch Duty

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of Commerce of February 8, 1956:

IMPORTERS GET DECISION—TREASURY REJECTS CHARGE SWISS DODGE WATCH DUTY

WASHINGTON, February 7.—The Treasury today rejected long-standing charges by domestic watch manufacturers that Swiss watchmakers have dodged paying hundreds of millions of dollars in import duties.

The ruling, to be finalized in 30 days after the department hears views of interested parties, is in effect a reaffirmation of a 1940 decision that movements not "adjusted" by special post-manufacturing processes are not subject to addition duties of 50 cents for each "adjustment."

ISSUE UNDER PROBE

Today's ruling also represents an answer to the Senate Permanent Investigations Subcommittee headed by Senator JOHN MCCLELLAN, Democrat, Arkansas, which has been looking into the imported watch "adjustment" problem since last summer.

In July, domestic watch manufacturers told the investigating subcommittee that importers had evaded payment of an estimated $238 million in special "adjustment" duties over the years.

The contention was that perfected production machinery has permitted the Swiss to "build in" the special adjustment process in mass-production manufacturing. This, it was charged, permitted a watch to come in marked "unadjusted" when in fact it was "adjusted." As proof, it was pointed out that the same watch was designated, "adjusted" when the Swiss sold it in third markets.

Importers and Swiss manufacturers maintained that third-market shipments were marked "adjusted" as an advertising technique only. When the same type unit was exported to the United States it was marked "unadjusted" to conform with United States law, they argued.

SENT TEAM ABROAD

The McClellan subcommittee took the allegations of the domestic industry under advisement. In its annual report released last month the subcommittee said it would hold up action pending a Treasury report on the situation. A team of Treasury experts went to Switzerland last fall to investigate the charges first hand.

A subcommittee spokesman, informed of Treasury's tentative finding in the dispute, said the panel's finding on the matter may not necessarily conform to the Treasury's decision. He said the subcommittee report on the adjustment case "should be ready in about a month."

The Department's decision today, published in the Federal Register, said it was reaffirming the 1940 finding after "extensively" reviewing "all pertinent considerations."

The ruling also clarified ambiguities in the present law, but distinguished between "adjusting" processes made after assembly and the normal timing and regulating techniques all watch movements receive.

Myths and Realities in Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. ADDONIZIO. Mr. Speaker, Mr. Harry Kranz, the able legislative director of the New Jersey State council, CIO, has kindly sent me the following article Myths and Realities in Unemployment Insurance which appeared in the December 1955, issue of the Employment Security Review. The author of the article, Mr. Philip Booth, is Chief of the Division of Program and Legislation, Bureau of Employment Security, United States Department of Labor. Mr. Booth furnishes the true facts about the unemployment insurance program which has been the subject of so many misstatements. I believe my colleagues will be interested in reading the enlightening article which follows:

MYTHS AND REALITIES IN UNEMPLOYMENT INSURANCE

During the 20 years of unemployment insurance history in this country, various public impressions of the way the program operates have been widely circulated and widely accepted. While some of these are reasonably accurate, others have little, if any, factual support. Many of the latter are concerned with the extent to which benefits are paid to "chiselers" and "work dodgers." In a program protecting more than 40 million workers, some "chiselers" are bound to show up. But if we take account of benefit payments equaling as much as $2 billion a year, the amount of money going out in improper payments in comparison with proper payments is remarkably small. Neither the weekly amount of benefits nor the methods of administration make the system particularly inviting to chiselers.

This article describes some of the myths that have grown up about the way the unemployment insurance program operates and comments on them with facts and figures obtained through actual operations of the State employment security systems.

Myth 1. People prefer benefits to jobs.

Facts: Many jobless workers do not take advantage of their benefit rights, at least not immediately, even when they are unquestionably eligible. Our experience provides little support for the notion that when layoffs take place, all the workers hurry down to the employment office to file benefit claims, the ink on their layoff notices still wet. All studies which have been made show a consistent lapse of time between the last day of work and the date of filing a first claim. Figures from California, Florida, Michigan, and New York, for example, show that almost half the workers filing their first claim in a benefit year have waited more than a week after their job ended, a third waited more than 2 weeks, and a fifth more than a month. When claimants were asked why they waited before filing a claim, they answered most frequently that they expected to get a new job quickly or to be called back soon to their old job.

The amount of money in each benefit check compared with a claimant's regular earnings is itself a strong stimulus to find work. Everywhere, weekly benefits have been set well below the average weekly earnings to provide this incentive.

As of September 1, 1955, only 1 of every 8 workers lived in a State where the maximum weekly benefit he could receive (excluding dependents allowances) was as high as half of statewide average weekly wages. The nationwide average weekly benefit of about $25 in 1954 was only one-third of nationwide average weekly wages.

When loss of work causes people to cut down on their living standards or to use up their savings, or both, chances are they would rather go back to jobs in which they would get considerably more in wages than they can in benefits. In fact, American workers have billions of dollars of obligations for the purchase of homes, cars, furniture, and other consumers' good which provide compelling incentives for them to find work quickly when laid off, if for no other reason than to keep up their mortgage and installment payments.

Myth 2. Claimants collect the maximum number of benefit checks and then promptly

go back to work or retire from the labor market.

Facts: A few years ago Michigan surveyed the experience of a number of people some time after they had collected all the benefits to which they were entitled. Many of these former claimants—33 percent of the men and 47 percent of the women—had no employment after their last benefit check, but relatively few—4 percent of the men and 13 percent of the women—reported that they were no longer in the labor market. Two-fifths of the claimants who were still in the labor market were without work for more than 6 months after they stopped collecting benefits. The majority of the people in the survey were supported by their family or other relatives after their benefit checks stopped. Many lived on savings. Some had to accept public relief.

Comparatively few claimants, as a matter of fact, collect the maximum number of checks payable under the law. There is a considerable turnover in the benefit file. In recent years, 4 out of every 10 New York workers who were registered for unemployment benefits in 1 month did not claim benefits in the next month. About 10 percent of all claimants dropped out without receiving even one check. Only 1 out of every 6 beneficiaries in 1954, a year of moderately heavy unemployment, received 26 weekly checks, the State's maximum. The average number of benefit checks per beneficiary in 1954 was 14.

Throughout the country, while about 9½ million individuals filed initial claims in the recession year of 1954, nearly 3 million of these did not receive even one benefit check and almost an additional 5 million returned to work before they had exhautsed their benefit rigths. Thus, only 1 out of every 5 beneficiaries drew all the benefits to which he was entitled. For those drawing benefits, the average number of weekly payments was slightly less than 13.

It is almost axiomatic that the number of workers exhausting benefits rises and falls with changes in economic conditions. In 1953, a year of full employment, only three-fourths million exhaustions occurred, while the following year, when unemployment was much heavier, the figure increased by a full million to 1¾ million.

Myth 3. The same people collect benefits year after year.

Facts. Many States periodically make studies of the benefit experience of a sample of workers representing all industries. Consistently they find that in a 2-year period, from one-eighth to one-fourth of the beneficiaries in the first year are repeaters in the second year. These figures include persons who collect as few as 2, 3, or 4 checks in the 2-year period as well as those who receive the maximum in both years.

Persons who collect the maximum duration in each of 2 successive years are extremely few. A New York study showed that in the benefit years 1947–48 and 1948–49, fewer than 2 percent of the beneficiaries in both years did so. In Arizona, only one-tenth of 1 percent of all claimants between 1948 and 1953 exhausted all benefit rights in each year of this period. In most States, people who exhaust their rights in 1 year often cannot qualify for the maximum duration in the next year.

New York recently studied the benefit experience of a group of workers for 5 successive years. In 14 seasonal industries in which there is considerable underemployment each year, few workers filed benefit claims in each year of the 5 in which they had some covered employment—3 percent or less in 10 industries and between 5 and 10 percent in 4 industries. The percentages of repeaters ranged from 14 to 31 in another group of 4 industries—men's and women's coats and suits, dresses, and millinery—which had the largest proportion of steady repeaters.

These repeater figures are low despite the fact that in many industries, workers are laid off annually as part of a regular pattern of shutdowns for inventory, retooling, or model changes as well as seasonally slack business. Many such workers draw benefits each year during these periods.

Myth 4. Many people collect benefits illegally by lying.

Facts: One dramatic instance of claimant fraud makes a deeper impression on the public than a ream of statistics. Evidence accumulated from an ever-increasing amount of effort by State agencies to detect fraud and determine its extent in the system proves that extremely few claimants deliberately lie to obtain benefits. The figures show that payments made on claims found to be fraudulent during the 1955 fiscal year amounted to $3 out of each $1,000—three-tenths of 1 percent of all benefits. In only 1 of the previous 4 years did this figure exceed $5 and in the other 3 years, it varied from $2 to $3 out of every $1,000 in benefits.

It is important to distinguish between claimants who make an honest mistake in supplying information to local office personnel and those who deliberately misrepresent facts in order to obtain benefits. Frequently, claimants do not realize that certain work constitutes "employment" and may not intend to conceal relevant facts when they do not reveal such work.

Other problems arise due to technical requirements which call for the claimant to report the "gross" amount of pay rather than the take-home pay he has received during the week for which he claims benefits, to report earnings from self-employment (when he may be thinking only of wages from an employer), and to report employment and earnings during a 7-day period ending perhaps on a Tuesday or Wednesday, when he customarily considers that a week ends on Saturday.

Frequent contacts uncover information

Local offices are in a position to find out a good deal about claimants because of their frequent contacts with them. Hours for reporting to unemployment insurance offices are fixed during working hours to discourage "chiseling." Local office personnel are trained to note claimants who have a record of reporting early or late, or on other than their regular reporting days; who appear in work clothes or carry a package which may contain lunch; whose hands indicate recent manual work; who are seen riding to and from the local office in a commercial vehicle suggesting possible employment. Women who appear at a local office with a young child or a baby in a carriage are questioned as to their availability for work.

Local office personnel take other action to detect fraudulent claims. They report suspected fraud cases to a central investigation unit which investigates, decides and, when necessary, recommends court action. Other sources of leads for the investigation unit are anonymous letters and telephone calls, reports from other parts of the agency, and from local law enforcement agencies.

The investigation group also examines payrolls in industries which appear to offer claimants the opportunity to collect benefits while earning—while working intermittently, for instance, or on a piece-work basis, or where the workers "shape up" daily for a job, or where the work is done at home. The industry investigations are generally carried on in this manner: selecting an employer; obtaining the benefit records of all employees on his payroll; checking the record of earnings or employment of these employees with benefits that they received during the same period.

Penalties for fraud range from reduction of the maximum potential weeks of benefits up to a court conviction which carries a fine or imprisonment or both.

Other methods for detecting fraud, which may be even more important in many States than those mentioned here, are discussed in other articles in this issue.

Myth 5. It is easy to collect benefits.

Facts: The unemployment insurance system has controls designed to confine the payment of benefits to persons who are genuinely attached to the labor force and who are unemployed through no fault of their own. These controls are both statutory and administrative.

All State laws require that a worker must have had a minimum period of employment—of at least 14 to 20 different weeks—or have had specified minimum earnings during a year shortly before he files a claim for benefits. This requirement is intended as evidence that the claimant has been recently attached to the labor force as a regular worker.

The laws require that to receive benefits, a worker must be totally or partially unemployed, available for work, and able to work.

He must report in person regularly during working hours to certify to his unemployment.

If there is evidence that a claimant is not interested in obtaining work, he is found ineligible.

A worker places himself temporarily outside the protection of the law (is disqualified) if he refuses employment or has quit his job without good cause or was discharged for misconduct; in other words, if he did not act like a reasonably prudent person who wants to work.

Benefits are also withheld in the event of a strike or lockout at the claimant's place of work.

Experience of nearly 20 years has amply shown that the overwhelming majority of workers who file claims have legitimate rights to benefits. It is, however, necessary to assure that claimants continue to be available for work while they are drawing benefits. The devices described below are used for this purpose.

Claimant interview: The backbone of claims investigation is an interrogation of the claimant, conducted by skilled examiners at the local offices. Statements obtained are put in writing. Claimants are confronted with information received from outside sources, such as employers or other workers, and with facts obtained by the local office.

Employer information: Information from employers is obtained through responses to queries sent them at the time a claim is filed. The employer is asked to furnish the reason for a claimant's separation from employment if he has any question as to the worker's right to benefits. He is also asked for any other facts which may have a bearing on the claim.

Placement office participation: Benefit claimants must register for work with the Employment Service when they file their claims. If a claimant refuses a job to which he is referred by the Employment Service, or declines to accept referral to a job, or if the placement interviewer hears of other circumstances which indicate that the claimant is unprepared to take either temporary or permanent work, the claims section is notified. It makes an investigation and decides whether benefits should be paid or postponed.

Special techniques: A variety of techniques are used to identify claimants whose cases should be investigated. These are discussed in greater detail in other articles in this issue.

In many States, each claimant must list contacts made in his independent search for work, the type and conditions of employment he is seeking, and other data having a bearing on his availability. Other questionnaires are used for special conditions, such as for women claimants who have child-care problems, inquiring into the arrangements made for care of the children

if the claimant goes to work. A statement is obtained from physicians regarding claimants who refuse or quit a job, or restrict the field of their job searches for health reasons.

Claimants whom the placement staff has been unable to place in spite of active demand for labor in their field are interviewed periodically to determine the adequacy of their own job-finding efforts.

The headquarters of most States supply local offices with a comprehensive interpretation of the law in terms of actual cases, including precedent-making decisions, guiding principles and statements of policy on various issues. In addition, a manual of procedures describes steps to be taken in the examination of claims. An investigation section is also used to investigate "mass" situations of possible fraud covering for example, a whole industry or location.

The controls outlined above show that a jobless worker does not automatically receive benefits after meeting the qualifying wage requirements. The claimant must pass other tests which are devised to ascertain his lack of employment and his availability for work when he files a claim for benefits. In 1954, some 370,000 special interviews of Michigan claimants were conducted by experienced claims examiners. Over 130,000 disqualifications were assessed. One-third of the disqualifications were because of unavailability of claimants for work, two-fifths because of voluntary quitting, one-tenth for discharge for misconduct, and one-twenty-fifth because of refusal of employment.

Myth 6. Unemployment insurance helps only those drawing benefits.

Facts: Many people are not aware of the positive role the employment security program plays in bolstering the economy and lessening unemployment. They do not realize the extent to which unemployment insurance keeps purchasing power up by offsetting payroll losses. In the 1954 recession year, covered payrolls were down $2.08 billion from the 1953 total. Benefit payments increased from $1 billion to $2 billion, a rise equaling about half of the decline in payrolls.

It helps conserve the Nation's skills, by giving unemployed workers a chance to look for a job suitable to their training and experience, and some income during the interim.

The program provides a job exchange, and without charging fees helps workers to get jobs and employers to get workers.

It gathers labor market information which is used: to alert responsible governmental officials to the state of the economy; to describe the local labor supply to employers seeking a new plant site or planning expansion; to counsel workers on job opportunities.

It stimulates and helps develop community action to combat unemployment. See, for example, the Utica Story, presented in the December 1953 issue of the Employment Security Review.

Myth 7. Unemployment insurance tax costs are high in proportion to the system's value.

Facts: Unemployment insurance should be regarded as a great bargain for employers, for their tax bill to support this program is quite small compared with the system's benefits discussed earlier. In addition, taxes under unemployment insurance are far lower today than when the program began.

In 1939, for example, Federal and State employer unemployment insurance taxes were 3 percent of wages. Under the original estimates, a 3 percent payroll tax was thought necessary to cover the cost of the program. Amendments to the Federal law in 1939, and similar State amendments in the following 4 or 5 years, limited the tax to the first $3,000 of a worker's earnings during the year. However, in 1939 and 1940, so few workers earned more than $3,000 per year that the limitation exempted only about $2 of each $100 of wages; that is, the tax applied to 98 percent of all wages in covered employment. In those years, experience-rating provisions were not operative, so all employers paid the standard 2.7 percent State tax.

Moving on to the present day, wages have risen so far and employer tax rates have been so greatly reduced that employers' taxes are about one-third of their former level. This is because the $3,000 tax base, unchanged since 1939 (except in a few States since 1953) now covers only about 71 percent of all wages. Besides, experience rating cut employers' State taxes in 1954 to about 1.1 percent of taxable wages on the average, the lowest in the program's history. Applying this 1.4 percent rate (1.1 State + 0.3 Federal tax) to 71 percent of wages gives a cost rate of 1 percent of all wages—or slightly over one-third of the cost rate of 2.9 percent in 1940 (3.0×98 percent).

It would probably be agreed, too, that the Nation's employers are far less heavily burdened by the 1.4 percent tax today—with our high level prosperity and profits—than they were burdened by the much higher taxes in 1940. In that year, businessmen had a more difficult time than today, absorbing or passing on to their customers the higher payroll taxes they were paying.

Looking at other costs which employers have taken on in recent years, unemployment insurance taxes again seem less formidable. According to a recent study published by the United States Chamber of Commerce, pension payments (aside from social security) cost 3.8 percent of payroll in 1953; vacations and bonuses in lieu of vacations, 3.3 percent; holiday pay, 2.1 percent; life insurance, sickness, accident, and hospitalization, 1.8 percent; and workmen's compensation, 0.7 percent. Certainly, the value of these benefits to individual workers and their families, to employers, and the Nation's economy is substantial. Yet, it is widely recognized that the Nation's economy, as well as workers and their families, obtain substantial support from unemployment insurance, especially during recessions.

The Powell Amendment

EXTENSION OF REMARKS
OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD an article by Bill Frank. This article appeared in the Wilmington Morning News, Tuesday, February 7, 1956:

FRANKLY SPEAKING

The proposed antisegregation amendment to the Federal aid-to-schools bill, now pending in the Congress, is a dangerous mistake.

If it ever materializes into law, it will be a bomb thrown right smack into Delaware and it will make things much worse than they are now.

This antisegregation amendment, introduced by United States Representative ADAM C. POWELL, Democrat of New York, says that Federal aid made available to public schools must not be given to school districts that have racial segregation.

Representative POWELL may think he is helping the cause of integration. He is not; he's hurting it.

He may think he is helping his fellow Negroes who live in segregated school districts. He is not; he's hurting them.

The amendment is an unnecessary irritant. But over and above everything else, the amendment in many ways would contravene the very essence and spirit of the United States Supreme Court decision on integration in the public schools.

It pleases me, and I think should please all of the middle-of-the-road integrationists, to learn that our Delaware Representative in Congress, HARRIS B. MCDOWELL, is not at all keen about the Powell amendment; in fact, I have the distinct impression he's against it.

I also see by the New York Times that Adlai Stevenson doesn't think the Powell amendment is necessary.

And while this attitude may generate some feeling against them, let's say on the part of the NAACP, it is hoped that others will keep a correct perspective on the whole issue.

First, a few words about the Powell amendment:

No sooner had the Federal aid-to-schools bill been introduced in Congress when along came Representative POWELL with a proposal for an amendment which in effect would say this:

"Those school districts that keep racial segregation will not get a cent of Federal money for school-building construction."

The amendment would also say that the money available to such districts would be held, under earmark, for them until such time as the local districts (segregated) complied with the Supreme Court decision.

This amendment would be a big legislative club held over the heads of the local districts that have not yet integrated.

The essence of the Supreme Court decision on integration is against such bullying tactics.

As I understand the Supreme Court decision, the States and the districts are given time to adjust, to think through the problem, to move, slowly or quickly, in keeping with their experience and special problems.

There is no timetable for action among the segregated States or school districts. Basically, all that is demanded of them is good faith.

The Supreme Court in its wisdom realized that its decision came as a shock to the Southern States and to hundreds of school districts that maintained segregated systems.

It had in mind that it would take some years before complete adjustment was effected—more years in one area than perhaps in another.

The Supreme Court did not contemplate any move that would suddenly present the segregated States and school districts such a humiliating ultimatum.

Nor did the Supreme Court have in mind a Federal agency dangling food and water in front of school districts that need new buildings, saying to them, "Here it is. You can have this aid but you must do what we say."

In a way, I guess, it was the sort of strategy that Representative POWELL proposes that brought on the worst of the reconstruction era and delayed the healing of the Civil War so long.

Let's look at the possible effect of the Powell amendments in Delaware:

The comparatively little money that the Federal Government would make available here would be denied to such important communities as Laurel, Milford, Georgetown, Seaford, and so on; it would be denied to the smaller districts that need help, too.

You can imagine the intensified hatred that would flare up in those areas.

But you can also imagine how all children would be hurt in those districts—Negro as well as white children.

In fact, the Powell amendment, translated in part of the Federal aid-to-schools law, would virtually bring on an attitude of "The hell with it all. We'll not be badgered into

submission by any such monetary whip nor will we be lured on by any such bribe."

However, it can be safely assumed that the Powell amendment, even if it passes the House of Representatives, will get fouled up in the Senate.

It undoubtedly will generate a filibuster. The end result will be no Federal aid of any kind to the public schools of the Nation.

I think this is primarily the basis of Representative McDOWELL's position—that it would do much more harm than good, that it can and will lead the Federal aid-to-schools program in no other direction than down the drain, and that a possible byproduct of the argument will be more antagonism and an intensification of the sores that are already very raw.

The NAACP may say the attitude—that the Powell amendment is not only unnecessary but harmful and even dangerous—is a surrender to the segregation policy of the Southern States.

The NAACP may go even further and brand such an attitude as appeasement and disgraceful.

I fail to see where the Federal aid-to-schools bill, without the Powell amendment, is either disgraceful or a symbol of appeasement.

It's just plain commonsense and does not force an issue that the Supreme Court wished to avoid.

The acceptance of the United States Supreme Court decision and compliance with the decision cannot come overnight. I'd like to emphasize the two words: acceptance and compliance.

It may very well be that compliance will come first; but acceptance is still another matter and may come years later.

It's very similar to the situation in the 1880's with regard to the Negro vote.

Compliance with the amendments to the United States Constitution was here long before acceptance was a reality.

Today, hardly anyone really questions the right of the Negro to vote. That was not true in the 1880's, particularly in Delaware, even among the Republicans who saw the Negro vote as a boon to them.

In the 1880's, the Negro was reluctantly allowed to vote; today, very few people are disturbed at the thought of the Negro voting—as long as the vote is a free one and unfettered to some side money.

Acceptance in the field of voting came much later than compliance because of the various attempts to whip people into line.

And so it will be in the integration-segregation area. There must be persuasion, open discussion, give-and-take, 2 steps forward and 1 step back until, let's say, the 1960's.

By that time, we'll look back upon the 1950's and wonder what the scrap was all about.

The Railroad Retirement Act Should Be Amended To Increase Benefits and Permit Optional Retirement at Age 60 or With 30 Years' Service, With the Annuity To Be Computed on the 5 Years of Highest Earnings

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. VAN ZANDT. Mr. Speaker, recently a subcommittee of the House Committee on Interstate and Foreign Commerce, of which our colleague OREN HARRIS, of Arkansas, is chairman, held hearings on 53 bills designed to amend the Railroad Retirement Act.

After taking testimony from the sponsors of the bills, the hearings were recessed temporarily and when resumed representatives of railroad management, railroad labor organizations, and agencies of Government will be heard.

At the conclusion of the hearings, the subcommittee will make recommendations to the full committee which is expected to perfect a bill for House action during the early summer.

As a sponsor of several bills pending before the House Committee on Interstate and Foreign Commerce, it was my privilege to appear before the committee on January 24, at which time I testified on behalf of my bills to increase benefits for annuitants, pensioners, and widows, and permit optional retirement at age 60 or after 30 years' service, with the annuity to be computed on the 5 years of highest earnings.

The legislation which I have introduced over a period of years represents the wishes of the active and retired railroad employees and their families in my congressional district.

It is in their interest and at their request that I have been making a determined effort for the past several years to have full consideration given to my bills to amend the Railroad Retirement Act.

My statement before the subcommittee of the House Committee on Interstate and Foreign Commerce follows:

Mr. Chairman, once again I am grateful to you and the members of this committee for according me the privilege of appearing before you to explain the bills I have introduced to amend the Railroad Retirement Act.

As all of you know, I represent a large group of active and retired railroad employees and at their request and in their interest I introduced proposed amendments to the Railroad Retirement Act.

Before discussing these amendments I should like to convey to you the attitude of the active and retired railroad employees of my district, as I talked to many of them last fall during the congressional recess.

Not only did I find a lot of dissatisfaction—and may I repeat dissatisfaction—among the retired people because of the failure of Congress to increase benefits, but I also found a general feeling among active railroaders that the Railroad Retirement Act should be revised for the purpose of providing more adequate benefits at the time of retirement.

Mr. Chairman, the basis of the majority of complaints stems from the action of Congress last summer in approving an increase in spouse benefits. The widow and widower are the chief critics of what they call discriminatory action on the part of the Congress.

Frankly, I found it very difficult to answer a widow whose average monthly benefit check is in the neighborhood of $40 when she asked me if I could exist on the scale of benefits paid those in her category.

In addition to the criticism that I received from the widow and widower on my visits to my congressional district last fall, I encountered a concerted and organized drive by actively employed railroaders—especially those in the Altoona, Pa., area where the largest railroad shops in the world are located—in support of amendments to permit retirement after 30 or 35 years of service, or at age 60, with the retirement annuity being computed on the 5 years of highest earnings and not less than one-half of the individual's monthly compensation.

In addition to the personal contacts I had with active railroaders in regard to the new formula of computing annuities, I have received postcards and petitions that contain in excess of 5,000 signatures in support of the proposed change in formula. Mr. Chairman, it is my understanding that this committee has received similar communications urging approval of these proposed amendments.

In all my statements regarding the possibility of liberalizing the Railroad Retirement Act and increasing benefits, I have stressed the absolute necessity of maintaining the stability of the retirement fund and keeping it in a solvent condition to guarantee the payments of present and future benefits with the highest degree of certainty.

Regardless of the repeated admonition that the solvency of the retirement fund is of paramount consideration, there is an honest difference of opinion in disputing the assertion that benefits cannot be increased without a corresponding increase in payroll taxes.

I called attention to this difference of opinion during the last session of Congress when I pleaded for an across-the-board increase in railroad retirement benefits.

In this connection, the views I voiced the past 2 years that my constituents felt an increase in benefits would not impair the financial stability of the retirement fund are worthy of your close examination.

While there is always room for an honest difference of opinion, in view of the widespread insistence that the Railroad Retirement Act be liberalized and benefits increased, I am certain that this committee will review the entire subject and hold adequate hearings at an early date so that final action can be taken on proposed amendments before the 84th Congress adjourns next summer.

Mr. Chairman, I have pending before this committee 14 bills designed to amend the Railroad Retirement Act, and I should like at this time to briefly describe them:

H. R. 856, which provides full annuities at compensation of half salary or wages based on the 5 years of highest earnings, for individuals who have completed 35 years of service or have attained the age of 60.

H. R. 857 repealing the prohibition against the payment of dual benefits to widows which I introduced January 1955 was incorporated in the committee bill H. R. 4744, which became law last year and is now known as the 1955 amendments to the Railroad Retirement Act.

H. R. 858 provides retirement on a full annuity at age 60 or after 30 years of service and that such annuity for any month shall not be less than one-half of the individual's average monthly compensation for the 5 years of highest earnings.

H. R. 859 provides for an acros-the-board increase of 25 percent in the annuities and pensions payable to retired railroad employees or their survivors. This bill has been revised since its introduction because of changes made in the Railroad Retirement Act by the 1955 amendments. The bill superseding H. R. 859 is H. R. 7984, which I introduced January 1956.

H. R. 2443 provides that an annuitant may be eligible for his retirement annuity even though he renders compensated service for an employer other than railroads by whom he was last employed before his annuity became effective. This bill covers the situation where a retired employee is denied the opportunity to serve as a clerical employee of a church, civic, fraternal, or social organization.

In regard to the series of bills which I have introduced during the present session of Congress, they are as follows:

H. R. 7982 provides that the present dual benefit restrictions on spouses' annuities shall be eliminated.. If this bill becomes a law some 6,000 spouses who have earned social-security benefits in their own right

will be entitled to receive such benefits without having the amount deducted from their railroad retirement benefits as is being done at the present time.

H. R. 7984 supersedes H. R. 859 and provides for a 25 percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors. This bill is a revision of H. R. 859 and is necessary because of changes made by the 1955 amendments to the Railroad Retirement Act.

H. R. 7990 provides a 10-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows, or other survivors.

H. R. 7988 provides a 15-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows or other survivors.

H. R. 7986 provides a 20-percent across-the-board increase in the annuities and pensions payable to retired railroad employees, their widows or other survivors.

H. R. 7983 is a bill designed to provide a 25-percent increase in widows' annuities.

H. R. 7989 provides a 10-percent increase in widows' annuities.

H. R. 7987 provides a 15-percent increase in widows' annuities.

H. R. 7985 provides a 20-percent increase in widows' annuities.

Mr. Chairman, it is my understanding that the opportunity to appear before this committee is a means of affording members of Congress a chance to explain as briefly as possible the bills they have pending before this committee with respect to amending the Railroad Retirement Act.

Mr. Chairman, in accordance with information you furnished me I am pleased that you plan to hold public hearings at a later date at which time I hope it will be possible to have a more general and detailed discussion of the proposed legislation.

I wish to thank you, Mr. Chairman, and members of the committee for the opportunity to present the views of my constituents who reside in a heavily populated railroad district.

I have translated the wishes of my constituents into legislative amendments and I assure you that I appreciate your intention to consider these proposed amendments to the Railroad Retirement Act.

Address by Hon. James A. Farley, Chairman of the Board, the Coca-Cola Export Corp., Annual Brotherhood Banquet, the National Conference of Christians and Jews, Inc., Wilmington, Del., February 7, 1956

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. McDOWELL. Mr. Speaker, once again I had the honor and the pleasure to listen to the remarks of the Honorable James A. Farley as he addressed the Wilmington Conference of Christians and Jews at their annnual banquet in the Gold Ballroom at the Hotel du Pont, Wilmington, Del., last evening. Mr. Farley is truly a great American. His leadership of the Democratic Party has endured and grown throughout the years in its profound influence.

I was glad to find Mr. Farley in his usual good health, and in extending his remarks in the RECORD I do so in full recognition of my opportunty to bring his views on this subject to my fellow citizens.

The address by Mr. Farley follows:

It is always a pleasure to come back to Wilmington and renew old friendships, and I want to thank your committee for inviting me. It would have been hard to refuse Bill Duffy in any case but, frankly, I consider it a real privilege to address a brotherhood meeting in a city which has so often demonstrated its firm adherence to the principles of brotherhood.

Speaking for the national conference is hardly a new experience for me. I have been active in conference work for over 15 years and have served as its New York State chairman for over 10 years. I have helped to the best of my ability to secure leadership for local and industrial groups in and out of the State, so that the conference could obtain some of the money it needs to carry on its work and I have had the honor of working with our present national chairman, Harvey Firestone, as cochairman of the religious commission.

I tell you these things because I want you to know that I am here not as your guest speaker but as your co-worker, one who believes deeply and sincerely as you do in what the conference is doing.

Perhaps it may seem strange to some of you that I should come here to speak to you about the work of the National Conference of Christians and Jews. Surely, you will say, the very fact that you are here should be ample indication of your interest in this work. But I have found on a number of occasions that there is a sort of general but somewhat fuzzy idea even in the minds of substantial contributors and ardent workers of what the conference is really trying to do. The words are commonly used—interfaith and tolerance—and there is an idea that the conference has been organized to spread tolerance throughout the Nation. As I see it, tolerance in the field of human relations is hardly the aim of the conference. In fact, it is a word I do not like and one I know the conference never uses. I do not want you to tolerate me and I am sure you do not want me to tolerate you. Toleration somehow suggests a number of isolated groups each going its own way and all looking over their shoulders to see that there is no attack or other interference by other groups. The national conference does not ask for tolerance. It asks for justice and understanding. It declares that we are all one family here on God's footstool. If providence has willed that the world be peopled by men and women of many races and many religions then surely it is not too much to ask that we give to each race and to each faith the respect and the recognition it has earned.

What the conference is doing today has not changed basically from the concepts of its founders 28 years ago. True, its field has been broadened, its influence has expanded and its stature in the community, the Nation, and the world has been enhanced immeasurably. But basically, it still seeks through a process of well-planned, continuing education to translate its charter into a living thing and to establish justice, amity, cooperation, and understanding among peoples of differing religious loyalties—these same people who have built this great Nation. It holds that we are, all of us, brothers—children of the same father. It believes, as did the men who founded this Republic, that democracy cannot long survive if it abandons the great moral and spiritual precepts which are the keystones of all religion. It holds that an attack on one religion almost inevitably leads to an attack on all religions. Surely all of us remember how rapidly Hitler's persecution of the Jews was followed by the persecution of Catholics and Protestants.

Of course, it the dictatorship, whether of the right or the left continues for any extended period, if it thinks that its campain of persecution, calumny, ridicule, and abuse has succeeded in alienating its youth from the church of its fathers, then the party feels the time has come to set up its own gods.

Perhaps some of you have read Alsop's articles which appeared recently in the Saturday Evening Post. He tells of his experiences in his guided tour through Soviet Russia. He makes the point that no longer do the Soviet leaders feel it necessary to make a frontal attack on the churches. If the old folks want to go to the few churches still functioning, why let them. For by now the youth and those who have reached maturity under Soviet rule have been given a new religion—man worship. Instead of the ancient icons, the faithful carry pictures of the current boss and of course the founding father Lenin. Alsop goes on to tell of his visit to the so-called Lenin museum in the city of Kiev. Here he saw what was labelled the room in which Lenin lived during his exile, the clothes he wore and the books and tools he used. Then when Alsop went to other cities he saw the same room, alike in minutest detail. The tear in the bedspread was exactly the same length and at the same angle as the tears in all the other bedspreads. All the rakes were missing the same teeth. All the books were opened at the same page. Frauds? Obviously. But schoolchildren are taken on pilgrimages to these shrines and they bow the head and bend the knee to their god. Yes, in the dictatorship of the proletariat, Lenin is god and Khrushchev is currently his prophet. A sorry prospect, indeed, but one that has been deeply ingrained in the minds of the young people of the Soviet.

Happily we have a different concept here, and it is the one under which the national conference operates. Feeling as it does that only a people dedicated to the brotherhood of man under the fatherhood of God can be a peaceful and happy people, the conference has developed a sound and workable program keyed to this noble thought.

Its foundation is the idea that men are inherently decent, that all they ask is the right to enjoy those inalienable rights with which their Creator has endowed them. To the degree that we acknowledge that these rights are inalienable, to that degree we shall achieve democracy. To our shame we are compelled to admit that we have denied these rights at times to our neighbors. Perhaps it is only an indication that man has not yet achieved perfection and that the virus of prejudice still infects many of our people.

Prejudice is a fearsome thing. It is often vicious and often blind and its blindness makes it all the more vicious, because in its blindness it strikes out indiscriminately. While it is true that no child is born a bigot, bigotry is sometimes a product of the home.

Prejudice is often nurtured in clubs and societies under the mantle of exclusiveness, or perhaps more correctly the cloak of smugness. It is sometimes found in the schools, where teachers and pupils continue the antagonisms they have picked up elsewhere. And, I am sorry to say, it is sometimes found even in the churches.

The conference recognizes these facts. It tries to analyze them, to discover their origins and then works tirelessly and continuously to counteract them. It does not use the denuciations or invectives that some other well-meaning groups favor nor does it seek to organize dissident blocs to bedevil legislatures. It feels that brotherhood by fiat is not a sound or wholesome thing. It believes people can be taught brotherhood in

its noblest sense as surely as they can be taught hate, and we have had plenty of evidence of hate mongers and their evil work right here at home. It feels that the stuff hate feeds on is ignorance and that a program of education through schools, theaters, periodicals, radio television, all avenues of communication, can do much to neutralize the acids of racial and religious animosities.

It says, in effect, "Mister, if you have a gripe, if you dislike another man or his church or the group he belongs to, let's sit down, all of us, and talk it over. Tell us why you are sore and maybe you'll convince us, or maybe we'll convince you. Experience over the years has shown that invariably these round-table talks prove that there are far more areas of agreement than of disagreement. It may come as a surprise to you, Mister, but the people you disliked mainly because your father before you disliked them generally turn out to be pretty decent citizens after all. But the principal thing to remember is this—don't keep your prejudices, real or imaginary, within you. Don't let them fester and rot your soul".

I repeat because I believe it is important for you to bear in mind—the program of the conference is first and last one of education.

The conference approaches its problems as a well-staffed medical center approaches its problems. Simply saying that cancer is a deadly disease will not eliminate cancer. Trained and dedicated scientists work everlastingly to find its cause, knowing that only after discovering its cause can they effect a cure. Research which will lead not only to cure but to prevention is the modern way in medicine.

So, the conference feels, should it be in human relations. Therefore, it establishes university centers, summer workshops for teachers, seminars in factories, discussion sessions in schools—constantly asking why? why? and over the years coming up with some of the answers. What it learns, it tries to implement through its various commissions, nationally and locally. It is not my intention to enlarge upon the work of these commissions. These are technical details and many of you participate actively in their work here in Wilmington and probably know more about them than I do.

It has often occurred to me that there is a certain similiarity between law and education. Just as there are two kinds of law—lex tradita and lex scripta, the handed-down law and the written law—what we call common and statute law, so there are two similar kinds of knowledge, the spoken and the written. The spoken is the knowledge a father imparts to his children or a pastor to his flock or a teacher to his pupils. The written is the kind we find in books, newspapers, and other printed matter and which is often accepted as gospel just because it is written.

Your problem and my problem is to seek out the truth in the spoken and written word and separate this truth from the half-truths, the twisted documentation and the out-and-out fabrications.

Because if we do not we are apt to go out and repeat these tales, and those who hear us enlarge upon the original and add their own embroidery until the poisonous stories we have absorbed wittingly or unwittingly have been instilled in the minds of others. Bad news somehow travels much faster than good news and there are so many people who are willing to speed it on its way.

But there is another kind of education that, to my mind, is becoming more and more important today. Let us call it education by example. For what we do and say as individuals determines in the final analysis what we do and say as a nation.

Furthermore, what we do and say today is of the utmost concern not only to us but to the world itself, a world whose boundaries are narrowing day by day.

President Eisenhower, in his state of the Union message to Congress, said that the Kremlin has changed its policy from one of active aggression to one which seeks to divide those who differ with it. That is not exactly a new policy. It is an enlargement on an international scale of what we have seen the Communists doing all over the world for years, yes, even in our own country. For what other reasons would they infiltrate a defense plant, a labor union, a school or a governmental agency? I doubt they are trying to improve work standards or departmental efficiency. They know there are always some weaklings, some malcontents and some dreamers in whom the seeds of discord can be sown. They will find some who will listen to their siren songs, and who will swallow their stories of the golden apples just over the horizon. After all, the oak was once an acorn and big things may grow from small beginnings.

In the 18th century when our country was in its birth throes, Benjamin Franklin said, "We must all hang together or assuredly we shall all hang separately." Today, when in our full manhood, we are facing another threat, the words are different but the thought remains the same. Today we say "brotherhood or chaos."

Brotherhood is no longer merely a phrase. It is no longer a part of the name of a labor union, a social group, or a religious sect. It is a word which has been hammered into the conscience of America over many years. It is a word that appears more and more often in the speeches of presidents and prime ministers. It is the beacon lighting the road to lasting peace. It is the one last hope of a tense and fearful world trembling before the awesome vision of the H-bomb and the transatlantic guided missile. Brotherhood has become synonymous with survival. Make no mistake about that and to a great measure the choice between brotherhood and chaos lies with us.

Yes, the example we in these United States set will go far toward determining whether we shall live in a free world under God or a slave world under the hammer and sickle.

My work as head of an export company takes me all over the world. I have seen many things and heard many things both in Europe and Asia. Some of the things I have seen and heard have left an indelible impression on my mind. There is so much to say but I realize the time allotted to me here must of necessity be limited, and I therefore suggest that we pass over the many menacing things now happening in Europe.

As I see it, it is in the East, the Near East, and Africa that the cauldrons are really boiling. It is in these so-called backward areas that the greatest threats to world peace exist. It is here that waves of nationalism are sweeping over the lands. People who lived for centuries under alien banners are now writing their own declarations of independence modeled, I understand, for the most part after our own great document. We have been quick to give these people substantial material help, but somehow or other we have failed to gain their confidence. We shall never have their confidence unless we learn to treat them as brothers and political equals. We must not appear to be lords and ladies bountiful distributing largesse to the peasantry. Otherwise, I am afraid the traveling team of Khrushchev and Bulganin will add them to their troupe.

America has always been generous to those in need. We have given financial and material help to many peoples. They were necessary measures and as an initial deterrent to the spread of kremlinism they have served their purpose well. But they are not enough in themselves and are already beginning to react against us. Dollar diplomacy can go just so far. I doubt it can buy lasting friendship. Perhaps nations are no different than individuals. The man to whom you keep giving help at first is grateful, then usually resentful, and finally sometimes ends up by really hating you. Only in this way can he salvage the only thing he has, his pride. It is of course a false pride but he cherishes it and nurses it and feeds upon it.

And so let me repeat—the example we set the world will be, in my opinion, an incalculably important factor in determining the fate of the world.

It boils down to this—if we cannot continue to live together in peace and harmony in these United States, respecting the other fellow's right to differ with us in all lawful ways, if we cannot learn to give to the other fellow the same rights and dignities that we reserve to ourselves—then we have failed as citizens of this Republic.

If we cannot learn to project these same ideas overseas, particularly in our dealings with the people of Asia and Africa, then we have failed in our missions as the acknowledged leader of the free world.

I do not believe that we have failed nor that we will fail. We may bungle things a bit; we will make mistakes. But when the chips are down one great American characteristic will carry us through and that is our faith; faith in ourselves; faith in our destiny, and faith in our God.

Why Not the Minnesota?

EXTENSION OF REMARKS
OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. O'HARA of Minnesota. Mr. Speaker, the development of river transportation on the Minnesota River, the flood-control problems, and all matters pertaining to the area affected by the Minnesota River has long been one of my very deep interests.

I have taken no position, and intend to take none, upon the so-called upper Minneapolis Harbor development, as I feel that each river development must stand on its own separate state of facts.

The development of the Minnesota River for both transportation and harbor facilities has a tremendous and important future for Minnesota and the entire Northwest. I enclose an editorial from the Shakopee (Minn.) Argus-Tribune of January 12, 1956, which indicates the deep interest in the present development and the future possibilities of the available facilities on the Minnesota.

The editorial follows:

WHY NOT THE MINNESOTA?

River transportation in Minnesota will come in for another going over Friday, January 20, when Army engineers will hold a public hearing on the upper Minneapolis Harbor project which, it has been estimated, would cost $33 million.

To date $10 million has been spent on the Mississippi River job and it cannot be completed for at least another 6 years.

It has also been authoritatively ascertained that the Minnesota River could more speedily and more cheaply be put to more universal use for water transportation opening up vast new acreages for industrial development from Mendota to Shakopee.

Port Cargill and Port Richards at Savage and the Northern States Power Co. Blackdog plant on the Minnesota River are already responsible for water transportation tonnage

that already equals or exceeds the tonnage in the Minneapolis Harbor—and that record with a minimum expenditure of public funds. The companies utilizing the stream maintain it at their expense.

It seems only logical that with the Minneapolis Harbor issue again coming up for review, the question of the practicality of the Minnesota River project could not be ignored at the January 20 hearing.

It seems only logical, too, that civic groups, existing industries, landowners, and communities generally on the Minnesota River west of its junction with the Mississippi would be vitally interested in what transpires at the hearing.

There can be no doubt that there will be no lack of effort to encourage the completion of the Minneapolis Harbor regardless of its cost to the taxpayer in proportion to the questionable economic value the project may hold.

Army engineers have already reported that the expected benefits from the completion of the Minneapolis Harbor do not justify the expenditure of the estimated $33 million required to finish the job.

What more is necessary? Who should know more about it than the governmental agency within whose province the Nation's waterways lie?

There seems to be no question about the value of inland waterways—present use of the Minnesota as far as Savage is ample proof. With just a small fraction of what it would cost to complete the Minneapolis Harbor, the Minnesota could be opened to greater use, and tremendous acreages of submarginal and practically wastelands could become the sites for vast industrial growth which the State so sorely needs.

It isn't too late for the voice of small communities and residents of the Minnesota Valley to be heard. The voice should be raised at the hearing January 20.

This Is the Enemy—No. 1

EXTENSION OF REMARKS
OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. DODD. Mr. Speaker, the extract of interim historical report, Korea War Crimes Division, has never been placed in the RECORD. To correct this oversight, I am introducing that portion of the report which deals with war crimes committed against Americans.

Through bestial atrocities such as those recorded here, 6,000 American servicemen were murdered and additional thousands maimed while prisoners of the Communists.

As executive trial counsel for the United States at the Nuremberg war crimes trials, I took part in the historic legal process by which the chief authors of the Nazi criminal conspiracy against mankind were brought to justice.

Those of us who labored in that soul-sickening probe of human infamy, were sustained by the hope that a new concept of man's responsibility to the moral law would emerge, and that future wartime atrocities would be mitigated by fear of retribution.

This has not come to pass, for the precedents of Nuremberg and Tokyo were reversed at Panmunjon. In Korea, criminal barbarism in all its stark horror was loosed against our sons, who went to Korea to save the cause of justice and decency in the world.

In the beginning the punishment of all war criminals was the declared aim of the United Nations Command. A War Crimes Division was established. Hundreds of cases were investigated and many of the guilty were uncovered and held for future trial. But as a consequence of our failure to achieve victory in Korea, those Communist-war criminals in United Nations custody were freed. Thousands of missing American prisoners who were not repatriated were declared dead and the matter was closed.

But they must not be forgotten. For their ordeal was the sacrifice required by a national policy of unpreparedness in peace and vacillation in war.

Nor can it be forgotten that the Communist authors of these unspeakable brutalities are the leaders of Communist China, North Korea, and Outer Mongolia, who now knock for admittance into the family of civilized nations.

I hope that those who now toy with "package deals" and thoughts of diplomatic recognition will read this record. In it they will see in naked truth the mortal and implacable enemy of everything in the world worth preserving, an enemy which must not be appeased or recognized by freemen.

EXCERPTS FROM EXTRACT OF INTERIM HISTORICAL REPORT, KOREA WAR CRIMES DIVISION

SCOPE OF REFERABLES

To date, 34 cases are referable to higher headquarters as being ready for trial. It seems apparent that in making such referrals primary importance was placed upon whether or not one or more of the suspected perpetrators were in United Nations custody. If such was the fact, and the evidence appeared adequate to obtain a conviction, the case was then forwarded. Brief summaries of these cases follow, categorized into those involving American personnel, and those which do not.

SELECTED REFERABLE CASES INVOLVING AMERICANS

The following referred cases are those in which American soldiers were the atrocity victims:

KWC No. 16, Hill 303: Before dawn on the morning of August 15, 1950, a mortar platoon leader of the 5th Cavalry Regiment called for reinforcements to defend his forward position, and was informed that a platoon of 60 South Koreans was being sent, under a Lieutenant ———. About daybreak, the soldiers saw a group of Koreans approaching, the commander identifying himself as Lieutenant ——— and the Americans were overrun before they found out that their reinforcements were actually the enemy. The captives were then escorted to a nearby orchard where their boots and dogtags were removed and all their personal property confiscated. The prisoners' hands were tied behind them with either wire or their own bootlaces.

For 2 days they were kept hidden in ravines during the day and forced to march at night. Suddenly, on the afternoon of August 17, 1950, without warning, their North Korean guards opened fire upon these bound victims and then left the scene.

Thirty-four American soldiers were slaughtered in this massacre. However, there were four survivors. Later the same day, these men were rescued by a United Nations patrol, who also recovered the bodies, took photographs and captured two enemy soldiers. Since this time, confessions have been obtained from Communist prisoners admitting participation in the crime, and the incident is now referable.

KWC No. 67, Maedae murders: Photographs clearly reveal that the six American soldiers detained as prisoners in a Korean house near Maedae were shot in cold blood and probably bayonetted. Ironically, this slaughter took place in front of a Communist propaganda bulletin board. However, there were five survivors, wounded in the massacre, who escaped by feigning death. In addition a captive North Korean sergeant has admitted participation in the murders. Close examination of the evidence leaves some doubt as to whether this case was properly referred, since there seems to be discrepancies between the confession and the survivors' statements.

KWC No. 75, Seoul-Pyongyang death march: The Seoul-Pyongyang death march has not been referred because no known perpetrators have been located in custody. However, since it leads up to KWC No. 76, it is included here for purposes of continuity.

On September 26, 1950, Korea added its counterpart to the infamous Bataan death march involving approximately 376 American prisoners of war. Only 296 survivors completed this 2-week horror hike.

In August, 1950, these prisoners were being held in Seoul, awaiting movement northward. Nearly half of the group was wounded, many seriously, but despite this they received practically no medical care. Instead, they were beaten often, and on at least one occasion were subjected to the humiliation of being forced to parade down the main street of the city. Their personal belongings were all stolen, and in addition, their combat boots were confiscated, many being left barefoot, and a few receiving ill-fitting Korean shoes in return.

During the ordeal of the march to Pyongyang, many of the sick and wounded were unable to maintain the pace. At this time the Communists demonstrated a policy that runs like a connecting thread through all the reported atrocity cases. That policy was the summary execution of any prisoner whose physical condition would burden their operations. These bodies were always left unburied along the roadside.

Beatings from the guards were commonplace throughout the ordeal. No medical care was provided and the only food was 1 or 2 rice balls per day. For water, the unfortunate survivors had to shift for themselves, drinking from roadside ditches and adjoining rice paddies. As a result, most of them suffered from attacks of diarrhea and dysentery.

Some of the wounded managed to ride on an ox cart, but with no medical care, their wounds became infected and maggot-laden. The senior office among the prisoners, a major, constantly pleaded with the captors for medicine, water, and more food. For his efforts, this officer received only additional abuse and beatings. At one time, when an opportunity to escape afforded itself, he refused to accompany those leaving, stating that he felt his duty required him to remain and do what he could to alleviate the suffering of the men.

Once an American plane flew over the hapless column and dropped supplies for them. However, the North Korean captors immediately and methodically collected these items, appropriating them to their own use. Some 33 soldiers managed to escape during the march and were rescued by friendly forces. In all cases, these individuals were undernourished and suffering from severe malnutrition. Others were in dire need of medical care for neglected wounds.

KWC No. 76, Sunchon Tunnel massacre: When the fall of the North Korean capital of Pyongyang to United Nations forces seemed imminent, all prisoners of war were entrained by the Communists for movement

northward. The men were herded into open gondolas, packed to overflowing, and forced to ride unprotected in the raw October weather. Pneumonia and exposure then started taking its daily toll from the weakened survivors, and their buddies conducted burial parties for them whenever an adequate halt was made. After they had suffered such inhuman treatment for a period of 9 days, their train arrived at a railroad tunnel approximately 4½ miles northwest of Sunchon, and remained inside the mountain all day to avoid the United Nations air activity taking place in the area.

During the early afternoon of October 20, 1950, the starving men were promised their first meal in several days, having eaten only hard crackers distributed intermittently during the journey. Their North Korean tormentors took the American major, together with a group of selected prisoners, purportedly as a detail to go to a nearby village to prepare the food. They were never seen nor heard from again. Hours later, the men remaining in the tunnel were informed that food had been prepared for them, and that they were to be conducted to a Korean house to eat, but due to the limited space they must go in small units, alternately.

Accordingly, the first group of 30 men was removed from the tunnel, escorted down the tracks, and told to hide in an erosion ditch until food was brought to them. As soon as they had relaxed on the ground, their guards opened pointblank fire in cold blood with Russian-made burp guns and rifles. Those living through the initial massacre and still showing signs of life were dispatched by shooting or bludgeoning. Some of the victims survived by feigning death.

Remaining groups were then brought out and treated in a like manner, in each case, the men being slaughtered while sitting on the ground, or standing around helplessly with empty rice bowls in their hands.

United Nations forces overran the Sunchon area on the following day, recovering the bodies of 68 murdered Americans, and, in addition, discovering 7 more inside the tunnel who had apparently died of malnutrition. Among the corpses were found some seriously wounded survivors who were evacuated. In addition, others who had escaped the atrocity found their way back to friendly troops.

Summation of this diabolical movement and massacre reveals that at least 138 American soldiers lost their lives in this war crime. The evidence is convincing and confirmed. An actual perpetrator is in custody in the case of the death march, but the entire happening should be scored against the Red leaders who condone and encourage such activity.

This Is the Enemy—No. 2

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. DODD. Mr. Speaker, I wish to insert in the RECORD the second section of a series of excerpts from the extract of interim historical report, Korea War Crimes Division.

The documented criminal atrocities recorded below were committed against American soldiers and marines and soldiers of our South Korean ally by the Communists during the Korean war.

The perpetrators of these heinous acts of barbarism were once in the hands of the United Nations command, awaiting trial in the tradition of the Nuremberg and Tokyo proceedings. However, our failure to achieve an honorable armistice in Korea resulted in the freeing of these criminals.

Though we failed to bring to justice the guilty individuals, there was still open to us the course of placing the Communist regimes responsible on trial before the bar of world public opinion. To that end in 1955 I urged Secretary Dulles to attempt the establishment of a United Nations tribunal, before which these Red regimes would be placed on trial for war crimes against the United Nations; in absentia if necessary.

This course was rejected by the administration on the grounds that it would endanger the friendly relations that were supposed to be emerging from the Geneva Summit Conference.

The myth of the "spirit of Geneva" has been exploded. It is hoped that the sorry spectacle of our leaders engaging in camaraderie and mutual admiration with the Soviet tyrants is at an end. Much was done at the summit to raise the prestige of communism and they have effectively used their new prestige against us in every part of the globe.

Today more than ever before the people of the world need a true picture of communism in action. It is not too late to revive our own moral position. It is not too late to arouse the wrathful indignation of the decent people of the world against those responsible for the hideous brutalities inflicted on the forces of the United Nations.

EXCERPTS FROM EXTRACT OF INTERIM HISTORICAL REPORT, KOREAN WAR CRIMES DIVISION

KWC No. 125: On or about July 20, 1950, two American soldiers were killed in combat with North Korean soldiers and their bodies were recovered in November 1950 upon information supplied by a South Korean civilian. He confessed that he had seen the Americans hiding in a cave and had reported this fact to the North Korean soldiers, who went to the site and apparently shot them. This statement is corroborated by that of another civilian who assisted in the burial of the bodies. It is doubtful that this case should be considered as an atrocity, but appears at best to be a case of collaboration with the enemy.

KWC No. 143, 27th I. and R. Platoon: Personnel of the I. and R. platoon of the 27th Infantry Regiment, consisting of 2 officers, 11 enlisted men, and 3 Republic of Korea Army soldiers were ambushed and captured by North Koreans on November 6, 1950, in the vicinity of Togan-ni. The captives were stripped naked, even their shoes and dogtags being removed, and then marched about 5 miles to the headquarters of a Communist unit for interrogation. One of the officers was singled out for questioning and subjected to particularly brutal beatings for having warned the men to withhold all information other than that required by the rules of warfare. Soon thereafter, having been promised a warm meal, the prisoners were led to the vicinity of Yultong-ni. Their captors held a conference and, laughing among themselves, started shooting their victims in cold blood.

There was one survivor of this atrocity, who managed to return to friendly lines and tell the story. In addition, the bodies were recovered later at the scene and all of them identified. The following day, a captured North Korean confessed to participation in the crime, completing the chain of evidence.

KWC No. 185, marine patrol: Ten marines from the 1st Marine Division went on a reconnaissance patrol near Nakchon Dong on January 29, 1951. They never returned from this mission. In March 1951, checking on a National Police report, a patrol from the 2d ROK Division found their bodies, together with those of 10 Republic of Korea Army soldiers, 4 National Police, and 1 Korean civilian. These corpses were stripped naked with their hands bound behind them, and the physical appearance of the remains revealed that the decedents had either been bayoneted in the back and chest or had their skulls crushed with clubs.

Interrogation of native villagers indicated that these Americans were captured about January 30 and held prisoners until their murder on February 5, 1951.

Two North Korean lieutenants, discovered among captured Communist prisoners, have confessed to participation in this crime. Although their statements were recorded at different times and places, the factual data is the same. They relate that their commanding officer told them to prepare to execute the prisoners secretly. For this purpose, they decided to use bayonets. Accordingly, the graves were dug in advance, then the victims were led forth individually, stripped, bound and ordered to sit on the ground. In this position, each man was used for bayonet practice, and if death came too slowly or resistance was offered, his head was smashed with a rifle butt. Blood stains were swept from the ground and the bodies buried.

KWC No. 123, KWC No. 154, and KWC No. 184: These cases are all similar in that each involves the murder of a wounded American prisoner by civilians. In each, the perpetrator has confessed, and the confession is corrobrated by the recovery of the body of the victim at the sites pointed out. Two of the cases had additional statements from eyewitnesses.

KWC No. 1409: A North Korean prisoner of war has confessed to the murder of 10 United States soldiers and 9 ROK's who were prisoners of suspect's unit at the time. Suspect states that he personally killed 3 Americans and 4 ROK's and that 2 other NK's killed the remainder. A ROK check at the area mentioned by the accused proved positive; and a field trip resulted in the recovery of approximately 18 skeletal remains. Remains of 3 Americans and 4 ROK's were found in 1 hole, and the remainder nearby. This case is considered referable for trial. Also in the case file are pictures of the war crimes team discovering the bones.

SELECTED REFERABLE CASES INVOLVING KOREANS

Although a jurisdiction question may exist as to whether these cases should be tried by Republic of Korea or United Nations tribunal, there is no doubt that they are atrocities within the scope of war crimes division activities.

KWC No. 29, Chonju: During this same period of time, September 27–28, 1950, Chonju suffered a similar experience to that of Mokpo and Kongju, apparently indicating a fixed plan of extermination by the Communists. Two North Korean officer prisoners have confessed to killing as many as 2,000 anti-Communists, but check with natives indicate that approximately 80 were slain. Two survivors state that 16 were in the group with them, and that death in each case was by beating at the hands of a mob.

KWC No. 90, Kongju: Kongju received its demonstration of Red ruthlessness on December 27, 1950, when the 35 men and 1 woman political prisoners confined in the city jail were eliminated. In the late afternoon, these people were told that they were to be given a lecture by an officer of the North Korean Peoples' Army, and were led into the open and there seated in a semicircle. As soon as they were settled as comfortably as possible, the officer ordered the guards to open fire upon them and the slaughter commenced. Fortunately there were 2 survivors and most of the bodies

have been recovered from the place of execution. In addition, 2 prisoners of war, in separate confessions, have admitted participation in this crime, and each has implicated the other.

KWC No. 92, Hamyang: Another common policy which the enemy seemed to follow was that of executing captured Republic of Korea Army soldiers. In this case, on September 1, 1950, 269 such prisoners, plus 1 reported American, were marched to the base of a mountain about 8 miles northwest of Hamyang after being told that they were to be evacuated to the north. At this point they were divided into groups of 10, bound together, led off into the hills, and summarily shot. Several suspects now confined as prisoners of war have confessed to this atrocity, and have been identified by the six victims who managed to survive.

KWC No. 102, Kwanju: Obligingly cooperative, 1 North Korean prisoner stated that he was a member of the Education and Cultural Section in the village of Kwanju, and that in his capacity, together with 2 accomplices, on September 16, 1950, he took 10 anti-Communist prisoners about 8 kilometers in the country and there executed them. He adds that he used a carbine and did not bury the bodies. He desired to point out the situs, so accompanied by a war crimes investigator and a Korean detective from Kwangju, he directed them to the spot. Three badly decomposed bodies were found, and the suspect insisted that these were 3 of the 10 victims he had helped to murder. The case was probably submitted to accommodate the confessor.

KWC No. 117, Mokpo murders: Approximately 282 South Korean political prisoners were confined in the Mokpo peoples prison on September 28, 1950 when United Nations forces were approaching the city. Realizing that defeat was imminent, their North Korean jailers held an emergency conference and decided to follow the usual pattern of executing these persons for the crime of being reactionaries. The victims were taken from the jail and had their hands handcuffed or tied behind them. They were then loaded onto four trucks and taken to different murder sites. Although most of these unfortunates were shot to death, a few managed to escape when one of the trucks broke down. When the liberating forces overran the city, they took many prisoners, six of whom confessed to participation in the mass killing. This added to the statements of survivors and recovery of bodies completes the evidence against them.

KWC No. 122, Myong Duk San: This case involved the beheading of a Korean civilian prisoner by a North Korean lieutenant acting under orders from his commanding officer, a lieutenant colonel, and assisted by a junior lieutenant. In addition, there were two eyewitnesses to the murder. The crime was referred because all three suspects are in confinement and have made corroborating confessions. In addition, the witnesses' statements make the evidence conclusive.

KWC No. 141, Changhyon massacre: Three North Korean prisoners of war have confessed to the killing of some 1,800 South Korean civilian prisoners on October 8, 1950. The victims were residents of Seoul and Kaesong who were alleged to have been friendly with the U. N. forces. The victims were forced to march to Pyongyang with their hands bound, little food, and scanty clothing. After reaching Pyongyang, they were confined in the military academy building. Later they were divided into smaller groups and taken out and shot. The bodies were buried by nearby villagers. Two American officers investigating the atrocity have made sworn statements concerning their observations of the mass graves. They stated that the stench of death was everywhere, the ground was sunken and that upon digging they turned up a human skull. There was also a grave marker which stated in Korean "to our comrades from South Korea."

KWC No. 180, Naju: Also on September 28, 1950, at Naju, a junior lieutenant in the political security police unit took six political prisoners from the jail, and as usual, without trial, shot and bayoneted them. This lieutenant has confessed to the atrocity but maintains that he acted under orders of his superior. The hands of the victims were tied behind them, they were shot, and the bayonet used for the coup de grace where deemed necessary. Despite this treatment, 5 persons survived, although 1 died shortly thereafter. All identify the confessor as the perpetrator.

CASES INVOLVING AMERICANS

The following cases, selected from the files, are those in which there is sufficient evidence to prove that the crime has been committed, but which have not been referred, primarily because no perpetrators are in custody. Victims were Americans except in the case of the Catholic priests, and in the Taejon massacre, thousands of Korean civilians were also included.

KWC No. 2: Soldiers from the 24th Infantry Division, engaged in a fire fight near Chonui on July 10, 1950, witnessed the capture of 4 American soldiers, and then looked on helplessly while 2 of them were murdered. Later on, all 4 bodies were recovered, hands bound behind their backs, 3 shot in the back of the head and the other with the skull crushed by a blunt instrument.

KWC No. 10, medic and chaplain: No respectors of the Red Cross or the Christian cross, the Communists in July 1950 overran a group of 18 to 20 wounded American prisoners being ministered to by the regimental surgeon, wearing the Red Cross brassard, and an Army chaplain, none of whom was armed. The enemy immediately opened fire, wantonly executing the group with Russian rifles and burp guns. The surgeon, although wounded, managed to survive and escape. Later, remains of three victims of this atrocity were recovered. The chaplain was awarded the Distinguished Service Cross posthumously.

KWC No. 63, Ku-jang-dong train massacre: Thirty American prisoners were shot and bayoneted to death about 4 miles north of Ku-jang-dong, on December 21, 1950. They were being moved north by train, when it was strafed and disabled by United Nations planes. Their North Korean captors decided to murder all those who were wounded, before continuing the evacuation. Shortly thereafter, a friendly patrol moved into the area and discovered their bodies, seven of which had been covered with oil and set afire.

While searching the area, three survivors were discovered, one hiding under a straw mat with half his face shot away and the bone of his left leg exposed. The other two had sought refuge in a nearby Korean home and were seriously wounded, as well as being weak from malnutrition. They all agree that the person who gave the massacre order was a South Korean traitor. To date no perpetrators have been discovered, but this incident adds to the accumulation of evidence proving the Communist policy of killing wounded captives.

This Is the Enemy—No. 3

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. DODD. Mr. Speaker, I wish to insert in the RECORD the third and final section of a series of excerpts from the extract of interim historical report, Korea War Crimes Division.

Historians of Korea war crimes regard Chinese and North Korean Communists as equally guilty of the incredible program of criminal atrocities against helpless prisoners of war, which the following extract bears out.

These atrocities were a part of the Communist war against the United Nations, a war which still technically continues.

Yet astute observers of the United Nations Assembly report that the United Nations admittance of Red China is inevitable, and is being delayed until next year only to prevent election year embarrassment to the present administration.

Indeed, by accepting the shameful "package deal," which called for the admission of five Communist statellites whose governments satisfied none of the requirements of the United Nations Charter, including the Communist puppet province of Outer Mongolia, the administration seems to have embarked upon the gradual destruction of the moral position against admittance of Red China.

But I am confident that this Nation, after reflecting upon the history and character of the Communist Chinese regime, will remain steadfast in its opposition to United Nations acceptance. For such acceptance would make a mockery of the heroic sacrifices made in Korea, and would reduce the San Francisco Charter to a worthless scrap of paper.

This is one stand from which there can be no retreat or with which there can be no compromise.

EXCERPTS FROM EXTRACT OF INTERIM HISTORICAL REPORT, KOREAN WAR CRIMES DIVISION

KWC No. 113, Chinese torture: This case illustrates one method of handling wounded American prisoners by Chinese captors. A lieutenant survivor of a patrol ambushed on November 8, 1950, stated in his affidavit, "I saw my men that were wounded in action taken by the Chinese and hung up by their hands and then their clothes set afire, and the men that were dead and unconscious, they would push sticks in their eyes, and bayonet. They took most of the dead men's clothes off." This has been corroborated by a medical officer who examined the condition of the recovered bodies.

KWC No. 164, bamboo-spear case: During December 1950, a South Korean patrol discovered the bodies of five American airmen near Muju. It was apparent from the condition of the remains that the victims had been subjected to fiendish torture, the flesh being perforated with multiple punctures, apparently inflicted by sharpened sticks or bamboo spears. An investigation of the incident disclosed that the men were members of a truck convoy that had been ambushed by guerrillas.

KWC No. 279, slaughter of 1,250 American prisoners: One thousand two hundred and fifty American prisoners were slaughtered in cold blood by their Communist captors if the confession of a North Korean prisoner is true. Unfortunately, that is all the evidence contained in the file. However, after several days of questioning, during which the suspect gave very detailed information, it was the belief of the interrogators that the facts contained therein were well founded and reliable.

This North Korean stated that in his assignment as a truckdriver, on September 10,

1950, he was driving from Namchon to Pyongyang and passed a group of 24 warehouses surrounded by barbed wire and noticed that many American prisoners were confined therein. Five days later, his unit was ordered to prepare for a long trip. He added that about 30 Russian-made trucks were in his battalion, and that they loaded approximately 650 prisoners on them and commenced their journey about midnight. At their first stop, they were joined by an additional 24 trucks loaded to capacity with United States prisoners of war. During the next stop, which was for a meal and rest for the cargo, he noticed that 50 trucks were in the convoy. At the final halt, the men were unloaded and led into a mountain valley where they were fed rice and wine, but, upon a blue flare signal, the guards and drivers began firing into the group and continued for about 40 minutes, completing the slaughter of the estimated 1,250 prisoners. They then uncovered three large pits which had been excavated earlier, but found them insufficient to hold all the bodies, and so were required to dig another.

Following this macabre execution, the trucks returned and later transported all the remaining prisoners from the warehouses to a new camp further north. The Confessor was unable to explain why the one convoy load was murdered but the others were spared. To the extent that it has been possible to check, such as locations and units, this confession appears accurate. Every effort should be expended to discover corroborating evidence for this reported atrocity.

KWC No. 1670, Artillery FO team torture: Proving that the Communists still persist in committing atrocities, this recent case occurred on September 21, 1952. At that time an American forward observer team and a squad of South Koreans occupied Hill 854 near Samchi-yong. Their position was overrun by the enemy, but was recovered the following day in a counterattack. The bodies of two United States soldiers, horribly mutilated, together with those of several South Koreans were discovered by a friendly patrol. The lieutenant who found them made the following affidavit:

"One of the boys had no head. It seemed to have been mashed or beaten and was laying all over the road. Both of his feet had been cut off about half way between the knee and the ankle. It appeared as though they had been chopped off with a dull instrument. He had no means of identification on him. I searched him for dogtags, clothing markings, belt markings, shoes, ID tags, and personal effects in his pockets but nothing was to be found.

"The other GI had his eyes gouged out, and nothing remained where his eyes were except holes. He had been bayonetted all over the body with the upper part of his legs completely layed open to the bone. He also had no marks of identification on him."

Bodies of the Republic of Korea soldiers had received a like treatment, one of them having had the genitals severed with a sharp instrument and lying alongside the corpse. One can only imagine the horrible suffering to which these victims were subjected.

KWC No. 1512, Catholic priest murder: An Irish priest was the victim of KWC No. 1512. He was accosted by an enemy officer while walking down the street with a Korean friend. Their assailant accused them both of being spies for the Americans and took them to his superior officer, who told him to dispose of the prisoners in any way he desired. Accordingly, they were escorted a short distance and then shot in cold blood. The priest was slain, but his friend survived. The body has been recovered and identified, but since the perpetrators are unknown, the case has not been referred for trial.

KWC No. 28, Taejon massacre: For murderous barbarism, the Taejon massacre will be recorded in the annals of history along with the Rape of Nanking, the Warsaw ghetto, and other similar mass exterminations. Unnumbered civilians, estimated variously from 500 to 7,500, as well as 42 Americans and 17 Republic of Korea Army prisoners were slaughtered in cold blood for political expediency.

During the summer of 1950, following the capture of the city by the enemy, the North Korean Home Affairs Department was established with the express purpose of apprehending all persons unsympathetic to the Communist cause. This security force then proceeded to arrest prominent business and professional men together with all persons in the area who had been employees of the Republic of Korea. Each unfortunate person who was arrested was subsequently brought to the headquarters located in the Catholic mission for inquisition, and those who survived were then incarcerated in the city prison. This jail consisted of 150 cells, each of which was packed with from 40 to 70 of these victims. When it was impossible to squeeze more into these blocks, the overflow was retained within the confines of the mission. The military prisoners were not segregated from the others.

During the imprisonment, North Korean soldiers were granted access to the hapless, defenseless individuals for the sport of tormenting them and confiscating any personal possession that might have been overlooked. Favorite pasttimes were the twisting of prisoners' fingers, kicking and beating them without provocation.

When the recapture of Taejon by United Nations forces appeared imminent in late September 1950, the occupying conquerors determined that, prior to withdrawal, they would liquidate all these victims.

Commencing September 23, 1950, several groups, numbering from 100 to 200 each, were quietly removed from their cells each night, their hands tied behind their backs, and each person bound to the others. They were then transported to previously selected sites, placed in open trenches or ditches dug expressly for this purpose, and summarily shot. A check was made to locate survivors, and where found, their skulls were crushed. The bodies were then covered lightly with dirt.

By September 26, 1950, the Security Police decided that they must accelerate the rate of murder if they were to accomplish their fiendish purpose prior to departure. Therefore, they dug additional trenches in the courtyard of the police station and called in a North Korean Army unit to assist in completing their bloody work. The able military prisoners were led out in small groups and promptly dispatched. Those remaining, several wounded American soldiers, were carried out on litters, unceremoniously dumped into the trenches and shot or beaten to death. As time ran out on the murder-gorged aggressors, the remaining South Koreans were dragged from the prison into the already filled trenches and killed. At the same time, those who had been retained in the Catholic mission interrogation center were executed as rapidly as possible. When these trenches were filled with bodies, others were slain in the churchyard and basement, and many bodies thrown down the well until it was completely stuffed. The perpetrators then fled without burying their latest victims.

Examination of the bodies revealed that most of them had been beaten and mutilated before execution. Of these thousands of unfortunates, there were only 6 survivors, 3 civilians, 1 Republic of Korea Army soldier, and 2 Americans. Thousands of bodies were recovered by the liberating United Nations forces who occupied the city. Those responsible for the horror of this crime must be brought to judgment before the tribunal of civilized peoples.

CASES INVOLVING KOREANS

These cases, selected more or less at random, illustrate the manner in which the Communist North Koreans and Chinese have dealt with persons whom they considered bad political risks. In no instance has there been any indication that the victims were given any semblance of trial prior to execution. The incidents related are but a sampling of the hundreds of inhumane atrocities recorded in the case files of the War Crimes Division.

KWC No. 32, Suchon jail: Demonstrating ingenuity in means of torture, the North Korean Communists decided to dispose of the landowners and government officials they had confined in the Suchon jail. So, prior to their withdrawal on September 23, 1950, they piled wood, packing cases, and other combustibles around the outside walls of the brick building in which the prisoners were held. They then drenched it in gasoline and set it afire, roasting alive the unfortunate victims secured inside. Several days later United Nations forces recovered 32 charred bodies from the hideous crematory. Local civilians say that altogether more than 280 persons were murdered.

KWC No. 36, Seoul Hospital murders: When the North Korean Peoples Army invaded Seoul on June 28, 1950, they immediately occupied the university hospital, wherein were confined around 150 wounded Republic of Korea soldiers. Upon orders of the commanding officer, these patients were all executed in their beds and rooms, following which their bodies were buried behind the hospital.

KWC No. 41 and KWC No. 727, Chonju: When the estimated 600 to 2,000 political prisoners (317 bodies recovered after relatives had been removing them for several days) were murdered in Chonju, the blood bath was accomplished by beatings wherein the bound victims were killed with clubs, picks, swords, and similar weapons.

KWC No. 53, Yongchong: For diabolical mass murder, Yongchong has few equals. Approximately 500 South Korean prisoners, survivors of 800 who originally left Seoul on this final march, were led into an apple orchard, lined up in four ranks, and shot. Survivors were bludgeoned, and all bodies were piled together, drenched with gasoline and ignited. Another group of 90 had been shot and deposited in a coal mine about 15 miles away, en route to Yongchong.

KWC No. 56, forcible conscription at Tong Tang-Ni: Many of our enemy prisoners of war are discovered to be South Koreans who were conscripted into the Communist armies against their wishes. The procedure followed at Tong Tang-ni demonstrates one manner in which this was accomplished. On October 2, 1950, all the young men of the village were assembled by the North Korean Security Police and given the choice of entering the North Korean Army or being imprisoned. Approximately 40 men refused to volunteer and were jailed. Soon thereafter, the prisoners' hands were tied behind their backs and they were divided into two groups. One group was taken to the river bank and shot to death by their five guards. The other suffered a like fate after being lined up on the edge of a large pit.

KWC No. 733, Chonju: Agents of the 25th CIC team counted 315 bodies on the afternoon of September 30, 1950, 2 days after the families of victims had begun removing the bodies. Estimates of the number of victims range from 600 to 2,000. All the victims had their hands wired behind their backs and most of the bodies bore evidence of having been shot. A number of the victims evidently had been stabbed or bayonetted in the stomach and a few appeared to have had their heads split by an ax or similar implement.

Federal Aid For School Construction

SPEECH

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1956

Mr. METCALF. Mr. Speaker, the Rules Committee is still hearing witnesses on H. R. 7535, the Kelley bill for Federal aid for school construction.

President Eisenhower presented his views on this legislation in the special message he sent to the Congress on January 12. The President submitted a revised and broadened program which in most respects is similar to that proposed by the Kelley bill. Except for a formula to encourage the States to greater local effort, every one of the President's proposals was considered by the House Committee and accepted or rejected or modified in the bill finally voted out and now pending in the Rules Committee.

The awareness of the need for more classrooms, the action at the White House Conference on Education, the strong bipartisan support for the Kelley bill in the committee added to the President's request for legislation now, gave hope that some school construction legislation would be enacted soon. There is, however, one great obstacle in the way of enactment. That is the so-called Powell amendment proposed by the gentleman from New York.

A similar amendment was proposed, in committee last year by the gentleman from New York, [Mr. WAINWRIGHT]. At that time the House had already considered a similar amendment in the military reserve bill. When the vote came upon the amendment in committee, I voted against it because I was convinced that its adoption would kill the bill and that the amendment added nothing to the present law. I still take that position. However, the gentleman from New York the other day addressed the House and told us of the need for his amendment. In the course of his speech he raised some questions that should be discussed in more detail.

The gentleman from New York inserted into the RECORD a copy of a letter from Mr. Parke M. Banta, general counsel for the Department of Health, Education, and Welfare, in which Mr. Banta declared that further congressional action was needed before the Surgeon General could withhold public funds where a hospital, to be built under a Hill-Burton grant, does not allow colored doctors to use its facilities for treatment of their patients.

In view of the legislative history of the Hill-Burton Act and because of the fact that there has been no decision of the Supreme Court of the United States specifically respecting hospitals the opinion may have some basis.

Then Mr. Powell calls attention to a letter from Dr. Harold Hunt, Under Secretary of the Department of Health, Education, and Welfare, "that any decision to withold grants because of the continuation of some degree of segregated education should necessarily be based on a court determination that the particular State or school district in question was not proceeding to make a prompt and reasonable start toward good faith compliance with the pronouncement of the Supreme Court."

The United States Supreme Court has acted. It has declared that—

> We conclude that in the field of public education the doctrine of "separate but equal" has no place. Separate, educational facilities are inherently unequal. Therefore, we hold that the plaintiffs and others similarly situated for whom the actions have been brought are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the 14th amendment.
>
> We have now announced that such segregation is a denial of the equal protection of the laws.

Subsequently the Supreme Court said:

> The courts will require that the defendants make a prompt and reasonable start toward full compliance with our May 17, 1954, ruling. Once such a start has been made, the courts may find that additional time is necessary to carry out the ruling in an effective manner. * * * During this period of transition, the courts will retain jurisdiction of these cases * * * to take such proceedings and enter such orders and decrees consistent with this opinion as are necessary and proper to admit to public schools on a racially nondiscriminatory basis with all deliberate speed the parties to these cases. * * *

Then in the case of Bolling against Sharpe the Supreme Court said:

> In view of our decision that the Constitution would prohibit the States from maintaining racially segregated public schools, it would be unthinkable that the same Constitution would impose a lesser duty on the Federal Government.

These decisions make it clear that the constitutional provision is a positive and affirmative one.

The equal protection clause is not a negative one. The Supreme Court has made it clear that the courts will enforce the constitutional requirement of nonsegregation without the necessity of further legislation. This provision is a self-executing one soundly based on constitutional doctrine and cannot be circumvented by inaction on the part of Congress. The later case of Bolling v. Sharpe also decided that racial segregation in the public schools of the District of Columbia was a denial of due process in violation of due process of law guaranteed by the 5th amendment.

What is the situation today? There are three categories of States. In the first category are States such as mine where segregation is not a problem and where it is illegal by State law and for all practical purposes is nonexistent. For such States the Supreme Court decision has made no material change.

The other two categories are the ones with which I propose to deal in the remainder of this discussion.

The second category is composed of States in which segregation has been practiced and in which schools were maintained under the separate but equal doctrine but who are now making genuine and realistic efforts toward compliance with the Court's decision. Border States of West Virginia and Missouri are examples of this second category.

The Supreme Court recognized that the process of desegregation would be a long one and directed that the process be undertaken with "deliberate speed," taking into consideration "problems related to administration, arising from the physical conditions of the school plants, the school transportation system, personnel revision of school districts and attendance areas into compact units to achieve a system of determining admission to the public schools on a nonracial basis."

These and other problems caused the Court to recognize that desegregation would not take place in a month or a year.

But note that the Supreme Court said that there must be a prompt and reasonable start toward full compliance. After such a prompt and reasonable start the districts were to proceed with deliberate speed.

In the third category are the States who have openly, notoriously, and publicly declared that they are not going to comply with the Supreme Court's decision. In these States official proclamations by the governor, regularly enacted acts of the legislatures, or official elections under the auspices of public officials and in accordance with the laws of the State have laid down a policy of open defiance of the Supreme Court decision. These are not acts of isolated local officials nor of groups of citizens but these are such public and official acts which have the force of State law and courts in most jurisdictions would take judicial notice.

Now Mr. POWELL'S proposed amendment would apply to each of these categories. As outlined in his speech on January 24 the gentleman from New York would add an eighth requirement to the contents of the State plan for any State desiring to accept the benefits of Federal aid for school construction. The amendment proposes that the State plan "provide that school facilities of the State are open to all children without regard to race, in conformity with the requirements of the United States Supreme Court decisions: Except that if a State plan does not so provide, it shall not prevent payment of funds authorized under this act to such States for use in counties or other political subdivisions within the State that are operating their schools in conformity with the Supreme Court decisions" and shall add to the contents of the statement that must be filed with the Commissioner of Education by the State educational agency the following language: "and shall state that the county or other subdivision in which each project is located is operating its schools without regard to race in conformity with the requirements of the United States Supreme Court decision. A State plan which meets the requirements of the Commissioner in every other way shall be permitted to be put into effect in those school districts which comply with the Supreme Court decisions."

As I read the amendment it will force the States to accelerate the process of desegregation. Those States in the sec-

ond category that I have mentioned, who are honestly, sincerely, and realistically attempting with deliberate speed to bring about integration of their schools would be forced to bring this desegregation about immediately.

Mr. Walter Lippmann in a recent column took a comparable position. The States that are making an effort to desegrate need the patient cooperation and the understanding of the rest of the Nation. At its best the Powell amendment would do nothing more than the Supreme Court decision is now doing. But giving it the interpretation above, and it is open to such interpretation, would be a deterrent to the very gradualism that the Supreme Court desires.

The gentleman from Arizona [Mr. UDALL] has introduced H. R. 6803 which is much sounder in its approach to this problem of aiding States in this second category to integrate their schools. Instead of saying to these States, you will have to get your schools desegregated immediately or you will not get any Federal funds, H. R. 6803 would adopt a positive approach. In effect, the Udall bill says that the Federal Government is responsible for the change in the doctrine of separate but equal to the doctrine of complete integration. Many States have made genuine efforts to provide Negro students with schools that were separate but equal. Now these States must readjust their school systems, close some of their schools, build others and undergo additional expense. This is in effect as surely a Federal impact on the districts affected as if a defense industry or an army post had moved in and disrupted the ordinary operations of the district. The Federal Government would build the schools or help to build them in districts where the impact was greatest. All of the people of America would be extending a helping hand in solving a problem that is national in scope.

The third category is different. In this category are the few States that by a system of calculated disobedience have taken legal and official steps to defy the Supreme Court's decision. The Supreme Court directed that there be a prompt and reasonablye start. By no rationalization can these States be deemed in compliance with the decree of the Court.

The decree of May 31, 1955, said "all provisions of Federal, State, or local law permitting such discrimination must yield to this principle," that is, the principle that segregation is a denial of equal protection of the laws and a violation of the Constitution.

Laying aside for the moment the pending legislation for Federal aid for school construction the question arises as to what is the effect of the Supreme Court decision on other school legislation. Can the Secretary of Health, Education, and Welfare certify that vocational educational money to be sent into these recalcitrant States is to be expended in accordance with the Federal law? Are these defiant States entitled to school lunch money for segregated schools? Are they entitled to money under Public Law 815 and 874 for construction and operation of schools in federally impacted areas?

According to Under Secretary Hunt's letter the administrative agency in charge of distributing can close its eyes to open defiance of the Constitution of the United States and continue to pay out money to States who are in open and flagrant defiance until directed to do otherwise by Congress.

I shall never agree with such a doctrine until there is a definite court decision declaring that I am wrong.

In a recent letter to the Washington Post and Times Herald, Mr. Clarence Mitchell, director of the NAACP, says that here is involved a deep principle and that "the NAACP has never retreated on principle and we shall not do so now."

For me, too, there is a principle here that is fundamental in constitutional doctrine, that goes back to the separation of powers. I shall never concede that the enforcement of the great provisions of the Constitution, the liberties guaranteed in the Bill of Rights, and the 14th amendment are not effective until there is a specific legislative enactment by the Congress. The legislative branch of Government cannot by refusal or failure to act, deprive citizens of rights and privileges guaranteed by the Constitution. It is the duty of the executive branch to enforce these provisions of the Constitution in every law. These self-executing provisions of the Constitution are implicit in every law enacted by Congress and it is unnecessary to specially mention them in legislation affecting the subjects in which these constitutional principles are involved. Without further congressional action it becomes the duty of the Commissioner of Education, the Secretary of Health, Education, and Welfare, and the Attorney General of the United States to enforce the equal protection and due process clauses of the Constitution as soon as clarified by the United States Supreme Court.

Therefore, when a State, by official proclamation of its Governor, by regular act of its legislature, by a duly called referendum of its voters or by any other official means, takes action circumventing the Constitution of the United States, then it is the duty of the executive department to enforce the Constitution. There is a great deal of difference between unofficial local resistance and failure to comply and public official acts of duly authorized officeholders.

To insert the Powell amendment into the school-construction bill would mean that Congress does believe that specific legislation is necessary to enforce the 5th and 14th amendments and that the rights and freedoms guaranteed by those amendments are not enforcible by the executive department until Congress has directed the Executive to carry them out.

Applied to the instant case, it means that the Commissioner of Education can sit idly by while States are in open defiance of the Constitution and violating the equal-protection and due-process clauses of that Constitution by official action and continue to send money to aid vocational education, school lunches, and other federally assisted educational services in segregated schools. I do not believe that is the law and I will not vote for an amendment that concedes that to be the law.

President Eisenhower has said that, in his opinion, the Powell amendment was unnecessary. He can clarify the whole question by getting a decision from the Attorney General as to whether the Commissioner has a right to withhold Federal funds from schools in the third category. Such a decision and a forthright declaration of intention to carry out the provisions of the Constitution as interpreted by the Supreme Court should be made before debate on the Kelley bill begins in this House.

I include as a part of my remarks the following editorials and the text of the letter from Mr. Mitchell mentioned above:

[From the Washington Post and Times Herald of February 2, 1956]

TODAY AND TOMORROW

(By Walter Lippmann)

THE POWELL AMENDMENT

The Kelley bill to appropriate Federal money in aid of the construction of schools has run into the conflict—which is still unresolved in the Southern States—over the Supreme Court's decision on segregation. Representative ADAM C. POWELL of New York is proposing an amendment to the bill which would deny Federal funds to States or local school districts which continue to maintain segregated schools. The money which is denied them would be held in escrow and paid out whenever a local district complied with the decision of the Supreme Court.

This amendment, which has the support of Representative JOSEPH W. MARTIN, the Republican leader in the House, might well, if adopted, bring about the defeat of the bill and the hope of Federal aid for the schools. It would be expecting too much that the southern Senators and Congressmen would vote for the bill with this amendment in it.

The southerners, plus many northerners who are really opposed to Federal aid on principle or on grounds of economy, would be a formidable opposition. But even if the bill could be passed over their opposition, it would complicate and obstruct, rather than assist and promote, the movement to end segregation in the schools.

"I think I shall vote for the Powell amendment" said Representative MARTIN the other day, "because of the position of the Supreme Court, I don't think you can do otherwise." Mr. MARTIN is entirely mistaken. The truth of the matter is that because of the position of the Supreme Court, Congress ought to reject the Powell amendment. For that amendment, far from upholding the Supreme Court's decision, would subvert it.

The position taken by the Supreme Court is that segregation in the public schools is unconstitutional, being a denial of the equal protection of the laws, and that the Court will pass upon "the adequacy of any plans" that State and school authorities may propose "to effectuate a transition to a racially nondiscriminatory school system. During this period of transition, the courts will retain jurisdiction of these cases."

The Supreme Court, recognizing that the changeover from segregated schools is a difficult and complex matter, has refrained from demanding immediate and unconditional application of its ruling. It has recognized that there must be a period of transition—a period of persuasion and accommodation—and the Supreme Court has accepted the burden of presiding over this transition.

The Powell amendment runs counter to the letter and the spirit of the Supreme Court's decision. For the amendment proposes to have Congress take over from the Court the burden of getting the rule against segregation observed. It proposes to punish the localities which are slow about or opposed to complying, and to give to admin-

istrative officials, rather than to the Supreme Court, the power to determine whether the law is being observed. No one, I submit, who understands and believes in the Supreme Court's decision, can vote for the Powell amendment.

If the amendment is adopted and the school-aid bill is defeated, the cause of integration will suffer. Federal aid for school construction will be withheld from precisely those States and school districts where it is most needed. Integration, since it means that Negro children will have the same education as white children, requires much money. In the segregated school systems the Negro children are for the most part less well provided for. One of the necessary means to the integration of the schools is to build more schools. Otherwise, under integration the education of the white children will be pulled down toward the standards now prevailing for the Negro children.

Any true and understanding friend of integration in the Southern States should realize that when he proposes to starve the southern schools, he is making it more difficult to bring about integration. The South now has a dual school system, the white one better than the Negro. It will take money to bring about one school system at the level of the schools for white children. The worse the two systems are allowed to become, being deprived of money that is indispensable, the harder it will be in fact to integrate them. And the more acute will be the passions aroused.

Mr. POWELL is a Democrat and Mr. MARTIN is a Republican. They would do well not to play politics with the public schools.

[From the Washington Post and Times Herald of February 3, 1956]

CART BEFORE THE HORSE

Those who believe that the bill for Federal aid to education ought to be saddled with an antisegregation rider need to give sober and realistic thought to the amount of weight they are asking it to carry. The bill will fall with that burden. And its falling will be a blow to integration as well as to education.

If Representative ADAM POWELL insists upon attaching his antisegregation amendment to the school bill, there is no doubt that many Members of the House of Representatives will support him—not because they think the amendment useful or constructive or in anyway likely to achieve its purpose but because they think opposition to it politically inexpedient. They may have the votes to adopt the rider, but it is by no means sure that they will then have the votes to adopt the bill—or that some who vote to encumber the bill will not turn around and vote to defeat it. Moreover, if the bill passes the House with Mr. POWELL's amendment tacked to it, the chances of getting it through the Senate will be very slim indeed.

This is not to suggest by any means that Mr. POWELL and others who advocate an antisegregation amendment to the education bill are cynical or indifferent to the welfare of the schools. Many of them are deeply convinced that Federal funds ought not to go in any circumstances to States or localities which are acting in violation of the United States Constitution. This newspaper has always shared that conviction. The trouble with trying to apply it in connection with a school grant-in-aid bill is that the Supreme Court has not said that the Constitution requires immediate and unconditional school integration; it has said, rather, that integration should be accomplished as speedily as practicable in conformity with local conditions, and it has designated the Federal District Courts not the Office of Education or any other executive agency, to determine whether the pace of compliance is satisfactory.

On the pretext of supporting the Supreme Court, the Powell rider would require the executive branch of the Government to discharge a function that is essentially judicial—and to impose a rigid standard where the Supreme Court has fixed a flexible one. The effect would be to give plausibility to opponents of Federal aid to education who argue that Federal aid would mean Federal interference in local affairs. And it would be to deny Federal aid to the very areas most in need of it. Thus education and integration alike would be retarded. For it is precisely where poverty is most prevalent that prejudice is most rampant. The States and localities most committed to segregation are the ones most in need of Federal aid—most in need of school improvement as an indispensable basis for the integration which they must sooner or later embrace.

Integration will come as education progresses. It cannot be promoted by withholding aid to education. Those who would be responsible for denying aid to all the Nation's public schools because segregation persists in a few of them threaten to push apart the pillars of the democratic process. The United States now has a historic opportunity to rejuvenate its public-school system. It would be tragic to lose that opportunity by confusing it with a different cause.

[From the St. Louis Post-Dispatch of February 3, 1956]

NO TIME FOR A RIDER

President Eisenhower has done well to throw his weight against any amendment to the school-aid bill denying Federal funds to districts where racial segregation persists.

To mix up the issues of Federal aid for school construction and racial segregation in the schools would be especially pointless in view of the Supreme Court's unanimous decision against segregation and its order for gradual implementation of the decision.

If it is unconstitutional for school districts to use their own funds in support of segregation, it is obviously unconstitutional for them to use Federal funds for that purpose. Hence, if a school-aid bill is passed without an antisegregation rider, and if some States undertake to use funds received under this bill in support of segregation, they can be enjoined in the courts.

So long as the courts obeyed the Supreme Court decision on segregation, they would surely have to rule against the use of Federal funds to support practices which have been declared in violation of the Constitution.

It is true that bitter-enders in the South are fighting the execution of the Supreme Court school decision. But an antisegregation rider to a school-construction bill will not settle that controversy. In the end, the courts must settle it. This will take time. But the time will not be shortened by unnecessarily injecting the segregation issue into the school-bill debate.

As the President said, let's get a bill passed first. School districts the country over face immediate building needs. The chances of Federal aid in meeting those needs ought not to be jeopardized by a pointless legislative fight over segregation.

[From the Washington Post and Times Herald of February 3, 1956]

POWELL AMENDMENT

Your editorial of January 26 on the school construction bill reiterates your oft-repeated opposition to the Powell amendment to the pending school-construction bill. This amendment was introduced by Mr. POWELL at the urging of the NAACP. It is supported by sincere and honest people throughout the country. A great many of these people, including the writer of this letter, have children who attend public schools.

After spending approximately $250,000 to win the school-segregation cases, private citizens should not be asked to spend additional money to obtain court decrees preventing the use of Federal money in the underwriting and extension of racial segregation. This is exactly what they will be called upon to do if the pending school-construction bill passes without the Powell amendment.

At present, the 5 most recalcitrant States receive over $75 million a year from the Federal Treasury for education. All of this money is spent under the illegal pattern of racial segregation and most of it goes to schools and colleges for white only.

The Department of Agriculture, the Comptroller General, and the Department of Health, Education, and Welfare have all refused to halt this misuse of tax money. The States that do not practice segregation in public schools are also the biggest sources of Federal revenue. This means that their money is being used to help finance segregation.

It is a cause for deep regret that you and the President direct your fire at those of us who are seeking to obtain obedience to the law, but do not criticize the obstructionists, who are expected to fight our amendment. The President and most of the supporters of the school-construction bill are willing to include the very worthwhile Bacon-Davis provision in the proposal because those who support the Bacon-Davis regulations have sufficient political power to get what they want. On the other hand, those who do not have such political strength are asked to step aside and bow to lawlessness.

The NAACP has never retreated on principle and we shall not do so now.

CLARENCE MITCHELL,
Director, Washington Bureau, National Association for the Advancement of Colored People.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Georgia.

Mr. LANDRUM. I thank the gentleman for yielding. I believe before the gentleman came to the Congress from Montana he was a member of the Montana Supreme Court, was he not?

Mr. METCALF. That is right.

Mr. LANDRUM. If I interpreted the statement of the gentleman correctly, it is his belief that if this Congress passes legislation authorizing an appropriation of Federal money for the construction of public schools, that money, or money that might be appropriated later under an appropriation measure, can be withheld from any State without any further action by this body or by the Supreme Court, if the State in question should disagree with the principle of integrated public schools.

Is that what the gentleman says?

Mr. METCALF. With one addition. That one addition is that Federal funds can be withheld from those States where there has been such a public and official action by the legislature, by referendum such as was had in Virginia, or by official proclamation of the governor, such an official action that a court would be able to take judicial notice of their failure to start and their open disobedience of the constitutional provision.

Mr. LANDRUM. Do I understand by that the gentleman means that when any State has announced its opposition to the Supreme Court decision of May 17, 1954, or any State which has now or might later adopt measures to prevent the integration of its public schools, the administrative, or executive, branch of

our Government would be authorized to withhold from that State any appropriations which might have become available for public schools through the action of this Congress?

Mr. METCALF. Again I have to qualify the gentleman's question. A mere announcement of disagreement with the Supreme Court decision is, to my mind, not enough. It takes a regular official act of the legislature or an official proclamation of the governor, or some regular act that of which a court of competent jurisdiction could take judicial notice, rather than these things we would have to prove in a regular court proceeding. I might say we would take judicial notice of the official election in Virginia, a referendum held under the laws of Virginia, by the regularly constituted voters of Virginia, that is a different kind of an act than a mere pronouncement that a State is or is not going to comply.

As I understand, there is a resolution of interposition pending in the Mississippi legislature. The fact that a resolution was introduced or that some members of the legislature announced that they were going to introduce such a resolution would not, to my mind, justify the withholding of Federal funds, but if the legislature passes that resolution and it is enacted into law in a regularly constituted form and fashion, then I say the only thing the Federal Government can do is to take cognizance of that official action and withhold funds.

Mr. WILLIAMS of Mississippi. Mr. Speaker, will the gentleman yield for a correction?

Mr. METCALF. Yes.

Mr. WILLIAMS of Mississippi. There is no interposition resolution pending at this time in the Mississippi State Legislature.

Mr. METCALF. I am sorry.

Mr. WILLIAMS of Mississippi. However, the State of Alabama has already interposed by declaring the decision null and void, and the State of Virginia has interposed its sovereignty, and I am certain that the State of Mississippi within the next 2 or 3 weeks will certainly not let its sister States down in their defense of the Constitution of the United States.

Mr. METCALF. I have been misinformed. But I would say if a resolution is passed by Alabama, if the gentleman's information is correct, that would put them in the official category that I have designated in my opening remarks, the third category, that would warrant and require the Commissioner of Education to withhold all Federal funds.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. I yield.

Mr. LANDRUM. Then, what the gentleman is saying is that any State which has put itself in that position would be supporting an appropriation for the construction of public schools throughout the United States and yet have that State's share withheld from it because the State refuses to comply with the decision of the Supreme Court of May 17, 1954, barring segregation in our public schools?

Mr. METCALF. That is exactly correct. The gentleman from Georgia knows that I understand that I have not the awareness he has of the emotional and sociological conditions that exist in some areas of the South. I do not have a segregation or desegregation problem in my district. I am merely talking about what I believe to be sound constitutional doctrine.

Before I yield further to the gentleman, let me give him an example. The right to trial by jury is guaranteed by the Constitution. Let us supose the Congress of the United States failed to pass any act providing for trial by jury. Does the gentleman think that any court would say, "Well, Congress has failed to act and, therefore, because of the inaction of Congress, because there is no legislation on the matter, we cannot have a trial by jury." The courts, of course, would provide it under court rules.

I appreciate some of the difficulties. I have tried to be sympathetic and understanding concerning the problems of the South, as the gentleman knows. I say, as a matter of constitutional principle, that this amendment is completely useless; and that it is the duty of the Federal Government, the executive department, to enforce these self-executing provisions of the Constitution.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. Of course, I yield further.

Mr. LANDRUM. The gentleman is a very able, studious, and devoted member of the House Committee on Education and Labor and I am sure the legal opinions he expresses here have come only after long and careful study.

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Arizona.

Mr. UDALL. I should like to compliment the gentleman from Montana on his presentation today. It seems to me that this is an issue that should be discussed in advance of the voting on the school bill. I know there are many advocates of the Kelley bill who have said that this issue ought not to be discussed, that it would endanger the bill because some of our southern colleagues might realize that if the argument presented by the gentleman from Montana [Mr. METCALF] is right, then in that event they would be opposed to any Federal aid bill. There have been speeches placed in the RECORD in recent days which lead me to believe that there are some of our colleagues who grasp that this may be the actual status if the Kelley bill passes. But I certainly think the gentleman has performed a very important service in bringing this matter to the floor where it can be discussed now, because I know there are enough keen lawyers in this body so that this question is going to be thoroughly considered before a vote is taken. I think the gentleman from Montana, whom I consider one of the ablest constitutional lawyers in the body—not necessarily because he served on the Montana Supreme Court, but because of the inherent qualities of his mind—has performed a service in discussing this particular aspect of the problem. As long ago as last summer, some of us were discussing these ramifications of the general problem.

Am I correct in understanding that the gentleman feels there should be a pronouncement by the Attorney General of the United States on this matter in order to clarify the issue before the Kelley bill comes to the floor?

Mr. METCALF. The gentleman from Arizona is correct.

Mr. UDALL. I also appreciate the mention the gentleman made in his discussion of the legislation that I have introduced. I have been one of those very much troubled by the problem presented by this bill, and by the amendment proposed by our colleague from New York [Mr. POWELL]. To me, this is not an easy question. I am unable to see it as a simple moral issue. Nor do I see it as a simple referendum on the segregation issue. I think the issue raised as far as any conscientious Member is concerned, is whether any amendment that is offered to the bill will effectuate or obstruct the law pronounced by the Supreme Court.

I think we have to keep that uppermost in mind.

May I say to the gentleman that it is my present intention to offer my proposal as an amendment to the Kelley bill. Thereby we would say to our southern colleagues that there would be a program of direct assistance to those districts in the South which are prepared to carry out integration programs. May I ask the gentleman if he would vote for and support that bill as an amendment attached to the Kelley bill?

Mr. METCALF. I thank the gentleman from Arizona for asking that question. I believe that is the way we should approach this very difficult situation. I believe we should say to our friends in the South, who are confronted with a problem of whose complexities I am aware, that we are going to extend the hand of helpfulness and friendship to help them solve a difficulty that has arisen as a result of the changed decision of the Supreme Court. The gentleman's approach, which would make it a Federal impact and say all of the people of the United States must join in and help our southern colleagues, is the kind of thing I would like to see done, and I would like to participate in it.

Mr. UDALL. I appreciate very much the gentleman's statement on this issue.

Mr. LANDRUM. If the gentleman will yield further, of course we, from the South, are delighted to have the hand of friendship extended to us from any Member or any section, but let me say to the gentleman that the greatest assistance that can be rendered to my State or, for that matter, in my opinion, to America, is to accept the responsibility at home for public education. If we are going to justify the further existence of the States making up this great Union, then let us accept our responsibilities at home. That is the kind of help we can extend to America. Let us solve these problems at home and carry on our public school functions at home. We have built ours into a pretty strong country that way.

Mr. METCALF. I thank the gentleman.

Mr. PRESTON. Mr. Chairman, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Georgia.

Mr. PRESTON. I am very much interested in the comments being made here this afternoon about our Southern States. We did not bring this discussion up. Our distinguished friend from the West brought it up, and he does not have any problem in his part of the country about integration, I understand.

Mr. METCALF. It is not quite accurate to say I do not have any problem in my State. There are small areas in which an integration problem is a difficult one, especially one which involves the Indians in my area rather than the Negroes you have in your area.

Mr. PRESTON. If they ever bring up this Indian question on the proposition of integration and segregation, I am afraid the whole country will be put to shame. There was never any such great concern shown about the Indians in this country as has been expressed about the colored population in the South.

I just want to make this observation to my warm friend from Montana. The people of Georgia will never accept 1 cent of Federal aid for education if it is conditioned upon placing into effect integration in our public schools. It matters not how badly we need it, the issue is too great, the principle too important for us to be tempted or baited in the least by $1 of Federal money.

Something comes to my mind constantly as I think about this decision of May 17, 1954. Shortly after it happened, a distinguished Senator from Virginia was carrying a Justice of the Supreme Court on a weekend jaunt down through his State. As they approached an old house, there was an obvious eruption of the ground there, an uneven contour of the land.

The Justice of the Supreme Court said to his distinguished friend who was in attendance on the journey, "What is that unusual eruption on the hillside over there?" The Senator said, "Why, my dear judge, that is where John Marshall turned over in his grave when the Supreme Court handed down its antisegregation decision." I am sure not only John Marshall turned over in his grave after that decision, but George Mason, Madison, Jefferson, and a lot of others of those great men who wrote into the Constitution so plainly and so clearly the proposition that all rights not given to the Federal Government were reserved unto the States. I repeat that we are undertaking to place a new interpretation on the Constitution. You know, I would much prefer and I am sure my distinguished colleague who is a jurist of great and fine reputation in his State must agree, that it would be better and we, in the South, could take this decision better if the Congress of the United States had met this proposition head on and voted on this issue through the people's representatives rather than for the Supreme Court to do something that the Congress steadfastly through the years has refused to do.

Mr. METCALF. I will say to my good friend, the gentleman from Georgia, that there is a way in which the Congress of the United States can vote on this issue, and that is for the Commissioner of Education to deny these States which I have included in my third category, these States who have passed legislation in defiance of the decision, to deny them vocational education funds. Then the law says that an appeal shall be made to the Congress of the United States as to whether those funds will be given for vocational education or not. That appeal would bring the issue squarely before the Congress if the administration, the executive department, would act, as I contend it is its duty to act.

Mr. PRESTON. There again, you are dealing with the proposition only of education. There is a broader picture involved here as to whether the 10th amendment means what it says. Does it really mean that all of the rights not granted to the Federal Government are reserved unto the States? Does it really mean that? The Supreme Court apparently says it does not mean what it says at all. That is the thing the Congress ought to face. Is Congress going to reaffirm the meaning and the intention of the 10th amendment or is Congress going to say that times have changed and the situation in this country has now socially developed to the point where the intention of the framers of the Constitution, however wonderful those intentions were at the time, cannot properly apply now. That is something, in my judgment, that Congress ought to face up to and not have the Supreme Court change the effect of the Constitution and then have the Congress docilely falling into line because of the Court decision. What do we do in other cases? When the Supreme Court makes a decision affecting gas in Texas or Louisiana or Arkansas or makes some decision affecting the pay of some disloyal employee of the Government of the United States, Congress promptly—promptly steps in and takes action to nullify the decision. But, the Congress has done nothing to nullify this decision of May 17, 1954. I think it is proper that the Congress should do it. Let us put it right out in the open with every Member speaking for the people he represents in the Congress and taking a position on this question of what the 10th amendment means.

Mr. METCALF. Of course, may I say to the gentleman before I yield to my friend, the gentleman from Mississippi who is on his feet, he recognizes the great differences between the Supreme Court passing upon the validity or the effect of a statute and the validity or the effect of an article or section of the Constitution of the United States. It takes different legislative action and different congressional action when the question of due process or equal protection of the laws is involved than is required when the question of ownership and title of tidelands oil or some other question arises which is a purely legislative matter.

Mr. WILLIAMS of Mississippi. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. WILLIAMS of Mississippi. In that respect, does the gentleman feel that the people of the United States and the States themselves are helpless in the face of any arbitrary action that the Supreme Court might take in any case?

Mr. METCALF. No, I do not feel they are helpless.

Mr. WILLIAMS of Mississippi. Surely the gentleman knows that the decision rendered by the Supreme Court in this case was not based on law. The gentleman knows it was based on sociology and politics; does he not?

Mr. METCALF. The gentleman from Mississippi and I disagree, as many other lawyers disagree, on the validity of the Supreme Court's decision.

Mr. WILLIAMS of Mississippi. They did not find one single legal premise on which to base their decision.

Mr. METCALF. I cannot agree.

Mr. WILLIAMS of Mississippi. Let us get down to the point of what you were talking about in your remarks. Is it my understanding that this is the basic point of your argument this afternoon—that the Powell amendment is not necessary in order to accomplish the purposes of denying funds to States who do not comply with this illegal Court decision?

Mr. METCALF. That is a very clear and succinct way of stating what I was trying to say, not nearly so ably.

Mr. WILLIAMS of Mississippi. May I say that I had not intended to vote for that legislation in the beginning. If there had been any doubt in my mind, though, it would have been removed this afternoon.

Mr. METCALF. I will say to the gentleman that one of the purposes for which I came to the well of the House today is to bring out some of the issues in this controversy that others feel should be smoothed over until the bill is passed, and find out on this floor and find out from the administration just what kind of enforcement we are going to get on this and other laws, so that the people from Mississippi and the people from Montana and the Representatives of all of the other great States of the Union can vote with intelligence on this legislation.

Mr. WILLIAMS of Mississippi. If the gentleman will just help us get that word around among our fellow southern Members, we will not be bothered by any such thing as Federal aid to education as presented in this bill.

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. UDALL. Our southern colleagues have been asking questions and I have an inquiry to direct to these gentlemen. I ask it in all sincerity, because it bears particularly on the approach that my amendment to this legislation would take.

Mr. METCALF. I will be glad to yield to any of them to answer the gentleman's question.

Mr. UDALL. Let me propound it. I may have to make a short speech before propounding it, because I come from a State that carried out desegregation 2

years in advance of the Supreme Court decision. Admittedly we do not have the problem that some southern States have. I recognize that where the Negro population in some of the States is 30 or 40 or 50 percent, that is one problem. Where it is 5 or 10 or 15 percent, in my opinion, that is another problem.

Mr. WILLIAMS of Mississippi. Will the gentleman yield for a short observation?

Mr. UDALL. Yes.

Mr. METCALF. I yield.

Mr. WILLIAMS of Mississippi. In the gentleman's State of Montana the ratio of Negroes is two-tenths of 1 percent. The total population of the State in 1950 was 591,024 of which 1,232 were Negroes. The population of the State of Mississippi is 47 percent colored. We feel that we know better than those who do not have the problem how to attend to our business down there.

Mr. METCALF. Let me say to the gentleman I had no idea there were that many Negroes in the State of Montana.

Mr. UDALL. May I say to my colleague that in my State of Arizona the population is about 5 percent Negro, plus the fact that we have more American Indians than any other State in the Union. However, the point I want to ask, and I ask it with all sincerity, is that these border States who feel as Arizona did—and I refer to such States as Oklahoma, Tennessee, Kentucky, and West Virginia—and who do not want to prolong the constitutional argument with the Supreme Court and are prepared to go ahead with integration, should not these States have assistance by Congress and by the country, in carrying out their programs? What is the answer of the gentlemen to that question?

Mr. METCALF. I yield to the gentleman from Georgia for his answer.

Mr. PRESTON. I cannot speak for other southern States, but I can speak for what is being done in Georgia. We do conceed that it has been overdue, but Georgia has moved to correct the deficient school facilities for the Negro population of our State.

We are at this time engaged in a program known as the minimum foundation program for education throughout the State, and we are constructing facilities just as good and in many cases better for the Negro population of the State.

I am not speaking for the others, but I think that those who are familiar with the situation in Georgia will agree that without the facilities of Federal aid we are moving rapidly to a point where we could in good conscience say that we have met squarely the problem as far as the Negro population is concerned.

Mr. UDALL. I think it is fair to state that those familiar with the situation know the efforts the State of Georgia has made—as a member of the House committee that held hearings on the subject I know that Georgia has done possibly more than most other States—but the question still remains as to the gentleman's convictions, and his attitude, as far as these other States and school districts are concerned that do not resist the decision of the Supreme Court, but say, "Very well; we disagree with the Supreme Court's interpretation, but we are willing to comply." Should those communities in the so-called border States have the assistance of Congress if they are prepared to carry out integration of schools?

Mr. LANDRUM. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. LANDRUM. In answering the last question put by the gentleman from Arizona [Mr. UDALL], I would say first that I speak as did my colleague from Georgia [Mr. PRESTON] from the standpoint of a Georgian: We believe fundamentally in the right of the State to run its internal affairs. To the extent that we believe in that, and that is our conviction, we do not propose to interfere with what other States do in their own affairs, except that if in our national effort it becomes obvious that some are being misled by what some others have said as to their rights, we want to do what we can to help them be saved from themselves.

Mr. UDALL. In other words, taking the State of Oklahoma as an example, if the people of Oklahoma are prepared to carry out integration programs, the gentleman will not put any obstacle in the way of that State or its school districts?

Mr. WILLIAMS of Mississippi. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Mississippi.

Mr. WILLIAMS of Mississippi. I want to explain what I said we believed was the position of the people of Mississippi in regard to the question that he asked.

We do not care what they do in Oklahoma; we do not care what they do in Arizona; and as far as your receiving tax money to help integrate your schools or build your schools, we do not mind so long as we are permitted to operate our schools without Federal interference. But if you are going to get it and we are not, then do not tax us to pay you. I believe the gentleman will agree with me in this.

I think that each State should be permitted to run its own internal affairs, and that includes the operation of the public school systems under the Constitution of the United States which leaves that exclusively to the States, in the manner that they deem best suited to the needs and circumstances of each local community and within the State itself.

I do not think that the Supreme Court—and I say this honestly—had a right to interfere by their decision in the operation of our local public school systems, and I think that the States are on solid ground and are defending the Constitution of the United States when they interpose their sovereignty between the evil of that decision and their citizens.

Mr. METCALF. Much as I respect the learning, the erudition, and the legal opinion of the gentleman from Mississippi, I could not disagree with him more. I still respect his right to quarrel with the decision of the Supreme Court.

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. UDALL. The real tragedy of this classroom shortage situation—the dilemma in which Congress finds itself at the moment—as I see it, is that the States that need help the most are the States where this problem is particularly acute and where opposition to the Supreme Court decision has been strongest.

I would like to state my concept of the highest form of patriotism. I think the highest test of the patriotism of a citizen of our country is his ability to ultimately accept the laws and our Supreme Court decisions when he profoundly disagrees with them. I quite understand the present attitude of some of our colleagues here. Perhaps if I were a native of and grew up in the States they represent, I would be making the same statements they have made here today. But I still feel—and I say this with all sincerity—that the ultimate act of patriotism is to finally accept what the United States Supreme Court says about the Constitution of our land. I have confidence in our friends. I believe that ultimately their patriotism will prevail, and we will solve this problem.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from West Virginia.

Mr. BAILEY. I have no intention of asking any controversial questions because there have been enough raised already. At present I see a three-sided argument that by the time this legislation reaches the floor may be a five-sided argument. My purpose will be to see to it that the meaning and the action of the Congress are directed toward the welfare of our boys and girls in this country. I am for classroms—we have to have them—and I do not propose, if it is in my power to prevent it, to allow some side issue to be dragged into this legislation that is going to defeat it. We must not lose sight of the objective of it, and that is the boys and girls of our country.

Mr. METCALF. I agree with the gentleman from West Virginia.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Oklahoma.

Mr. ALBERT. I agree with the gentleman from West Virginia. This is a practical situation, and we are not operating in a vacuum. If the Attorney General should hand down a formal opinion that these funds should not be made available to certain States, as suggested by the gentleman, or if the House should adopt an amendment containing such a prohibition, the schoolchildren of America will be the ones who will suffer, and not the proponents or opponents of this particular amendment.

Mr. BAILEY. If the point made by the distinguished gentleman from Montana is true, that the executive authority has the right to withhold funds, would that not apply to any other fund in the field of welfare? Would it not also apply to our decision to send $4.7 billion of foreign aid abroad?

Mr. ALBERT. I think the gentleman is correct.

Mr. QUIGLEY. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Pennsylvania.

Mr. QUIGLEY. I would merely like to make this comment. I would like to thank the gentleman from Montana and all the others who have participated in this most interesting discussion for all the light they have spread upon this subject, a subject which generally generates much more heat than light. But even as I compliment the gentleman and all who participated in this excellent debate, I must in all frankness and honesty state that I cannot say you have helped my thinking. You have just given me more to think about.

Mr. METCALF. I would like to make a comment to the gentleman from Oklahoma, the Majority Whip. It seems to me that now that the Supreme Court has acted, now that there is a Supreme Court decision, it is not only within the power but it becomes the actual duty of the Attorney General of the United States, the President of the United States, the Commissioner of Education and the Secretary of Health, Education, and Welfare to decide not only on school construction but on all these other matters relating to education what is going to be done with those school funds. When vocational education is certified by the Commissioner of Education, when he says "I certify that these funds are going to be paid in accordance with Federal law" he will have to make a determination in his own mind that those States in the South that have officially decided that they will not abide by the Supreme Court decision are either in violation of Federal law or that they are complying with Federal law.

When he makes that decision he is making a decision on a self-executing provision of the Constitution of the United States.

Mr. UDALL. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. I yield.

Mr. UDALL. I wanted to find out if the gentleman's motives and his point of view were not the same as mine on this aspects of the issue, and I daresay there are no Members of the House who want a Federal aid to education building program more than the gentleman and I do. But, the thing that has troubled me is that if this bill were brought to the floor without discussion—although at one time I thought perhaps it would be better if it were brought to the floor under those circumstances—and if we did not discuss this in advance, we might find some of our friends from Georgia, Mississippi, and these other States voting for the bill and then subsequently to have the decision and determination made that the gentleman suggests should be made now, and that they then, if the gentleman's constitutional argument is correct, find that they are deprived of aid when they voted for aid thinking that they would receive aid. It seems to me that they could conscientiously say to the gentleman and to myself and to others that we had misled them and that they would not have voted for the bill if those circumstances had been fully explained prior to the time it was brought to the floor. Is that the gentleman's purpose?

Mr. METCALF. That is exactly the purpose which I am trying to serve by raising this discussion at this time.

Mr. LANDRUM. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. I yield.

Mr. LANDRUM. Let me say to the gentleman from Arizona that the gentleman from Georgia has not been fooled. From the beginning of this controversy about Federal aid to schools I have known, and I believe the gentleman, as a member of the Committee on Education and Labor has known, that I believe that this legislation, if passed, means the surrender of the public schools to Federal direction, supervision, and control.

Mr. ALBERT. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. I yield.

Mr. ALBERT. The gentleman has made a good argument. He has based his conclusions on legal reasoning and matters of constitutional construction. But, following what he has said, it would seem to me that, if the gentleman is correct, then an opinion from the Attorney General is no more necessary than an antisegregation amendment to the Kelley bill.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. ROGERS of Colorado. I understand that the chief point made by the gentleman is that the Supreme Court of the United States has ordered desegregation, that is now the law of the land.

Mr. METCALF. It is an accomplished fact.

Mr. ROGERS of Colorado. Well, now, if the Supreme Court should change its decision, as it has been accused of from time to time, then what position would this legislation be in if it did not have the Powell amendment?

Mr. METCALF. It is the same as any other self-executing provision of the Constitution.

Mr. ROGERS of Colorado. Then the question is, if the Supreme Court should, by any chance, change its position, as it has been accused of constantly on the floor of this House, and say "We were mistaken when we made that decision as it deals with segregation" and then withdraw its opinion and we do not have the Powell amendment in the school bill, then what would the Attorney General of the United States say to any of these States who may practice segregation when they make application for funds? Does the gentleman think that the Attorney General then has any legal authority to say to them that they cannot receive the funds?

Mr. METCALF. I think that the Attorney General under the present decision of the Supreme Court has the legal duty to say that States not in compliance with the Court's decision cannot receive the funds. In the hypothetical case submitted by the former attorney general of Colorado and my good friend, of course, there should not be any withholding of funds because the law of the land would have been changed by that decision.

Mr. ROGERS of Colorado. If that is true, what is wrong with placing into legislation the law of the land not only in this bill but in all the others?

Mr. METCALF. The thing that is wrong about it is that we, the Congress, will concede that the Constitution of the United States is not a self-executing document, that it needs congressional authority to put into effect certain very precious and basic liberties guaranteed by the Bill of Rights, the Fourteenth Amendment, and even the body of the Constitution itself.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. Surely, I yield further.

Mr. ROGERS of Colorado. I direct the gentleman's attention to the situation he developed a moment ago when he stated that the gentleman from New York produced a letter from the Surgeon General stating that he could not withhold funds from certain hospitals entitled to money under the Hill-Burton Act. If that provision had been in the Hill-Burton Act, would the Surgeon General then have been in a position to withhold funds?

Mr. METCALF. I will say to the gentleman from Colorado that the provision that they tried to put in the Hill-Burton Act was the provision that was the law of the land at that time under the then interpretation of the Constitution, a separate but equal provision.

Mr. ROGERS of Colorado. But as a result of the failure to have anything in the act, the Surgeon General said he was helpless. Let us go one step further. The gentleman made reference to the so-called Vocational Training Fund. Does the gentleman feel, knowing that those funds and other educational funds were made available years ago before the Supreme Court did their flip-flop, so to speak—does the gentleman feel that the Surgeon General prior to the time that the Supreme Court rendered its decision, would be justified in saying that he could spend money in those areas where they have vocational training in segregated schools?

The SPEAKER pro tempore. The time of the gentleman from Montana has expired.

Mr. POWELL. Mr. Speaker, I ask unanimous consent that the gentleman from Montana be permitted to proceed for 15 additional minutes.

The SPEAKER pro tempore (Mr. BASS of Tennessee). Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. METCALF. I thank the gentleman from New York, and I now yield to him.

Mr. POWELL. I should first like to say that I apologize for not being here when the gentleman began his address.

Mr. METCALF. The gentleman told me in advance that he might not be here.

Mr. POWELL. Yes; I told him I might not be here. I tried to get here, but the planes were blocked out, and that is why I am late.

I want to compliment the gentleman on what I have heard, and on the years of excellent service he has rendered here.

There are 1 or 2 items that may be repetitious. As I got the drift of the gentleman's talk, he said that the Commissioner of Education has the power or should be instructed to have the power to deny funds to those school districts not abiding by the Supreme Court decision. Am I right or wrong on that?

Mr. METCALF. That is correct; districts which demonstrate their position by official acts, acts of sufficient stature so that a court would take judicial knowledge of the act. Therefore, the Commissioner of Education would have to take cognizance of that to come in the State and deny funds for failure to comply with Federal law.

Mr. POWELL. Our hope for such an action by the Commissioner of Education would be predicated upon one of two different things: Past action or a new director. Is that correct?

Mr. METCALF. If my premise is sound, of course, even an adverse opinion of the Attorney General would be overthrown by the first court action that would institute it. But I cited the letter the gentleman received from Dr. Hunt as demonstrating the attitude of the administration and its failure to carry out what I believe to be its constitutional duty.

Mr. POWELL. The gentleman therefore believes for one reason or the other that at present the Commissioner of Education has no directive nor any precedent with which to follow the gentleman's own philosophy. Is that correct?

Mr. METCALF. No. The letter from the Under Secretary, Dr. Hunt, is entirely foreign to my interpretation of the Constitution.

Mr. POWELL. Nevertheless, the gentleman is a colleague of mine in the legislative branch. Whatever the gentleman's interpretation may be, as a colleague of mine, as much as I may respect him, nevertheless it is confined to the legislative branch. What the gentleman is asking is that the executive do something which the executive has said it cannot do. Am I right or wrong?

Mr. METCALF. Yes, the gentleman is right. I am saying that I will never concede this basic constitutional principle, that the great rights protected by the first amendment, for instance, need legislative action for their enforcement; that the great rights protected by the fifth amendment need specific legislative action for their enforcement. I contend that it is the primary duty of the executive department to carry out the provisions of these self-executing sections of the Constitution, and that in enacting legislation such as your amendment there is a tacit admission by the Members of this Congress that we do need very specific legislative direction.

Mr. POWELL. That is exactly my position. It is an admission that we do need specific legislation, because the Comptroller General of the United States in the letter which the gentleman possesses, witten to me; Dr. Hunt, in his letter which the gentleman has; Parke Banta, the general counsel of the Health, Education and Welfare Department, and Mr. Folsom in public statements, all have indicated that there is no directive, and precedent also is against our position, our meaning, the gentleman's and mine, because right now there is flowing into States in open defiance of the Supreme Court, as of this moment, about $75 million per year. How then does the gentleman propose to change the mind of the executive branch of the Government?

To show you that the Negro people are completely in favor of my amendment, I call your attention to the following three editorials from the Pittsburgh Courier of January 28, 1956; the Afro American of January 28, 1956, and the Chicago Defender of February 4, 1956:

[From the Pittsburgh Courier of January 28, 1956]

SUBSIDIZING SEGREGATION

It would be an outrageous circumvention of the United States Supreme Court's directive to desegregate public schools if Congress should now pass a law providing a quarter billion dollars annually for 5 years to aid in the construction of segregated schools.

This is in line with the President's proposal to solve the serious problem of scarcity of schools, which also includes a provision of $750 million in Federal credits to stimulate construction, and such bills have accordingly been introduced.

Congressman POWELL and others quite properly want to make sure that none of this huge sum of tax money goes to States which are in revolt against the Supreme Court's desegregation decree, and they plan to attach a rider to the bill to insure that school segregationists are not aided.

President Eisenhower and Welfare Secretary Marion B. Folsom, along with various educational organizations, who are pressing for the passage of such a law, have taken the position that the issue of segregation is "extraneous" to the building of schools.

Like all American citizens, colored Americans are deeply concerned over the apparent inability of States and local communities to provide adequate public educational facilities, but they cannot see, in view of the Supreme Court's decision and directive, how the issue of segregation can be regarded as "extraneous."

The contemplated voting of such a huge sum to build public schools means that hundreds, perhaps thousands, of schools will be constructed and furnished out of Federal taxes collected from all of the people, with many scores of buildings being in the very Southern States which are now defying the decision of the highest court in the land.

If any Washington legislator should introduce a bill to appropriate hundreds of millions of dollars to aid public education in Russia or South Africa, a tremendous outcry would come from all over this land, and properly so; but the Southern States revolting against the decision of the Supreme Court (which determines what the Constitution means) are no less subversive of American society than Soviets or Boers.

Those Southern States that have elected to disobey the directive of the Supreme Court in an effort to maintain what they say is their way of life, must not be encouraged in their disobedience by having Federal funds lavished upon them, the better to evade the law.

Southern Senators have admitted that this appropriation cannot be passed if there is a no-segregation rider attached to the bill, while several prominent Representatives insist that such a rider will certainly be tacked on to assure that none of these millions is used to aid racially segregated school systems.

It is depressing to note that spokesmen of the National Education Association, the Association of State School Officers, and the American Association of School Administrators are all plunking for the bill without the proposed rider, prepared to sacrifice principle for pelf, disdainful of the Supreme Court's decree.

If this no-segregation rider is defeated, it will demonstrate to the entire world that a little minority of Negrophobes can thumb noses at justice, fair play, and constitutional procedure with impunity; that unreconstructed Dixie can eat its Jim Crow cake and have it, too.

[From the Afro-American of January 28, 1956]

CHILDREN AND EISENHOWER

Former President Truman has said if he were in Congress he would not vote to grant Federal money to schools in Southern States which are not integrated.

President Eisenhower, urging the Government to appropriate money to schools, carefully refrained from making any mention of antisegregation safeguards.

The difference could lie in the fact that Mr. Truman was a Member of the Congress before he became President.

He clearly sees the need for the White House and Congress to support the decisions of the judiciary in order to give the Government a unified policy where the Constitution of the United States is involved.

President Eisenhower has had no such experience in Congress. All of his career has been with the executive branch of Government.

On this issue, we are convinced that Mr. Truman is right and Mr. Eisenhower disappointingly wrong.

It would be a great mistake for an otherwise fine administrator not to place himself solidly behind the decision of the highest court of the land.

[From the Chicago Defender of February 4, 1956]

OUR OPINIONS—DEMOCRATS ON THE SPOT

A. CLAYTON POWELL'S forthcoming amendment to the Federal school-aid bill is expected to show the world—not only the United States—who in Congress believes in the basic tenets of our Government.

POWELL wants to deny any part of the proposed vast cash bounty for education to any State that is not willing to abide by the decision of the United States Supreme Court ordering integration of all public schools.

Normally this would be a thorny problem for our Congressmen, but this being an election year makes it—to put it mildly—explosive to an atomic degree.

Wiley JOE MARTIN, GOP leader in the House, has challenged the Democrats on the issue.

Last week, he announced with no reluctance that he favors the Powell amendment and predicted its passage in the House.

It seems to us that he made a point of the fact that he was making the statement after conferring with the President.

It would seem that the strategy is to let the Democrats kill the amendment and possibly the whole bill if either or both fail to pass.

With the presidential and and congressional elections at stake, the GOP could then point out to the Negro voter that the Democrats killed the Powell amendment, and to those favoring Federal aid to education that it was the same Democrats who likewise blocked its passage.

What the Democrats will do to offset this most tactical move has yet to be seen. But one thing is certain: The Democrats are on the spot.

Further, to show you that one of the best constitutional lawyers in the United States, Mr. Thurgood Marshall, also an expert on the legal aspects of integration,

is in favor of my amendment, I offer his brief on the question:

From: Thurgood Marshall, special counsel, NAACP.

Subject: Proposed amendment to pending grant-in-aid legislation for construction forbidding payments to segregating States.

This is in reference to the report that certain individuals and organizations are circulating information purporting to show that the Powell amendment to the school-construction bill is not necessary.

1. Last year I submitted a memorandum which was incorporated into the report of the committee's hearings dealing with certain legal objections expressed by the NEA to a proposed amendment to pending grant-in-aid legislation which would forbid payment under this legislation for the use of segregated schools.

2. All of the points made then are still valid now, and may be incorporated by reference into this memorandum. In summary, these points are:

(a) It is objected that no limitation such as that proposed in this amendment appears in other legislation. But, none of the other legislation referred to was passed in the face of a clear Supreme Court decision; and, at any rate, wrongful action in the past does not condone such action in the future.

(b) It was urged by the NEA that it would be inadvisable to legislate on a pending judicial issue. This objection is now clearly without force.

(c) It was urged by the NEA that the proposed limitation would be inconsistent with the position taken by the Attorney General in his amicus brief before the court. But even assuming, arguendo, that this brief has legal effect it has been superseded by the May 1, 1955, decision of the United States Supreme Court.

(d) It was objected that the United States Commissioner of Education would become an agent of the Supreme Court under the proposed limitation. But the Commissioner of Education is asked to enforce nothing. He would merely be required to administer an easily administrable requirements of the law.

(e) It was objected that even a State which is in the process of voluntarily desegregating should be denied such funds. But, the amendment could easily provide that such funds could be used only in school districts which comply with the Constitution of the United States.

(f) In addition, it was urged by me that to invest money in segregated school systems would be to invest it in economically inefficient schools which are also educationally harmful. This investment, moreover, would create an economic vested interest in segregation which would tend to perpetuate it.

(g) I pointed out that all the branches of Government are obliged by oath to obey and follow the Constitution. This is required by article VI of the Constitution. In passing this the Congress would be working in concert with the courts in support of the Constitution.

(h) I wrote that it is wise policy to make it attractive to school districts to comply with the Constitution rather than tell them that they may disobey and enjoy Federal funds nevertheless.

(i) The proposed amendment places in the bill a standard no more extraneous than that imposed upon the bill in the Davis-Bacon Act with which we, of course, agree.

3. Since that time certain events have occurred to which reference ought to be made.

(a) On May 31, 1955, the United States Supreme Court handed down its final decision in the School Segregation Cases. This decision sets down Constitutional standards which courts are to employ in entering final decrees against school districts which have been sued to compel desegregation. These are:

(1) A prompt and reasonable start toward full compliance of the May 17, 1954, ruling of the Supreme Court must be made.

(2) The burden is upon the school district to establish that time is necessary to effect the change.

(3) The school district must proceed in good faith.

(4) On time for delay it may find justification in problems relating to school administration arising from the physical condition of the school, the school transportation system, personnel and revision of school districts and attendance areas. But, as noted before, the burden is on the school system to prove that their considerations warrant delay.

(5) The Court held that "It should go without saying that the vitality of these Constitutional principles canont be allowed to yield simply because of disagreement with them."

These standards are clear and easy to follow. In fact they have been followed in a very large number of school districts in many States throughout the South. In the North they present very little, if any, problem. Certainly, districts which are proceeding in good faith to obey the Constitution, or which are obeying it, as is true of the overwhelming majority of school districts throughout the Nation, should not be denied Federal aid and it is not the intention of the proponents of this amendment that they should be denied Federal aid.

However, in a small minority of the States there is intransigent objection to the United States Constitution. In some of these States, as in Georgia, where a school district desires to follow the Constitution, State authorities have attempted to enjoin it. This has occurred in Valdosta, Ga., where the State has filed a suit to prevent the school board to even consider desegregating. States or districts which persist in disobeying the law should not obtain money from all of us to be applied to an illegal end.

It is the intention of the proponents of the amendment that school districts north and south which obey the Constitution may obtain these moneys. The subversive, defiant minority, which is making no move toward compliance, but is in many instances actively opposing compliance, deserves no such funds.

We were sent here to be Members of the Legislature. We took an oath to support the Constitution of the United States here in this Chamber. We cannot shift the burden of our responsibility as legislators to the shoulders of the Executive or the judiciary. If they do what you would like them to do, all well and good. If they do not, I do not see how that excuses us. Therefore, lacking a philosophy or a directive or an order in the executive department along the lines which you and I agree on, I cannot fail my personal responsibility and I do not feel you, or others, can fail your personal responsibility as a member of the legislative branch to sustain the law of the land which we swore to uphold. I am not a former member of the Supreme Court of Montana and I am not a lawyer, but I am an American and I know the Constitution and I know the oath I took. That is my feeling. If you can give me an argument to the contrary, I would be the first one to be convinced.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. ALBERT. Is it not true that if the gentleman's statement is correct, the decisions of the Supreme Court are nullified in all instances in which implementing legislation does not follow?

Mr. POWELL. If any decision of the Supreme Court needs implementation, you are right.

Mr. METCALF. If I may answer the gentleman. The opinion of the gentleman from New York is correct if his position is that these various provisions of the Constitution need special implementing legislation. Surely he does not contend that by inaction or by failure to act or refusal to act that we can deprive people of basic freedoms guaranteed by the Constitution; that it is necessary for the legislative body to act before the executive body must enforce basic Constitutional provisions. He does not make that contention and neither do I. The contention he makes is that in the history of this administration there has been failure to carry out the duty to enforce the provisions of the Constitution as interpreted by the Supreme Court. Therefore, it is the duty of this body to pass legislation to enforce the Constitution and I say to him that under the doctrine of the separation of powers, the way to require the executive department to carry out its constitutional duty is to go into the courts and force it to do it just the same as we would go into court to force the Executive to carry out every one of these self-executing provisions of the Constitution.

Mr. MURRAY of Illinois. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield.

Mr. MURRAY of Illinois. I think that your discussion is a discussion that has perplexed not only a great many lawyers but oftentimes perplexes the Supreme Court of the United States itself, and that is the differentiation between what is a right and what is a remedy. Certainly, the constitutional right, is enunciated in our Constitution and interpreted by the Supreme Court. But, we also have a constitutional provision that requires a remedy for every wrong. Is it the gentleman's position that this legislation or the Supreme Court decision in enunciating the right also provides the remedy?

Mr. METCALF. That is correct. It is my position that in the case of Bolling against Sharpe, which is the last case, the Supreme Court made it clear that there was no need for specific legislative enactments to enforce the particular decision in the case of Brown against Board of Education.

Mr. MURRAY of Illinois. Is there an adequate, sufficient remedy against any wrong that might be perpetrated by reason of our legislation?

The United States Supreme Court has held in recent years that the right to counsel for an accused in a capital case is a right protected by the Federal Constitution. Obviously, that right is ineffectual unless a State had some legislation insuring that every accused has counsel in a capital case. Is there a remedy in this case for a denial by the State of the right recently clarified by the Supreme Court in Bolling against Sharpe and the other cases referred to.

Mr. EDMONDSON. Will the gentleman yield?

Mr. METCALF. I yield.

Mr. EDMONDSON. In the instance of denial of counsel, does not the gentleman agree that a writ of habeas corpus would lie to secure that Federal right, even if the State had denied it or had made no provision to secure it?

Mr. MURRAY of Illinois. The Federal right of habeas corpus applies to Federal constitutional rights. It does not apply to the States. But in the case of a capital case, if a State would deny counsel for a criminal in a capital case, the party after exhaustion of State remedies would have a right to go into the Federal district court and obtain relief. But, this remedy is not effective in insuring that counsel will be given an accused. Are not other measures necessary to insure that a State will give them the right if we are going to have enforcement of criminal law consistent with the Constitution as interpreted by the Supreme Court.

Mr. EDMONDSON. Will the gentleman yield?

Mr. METCALF. I yield.

Mr. EDMONDSON. If I followed the reasoning of the gentleman from Montana, it is in substance this, that the executive is now under constitutional direction to follow a particular course as defined by the Supreme Court; that if the executive will not obey the Constitution of the United States in carrying out its administrative functions, how are we to expect the executive to obey a statute passed by the Congress of the United States?

Mr. METCALF. Exactly.

Mr. EDMONDSON. Now as to remedy which may be available to a person aggrieved by the failure of the executive to perform a constitutional duty, or by the executive's performance of duty in an illegal way, would there not be available a suit in the Federal court in the way of an injunction?

Mr. MURRAY of Illinois. Are we not to have a remedy for every right?

Mr. EDMONDSON. I would like to see that, yes. I question whether or not the right of injunction be present to forbid the sending of Federal funds in defiance of the Constitution?

Mr. ROGERS of Colorado. Will the gentleman yield?

Mr. METCALF. I yield.

Mr. ROGERS of Colorado. On the question of an injunction against public officials, which you and I recognize as lawyers is a very difficult proposition, especially if he has no statute to guide him, on segregation, the questions I wanted to ask the gentleman, under those laws that have been in force and effect that do not mention segregation, would a public official who has the control of those funds, such as vocational training or welfare matching funds, is he in a position to say to that State, "Because you are not now complying with the Supreme Court decision we are going to withhold funds as it relates to vocational training and welfare funds," because those States are not living up to the Supreme Court decision?

As a Federal official he has authority to make such rules. In insist that he is not going to send it down because that State is not living up to the Supreme Court decision.

Mr. METCALF. May I answer the gentleman?

The SPEAKER. The time of the gentleman from Montana has again expired.

Mr. METCALF. Mr. Speaker, I ask unanimous to proceed for 5 additional minutes.

Mr. SCHWENGEL. Mr. Speaker, reserving the right to object, as a member of the minority side in a Democratic Congress I am willing to stay here as long as necessary if we can accomplish something constructive, but it seems to me we are doing nothing except to have a very general discussion here this afternoon which can perhaps be just as well carried on elsewhere as here. May I ask the gentleman how much more time he might be asking for before this thing is brought to a close?

Mr. METCALF. I would merely like to answer the gentleman's question which he propounded just before my time expired previously and which he propounded a second time just now.

Mr. SCHWENGEL. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

The SPEAKER. The gentleman from Montana is recognized for 5 additional minutes.

Mr. WILLIAMS of Mississippi. Mr. Speaker, will the gentleman yield for 30 seconds?

Mr. METCALF. If the gentleman will leave me enough time to answer the question, I will gladly yield to the gentleman from Mississippi.

Mr. WILLIAMS of Mississippi. I just wanted to make the observation that the crowd that is trying to put the Powell amendment across is the same crowd that has been crying such bitter tears over what they allege to be economic pressures being used by certain prosegregation organizations in the Southern States. It looks to me as if they are trying, by the Powell amendment, to give legal sanction to economic pressure against the South. They are a bit inconsistent, it appears to me.

Mr. METCALF. I thank the gentleman from Mississippi.

Now, let me answer the gentleman from Colorado.

As I see it, I believe that it is not only within the power but it is also the duty of the Commissioner of Education when he finds that vocational education funds, for instance, are going into these States which I designated as States of the third category, it is the duty of the Commissioner of Education to deny funds to those districts.

The Supreme Court has spoken only on the 5th and the 14th amendments with respect to education as I outlined it before. I do not know what happens to welfare funds. I think there is a great field of contention.

Where is the remedy? I am sure what kind of remedy there is in the Federal courts. There is a remedy in the State courts under a taxpayer's suit for an injunction. But I can assure you that this thing can be definitely settled in 1 lawsuit, in 1 test case, and that is in the procedure that is outlined in the law. If the Commisisoner of Education or the Secretary of Health, Education, and Welfare will deny funds once then there is a procedure for appeal, there is a procedure for the State thus affected to go into Federal court and ask why those funds were denied and we can have a definite decision of this matter.

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield further?

Mr. METCALF. I yield.

Mr. ROGERS of Colorado. Does not the gentleman recognize that under the law when we vest an executive officer with the right to do certain things we vest him also with discretion and that the only ground on which you can get a review of his actions in court is on the ground of abuse of that discretion.

Mr. METCALF. But I want to say to the gentleman from Colorado that in every one of these laws there is specific provision for appeal on the part of the State against any act of the administrative agency.

Mr. ROGERS of Colorado. Yes; but will not the gentleman agrees as a general proposition of law that you do not upset the actions of any board or bureau or executive department on the question of the discretion that is used?

Mr. METCALF. I agree.

Mr. ROGERS of Colorado. That being true, if it is specifically in the law as to what he should and should not do, would it not be easier for the court to determine whether he was following the law that the Congress of the United States had passed?

Mr. METCALF. It is specifically in the law now, just as plain as it can be made by decisions of the Supreme Court that surround this provision of the Constitution.

Mr. ROGERS of Colorado. I am glad the gentleman gave that answer. But let us go a step further. I pointed out the question in reference to vocational education. Let us go to the question of funds under the Old Age Assistance Act. The gentleman agrees that that decision is the law of the land. Now, does he think that the Administrator of the old age assistance program would be justified in withholding from any State funds if the State was not in compliance with the Supreme Court decision?

Mr. METCALF. He may be justified, he may not; I do not know what the Supreme Court would do with the hypothetical question that the gentleman has presented. But I do know what the Supreme Court has done with the case involving racial discrimination in education. They have made that very plain.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. METCALF. I yield to the gentleman from Michigan.

Mr. DINGELL. Would not the gentleman say it was an abuse of discretion by an appointive official of the executive branch to fail to deny funds in compliance with the mandate of the Constitution as interpreted by the Supreme Court?

Mr. METCALF. That is correct. I say they are abusing their discretion right now. They have a constitutional mandate to withhold these funds.

The Second Annual Message of the Honorable Robert B. Meyner, Governor of New Jersey, to the Legislature, January 10, 1956

EXTENSION OF REMARKS
OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. SIEMINSKI. Mr. Speaker, under leave to extend my remarks, below is cited the second annual message of the Honorable Robert B. Meyner, Governor of New Jersey, to the legislature on January 10, 1956.

Topics covered in the message of Governor Meyner include the following: The State Highway Program; Our Needs In Education; Water is Still a Problem; State Employees; State Office Buildings; The Need for a Police Training Program; Crime Reporting; Statute Revision; Rapid Transit in Our Metropolitan Areas; The Port of New York Authority Program; the Problems of Old Age; Mental Health; Agriculture; Labor and Industry; Tax Equalization.

As of further possible interest to the House, perhaps some enterprising researcher somewhere might yet cause to be printed in the CONGRESSIONAL RECORD each year an outline of each of the annual addresses of the governors of the 48 States, our Territories, trusts, and possessions.

Such a presentation could conveniently lay before the Congress a cross section of the conditions confronting the people and regions of our country. Such a presentation each year could do much to give each State, Territory, trust, and possession a more active sense, perhaps, of participation in the affairs of our Government without in any degree lessening the importance of each Member of Congress of each delegate to the people he is elected to represent.

Governor Meyner's address follows:

GOVERNOR'S ANNUAL MESSAGE TO THE LEGISLATURE

Mr. President, Mr. Speaker, and members of the senate and general assembly, I take pleasure in greeting the members of the 180th Legislature of New Jersey and in reporting to you, in accordance with the constitution the condition of the State and the measures which are deemed desirable in the year to come.

The general theme of this message is that most of the problems that confront the State are products of our growing population and expanding economy. If we were not enjoying a period of progress, we would not need, as we do, more schools, more highways, more recreational facilities and many other things, nor would we be obliged to increase our present services. Fortunately, New Jersey is not stagnating, but it is forging ahead and, in the process, it is up to you and to me to see that State government meets the demands that come with the impact of growth and change.

WHAT NATURE ABHORS

In our classic system of checks and balances, the executive and the legislature each acts in its own sphere, but something like anarchy would result if the spheres were to become separate vacuums. If New Jersey is to have an effective democracy, you and I must work together, putting aside selfish motives and narrow sectional considerations in the interest of the State as a whole.

Rivalry between political parties, at its best, is a sound and wholesome thing, because it is an appeal for the moral and intellectual approval of the people. But, at its worst, it descends to the frustration of the democratic process and to the denial of worthy and badly needed measures.

In an effort to increase cooperation between the executive and the legislature, I established a bipartisan conference. On the morning of every legislative day, I meet with the senate president and the assembly speaker and the majority and minority leaders of the senate and general assembly. At these meetings, I outline the measures which in my opinion are needed, at the same time inviting the views of the conferees. I will continue to do my best to assure that these meetings are not a mere matter of form or ceremony, but that they will serve to promote a constructive exchange of ideas and to arrange for cooperative action between the two branches of government.

AN OPEN-DOOR POLICY

My office door is open not only to the leaders but to any member of the legislature who wishes to consult on State matters. And this holds true for the members of the cabinet, division and bureau chiefs, and all other State officials who have facts at their disposal of value to members of the legislature. I am a firm believer in the sovereign quality of facts as a condition precedent to legislative action, since many of the disputes over measures arise from a lack of knowledge of the underlying problem. The facts as I have them are yours for the asking.

In my 2 years in office, it has been the practice of the legislature to remain in continuous session. If this practice is to continue, I merely request that the senate take prompt action on appointments, either in confirmation or in rejection, in order that the work of the State may proceed in an orderly manner. When an appointment collects dust in a pigeonhole, it often means that important State business is neglected for want of an official to fill the post.

In the past 2 years, I have vetoed measures that would have cost New Jersey millions of dollars, not only in immediate expenditure but also in annual recurring obligations. Many of these bills were of local and special nature and of no value to the State as a whole. There is no magic possible in the operation of the State treasury. All funds come out of the taxpayer's pocket. My policy will continue to be that bills requiring expenditure of public funds must be predicated on the availability of revenue.

A DUTY NEGLECTED

Since proper representation is at the root of the democratic process, I urge you as one of your first tasks in this session to remedy a long-neglected situation, namely, reapportionment of the assembly in accordance with population changes. This is a task enjoined upon you by article 4, section 3, of the State constitution, which provides that "apportionment of the members of the general assembly shall be made by the legislature at the first session folowing the next and every subsequent census."

Though the last census was taken in 1950, five sessions of the legislature have come and gone without action in this vital matter, in marked contrast to the historical pattern. Looking back to the middle of the 19th century, the assembly was reapportioned every decade until the present one, and except in one case the legislature acted promptly in the year after the decennial census. Reapportionment involves some painful choices and some difficult judgments. Even so, it cannot justly be longer deferred.

Similarly, it is incumbent on the legislature to redistrict the State for congressional purposes. Though this also is a duty of the legislature, it has not been done since 1931, a quarter of a century ago. Meanwhile, there have been wide population shifts, with the result that many of our sections are either overrepresented or underrepresented in Congress.

THE INCREDIBLE SEVENTH

One of the districts—the seventh—is a graphic example of the gerrymander, that type of districting designed to keep an individual or a party in office without regard for the basic needs of the constituents. This district begins north of Trenton, comprises all of Hunterdon, all of Warren, all of Sussex, and parts of Passaic and Bergen. It starts on the Delaware and ends up in dog-leg fashion on the banks of the Hackensack.

I hope that the 180th legislature will make itself memorable by assembly reapportionment and congressional redistricting in accordance with the basic philosophy of American democracy.

While the voting machine system is now established in 12 of our counties, 9 are still using the old-fashioned paper ballots. I continue to favor legislation to make the use of voting machines mandatory in all counties as the most accurate, quickest, most convenient and most trusted of all voting methods. The initial cost of the machines is made up in time by economies in the voting process.

THE LIABILITIES OF PROGRESS

We have at this time an increasing and highly mobile population, industrial and residential growth, a minimum of unemployment, large cash incomes and heavy spending.

As I have said, to a large extent the State's problems arise out of these very conditions. When population grows, more schools are needed for the young and more care for the old. When industries and residential areas expand, and when income is high, more cars and trucks congest our highways. The assets of progress are always accompanied by certain liabilities.

THE STATE HIGHWAY PROBLEM

Each year the highway needs of New Jersey grow more critical; indeed, in some sections, we are approaching strangulation. Last year 140,000 new registrations played a part in adding one billion miles of motor vehicle travel within the State—and that figure does not include our expanding interstate traffic. Many of our State highways are already burdened with more than twice their designed capacity.

The cost

It will cost some $2 billion, over a 10-year period, to modernize our State highway system, as estimated by the State Highway Department. It will take $600 million to improve the existing interstate system; $300 million for new interstate routes; and more than $1 billion for new State roads and improvement of existing roads not in the interstate system. In this estimate, provision is made for freeways—that up-to-date form of limited access thoroughfare so vital to the convenience and economic health of our urban areas.

What we are spending now

Against this $2 billion requirement, we will spend only $34 million on construction during the current fiscal year, and of this $12,500,000 represents Federal aid. The State is entitled to an additional $14 million in Federal aid for which no State matching funds have been made available. It is apparent that no real relief of our traffic-choked system is possible unless additional funds are made available.

In the last session of Congress, there was much debate over various proposals for a major national attack upon the Nation's traffic congestion. Congress was unable to agree last year on a national highway measure, but the issue is certain to be given due consideration during the 1956 session of Congress. Unless Federal assistance in generous degree is forthcoming, some means must be found to provide needed funds at the State level, perhaps in the form of a bond issue.

Contributions to safety

Meanwhile, our highway department is stretching the construction dollar to the utmost in its effort to provide new roads, as well as to improve existing roads.

It is making contributions to safety by the erection of center island barriers, building creeper lanes for trucks and painting white strips on the outer edges of pavements. These innovations, we believe, have already paid dividends in accident prevention. New life is being breathed into the highway system by dualizing existing two-lane and three-lane roads; construction of more overpasses; closing islands; removal of thousands of encroachments; banking of curves; designating speed and no-passing zones; improving road signs; and other changes.

Where grass does not grow

I think we should approach our highway problem not in a sense of dismay over its cost but in gratitude for the progress which has created it, and in the sense of the old chestnut that grass does not grow on a busy street. Our job is to adapt the highway system to the affluence that has permitted so many more people to own cars and that has created the vast new commerce by truck and trailer. It is a liability of expansion. And that theme, in a far deeper and more meaningful sense, may be applied to our educational needs.

OUR NEEDS IN EDUCATION

Last year, in Harper's magazine, Peter F. Drucker made this striking statement: "The most important economic event of 1954 went almost unreported in the newspapers. It was the announcement that 4,060,000 babies had been born in this country during the past year—the largest baby crop ever." This figure will be approximated, if not exceeded, for 1955. The baby boom is no new thing. It has been going on since the Second World War, and it means, according to the Census Bureau, that this country, with a present population of about 166 million, will increase to 190 million by 1965 and 207 million by 1975.

The increased birth rate has already affected New Jersey schools, and will continue to do so for years to come. It is welcomed as a new mark of national strength and as a source of increased wealth. Since the beginning of the school year 1952–53, enrollments have increased by more than 112,000. It has been necessary to add nearly 5,000 to the teaching staff and in the past 2 years the citizens of the local school districts have approved the expenditure of $131 million for capital purposes—a sum, as it happens, greater than the total of all such expenditures for the entire decade 1940 to 1950. It is estimated that an additional $100 million will be approved by local districts for school construction during the present school year.

New State aid

As we all know, and as the State government has already recognized, the burden of increased educational costs upon local districts has become most difficult. That is why the new State-aid formula went into effect this current school year, by which $63,500,000 in State funds was distributed to the schools. This is more than twice the sum distributed during the last year of operation under the old formulas. And, as a footnote, about $1 of every $3 collected in taxes by the State goes for educational purposes of all types.

Construction needs

But the floodtide of needs continues to pour in upon us. In spite of the large sums recently spent for school construction, more than 50,000 pupils are on a part-time basis or are housed in temporary or substandard quarters, while many classes are too large. And these conditions will increase in intensity as time goes on. It was this subject which inspired the eighth report of the State tax policy commission, submitted to the Governor and the legislature in May 1955.

After an awesome array of facts and figures about school needs and growing school populations, the commission proposed a school construction aid program. Estimates have been made that the cost to the State could run as high as $15 million for the first year, and increased amounts thereafter as the school population increases. The commission said that adoption of the program will require additional revenue, but it did not recommend a means for raising it. No action has as yet been taken by the legislature on the proposal of the State tax policy commission, but it continues to hold a high claim on your deliberations.

At the upper level

Many of the boys and girls who yesterday, so to speak, entered the elementary and secondary schools in such phenomenal numbers, tomorrow will be seeking admission to colleges.

New Jersey presently sends more than half of its college-bound youth out of the State. Already, institutions in other States, faced with the on-coming wave of applicants for admission, are beginning to sound warnings that future limits will be set on the numbers from New Jersey who can be accommodated.

The State board of educaton has authorized an extensive investigation in this area and, by June, expects to publish a study which will give us some idea of the problem we shall have to face in higher education.

The board of trustees of Rutgers has drawn a plan for reorganization of the State university which will doubtless be submitted to you at this session.

As in the case of the highways, the Federal Government last year gave some evidence of awareness of its responsibilities in the field of education. The concrete measure offered by the administration, however, fell so far short of the Nation's needs that it gathered little support either in Congress or from the States. It would have benefited New Jersey not at all. But the impetus for Federal aid without impairing State and local control of schools will continue to grow. It was the overwhelming decision of the recent White House Conference on Education in Washington, attended by citizen delegates from all the States, that Federal aid should be granted for school construction.

But Federal aid or no Federal aid, New Jersey cannot shirk what is at once its duty and its opportunity to provide adequately for its children's education. They are the State's true wealth—its greatest resource—whether estimated in sentimental and spiritual values or in stark economic terms as the producers and consumers of tomorrow. Education is the life blood of democracy.

WATER IS STILL A PROBLEM

In turning to the subject of water, here again is a need brought about by an expanding economy, for if the State were not growing in population and industrially, we would not be too concerned about the assurance of future water supply. Last November, the people rejected at the polls the proposal of a $100 million bond issue to build a reservoir at Chimney Rock in Somerset County and to provide water storage elsewhere in the State, particularly in south Jersey.

The people's verdict was not against the solution of the water problem. It only ruled out Chimney Rock as a site. The lesson to be learned from the Chimney Rock proposal is that there are human values involved in setting aside land for water storage that cannot be calculated by the slide rule or the mathematics of an engineer. And, while any site that is eventually chosen is bound to affect the lives of some people, the cost in those terms should be fully considered.

A fresh approach

It is up to you, the legislature, and to me, the Governor, to make a new approach to the water problem and to find a solution which will be acceptable to the people. If I may state the situation again in simple terms, it is that New Jersey, with an average rainfall of about 45 inches a year, receives all the water it needs; the only question is storage that it may be used as required. We have the resources. We need only to store them.

It is my conviction that the State should acquire sites for storage of water before development makes their acquisition prohibitive.

If anything were needed to dramatize the situation, it was last year's weather performance. After a protracted drought in the first part of the year, reaching serious proportions in July, we were visited in a little over 2 months by a series of 4 floods. One of these was by far the most damaging in the State's history. These floods and the series of droughts since 1949 have proved that the storage of water is essential to the welfare and safety of our people.

Tragedy of flood losses

Although insurance of all kinds is almost a fetish with the American people, last year's floods again highlighted a serious hiatus in the insurance picture. Thousands of people suffered tragic losses of property for which there was no possibility of recovery. In many cases homes were lost on which mortgages must still be paid. I suggested then, and I repeat, that if the private insurance companies cannot work out a plan to indemnify citizens against flood losses, the Federal Government should devise means to do so.

I suggest, too, that the United States Weather Bureau should cooperate more closely with State agencies to release flood warnings to the public and to all disaster-relief officials.

A study is in the process by the Department of Conservation and Economic Development to determine whether municipalities should be authorized to mark flood areas and to establish a system of flood zoning, so as to discourage building and development in areas subject to overflow.

Housing needs

A report released by the department of conservation and economic development last month revealed a shortage of housing for certain income groups. There are in the State more than 108,000 substandard dwelling units, a term that means a house lacks toilet or bath or has no piped running water. This is a reminder that the slums are still with us, with their festering sores of misery, crime, and delinquency. The report estimated that 120,000 dwellings are needed for families of moderate income.

At the close of the last session, I signed into law a resolution to create a special study group to investigate the problem of middle-income housing. It is my hope that the special study group wil take advantage of the work done by the department of conservation and economic development and its advisory committee, so that needed legislation can be expedited.

Impact of growth

The face of New Jersey continues to change rapidly with new construction and development everywhere. Outward-thrusting communities, new areas of industrial and commercial enterprise testify to the State's vitality and growth. There are only 3 States

smaller in area than New Jersey, but we rank 8th in population, 6th in per capita income, and 7th in manufacturing production. Our 11,000 industrial firms have an annual output valued at $5 billion. The year 1955 saw much new industry of diversified nature enter the State.

Under the impact of this growth, new problems arise as older formulas for meeting the needs become inadequate, if not obsolete. The need for intelligent planning becomes more and more urgent in order to make full use of our physical resources, to maintain a strong base for our economy and to fulfill demands for housing, education, transportation, and recreation.

Need for planning

The proper use of land cannot be taken for granted and we have revitalized our State planning agency to take a fresh look at this aspect of the State's welfare. The lack of proper planning underlies many of the difficulties encountered in the expansion of our towns and cities. By participating in the Federal program of urban planning assistance, the State will be able for the first time to give technical aid to communities struggling to lay the groundwork for orderly development. The new emphasis on State planning also holds the promise of more efficient use of available physical assets in the operation of State government.

The State has recently acquired three valuable areas: Island Beach, the Worthington tract, and the Wharton tract. All of them possess immense possibilities for the health and welfare of the State. It seems to me, what with these new areas plus our system of parks and forests, we should now be concentrating on the development stage. A statement of policy is needed from the legislature as to the uses to be made of our lands for recreation and other purposes in this most highly urbanized State of the Union.

STATE EMPLOYEES

During the past year, I asked several members of my cabinet to form a personnel committee to study the conditions of State employment as compared to employment in similar positions in private business and other organizations. Based on this study, as well as a recognition of specific needs indicated by our experiences in State government, I will make specific recommendations in my forthcoming budget message.

STATE OFFICE BUILDINGS

I have repeatedly called attention to the need of more space for State offices. You need only to make a tour of Trenton to find out how badly we are crowded and in how many different and inconvenient places the State's functions are discharged. Some of the quarters would be condemned by our own inspectors if they followed the rules applicable to private buildings. And we are paying more than $1 million in rent in the Trenton area. I have suggested a number of buildings to remedy the condition, but another proposal is for a multistoried type of building on the Statehouse grounds.

While I have no pride of opinion as to the course to be taken, I think we should be careful to choose the right one. A multistoried building on West State Street would create difficult traffic and parking problems. As for a building for the department of labor and industry, funds for such a building are already available from fines and penalties under the Unemployment Compensation Act. I am sure the Federal Government, which has a stake in these funds, would contribute liberally to a separate building for the department, making payments in lieu of rent. I do not know what financial responsibility Washington would assume if the department were housed in a general office building. A relevant factor, also, is the position that Federal defense officials have taken with respect to encouraging dispersal and decentralization policies in urban areas.

To help me in arriving at my own ultimate decision, I have asked some experts in private business, who have had much experience in constructing office buildings, to advise me of their conclusions on cost and location. This information will be made available to the legislature when it is forthcoming.

THE NEED FOR A POLICE TRAINING PROGRAM

It seems to me unsound to give a man a badge, a club, and a gun and send him out for police duty unless he is properly screened and trained.

With increasing population in New Jersey, the burden on local law enforcement officers continues to mount. Modern conditions of travel and improvement in methods of criminal detection make the task of local officers far more complicated than it used to be. Today a criminal can traverse the State from north to south within 3 hours and from east to west in 1 hour.

The job of police officer has lost its traditional concept of being local in nature. I recommend that we inaugurate a police training program, similar in nature to that already employed by the State police and various local training programs, to apply to all municipalities. Such a program would require a potential police officer to receive a thorough course with academic subjects, clinical experience and physical training.

Aside from the State police academy, the Newark Police Academy has maintained a fine standard of compulsory training; in Union County, the chiefs of police training association since 1947 has offered training courses to county agencies; the South Jersey Suburban Police Association, established in 1927, has conducted a series of training courses; the city of Jersey City has a police training school.

What I am proposing is that a movement which has already gained headway and public acceptance be broadened so that all police officers be properly trained before they assume their duties or after they have been appointed for a probationary period and before their appointment becomes permanent. A recent survey shows much sentiment for this action. Of 512 inquiries, 392 were answered. Of these, 128 municipalities said they were participating in a voluntary program, or had too small a staff for training. Two replied that compulsory training was in force. The remaining 262 municipalities replied they would welcome training.

The legislation I request would not be designed to infringe upon local control but is advocated solely to aid the municipality in improving its service to our citizens.

CRIME REPORTING

I should like to repeat a recommendation made in my first annual message for an adequate system of crime reporting. Intelligent law enforcement requires an ability to review accurately past and present criminal experience so that, at any given time, law officers may measure the results of their efforts. I hope you will establish an adequate system of compulsory crime reporting centering in the State police.

STATUTE REVISION

There has been no overall revision of the statutes of New Jersey since 1937, and even in that year much of the work consisted of compilation, rather than thoroughgoing revision. At the time, it was contemplated that the laws would be subjected to a continuing course of revision, year by year, but that expectation has not been fulfilled.

Since 1937, many amendments and exceptions have been made in the laws, which have come to represent a jungle growth rather than an orderly development. As a result, it is often very hard to find out what the law actually is in many areas. A lawyer almost has to be a soothsayer to supply answers to his clients and to prepare his cases.

Among the sections most glaringly in need of revision are title 40, covering counties and municipalities, and title 19, covering election laws, though there are many others also in need of attention. A study is being made of title 19, but no final results have been announced. The Governor and the legislature should work together to bring about revision of our statutes.

Apart from the difficulties encountered by lawyers and judges, it is easier for laws to be obeyed when their intentions are clear. Evasion and violation are most likely to occur when doubt exists.

We also need an administrative procedures act. It should provide for prompt publication of rules and regulations, and provide minimum requirements of fairness of the conduct of hearings by State agencies. The Constitution states: "No rule or regulation made by any Department * * * shall take effect until it is filed with the Secretary of State. * * * The legislature shall provide for the prompt publication of such rules and regulations." We should proceed to carry out the provisions of the Constitution.

RAPID TRANSIT IN OUR METROPOLITAN AREAS

A reconstituted Metropolitan Rapid Transit Commission, financed by an $800,000 grant from the Port of New York Authority, is conducting public hearings and making a comprehensive study of traffic conditions in the New York-New Jersey metropolitan area. Its report, I am sure, will give us a fresh look at the intricate problems surrounding rapid transit in that area, and its findings should likewise prove of value in the Camden-Philadelphia area of south Jersey. The railroads claim that competitive transportation conditions compel them to carry commuters at a loss, yet it is perfectly clear that rail, as well as highway transportation, is needed to carry vast numbers of commuters back and forth. Out of the commission's study should come clear answers to many of the hard questions involved.

THE PORT OF NEW YORK AUTHORITY PROGRAM

You have before you for action legislation authorizing a gigantic construction program to be undertaken by the Port of New York Authority, including the double-decking of George Washington Bridge, and construction of the Narrows Bridge across New York Bay. Almost a year ago, the New York Legislature approved this program, but it still awaits action by New Jersey. I need hardly describe the benefits that will accrue to the whole metropolitan region from this program, nor do I need to labcr the desirability of your prompt action.

THE PROBLEMS OF OLD AGE

The lengthening life span plus the increasing prevalence of public and private pension plans present the Nation with a set of problems concerned with making old age pleasant and useful. Numerous organizations are making studies of these problems. The legislature has established the New Jersey State Old Age Study Commission, which no doubt will make valuable recommendations. The Council of State Governments has issued a most interesting report. There is a veritable ferment of ideas on the subject from one end of the country to the other.

There are in New Jersey some 450,000 persons over 65, comprising nearly one-tenth of our entire population. Since economic factors bulk large in any consideration of old age, it is important to point out that 200,000 are receiving private pensions, are self-supporting, or are being cared for by their families; some 225,000 are receiving Federal old-age and survivors insurance; only 20,000 are receiving State old age assistance.

A good many old people are committed to State hospitals on the ground of senility, and I am afraid that some of them are the victims of family neglect and do not belong

in institutions. The commitment procedure should be reexamined.

Medical care, of course, is an urgent need of the old and the New Jersey Welfare Council deserves praise for its study of this aspect. The council asks for the creation of a State commission to consider how to make adequate medical care available on a statewide basis.

There are many ways in which the State, working cooperatively with private groups, can stimulate interest in life for the aged. For one thing, meeting places can be provided in schools, churches, and other structures unused in the evenings. Adult education programs can be enlarged and geared to the needs and desires of the aged. Private business, which in some cases has done a great deal for the physically handicapped, might discover new types of employment which could capitalize on the skill and wisdom of older people. Facilities in our parks and forests should be increased to provide wholesome outdoor recreation.

MENTAL HEALTH

I can report to you substantial progress in our fresh attack on mental disease.

With additional staff and with increased use of the so-called wonder drugs, we have intensified our treatment programs. Approximately 3,600 patients have been receiving the new forms of treatment. About 45 percent of these patients, many of whom seemed destined to remain for long years in our institutions, have been able to leave. The relief of human suffering and the financial saving justify continued efforts.

During the coming year we shall complete the conversion of the Bordentown plant to its new use as a research and training center for the mentally retarded. This will substantially reduce the waiting list and should begin to find new answers to the many unknowns in this important field.

AGRICULTURE

Agriculture remains an important segment of our economy despite the expansion of industry and housing developments in our rural areas.

Improved methods of production and marketing, programs for eliminating infectious plant and animal diseases and harmful insect pests, an adequate milk marketing order, planning for agriculture in terms of our State economy are all the proper concern of our farmers and the agricultural department. Legislative measures will be submitted to you as the need arises.

LABOR AND INDUSTRY

During the past year labor and industry have shown continued capacity for adjusting differences and reaching agreements with a minimum of disturbance of operation. Generally, the scene has been peaceful and gratifying.

To assist in the maintenance of industrial activity, we should have a State labor relations act. The National Labor Relations Board is increasingly divesting itself of jurisdiction, and this circumstance underscores the necessity for State legislation which will provide adequate means for resolving disputes involving representation and unfair labor practices at the intrastate level.

I again urge that there be adopted a realistic minimum wage law of universal application to all employees in this State who are not subject to Federal law. Presently our statute merely authorizes administrative determinations with respect to women and children in specific industries. At its last session, Congress adopted a bill fixing a minimum wage of $1 per hour applicable to all employees engaged in interstate commerce. We should not further delay an appropriate statewide minimum wage.

At the last session, the legislature increased unemployment compensation and temporary disability benefits from $30 to $35 per week. That unquestionably was a step in the right direction, but recent studies indicate that the $35 figure is inadequate to meet the minimum needs of the unemployed. I urge further study and consideration to the end that a more realistic rate will be adopted.

And since the need of the individual and the public interest in his plight are in no sense related to the number of employees within an establishment, the coverage of these laws should be extended to embrace one or more employees.

So also our existing rates with respect to workmen's compensation benefits are out of line with the needs of an injured employee. There should be a review of the benefit schedules and an appropriate increase in the weekly benefit.

TAX EQUALIZATION

There has been progress in the use of equalized real property valuations for apportionment purposes. In 1955, for the first time, the costs of county government were apportioned in five counties after equalization of real property values on substantially a full-true-value basis. Statewide equalization at the county level is expected in 1956 so that the apportionment of the costs of operating county government, now in excess of $95 million annually, will be made on equalized valuations. However, the operating costs of regional, consolidated, and joint school districts are not being apportioned on the basis of equalized valuations. I recommend the enactment of legislation specifically providing that the county boards of taxation shall make such apportionment of these costs.

The 1947 constitution of New Jersey provides that all real property assessed and taxed locally or by the State for allotment to the taxing districts shall be assessed according to the same standard of value and taxed at the general tax rate of the district in which situated. Existing legislation prescribes full true value as the standard for assessment purposes. There is great lack of uniformity in the assessment of such property, resulting in gross inequities in the distribution of the local tax burden. Such property is not uniformly assessed at either full true value or a fixed percentage of true value. Since local property taxes in New Jersey have now passed the half-billion-dollar mark, it is of utmost importance that this heavy burden be apportioned as equitably as possible. Existing law imposing a duty upon the Division of Taxation to require revaluation of the real property of a taxing district where inequities exist is thought to be vague. I recommend legislation clarifying the procedure in such cases and at the same time authorizing municipalities undergoing revaluation to meet the cost by emergency financing, spread over a 5-year period. The legislative needs in this regard should be carefully studied.

Existing laws relating to the taxation of tangible personal property (inventories, machinery, equipment, and household goods) are inappropriate under current economic conditions, for the purpose of fairly apportioning the local tax burden. I believe it desirable that the legislature carefully study this problem in the hope that more suitable legislation for the taxation of this class of property may be devised.

CONCLUSION

I have confined my remarks to the most pressing problems. There are other important matters about which I shall communicate to you or your leadership from time to time.

You will have my full cooperation, as I have given it during my 2 years in office. The legislative and executive branches can make 1956 a notable year in the history of the State of New Jersey.

Segregation in the Schools

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial entitled "Right to the Point," which appeared in the daily newspaper the State, of Columbia, S. C., under date of February 7, 1956.

This editorial highly commends a recent statement and the joint resolution offered by the junior Senator from Virginia [Mr. ROBERTSON] calling on Congress to pass a law authorizing the States to operate schools on the basis of either segregation or integration of races.

I was very happy to join the Senator from Virginia as a cosponsor of the greatly needed joint resolution, and am delighted the editorial writers of the State have explained its purpose very adequately to the people of my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT TO THE POINT

Senator ROBERTSON, of Virginia, has gone right to the heart of the situation, and in a most direct way, in proposing that Congress pass a law authorizing the States to operate schools on a basis of either segregation or integration of races.

To put it another way, he wants our national lawmakers to assert that States must be left alone to attend to their own business as to education, which not only makes sense but is clearly the Constitution's intent.

In a statement announcing his decision to introduce a resolution embodying this thought, Senator ROBERTSON called attention to the fact that he was acting "in accord with section 5 of the 14th amendment (to the Constitution) in which the people reserved the right to determine through their representatives in Congress, how the equal-rights provisions of the amendment should be implemented."

Should Congress respond favorably, the United States Supreme Court decision of May 17, 1954, would be set aside, but transcending this one issue would be notice to the Court to function in its own sphere of our fundamental of trials and balances. The Constitution grants to Congress the right to regulate the appellate powers of the judiciary, save in certain types of litigation, which are placed under its original jurisdiction.

Readers may recall that we have frequently said in these columns that Congress has the right to set up rules and regulations for the Court, and have urged that action along this line to be taken.

We quote further from Senator ROBERTSON'S statement because it so admirably sums up the situation and so well expresses our own views. He said that when the 14th amendment was adopted "no one in the Congress or in any of the States which ratified the amendment suggested it was intended to take from the States their control over public education.

"The amendment specifically said, however, 'The Congress shall have the power to enforce, by appropriate legislation, the provisions of this article,'" and "it should

be noted that the same Congress which proposed this amendment, while acting as a legislative body for the District of Columbia, established a system of segregated public schools in the district.

"Congress still has the right to say, by legislation, how the civil rights provisions of the 14th amendment shall be enforced. I am proposing that this right be asserted by giving the States the choice of operating either desegregated schools or the separate-but-equal facilities which all previous decisions of the Supreme Court declared were permissible."

Senator ROBERTSON'S remedy is a more direct approach than interposition, but the passage of interposition resolutions, provided they do not extend to cover nullification, go hand in hand with his proposal, in that they demonstrate by official act the determination of States to assert their rights through every legal means. The two do not conflict. Indeed, let's have both.

Peaceful Uses of Atomic Energy

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. ANDERSON. Mr. President, I have been impressed and gratified by the press reception of the recent report of the Panel on the Impact of the Peaceful Uses of Atomic Energy. Newspapers and magazines in nearly every section of the country have carried reports and editorials on the findings of the panel as delivered to the Joint Committee on Atomic Energy, January 31, 1956.

The perception of the editorial writers has been usually lucid. Their writings show that they have digested the report and have commented on what they view as the essence of its more important aspects.

In this regard I would like to call attention of Senators to two recent editorials. The first appeared on February 1, 1956, in the San Francisco Chronicle. It was entitled "Hydrogen Power: A New Frontier?" The second was printed in the Philadelphia Bulletin of February 3, 1956. It was headed "Atomic Age Blueprint."

To facilitate reading of these editorials by Senators, I am asking unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Francisco Chronicle of February 1, 1956]

HYDROGEN POWER: A NEW FRONTIER

The first comprehensive study of the effects of atomic energy may work upon the United States and the rest of the world has been completed by a nonpartison committee of civilians, appointed for the purpose last March by the Joint Congressional Committee on Atomic Energy.

As was to be expected, the committee reported those effects are likely to be tremendous. Atomic energy was deemed "a bright promise" for an important new source of electricity which could immeasurably expand the economies of the world.

But it was not the presently used fission, or A-bomb, process that stirred the study committee's strong enthusiasm. That was aroused by the prospects for the fusion, or H-bomb process, the possibility that the reaction of the hydrogen bomb might be controlled to provide a limitless source of power.

The study committee, an extraordinarily able representation of science, education, industry, labor, and the press, regards hydrogen power as "a truly frontier research project" and properly notes its importance to the maintenance of world leadership by the United States.

Such observations are followed by the implication that the project is being hampered and hobbled by Government restrictions. The committee urgently recommends that the Government make public all technological information about atomic reactors, and that it lift the veil that now swathes hydrogen power in deepest secrecy.

Here it runs counter to the position of the Atomic Energy Commission as recently stated by its Chairman, Adm. Lewis L. Strauss. He argued that adequate atomic information has been released and he rejected demands that fusion-for-power developments be fully disclosed.

It is the attitude of Admiral Strauss that such matters must remain secret, aloof from the scrutiny of potential enemies.

Yet Senator CLINTON ANDERSON, chairman of the Joint Congressional Atomic Energy Committee, has publicly stated that he knows of "no military reason" for secrecy in the Government's program to harness fusion energy. He has urged that colleges and industry be permitted to enter the field.

We stand with him and the study committee in this respect. We fear that American science and American industry and American prestige—and even American defense—are likely to suffer more mischief from a policy of overly tight security than are the potential enemies whose mystification is being sought.

[From the Philadelphia Bulletin of February 3, 1956]

ATOMIC AGE BLUEPRINT

The Atomic Energy Commission is reputed to have rubber stamps covering every degree of secrecy, but no one has ever alleged that it had one for required reading.

If it hasn't got one, it should hasten to make one and stamp it on the document which has just been released by the citizens' panel named last March by the Joint Senate-House Committee on Atomic Energy.

The citizens' panel undertook a task as urgent, and as difficult, as the task that would have faced a royal commission in 1769, if one had been assigned to study and predict all the changes that would be wrought in the world by James Watt's patent for an improved steam engine. It has done a remarkably fine job.

The report is especially useful in separating wishes and dreams from the concrete possibilities of the atomic age. It is equally useful in pointing out that the United States, thus far, is deficient in developing the possibilities already visible.

It finds great opportunities in power, agriculture, medicine and health, and atomic-powered locomotives and ships.

If private enterprise is slow to assume a substantial share of the burden, it is argued, the Federal Government will be under obligation to carry out the necessary development. The world will not wait.

The point is well taken. If private enterprise lags, the atomic age may, by default, become a socialized atomic age. The report draws from this another conclusion: That the Atomic Energy Commission should, while safeguarding defense, relax its secrecy rules to permit the fullest possible cooperation with outside scientists in private fields.

REA Chief Used Blackball Threat To Halt Criticism

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Nashville Tennessean of January 29, 1956. The article, by Nat Caldwell, charges that the Rural Electrification Administrator, Mr. Ancher Nelsen, under pressure at the St. Louis convention of REA cooperatives to prevent passage of critical resolutions. The article indicates that directors of one South Dakota cooperative were told to make their manager put his slingshot away or the REA Administrator would not help them get Bureau of Reclamation power.

My attention has been directed to this alleged threat because I am chairman of the Interior and Insular Affairs Committee which has jurisdiction over legislative matters dealing with the Bureau. Inasmuch as the Rural Electrification Administration is in the Department of Agriculture, and is the more direct concern of other committees, I am requesting consent to place the article by Mr. Caldwell in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REA CHIEF USED BLACKBALL THREAT TO HALT CRITICISM—SAID HE'D KILL CHANCES FOR MORE POWER UNLESS CO-OP HEAD SILENCED

(By Nat Caldwell)

ST. LOUIS.—Ancher Nelsen, Republican REA Administrator, threatened the power supply of rural electric cooperatives here last week in an attempt to block criticism of Administration power policies.

Individual leaders of rural power cooperatives said that Nelsen applied pressure in person in an effort to keep critical resolutions off their national convention floor.

His efforts, they insisted, were largely unsuccessful.

He was credited with blocking only a single major resolution. This one was severely critical of Nelsen for allegedly forcing the Colorado-Ute Cooperative into an expensive partnership agreement with private power companies.

Nelsen could not be reached for comment on these charges yesterday. His office staff in Washington said he was in Minnesota for the weekend and his office would try to reach him but doubted he would be prepared to make a statement until he had read charges by the REA board members.

TO SILENCE MANAGER

A South Dakota cooperative president said that Nelsen appeared before his organization's board and warned them to silence its manager, long a critic of Nelsen's REA policies.

"Make Virgil Hanlon keep his slingshot in his pocket, if you want any help from me," the president, Alfred J. Pew, Madison, S. Dak., quoted Nelsen.

Hanlon, manager of the East River Electric Cooperative, has been active on key committees of the National Rural Electrification Cooperative Association. He was a strong supporter of the Colorado-Ute resolution.

It died in the convention's generation and transmission committee, after Nelsen came before the committee and lectured its members.

Arthur Jones, secretary of the East River Cooperative, said that Nelsen warned their board that if Hanlon took his usual active role in the convention's affairs they might expect no help from REA.

The co-op now is applying to the Bureau of Reclamation for an additional power supply from Fort Randall Dam. "Nelsen said that we had no chance with the Bureau if he refused to help us and he would so refuse, if Hanlan was active," Pew said.

Joe Finnell, North Dakota co-op leader, and W. O. Coleman, Georgia cooperative president, said Nelson's uninvited appearance before the resolution's committee was such as to imply doubt of future loan approvals for cooperatives of committee members who refused to heed him.

"He talked nice, but he saw that we got the idea," said Finnell, who is a board member of Shynne Valley Electric Cooperative, Finley, N. Dak.

Coleman, a member of the resolutions committee for 8 years and its secretary, said Nelsen's appearance before the resolutions committee was unprecedented for an REA administrator.

"He simply told us that if there was any resolution there critical of his department in any way, he would like to discuss it with us and iron out the difficulties so the resolution would not have to go to the floor," said Coleman. He is president of Excelsior Cooperative, Metter, Ga.

"No REA administrator ever before made such a suggestion," said Coleman. "He knew that some of our committee members had loan applications before him and he wanted to argue with us about each issue that might come up. We didn't give him the chance. Nobody before had ever asked such a chance."

Paul Tidwell, Centerville, Tenn., manager of Meriwether Lewis Cooperative and Tennessee Valley representative on the NRECA board of directors for 6 years said he was surprised that Nelsen went that far.

"I have been on the national board and on many committees for years, and no REA Administrator has ever before tried to push himself on us."

A Colorado cooperative board member who served on the generation and transmission committee, which killed the Colorado-Ute resolution, said that Nelsen came into our committee "mad to start with and then he blew up."

"Seven of our ten members folded when he got mad and voted to drop the resolution," McMillan said. "I couldn't say whether you would call it pressure or not. But he sure got mad and stormed around."

McMillan said that he would not have given up his stand for the critical resolution if members of the Colorado-Ute co-op had been present at the convention.

"I would have taken it to the floor, regardless of what Nelsen said," he added. "But I didn't have all the facts I needed. Nelsen threatened to personally fight the resolution on the floor if we brought the matter up. And I needed to be armed with more facts to defeat him."

Clyde Ellis, general manager of the NRECA, said following the convention that never before in the organization's history had "such pressures" been applied.

The resolutions committee submitted and the convention passed one resolution condemning "pressures" on members in an effort to influence State and National organization policy statements. It did not name Nelsen or REA by name.

"It is quite obvious what the resolution meant and what its sponsors intended," Ellis said.

"They were talking about the Rural Electrification Administration as presently constituted, and in particular, its Administrator, Ancher Nelsen."

The Vanishing Family Farm

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. SPARKMAN. Mr. President, one of the problems confronting our country today is the disappearance of the family-sized farm. Recently Mr. Eric Severeid made a broadcast over the CBS radio system, and the text of the broadcast was published in the February 9 issue of the Reporter magazine. I ask unanimous consent that the text of the broadcast be printed in the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THE VANISHING FAMILY FARM
(By Eric Sevareid)

The showdown on farm policy seems to be developing faster than expected. A strong congressional push for restoring high, rigid supports is under way, administration conferences are going on in an atmosphere of crisis, and Secretary Benson is reported to be weakening under the intramural pressures of his party's election strategists. Obviously, some sort of financial rescue operation is coming.

Beneath the surface of these policy quarrels over stopgap measures, a profound change is coming over agricultural life in the country. It may be progress, it may just be inevitable, but it does have its tragic aspects, and it is happening with remarkable rapidity. An American way of life as old as our deepest traditions is passing away. The source spring of much of our moral outlook, our conceptions of individualism, our politics, our folklore is drying up. The small family-size farm and farm-family life are vanishing, as fast as the Indian villages vanished a century ago. And America is never going to be quite the same.

Almost everywhere one sees this unstoppable tide of change. Three family farms adjoin the small weekend property this reporter maintains in the foothills of the Virginia Blue Ridge. One, of some 300 acres, has just been inherited by an ex-GI farmer with a large family. He will try to sell, and then rent a much larger farm in order to make ends meet. The next farm, about 100 acres, is still run by the 75-year-old man who has lived there all his life. He still works dawn to dark, owns nothing approaching a luxury; sons in the city support him.

The third farm, about 130 acres, is also operated by an intensely hard-working dirt farmer and his efficient wife; they have no phone, no car, and all expenses are pared to a spartan minimum. His gross cash income last year was $400.

Generations of children grew up on these three farms, but the end has come. No small farmers will buy these places when their owners die out, for no profit is possible. They will all end up, eventually, as part of great properties owned by corporations or by city businessmen who can make farming pay on a very large scale or who will run them for tax-deduction purposes.

Now this is not the best farming land in the country, but the same thing is happening in the best soil regions. You get an idea from a year-long study just published by the Farmers Union Grain Terminal Association, in St. Paul. They studied 4,300 family-run farms in good farming country—Wisconsin, Minnesota, the Dakotas, and Montana.

Here are some of their findings: Net income before taxes in 1954 was $2,500—that means $50 a week. To net this much required, from the family, about 5,000 working hours in the year, more than twice the standard for most city workers. If you figured a 5-percent return on investment, then it would come to $450 for the whole year, earned by the labor alone. While home construction booms around every great city, very few new farm homes have been built in 35 years.

In these 5 farm States, in a 5-year period, 38,000 farm homes have disappeared. That means 1 family in 13 gave up the life they had tried to live. This rate of failure seems to be on the increase.

In that region, as in back-country Virginia, the story is the same: The independent farmer and his family are leaving the land; the home is vanishing and the business office is taking over.

Iowans on Farm Show by Murrow

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. MURRAY. Mr. President, a great deal of interest was aroused by Edward R. Murrow's See It Now program, on January 26, dealing with the farm problem. Although Secretary of Agriculture Benson had 5 minutes at the end of the show to answer statements which were made by the farm people who appeared, the next day he demanded equal time to reply to the farmers' statements.

Mr. Lauren Soth, editor of the editorial pages of the Des Moines Register, published by the Cowles brothers, who generally support President Eisenhower, has written a review of the Murrow show which appeared on the front page of that newspaper. In his article, Mr. Soth advises Secretary Benson that he might be better off to leave well enough alone, rather than trying to answer Murrow. Soth declares that "It was a good show. It also was a good description of the farm situation. But it was especially good in reflecting the attitudes of farmers—their uncertainties and the confidence as well."

I believe this judgment of an eminent midwestern editor, whose newspaper is sympathetic to the present administration, is a significant contribution to discussion of the farm problem, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Des Moines (Iowa) Register of January 27, 1956]

IOWANS ON FARM SHOW BY MURROW
(By Lauren Soth)

Edward R. Murrow described the American farm problem as a "crisis of abundance" in his See it Now television show Thursday evening.

It was a good show. It also was a good description of the farm situation. But it was especially good in reflecting the attitudes of farmers—their fears and uncertainties and their confidence as well.

The program depended heavily upon Iowa farmers, and much of the narration was by Iowans or former Iowans.

The show was somewhat overdramatized. The showman's approach to the reporting of a complex social problem leads to some errors. Murrow overplayed the distress farm sale theme, and made it appear to be a dominant element of the farm situation today.

CORNING AREA

Murrow opened the program with a sequence of shots taken in southern Iowa, around Corning. This beginning was unfortunate, since it gave a general impression of distress and hardship which, while true enough for some areas, does not reflect the general situation in the country as a whole, or even in Iowa.

But anyone who watched the entire hour-long show would have gained a fairly well rounded picture of the farm problems of today.

The first scenes showed the closing-out sale of Dale E. Peterson, a young Korean war veteran who started farming in 1946. He and his father told of the effects of drought combined with low hog prices which moved the younger Peterson to sell out. He and his family are moving to California.

YOUNG FARMERS

This story reflects both the short crops in southwestern Iowa in the last few years and the sharp impact of low prices on young farmers everywhere.

It is these beginning farmers who have left the price-cost squeeze most severely. They started farming when prices were high, but they had only a few years of good times before drooping livestock prices caught them. They have no reserve of cash and equipment from wartime.

So the Peterson story was a true snapshot of a typical but limited farm problem.

MISLEADING IN PART

But the narration accompanying these scenes gave the somewhat misleading impression that large numbers of Iowa farmers are being forced out of business. Murrow said that 600,000 United States farmers had given up in the last 4 years. That is literally true.

But most of them have gone to higher-income jobs in cities. Any implication that this is tragedy in all cases, or that it is an unsound economic development, is false.

As Secretary of Agriculture Ezra Benson pointed out in a short talk at the end of the program, this movement of people out of farming in recent years has not meant that family farms are disappearing.

WANTS TO ANSWER

Secretary Benson said he wanted to dispel the impression conveyed by the southwestern Iowa auction that thousands of farm families were being driven off farms. He said fewer farmers had left farms in the last 3 years than in the preceding 3.

Benson expressed concern lest the program give the public the idea that the small American farmer is on his way out. Any such contention is "demagoguery at its worst," he said.

Benson asked CBS for equal time to answer the Murrow program. He said the farm sale scenes distorted the farm picture. He also may be annoyed by the unfavorable comments some of the farmers and Dan Turner made about him.

In total effect, the show seemed fair to Benson and quite sympathetic with his efforts to meet a complicated series of farm problems. He might be better off to leave well enough alone, rather than trying to answer Murrow.

REAL FARMERS HEARD

See It Now described the towering surpluses of wheat and cotton as only the camera can do it. Liberty ships loaded with wheat, and not going anywhere, were shown in harbors on the east and west coasts.

But the real merit of the program was not in its attempt to put facts before the public so much as the interviews with people.

The discussion of agricultural policy between three farmers leaning over a barnyard gate in southwestern Iowa was a priceless documentary of how farmers think and feel and differ in the present economic climate.

If the program included nothing else, this would go far to acquaint city people with the attitudes of farm people.

EXPLAINS PARITY

Dan Turner, former Governor of Iowa, provided an added bit of color. Turner told a story of a young farmer who asked him what parity meant, saying he was ashamed he didn't understand it.

"I told him he shouldn't be ashamed," said Turner. "The Secretary of Agriculture doesn't understand it, either."

Turner then defined parity as equality, justice or "being on a level with the people you buy from." He said neither political party can take pride in what it has done for the farmer.

WHEAT COUNTRY

After showing the hardship and the dissatisfaction among farmers in southwestern Iowa, See It Now switched to one of the farm areas which has been most prosperous in recent years—the great wheat growing section of the State of Washington, the Palouse country.

Here was shown a farmer who said he did not own a Cadillac, but only "as a matter of taste." This big operator had received a loan of $160,000 on his wheat last year. A banker in the same region said farmers had been "practically on a honeymoon" with high price supports and good crops.

But in the same section of the State "small" farmers, including one who farms 1,200 acres, were shown complaining about low prices and high costs of production.

FORMER ISC MEN

In Wisconsin, Murrow picked up interviews with two former Iowans—Ed Syndergaard and Nick Fabricius, both of the Iowa State College staff. Syndergaard is now a dairy farmer, and Fabricius is manager of a dairy plant.

Tom Powell, of the Soil Conservation Service, was interviewed in the Corning sequence of shots. He advocated a food-stamp plan as a means of increasing consumption and raising prices of farm products.

Benson happened to be in Johnstown, Pa., where the Murrow program of filmed sequences originated, and was asked by Murrow to view the program and comment at the end.

The TV time ran out before Benson had a chance to make a formal request for time to answer Murrow, but he said later he would make such a request today.

In New York, N. Y., CBS would not comment on the program or Benson's request.

Southern Culture and Interposition

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Southern Culture Has Not Crumbled," published in the Augusta (Ga.) Chronicle Herald of February 5, 1956.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SOUTHERN CULTURE HAS NOT CRUMBLED

In discussing segregation and the interposition action of the South to avoid compliance with the Supreme Court's unconstitutional decision on integration of the races, the Charlotte Observer coined a phrase that sticks in the mind like a sandspur in a barefoot.

The Observer, owned by northerners, said that the South is grasping at a straw in seeking to interpose the rights of States between the court's decision and compliance with its unacceptable edict.

"The South," the Observer declares in an editorial, "can afford to resurrect its memories, but it can't afford to rely on a wish and a myth to restore a crumbled culture."

It is those two words, crumbled culture, that prick the mind with irritating sharpness.

The truth is that the culture of the South has not crumbled. That is what seems to annoy those who apparently would be glad to witness the South's complete disintegration.

The days of courtly leisure have passed in the South, to be sure. Plantation life is not what it used to be. The debris left by the War Between the States has been cleared away and the scorched earth has been restored to its productive uses. These things are self-evident. But they were only manifestations of exterior adaptation to a changing pattern of life and proof of the South's indestructibility, even by a disaster as grave and as devastating as the war of the sixties.

The culture of the South, however, is something apart from surface manifestations of the cavalier's past approach to easy living. It goes even deeper than the poverty-ridden courage of those who carried out the task of rebuilding the South after it had been destroyed by war and the oppressions of the reconstruction era.

The culture of the South has its roots in the soul of a people whose moral and political concepts have drawn their strength from a never-to-be-destroyed faith in freedom itself. This devotion to liberty and the conviction that compacts entered into either by individuals or political groups, such as the States and the Central Government, must be observed by men of honor, is the force that has bound together the diverse elements of southern life and character.

Webster defined the word "culture" to mean—among other things—the complex of distinctive attainments, belief, traditions, etc., that constitute the background of a racial, religious, or social group.

But this "complex" to which Webster refers has to be held together by some strong, ineradicable force before it attains permanence as a culture. This all-powerful but sometimes almost invisible force shapes the permanent pattern of a culture and prevents its diverse elements from shifting at every turn of events, like the bright bits of glass in a kaleidoscopic color image. With the South, the pattern of its culture has been fixed in the image of liberty, which is safeguarded by the rights that were reserved to the various States specifically at the time the compact of union was ratified.

The Supreme Court, by an unwarranted assumption of authority on the part of nine ordinary men, cannot destroy that pattern overnight without endangering not only the established foundations of southern life, but also the tranquility and guaranteed rights of the people and the States in every section of the Nation.

The manner in which the South has reacted to the Supreme Court's unconstitutional action should prove most clearly to the Charlotte Observer—and to everyone else— that the culture of the South has not crumbled. On the contrary, the adamant

quality of that culture has been demonstrated in a manner that should convey a warning to all who believe that they can reshape the pattern of freedom to the image of totalitarianism.

Thirty-eighth Anniversary of the Independence of Ukraine

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. FREAR. Mr. President, on January 21 I had the pleasure of attending a commemorative dinner on the occasion of the 38th anniversary observance of the independence of Ukraine.

At that time Dr. Lev E. Dobriansky, professor at Georgetown University, and chairman of the Ukrainian Congress Committee of America, delivered a brief but significant statement in behalf of the millions of freedom-loving people who have been brought under the yoke of international communism.

I ask unanimous consent that this statement be included in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FROM UNITY IN CAPTIVITY TO UNITY FOR LIBERATION AND FREEDOM

(Statement by Dr. Lev E. Dorbriansky, professor at Georgetown University and chairman of the Ukrainian Congress Committee of America, at commemorative dinner on 38th anniversary of the independence of Ukraine, January 21, 1956, Mayflower Hotel, Washington, D. C.)

Reverend clergy, honorable and distinguished guests, friends in the cause of indivisible freedom, my words need be brief. We celebrate this commemoration of the 38th anniversary of the independence of Ukraine in the cause of indivisible freedom. Our hearts, our minds, our mutual efforts are oriented to the future, not the past. History forcefully teaches us that it cannot be otherwise. With exemplary heroism and in glory, the sons and daughters of Ukraine—of all the independent non-Russian nations which fell before the first wave of Red colonialism and imperialism following World War I—left us a legacy of principle, courage and vision to wage today the cause of indivisible freedom in the now global struggle against Russian Communist colonialism and imperialism.

In this critical chapter of history on freedom's fight against Communist totalitarianism we would scarcely pay adequate tribute to the earliest victims of Red colonialism and imperialism unless we constantly bear in heart and mind all of the victims of this reactionary force. As Americans, dedicated by our own tradition to the indivisibility of freedom, we could possess none but this whole outlook—an outlook that alone meets the challenge of the unitary, unfolding reality of Red colonialism and imperialism, an outlook that alone occupies a fitting place in the consciences of morally and politically free men and women everywhere. As Americans, we would be most undeserving of the loyal support of the captive peoples and nations unless we continually and persistently express our loyal support of them in the cause of liberation and freedom.

Thus, on this solemn occasion, our hearts and minds are also with the other non-Russian victims of the first wave of Red colonialism and imperialism—with the nations and peoples of Byelorussia, Georgia, Armenia, Azerbaijan, Turkestan, North Caucasia, Idel-Ural and Mongolia. Our hearts and minds are firmly with the non-Russian victims of the second wave of Red colonialism and imperialism in the forties—with the nations and peoples of Lithuania, Latvia, Estonia, Poland, Hungary, Bulgaria, Rumania, Slovakia, Czechia, East Germany, Manchuria and China. In mind and heart we stand with the victims of the third tide of imperialist Moscow aggression—with the nations and peoples of North Korea, North Vietnam, and Tibet. We bear also in heart and mind the unvested and enslaved masses of the Russian people who for centuries have had to endure the hardships imposed upon them by one autocratic form or another of a traditional imperialist and colonial totalitarianism.

This is the significance of this occasion. We celebrate the anniversary of Ukrainian independence for the independence, freedom and sovereignty of all captive nations, including, in a real sense, the Russian nation. We celebrate it in full tune with the latest pronouncements on the captive peoples by our President and Secretary of State. We celebrate it with the prayer of an earlier American revolutionary for freedom, Benjamin Franklin; "God grant that not only the love of liberty, but a thorough knowledge of the rights of man pervade all the nations of the earth, so that a philosopher may set foot anywhere on its surface, and say, "This is my country."

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. ROGERS of Texas. Mr. Speaker, the fourth in a series of articles on mental illness printed in the Amarillo Globe-Times deals with what goes on behind the scenes in a State hospital. The facts brought out in this article are pertinent to the discussion of care for the mentally ill and I recommend the article to those concerned with this nationwide problem:

[From the Amarillo (Tex.) Globe-Times of January 9, 1956]

THE MENTALLY ILL CAN BE CURED—BEHIND THE SCENES IN A STATE HOSPITAL

(By Louise Evans and Mary Tom Rasco)

Texas alone of all of the States has a law for the mentally ill straight out of the Middle Ages.

To secure treatment for more than 90 days in a Texas State hospital, you must have a jury trial committing you to the State's care.

The Texas Legislature has passed one merciful law to evade this constitutional command.

Senate bill 218, passed as an emergency measure last spring, allows the county judges to send the mentally ill directly to the hospitals for the 90-day observation and treatment period. The application for admission must be signed by two doctors in the home community.

But if the treatment cannot be completed in 90 days, the patient must submit to the jury trial—an inhumanity that already has pushed many a curable ill person into mental shock as truly devastating as the physical shock that can kill if first aid is delayed.

The voters of the State of Texas must make the decision next November on the compulsory jury trial mandate. (If the patient asks for a jury trial, he can have it.) The legislature has done all that it can do, by passing the emergency legislation and by approving a resolution to submit such a constitutional amendment to the voters.

NOT A JOB FOR JURY

Are citizens "railroaded" into State institutions when there are no jury trials?

The doctors in Topeka laugh at the idea. In fact, as they point out, the average juror is no more competent to diagnose mental illness than he is cancer. A harmless eccentricity can appear as madness; a psychopathic personality can be hidden behind a charming smile and intelligent conversation.

In fact, jury trial helps to "railroad" those who are not mentally ill but suffering from other defects, such as old age and feeblemindedness.

The first step the Kansas State hospitals took toward improvement in the care of the mentally ill was a change in admissions' law: A mentally ill person, or one who thinks he is, can voluntarily enter a hospital on the request of a physician. No mentally ill person is required to have a jury trial, although at the end of 90 days observation he can ask for a court review. A man's right to his day in court is not abrogated.

The patient, or his family, agrees to pay a $12 weekly charge for maintenance and treatment. (Under the Texas cost of $2.13 per patient per day, this sum would nearly cover the weekly cost.) In Kansas, the three hospitals in 1954 showed a per patient daily cost from $3.20 to $4.99, the latter in Topeka State Hospital which is the training and research hospital for personnel and, therefore, has a larger budget. A proportion of the care and treatment is assumed by the State of Kansas, but individuals and families are expected to participate in the cost of care.

FEW COMMITTED NOW

Five years ago in Kansas, 95 percent of all patients who entered the hospitals were committed. Today only 5 percent are committed, and many of those are the criminally insane; 9 percent ask for voluntary commitment on a physician's affidavit; the remaining 86 percent are referred to the hospitals by the judges.

At the end of the 90-day observation and treatment period, if the doctors tell him he needs additional care, the patient can then commit himself voluntarily to the care of the institution. Last year 86 percent of the patients used this method of commitment. The probate judges of the home counties of the remaining 14 percent (excluding those who had been committed as criminally insane, of course) were notified, and court commitment orders were obtained, if the judge and his commissioners felt treatment should go on after advice by the psychiatrists of the hospital.

Naturally, during the treatment period, certain civil rights, such as voting, are held in abeyance. It is likely that there will occur stumbling blocks related to divorce, community property, even handling of bank accounts, while the present legislative program is threshed out. As usual, the legal debate over these details in separate court actions will develop firm legislation for the future. With the new concept of State hospitals as treatment centers and of mental illness as illness, there necessarily must be a new consideration of the civil rights of the hospital population.

FIRST MONTHS VITAL

Admission rates in Kansas hospitals have jumped in the past 5 years. About 82 percent of all admitted go out after only 6

months' treatment, eliminating the custodial care that originally extended for as much as 70 years. These leave room for treating new cases. In other words, Kansans get treatments for their mental illnesses in those first crucial months when rehabilitation and cure is more certain. With the stigma of commitment removed, State hospital physicians see the mentally ill while they can be helped. Hospital staffs are in the business of treating patients, not performing custodial duties, and the very hopefulness of this program attracts the kind of staff workers who in turn can assist with rehabilitation.

Consider the general groups that have been going to the Nation's State hospitals:

The mentally retarded.
The alcoholic.
The senile.
The criminally insane.
The psychopathic personality.
The emotionally disturbed child.
The neurotic.
The psychotic.

Those with physical ailments that reflect in erratic actions and an apparent unsound mind.

And, let's face it, a lot of old folks and even young folks whom no one wants.

Kansas proposed to sort these people into (1) those who could be handled in State hospitals designed primarily for treatment rather than custody, (2) nursing homes, (3) boarding homes, (4) prisons, (5) centers for mentally retarded, (6) alcoholic recovery centers, (7) out-patient clinics, (8) family care, any place the approximate $5,000–$20,000 hospital bed construction cost could be saved. All would receive treatment for mental illness by the State's psychiatric teams.

SOME TYPICAL CASES

Let's look at one session of the Kansas State Hospital staff as it considers admissions. Presided over by Dr. William Simpson, clinical director, the meeting includes the psychiatrists who head the four sections of the hospital as well as social workers and others who know the individual cases. Dr. Simpson, a handsome young man born in Canada, has an appearance of competency and confidence. He began his psychiatric residency at the hospital in 1950. His administrative skill as well as his depth of psychiatric knowledge is apparent at this screening session for those patients who have been referred by physicians or probate judges or from other institutions in the State.

Here are some of the cases and what the staff agreed upon:

Mrs. R. B.: Always active in home and community work; somewhat of a perfectionist; always driving herself. Started having periods of depression. Condition steadily worsened. Had been in private hospital for treatment of mentally ill. Knows she is ill.

Decision: Admitted for observation and treatment.

Mrs. M. T.: Eighty-six-year-old woman of irrascible nature. Believes she has no business in nursing home and that her daughter should be legally forced to keep her.

Decision: Staff reports daughter cannot provide home for her. Case refused. She to stay in nursing home.

Mr. W. B.: Age 21; schizophenic (withdrawal from reality or distortion of reality); obsessional thoughts. Mother has been in mental institution for 20 years.

Decision: Possible hereditary insanity. Needs observation and treatment. Insulin shock treatment indicated.

R. Y.: Age 36; alcoholic; feels Government owes him a living; gives hot checks, veterans' hospital turned down.

Decision: Character disorder rather than insane. Family rather than community problem. Referred back to county.

F. L.: Age 18; poor history since divorce of mother 7 years ago; stealing; planned to kill a girl.

Decision: Probably paranoid, catatonic. Sent to Larned State Hospital where criminally insane are treated.

S. W.: Two years of heavy drinking; anxious.

Decision: Referred to alcoholic recovery Unit in Wichita, operated by State commission on alcoholism.

REALISTIC APPROACH

These cases are indicative of some of the types that come before the admissions' board. Noticeably the merely senile and the nonpsychotic alcoholic who cannot be helped by hospital treatment are diverted to nursing homes and clinics. Alcoholics, who have been responsible citizens for many years and suddenly show psychosomatic symptoms, are admitted immediately * * * such as a farmer who on retirement suddenly began to drink heavily and to act erratically.

Kansans are trying to take realistic action to reduce the long waiting lists that have hitherto plagued their hospitals, just as other States and the Veterans' Administration are being plagued. As hospital population has been permanently reduced, more space is available for treatment. The State law clearly states "that examination of said person (committed for 90-day examination) shall be commenced immediately by the medical and psychiatric physicians of said hospital staff." No person, who comes to the Kansas hospitals either voluntarily or through the probate judge's application, can be held indefinitely without examination.

Insanity is a legal term, not a medical term. The State law provides that this "judicial determination of his—the patients—mental condition" has to fall within that 90-day period.

Humanity—and a sharper eye for the dollar-cost of illness if treatment is delayed—causes the Kansas hospital staffs to study carefully not the mental illness but the individual who is mentally ill.

Interposition by States

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Interposition by States Merits Full Test," published in the Nashville (Tenn.) Banner of February 2, 1956. The Nashville Banner is one of the great daily newspapers of the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTERPOSITION BY STATES MERITS FULL TEST

Since May 17, 1954, with its Supreme Court ruling for public-school desegregation, numerous ideas have been advanced for evasion or nullification of that judicial decree. From the outset, this newspaper urged against injudicious action. We have said repeatedly that it calls for calm appraisal, making for order under law.

We believe, however, that the Virginia resolution for interposition by the States deserves respectful study, and that it demands that examination by the courts that can establish its legality; that submission to the States, if held valid, which can determine the wishes of the people anent the issue contained in the amendment it proposes.

The Banner has always been a devout champion of States rights, and led the fight for their preservation. As an uncompromising believer in the Constitution, we have recognized that there are States rights and Federal rights. Neither can safely encroach upon the other.

It was the belief of illustrious American forebears—men who helped write the Constitution, and men who subsequently were recognized as authorities on that document—that the States possessed a right of interposition when in their judgment the Federal Government in any of its parts encroached upon the prerogatives of a State.

Thomas Jefferson believed that. James Madison believed it. Each participated in resolutions setting it forth.

John C. Calhoun believed it, and wrote:

"The great and leading principle is that the general Government emanated from the people of the several States, forming distinct political communities, and acting in their separate and sovereign capacity, and not from all of the people forming one aggregate political community; that the Constitution of the United States is, in fact, a compact, to which each State is a party, in the character already described; and that the several States, or parties, have a right to judge of its infractions; and in the case of a deliberate, palpable, and dangerous exercise of power not delegated, they have the right, in the last resort, to use the language of the Virginia resolutions, 'to interpose for arresting the progress of the evil, and for maintaining, within their respective limits, the authorities, rights, and liberties appertaining to themselves.' "

Men of stature held that concept of constitutional Government and States rights under it—and until the view is disproven as a premise, authorities with a different view should go slow in calling the interposition idea invalid.

They may quarrel as to the issue evoking such a challenge by the States; disagreeing for example on the merits or demerits of segregation. They may seriously contend that the Constitution is what the Supreme Court from time to time may say it is—and argue accordingly. But they cannot ignore the fact that at the outset the Founding Fathers considered that the States conferred on the Federal Government the powers it possessed, and not vice versa; and that as the creator and antecedent of this compact the State reserved to itself the powers not otherwise expressly delegated.

We would like to see the principle of interposition tested, for several reasons. First, it may be the approach of last resort to blocking encroachment if sometime the Supreme Court should emasculate the line between State and Federal authority. Secondly, the test would slow down the precipitate action whereby eager-beaver elements are pressuring for instant conversion to the integration pattern. The pressure groups pushing for that are in a greater hurry than the court authorized in its declaratory decree.

Actually, important as this test is on the issue evoking it, it is no less important as a general matter. For a number of times in recent years the Supreme Court either overstepped its authority or nearly did.

For example—and still in the matter of States rights—it construed as a judicial prerogative the right of seizing tidelands property and conferring that property on the Federal Government. It did that in the face of numerous rulings to the contrary, and it required finally a law by Congress to estop that encroachment. Suppose no such law had been forthcoming. Would the States have had no right to a method of legal redress of such a grievance?

By testing the principle of interposition, the States are proposing simply to find out if the Federal judiciary can in fact by decree abolish States rights.

Admittedly, and properly, the exercise of the principle is limited to certain grave and extraordinary cases. That is one reason

doubtless that even the proposal of it is relatively a stranger to the present generation. Unless authorities including State authorities now questioning it are acquainted with history they may simply not understand its importance as a principle, or its ancient prominence as a safeguard against the encroachments our Founding Fathers feared.

Supreme Court members are not infallible—so are subject to error. Our constitutional authorities of long ago, knowing that, did not intend to expose a precious government and the principles thereof to the possible caprice of a few. So they bound upon it the inherent right of dissent by the States. Such at least was the theory of Jefferson, Madison, and Calhoun in their discussion of this principle.

How fallible the Court members can be was clearly shown in the steel seizure controversy which Mr. Truman, in his personal political caprice, inflicted just 4 years ago. He claimed inherent powers under the Constitution. He even went so far as to contend that by these inherent powers he could seize the press if in his judgment it was advisable. Finally the case was pushed to the Supreme Court, which ruled (6–3) that he possessed no such inherent powers. They restored the confiscated properties. But, note it, three justices including the then Chief Justice (Fred Vinson) dissented. The late Mr. Vinson deemed it Mr. Truman's privilege, because there was a war on (the Korean affair) and because certain prerogatives attended membership in the United Nations if they did not attend the Constitution of the United States in its express assignment of power.

Somebody has to speak for principle when principle is emasculated, or wrested from its context.

Entirely apart from the desegregation question, we believe that Virginia had the right to make the interposition proposal, and it deserves an adequate test of its legal aspects. If it is not defective legally, it should proceed to establish the wish of the American people through their States concerning the amendment proposed.

The Supreme Court is contending for that change without the amendment—notwithstanding the serious doubt concerning its constitutionality.

Family Life in a Secure America

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Harold E. Stassen, special assistant to the President, before the Women's Forum on National Security at their meeting at the Hotel Statler, in Washington, D. C., on Wednesday, January 18, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. HAROLD E. STASSEN, SPECIAL ASSISTANT TO THE PRESIDENT, BEFORE THE WOMEN'S FORUM ON NATIONAL SECURITY, JANUARY 18, 1956, AT THE HOTEL STATLER, WASHINGTON, D. C.

National Commander Kaminsky, National President Bramnick, national commanders and national presidents of these great patriotic organizations; members and guests of the Women's Forum on National Security: Never in all history has peace been as important to every family in the United States and to the families of every nation of the world as it is today. Never in history have weapons existed with the destructive power in relation to the numbers of people living on the globe as the new modern bombs of today.

Thus, I emphasize that everyone can be prayerfully thankful that 1955, from beginning to end, was a year of peace, and we enter 1956 with no wars being waged anywhere on the globe.

You have set the theme for your 1956 Forum as "Family Life in a Secure America." You have asked that I keynote your session. I respond with a salute to you, a salute to the organizations you represent, and to President Bramnick who has given outstanding leadership in this assembly.

Now, I intend to speak to you very frankly tonight, not only because of my deep conviction of the importance of peace but because of my keen realization that the women in this room tonight can do more to advance the cause of a durable peace than any group of citizens of similar number in this country. (Applause.) And, when I speak of what the women in this room can do in relationship to the citizenry, I, of course, recognize and emphasize as you do that the leadership of the President is of the greatest importance in this cause. The President of our country is the pilot of peace, and I know that you will join with the multitude of others at home and abroad in prayerful thanksgiving that our President now has regained his health and that he today carries on in the White House for peace for America.

Now, I said I was going to speak frankly, but let me immediately say that I will not speak in any partisan sense tonight. I am fully aware that this great audience and the leadership in it from across this Nation represent both of our great political parties, patriots all, and the independence of the Nation. I will speak of these things that affect the future of the family and of peace and of security in our country, but not from any standpoint of participating in any current phase or future situation in relationship to the partisanship that must be a part of the decisions that our people reach.

Yes; I am aware that currently on the public scene some magazine articles are the subject of some disagreement. I am aware of articles that Life has published and Saturday Evening Post has published and that, naturally, in a year such as this, there is a sharpness of comment. I have made my views clear on other occasions and other times, and I will not engage in that discussion tonight. I hope that the press here will not endeavor to interpret what I say in relationship to that current front-page controversy, because I see tonight not headlines; I speak in relationship not to deadlines; I seek, rather, an understanding of the leadership within this room in the weeks and months ahead, an understanding to be attained, in plain speaking, without partisanship, in what might be called a horsesense view of the security of America in the objective of peace.

Somebody said a while ago in the Midwest, "What does horsesense mean?"

The best definition I ever heard was by the wag who said, "Horsesense is that peculiar sense which horses have that prevent them from ever betting on men."

Pick your own definition. What I would like to do is speak plainly.

I do not believe that it is adequately realized that peace must be waged by all of the American people if it is to have its best chance of lasting and of living. Unless there is understanding and action by the citizenry, peace may fail when it need not fail.

Thus, I would outline tonight certain major facets and specific things of concern to the families of the Nation, and I do so from the background not only of my current special studies in my assignment from the President, but also on the basis of the total of my experience and observations in war and in peace.

I say, first of all, that there is no indication from anything I have observed anywhere in the world or from any of the studies we have made, reviewing the whole sweep of wars of history and all the attempts to limit arms and what happened under them—there is no indication that any single magic formula will ever be found in the thermonuclear age that automatically guarantees a permanent peace. No indication of that. But neither is there any indication whatsoever that the discovery of thermonuclear weapons means that war is inevitable. No indication of that. In other words, it will take particular and persistent efforts, day after day, month after month, year after year, to produce prolonged peace. By giving these efforts intelligent leadership, there are grounds for hope and measured optimism that there will not be a third world war.

I would present tonight these 11 interrelated conditions as necessary if our country and the world are to enjoy a long-continuing journey on the path of peace. I do not present the points in order of importance, and I will discuss my special field last.

But let me say the first of these 11 points—that restraint and patience must be practiced by every nation, especially the most powerful. We are a tremendously strong Nation. Today 40 percent of all the world's goods and services are produced, mined, manufactured, and fabricated within the shores of the United States of America—40 percent of the world's goods produced by 7 percent or less of the world's people. In the tremendously strong military position that we have, if there is to be a durable peace gradually unfolding, then it is imperative that we exercise that strength with restraint and with patience.

How easy it is, when you feel the great strength of your nation, to be a bit boastful or a bit impetuous. And if this Nation, under future provocations that are sure to arise, starts to give hasty and impetuous answers, if—and I speak plainly—the great veterans' organizations of our country, naturally, reacting to something that makes their blood boil in events that occur in some place of the world, start to respond in a way and affect our Government in a way that action leads to reaction and to counteraction, therein lies one of the dangers of the inflammation of thermonuclear war.

So, I emphasize that humility, that restraint, that care, that caution in the way in which this great Nation acts in the months and years ahead, having within it the tremendous power which the advance of the scientists in the thermonuclear age and the strength of our economy have created.

Second, and I would emphasize this worldwide, no nation shall attempt to take selfish advantage of the desire of another nation to avoid war. It is important to emphasize this immediately following the first point I made, because, if we show restraint and care, and if others endeavor to take advantage of our desire for peace, to see how far they can push, to see what advantages they can take of America, then, as they push in or try to push out, that will multiply the causes of war. Therefore, it is important, if there is to be a future of peace, that we make clear to all nations that their responsibility is not to attempt to take selfish advantage of our desire to avoid war, if they want peace.

Third, the United States must maintain adequate strength for its own defense and to help deter aggression by any other nation.

Here, too, I speak directly. Speaking of families and family life in a secure America, everyone in this room knows there is a very heavy burden of taxes on every family in our country today, but let me emphasize that it is much more important that there be a shield of adequate defense for that family than that the taxes of that family be reduced. [Applause.] And this is the way these issues tend to come up before a great free nation. It tends to be that you say directly, "Shall there be adequate defense?" There is practically unanimity of response. But the issue does not come up in that form. Usually the issue first comes up in the form, "Would you like your taxes reduced?" And everybody then says, "Yes." The relationship of that to the need of adequate defense over that family and over the Nation is not so clear sometimes until it is too late. You have seen the reports from abroad of similar action, where simply the protest of taxes develops tremendous voting power.

Here is one of the places where the vision and the understanding of the need of peace by the citizenry is the real key to the restraint on such urges, and the emphasis on the need of adequate defense.

Let me give you another example of how this matter of adequate defense is not simply standing up and being counted when the slogan is announced. One of the most serious portents in the future adequate defense of our country is the growing shortage of young scientists and engineers in our country. Why is this, as you look into it? Because in the high schools and preparatory schools of this land there are not today adequate numbers of competent teachers of science and mathematics. Here, at the very root of the kind of intelligent and trained and educated skill needed for the future of the Nation, we are showing a weakness. I am confident it is going to be met if it is recognized by men and women, such as you in this room, throughout the Nation, but it needs action. And there are many reasons for it. But one of the things is that in the great expansion of our economy and industry reaching out to hire more scientists, more physicists, more chemists, more mathematicians, they just hired the teachers away from the high schools of the land. And the teachers' salaries have been so inadequate.

I wish you could get every newspaper in this country to print on its front page, in one of these little boxes, just these two facts: "What is the salary of the teacher of science, chemistry, physics, and mathematics in the local high school?" Then, right below it, "What is the salary of the operator of the motion-picture machine in the local theater?" Just put those two facts on the front page of the newspaper. That does not mean I have anything against the motion-picture machine operators. But when you think of the future of America and of the education of the youth, and if you think of the importance of that education, in those early years, of the qualified youth of the Nation in the sciences that will mean so much in the next generation—chemistry, physics, general science, mathematics—then you begin to bring the situation into perspective so that citizens can act and do something about this serious deficiency.

Yes, adequate defense is not just the response to a slogan, as those in this room know so well, but these are the kind of concrete things on which you, through your great organizations across the length and breadth of this land, can make a tremendous change in just a year of time.

Fourth, all peoples should have and know opportunities to advance their standards of living under conditions of peace, including the peaceful civilian uses of atomic energy.

Regardless of adequate strength, regardless of the wisdom of using this military strength, if you have great masses of people in any area of the world who develop a hopelessness about their future, you will never be able to sustain a long-term peace. So, we do need to see that peoples on whatever continent, of whatever color or religion, feel and see and know opportunities to advance their standards of living by their efforts under these conditions of peace which we are endeavoring to establish and to maintain. In that there is the matter of the future possibilities of the peaceful civilian uses of atomic energy.

You know that the scientists of 72 nations of the world assembled at Geneva to begin the interflow of information of the way in which these marvels of science, that have this great destructive power, can be turned, rather, to the benefit of mankind.

I saw the other day a portable X-ray machine, one of these new mysteries in develpments. .Inside was a little capsule of radioactive thulium, not as large as a good-size vitamin pill, but that little pill in the center of a portable X-ray machine, without plugging into any electric current or anything else—all is contained in itself—can take X-ray pictures for about 1 year without reloading.

I saw a little battery, strontium 90, made out of some waste products, not much bigger than a flashlight battery, with a peculiar kind of energy, not the same as flashlight energy but one of the interesting things was that that battery will live over 20 years without reloading.

What are these things going to mean in ways in which people live in future years?

Those are just examples of this expanding perimeter, but the portent of peaceful use and the way in which the peoples of the world can participate in it will have a lot to do with the foundation for a lasting peace.

Fifth, the economy of the United States must be kept sound and strong, with expanding conditions of living for our own people.

There is no need to emphasize that, but it is needed just to mention it when you are speaking of the foundations of lasting peace.

Sixth, we must be true to our ideals of individual dignity, human liberty, and spiritual values under God.

Yes, when we speak of arms, when we speak of economics, it is important to realize the inseparable relationship to these fundamental principles on which America was founded, which have meant so much in the very way in which we live, and to translate those in terms of our policies toward other peoples. This is one of the principles concerned in the explanation of why we can never agree that peoples behind the Iron Curtain, held against their will, should ever be confirmed in that position by any decision of the United States. Because, if we ever act contrary to these very basic and fundamental values, it will not be the road to peace; that will be the beginning of the moral weakening and the deteriorating, slipping down the road that finally leads to war.

Seventh, the exchange of knowledge and of goods, and the understanding of cultures between the peoples of the world must expand.

We could talk all evening on this alone but, if we are to avoid the immediate dangers of war, if we are to think in longer term approaches to "Shall, in behalf of our children, there be peace?" then we do need to expand the trade, the movement of goods, the knowledge, the exchange of education, and then the understanding of cultures between the peoples of the world.

Yesterday there opened at the National Gallery here in Washington one of the unique and most unusual exhibitions ever held because it brought together the artistic ability of outstanding artists of 16 nations of Asia, along with the skill and ingenuity and craftsmanship of some of the great craftsmen of our country in bringing these designs under the beautiful crystal of Steuben glass. It is an open exhibit. I hope many of you, while you are here, take advantage of the opportunity to visit the National Gallery to see it, because you get that sense of a little more understanding of the culture of Asia and of the relationship of it, in turn, to the culture of America. That is just one example. But how much we need—in every walk of life in this country, in our national galleries, in our museums, in our concerts, in our own traveling—to seek to understand the culture, the education, the interests of other peoples.

This is not a matter of being visionary or of dreaming because, when you look back through the many centuries of history, the undestanding between peoples is one of the sure foundations on which wise statesmanship can build a lasting peace.

Eighth, the United Nations should be supported to an increased degree in its second decade.

I recognize that there are some differences of opinion on this. I would be the first to say that the United States is far from perfect, that it has serious weaknesses, that it has limped at times in this first decade, but if the nations of the world are to find the way to live together without the decisions of war, then something like the United Nations must be kept alive and must grow and develop with experience, maintaining the sovereignty of the individual nations but fitting them together in a cooperative and forum framework, if you please, so that explosions occur in the debate on the floor of the Assembly rather than in bullets or bombs flying across the borders.

Ninth, the spirit of cooperation between countries, of helping others for mutual benefits, should spread.

Perhaps I should say that this way: Nothing will unleash the dogs of war more quickly than a dog-eat-dog attitude between the nations of the world. And I speak, in that respect, not just of the relationship between the major nations but relationships between nations in any area or any circumstance anywhere in the world. Because wars can start out in a tangential situation far removed from major powers but might nevertheless, by reaction, by explosions, spread by action after action until the whole world would be again in flames.

So, this spirit of cooperation, the spirit really reflected in the approach of the Marshall plan, must spread to other nations, and other nations who are able to do so need to help their neighbors or those in less fortunate positions. America cannot carry all of the responsibilities itself that are needed in economic or in military respects. We cannot, we must not do it. We can do a lot, and we can carry it well, with the tremendous productive success of our country, but we can carry it successfully only if all who are able in other nations, including those who were made strong through earlier years of American aid, step forward and do their part in cooperation for mutual benefits between the ntions of the world.

Tenth, peaceful methods of settling disagreements between nations,, such as direct negotiation and mediation, shall take the place of ultimatums, threats of war, and the terrible eventuality of war itself.

We cannot contemplate a world that is just a placid pool of tranquil travelers. There will be disagreements; there will be hot points. We need to develop the way in which those disagreements and difficulties are resolved without the tragedy of war. That means bringing forward the peaceful methods of working out differences between nations. That means expanding direct negotiations, quieting down those who are about to become combatants, bringing up methods of mediation or, at times, arbitra-

tion; bringing forward the alternatives to war in the interest of peace.

Then, eleventh, a secure method, assured by inspection, must be found to end the competitive buildup of greater and greater armaments.

This may well be remote, but all the lessons of history tell us that a long, sustained, competitive buildup of armaments or, in other periods of history, an anxious arms race, carry within them the dangers of war. If we are to level off this danger, we need to seek the way by which openness and inspection will end the competitive buildup.

And I announce to you tonight in this national forum that the United States Government will make a renewed and persistent effort in the coming months of 1956 to reach such a sound agreement for the future limitation of armaments in the interest of a continuing peace.

Now, I said "a sound agreement" because all of our lessons show us that an agreement that is not thoroughly supported by inspection is worse than no agreement at all, because if there is an agreement and it is not thoroughly inspected, doubts and suspicions and charges and countercharges arise, and soon the agreement itself becomes a source of difference and danger of war rather than an aid to peace. So, it needs to be sound. It needs to be the kind in which the inspection system itself can be trusted, and not a matter of the word or treaty between nations.

The United States will endeavor to be responsive to the United Nations resolution which passed the General Assembly by a vote of 56 to 7, with only the Communist nations in dissent. This resolution provides in part, and I quote it:

"The States concerned * * * should as initial steps give priority to early agreement on and implementation of—

"Such confidence-building measures as President Eisenhower's plan for exchanging military blueprints and mutual aerial inspection, and Marshal Bulganin's plan for establishing control posts at strategic centers; and

"All such measures of adequately safeguarded disarmament as are now feasible."

If this first decade of the H-bomb chapter of the history of the world proves to be a 10-year period of world peace—and no one now can say whether or not it will be, but if it proves to be a 10-year period of world peace, then I believe that future historians will say that the President's dramatic and courageous Geneva initiative, in presenting his plans for mutual aerial inspection and exchange of blueprints of military establishments, unlocked the gateway to the path of peace.

I shall never forget that scene in the Hall of Nations at Geneva, when it came time for the President to speak on that Thursday afternoon, July 21, and over on his right were Bulganin and Khrushchev and Zhukov and Molotov and their associates, of the Soviet Union, and, on the left, the representatives of France, Premier Faure, Pinay, the Foreign Minister, and their associates, and, across, Mr. Eden, Mr. Macmillan, and their associates. And the President looked directly across the quadrangle table to Premier Bulganin and to Marshal Zhukov and said he had been searching his heart and mind for the way in which to show that America wanted peace but would move toward it only on a sound foundation. And he emphasized that America will remain strong and ready and secure for as many years as necessary to secure peace, but America also was ready to move on a sound basis to decrease the tension.

Then he proposed the exchange of aerial photography so that we could each see that the other is not stepping toward a great surprise attack and, from this beginning, try to move and lead the nations toward a more durable basis for peace.

There was silence in the room as he spoke. And no one, of any government, could doubt his earnestness and the significance of that moment. The Soviets have been expressing doubts and differences, but the matter is still under study, and this tremendous support in the United Nations is meaningful around the world.

What are the steps that would follow? These months ahead will be tremendously important. No one should underestimate the difficulties and the dangers in the world situation. There should be no false sense of security, but neither should there be hopelessness or cynicism.

A well-informed American people, following a course of calm courage and sustained strength, will improve the chance of traveling on the path of peace. Only on that path can we contemplate with confidence the joy and happiness of "Family Life in a Secure America."

Let us work together, diligently, prayerfully, intelligently, unceasingly, to strengthen that chance, to brighten that hope.

Mr. Dooley Comments on Civil Defense, Teddy Rosenfelt, and Battle iv San Juan

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. ROGERS of Colorado. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include and article by Roscoe Fleming, a capable and well-known writer of the West.

The article is as follows:

MR. DOOLEY COMMENTS ON CIVIL DEFENSE, TEDDY ROSENFELT, AND BATTLE IV SAN JUAN

(By Roscoe Fleming)

"Our civil defense, as they call it, reminds me iv Teddy Rosenfelt before the battle iv San Juan," said Mr. Dooley, looking up from the evening paper.

"And how was that?" asked Mr. Hennessey, who was warming his hands at the pot-bellied stove, preparatory to warming his stomach with a pre-Christmas Tom and Jerry.

"Addressin' his throops," answered the Sage of Archey Road, "Teddy demanded: 'Will yez fight or will yez run?' 'We will!' says the throops with one voice. 'That's me brave bhoys. I knowed ye would' says Teddy, an' leads 'em in that charge up San Juan Hill fr'm which they was only rescued by a company iv Naygro regulars."

"Well?" demanded Mr. Hennessey.

"Well, this civil defense bhoy we got now, he is in perpetual swivet about whether should we stay or should we run.

"First he was all hot f'r concrete shelters under ivery backyard in the counthry. If we'd done what he said then, the cement industry wud have been ahead a couple iv billion bucks and ivery household wud have had somethin' under the backyard good only f'r a septic tank or such. F'r now he's changed his tune.

"The gov'mint set off a hydrogen bomb, an' after a pause iv only a year or so, gits around to tellin' our civil defense director that the hydrogen bomb makes shelters worthless an' that the only thing to do in case the dastardly foe looses wan, is to put the entire population iv the U. S. on the road headed for some'ers else, at least until they meet the people fr'm some'ers else headed for here.

"Hinnessey, ye ever been caught of a Sunday afternoon thryin' to get back into town after a refreshin' day breathin' gas fumes out in the open counthry? They ye got just the barest notion of what this means.

"All the roads is jammed, an' nobody can get forward or back. The kids is cryin' and hungry and cold, an' the parents at their wits' ends.

"The flower iv our troops is running back an' forth along the road like chickens with their heads off, thryin' to get somethin' started.

"The whole machinery iv our civilization, if you kin call it that, is stuck on dead center. Uncle Joe in his wildest dream iv glory couldn't have dreamed up a better scheme for paralyzin' the mighty United States of America.

"Why, Washington is completely ringed around with them Nikes that our thrusty throops say can stop any airy plane or bomb just by lookin' at it, yet our gov'mint says that in case iv war our capital is to be 'forcibly evacuated.'

"This means, believe it or not that nearly a million men, women an' childer is to be drug out of Washington, willye or won't ye; all the patients in the hospitals, all the prisoners in the jails, and dumped some'rs else where they'll be 10 times as hard to take care of.

"Multiply this touchin' scene be 100, and ye got some idea iv what the 'doctrine iv dispersal' means; an' iv what the dastardly foe could start by merely sendin' one bomb this way. T'is an invitation to universal panic! Besides, which is least beseemin' to human dignity—to dig like moles, or run like rabbits?

"Hinnessey, I know not what others may do, but as f'r me, if the hydrogen bomb falls it'll find me right here, decanter in one hand an' the Book in the other, ready to hand out spirituous or spiritual consolation as the occasion requires. This will save everyone throuble in the long run."

(In a spirit of reverence, I venture one or twice a year to do a piece in the manner of Mr. Dooley, the tavernkeeper of Archery Road, and the Nation's principal and beloved adviser on public matters in the early years of the 20th Century. Mr. Dooley was of course the creation of Finley Peter Dunne. Any lapses from th' genius of Mr. Dunne are of course on me own head.—R. F.)

Nobody Called Truman a Traitor—But Eisenhower in 1952 Summed Up the Soft-on-Communism Attack

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by David Lawrence, which appeared in the Washington Evening Star of February 7, 1956:

NOBODY CALLED TRUMAN A TRAITOR—BUT EISENHOWER IN 1952 SUMMED UP THE SOFT-ON-COMMUNISM ATTACK

(By David Lawrence)

Nobody ever called Harry Truman a traitor or disloyal—and the former President ought to know it. What his faulty memory is striv-

ing to recall, rather vaguely, is that his administration was attacked in the 1952 and 1954 campaigns for being soft on communism. That's an issue which, if Mr. Truman wants it so, can readily be revived for public debate, and the facts spread upon the record once more.

For Mr. Truman has never explained why he signed 2 letters—1 on April 30, 1946, and 1 on April 7, 1947—praising the late Harry Dexter White whose connection with a Soviet spy ring had been called to his attention on February 4, 1946, by J. Edgar Hoover, Director of the Federal Bureau of Investigation.

When Attorney General Brownell disclosed the facts about the Harry Dexter White case in November 1953 he never called Mr. Truman disloyal, as the Trumanites were quick to charge in an effort to evoke sympathy for their side. What Mr. Brownell did was to question the judgment and administrative efficiency of the Truman administration in letting Communist stooges slip through their fingers. The most carefully worded statement of the case came not from Vice President NIXON or any other Republican spokesman but from General Eisenhower himself in an address delivered at Milwaukee, Wis., on October 3, 1952. The prepared text, which uses the word "treason" three times, reads in part as follows:

"I have come to Milwaukee tonight to talk with you about communism and freedom. * * *

"These two ideas are as opposed as danger is to safety, as sickness is to health, as weakness to strength, as darkness to light. Great truths can, at times, be startlingly simple. This one is of that kind. It is so simple a truth that it seems almost too obvious, almost stale.

"But let not our memories be too short. Only a few years have passed since many moved among us who argued cunningly against this plain truth. Their speech was persuasive, and their vocabulary clever. Remember? It went like this: 'After all, while we stand for political democracy, they stand for economic democracy. Fundamentally these are but two slightly different roads to the same goal. We both believe in freedom.'

"We must all remember that sophisticated lie. We will never forget it. For it partly poisoned two whole decades of our national life. It insinuated itself into our schools, our public forums, some of our news channels, some of our labor unions, and—most terrifyingly—into our Government itself.

"What did this penetration into Government mean? It meant contamination in some degree of virtually every department, every agency, every bureau, every section of our Government. It meant a Government by men whose very brains were confused by the opiate of this deceit. These men were advisers in a foreign policy that—on one side of the world—weakly bowed before the triumph in China of Communists hailed as agrarian reformers. On the other side of the world this policy condoned the surrender of whole nations to an implacable enemy whose appetite for conquest sharpened with every victory. This penetration meant a domestic policy whose tone was set by men who sneered and scoffed at warnings of the enemy infiltrating our most secret counsels.

"It meant—in its most ugly triumph—treason itself.

"These years have, indeed, been a harrowing time in our history. It has been a time of both honest illusion and dishonest betrayal—both terribly costly. It has been a time that should have taught us, with cold finality, the truth about freedom and communism.

"Most of us, young or old, wise or naive, have learned. An important few have not. They have learned very little—and they admit nothing. They are men about whom there is nothing great except their vanity and their complacency. They are proud prisoners of their own mistakes.

"Who are these men?

"They are those who cheered the blithe dismissal of the Alger Hiss case as a red herring. They are those who applauded 2 weeks ago when an administration servant grandly declared that Communists in our national life were not very important, and that we should not waste time chasing phantoms. They are those who slapped their sides with laughter when the same man dismissed the quest for Communists in our Government as a kind of silly game being played in the Bureau of Wildlife and Fisheries.

"Do you think these fish stories, ghost stories, and animal stories are really very amusing? Such comedy touches do little to relieve the tragic knowledge that we have been for years the gullible victims of Communist espionage experts. These experts in treason have plundered us of secrets involving our highest diplomatic decisions, our atomic research. Tragically, we do not know much more our security may have been jeopardized.

"You can never cure malignant growth just by a hearty bedside manner! I must be blunt, for this is a serious matter. I speak not as a partisan or as a candidate but simply as an American citizen—moved to honest anger by this persistent, gnawing threat of Communist treason in our national life. I know that millions of both parties today are moved to anger and to action.

"Neither these millions nor I have patience any longer with those whose complacency excuses our Government's failures as wholly unavoidable."

Mr. Eisenhower then recalled his own observation of "fifth columns" in Europe. He added that "it is the prerogative of Government to set the strictest test upon loyalty" and that it is a "privilege, not a right" to work for the United States Government. He declared that the Bill of Rights "contains no grant of privilege for a group of people to join together to destroy the Bill of Rights." He said:

"A group—like the Communist conspiracy—dedicated to the ultimate destruction of all civil liberties cannot be allowed to claim civil liberties as its privileged sanctuary from which to carry on subversion of the Government."

It is a great speech and certainly its doctrines should appeal equally today to the rank and file of Democrats as well as Republicans. Reprints should be widely distributed by the Fund for the Republic, since it has sent out literature on the other side of the same controversy.

Where Expected Longevity Is Greatest

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. AVERY. Mr. Speaker, despite the seemingly perpetual shadow of international strife, I am convinced the greatest problems facing our Nation in the future are those in the domestic areas of health, education, and welfare.

My reasons for making this statement are simple. The Nation's fast-growing population presents tremendous problems in the area of social adjustment. Our increasing birth rate is and will continue to be a challenge to educators. Our increasing life expectancy presents an equally enormous challenge in the field of welfare. Public health problems naturally encompass the other issues.

Our country in recent years has made remarkable accomplishment in the fight against disease. The longevity of its citizens has increased as a result. It is not unlikely that new health research projects now in progress will extend the average life expectancy of our populace even farther in years to come.

With this in mind, I wish to call the attention of the Congress to an editorial published December 3, 1955, in the Journal of the American Medical Association. It was of particular interest to me because it shows Kansas high among States where expected longevity is greatest. I consider this editorial a tribute to the talents of the medical profession, the watchful service of public health agencies, and the habits of clean living instilled in the residents at large in my home State. But above all, I consider it fair notice to the Congress that public welfare, the care of the aged and infirm, will become an increasingly important problem to the Nation in the years which lie ahead.

The editorial follows:

WHERE EXPECTED LONGEVITY IS GREATEST

Often the opinion is heard that the healthiest people in the United States live in heavily populated areas where hospitals, physicians, and other health facilities and personnel are plentiful. Recently published data on the expectation of life, particularly at birth, in each of the 48 States for 1949–51 refute this popular notion, especially for white males.[1] The statistical department of the Metropolitan Life Insurance Co. has assisted the National Office of Vital Statistics of the Department of Health, Education, and Welfare in the preparation of life tables for each State. All the tables, including those for nonwhite males and females, will be published soon by the National Office of Vital Statistics.

The 6 States with the highest expectation of life at birth for white males for 1949–51 were: South Dakota, 68.4 years; Nebraska, Minnesota, and Iowa, 68.2 years; Kansas, 68 years; and North Dakota, 67.9 years. The expectation of life at birth for white males in the United States was 66.3 years. In 1939–41 the six leading States for white males were Nebraska, South Dakota, Minnesota, Iowa, North Dakota, and Kansas. Thus, it is obvious that white males of these sparsely settled States still enjoy comparatively low mortality. The only changes apparent in the figures cited above are: (1) South Dakota has replaced Nebraska as the leader, and (2) Kansas and North Dakota have exchanged ranks.

It is not possible to say that longevity will actually be greatest among the white males of these 6 States, because expectation of life is an actuarial computation based upon the mortality rates at all ages in 3 specified calendar years. This computation, strictly speaking, is not a forecast of the mortality that will prevail during the entire lifetimes of the babies born in each of these 6 States in the specified 3 calendar years. These favorable mortality records among white males in these six States must be attributed, in part, to the strong north European strains in the population and favorable selection factors in migration. The number of miles that many people in these States must travel to visit a physician or

[1] State Variations in Longevity, Metropolitan Life Insurance Co., statistical bulletin, October 1955.

become a patient in a hospital might be considered a health hazard by many urban dwellers, but the people in the west north central region of the United States have developed a way of life that makes them well adjusted to these spatial conditions.

Nebraska retained its leadership in life expectation at birth for white females with 74 years as compared with 72 years of the entire United States. Oklahoma, Florida, Iowa, Kansas, and South Dakota follow with 73.8 to 73.6 years. A more general observation is that the State variations in longevity as indicated by expectation of life at birth were less in 1949–51 than they were in 1939–41. The leaders in expectation of life at age 25 were South Dakota, Nebraska, and Iowa, with 46.8 years for white males. The leading States for white females at age 25 were Oklahoma, Nebraska, Florida, Arkansas, Kansas, Iowa, Texas, South Dakota, and Utah, ranging from 51.8 years to 51.1 years. The States in which the people at age 65 had the greatest expectation of life were Arkansas, Florida, and Oklahoma for white males and Florida, Arizona, Arkansas, Oklahoma, and Texas for white females.

The variations in expectation of life in 1949–51 at these 3 selected ages were less marked, of course, among the 9 regions than among the 48 States. The west north central region (Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, and Kansas) had the highest expectation of life for white males at birth (67.8 years) and at age 25 (46.4 years), but the west south central region ranked first at age 65 (13.4 years versus 13.3 years). For white females the west north central region had the highest expectation of life at birth, 73.3 years; at age 25 its 50.9 years ranked it second to the west south central region with 51.2 years; at age 65, however, it was outranked by a small margin by the west south central, mountain, and Pacific regions. In 1939–41, the west north central region ranked first in expectation of life at birth, at age 25, and at age 65 for white males; and first at birth, first at age 25, and tied for second at age 65 for white females. These data for the 9 regions, as well as those for the individual States, should remove all doubt about where the expectation of life is and has been the highest, particularly at birth and at age 25.

Passing the Buck

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include a pertinent editorial from the Carlisle (Pa.) Evening Sentinel from the issue of January 30.

No matter how hard Mr. Luce tries, neither he, Mr. Dulles, Mr. Shepley, whose byline appeared over the article, nor the anonymous Life editor who wrote the headline, can escape the fact that the Secretary of State has accepted responsibility for the quotes directly attributable to him.

The editorial follows:

PASSING THE BUCK

Editor in Chief Henry R. Luce of Life magazine has apologized for the magazine's "unfortunate" brink-of-war headlines on the authorized interview with Secretary Dulles and for the caption on the cover, "Three Times at Brink of War; How Dulles Gambled and Won." Mr. Luce, thereby, in effect, blames some unnamed editor who handled the article or arranged its presentation.

The unnamed headline editor, however, surely did not write into the article that Secretary Dulles and the Eisenhower administration walked to the "verge" of war three times and averted it by "strong action." That was the "news" in the article and that is what the headline is based on.

It seems to us most unfair for the editor in chief to make any subeditor the goat for the effect of the magazine article. The trouble caused by the article was not caused by any headlines but by what Mr. Dulles said.

Resolutions Adopted by the Sangamon County Farm Bureau, Springfield, Ill.

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MACK of Illinois. Mr. Speaker, in my opinion, it is the thought and the hope of all of us that something in the way of constructive and helpful legislation for the farmers will come from this Congress. In this connection, I would like to have printed the following resolutions, which were adopted by the Sangamon County Farm Bureau, Springfield, Ill., favoring enactment of legislation which they believe will help achieve for the agricultural industry and for farm people, a fair share of the national income, as well as aid in stabilizing our entire national economy:

NATIONAL AGRICULTURAL POLICY

We reaffirm our belief that the welfare and prosperity of agriculture is basic for the continued economic health and welfare of all the people in our Nation. We continue to stand for high and efficient production and for good income for both agricultural and urban people. We believe that we as farmers should solve many of our problems ourselves through our own efforts. We also believe that in order for these goals to be obtained and maintained, agriculture will need and must have the assistance through legislation of the Federal Government in a similar way that assistance has been sought and obtained by other industries and by labor groups.

We continue to urge an expanded program in research to the end that new uses and new markets can be found for farm products. We believe that programs of research and marketing should be financed in part by farmers and that in addition substantial Federal and State funds and institutions should be used for such programs. Increased efforts should be made to increase sales of agricultural products abroad, including simplifying of trade procedures between the United States and other countries, and other means which will increase the opportunities of moving larger quantities of farm products into foreign markets. We urge greater use of agricultural products in exchange for critical materials, particularly those necessary in the maintenance of a strong national defense, including such products as can safely be stockpiled in this country.

We reaffirm our stand in favor of a sound price support and storage program based on the 90-percent support of basic crops, as one part of a broad program aimed at helping to maintain opportunity for farmers comparable to other groups, believing that the accomplishment of this aim will also help to strengthen and maintain the economy of our Nation as a whole. We recognize that if supports on basic crops are to be maintained at comparatively high levels, that workable production controls must also be put into effect and given sincere cooperation by farmers and also given effective administration. In this connection we believe that some of the so-called soil-bank proposals have merit. However, we would favor a soil-conserving reserve or allotment of 25 percent of the cropland of every farm as a prerequisite for eligibility for price supports, while the balance of a farm could be put in other crops according to a good balanced cropping program. The required conserving acreage allotments could be lowered or raised at the discretion of the United States Department of Agriculture based on available supplies and anticipated demand, and also an estimated need other than normal consumptive demand. In order to encourage participation, and certainly no program can be effective without a majority of farmers taking part, substantial payments should be made for acreages set aside in conserving crops, and in addition, increased payments should be provided for encouraging the seeding of grasses and legumes on increased acreages to be set aside. However, there should be a provision whereby these additional acreages of grasses and legumes should not be used for any other purpose. Also substantial payments should be made for the application of limestone and phosphate where soil tests indicate they are needed in order to secure stands and proper growth of these crops. An acreage rental plan for crop acreages set aside above the required minimum would also probably be helpful in the present situation. Greater participation could be obtained if the administrative officers and general farmer organizations kept in mind the ultimate good of farmers and were sympathetic and willing to administer such a program.

We strongly urge that the Federal Government does not make any funds available for any reclamation projects of land not now in agricultural production until agricultural production and demand are more nearly in balance.

We also recommend consideration of a special provision in our national agricultural policy which will provide that when any section of the agricultural producing area in the country is declared a disaster area, provisions would be made that the Department of Agriculture would make available to farm producers in that area certificates for obtaining feed grains from Government stock of at least the amount that a farmer had reduced his normal production by placing 25 percent (or more) of his crop land in a conserving allotment. We also believe that adequate and sound farm credit must continue to be available for farmers and we stand for a sound program that will continue to make electric power and adequate communications available to farmers at reasonable cost.

We favor the principals and programs outlined above because we believe they will help achieve for the agricultural industry and for farm people a fair share of the national income, and will also serve as aids in stabilizing our entire national economy.

SCHOOL FINANCING

Adequate school finances continue to be one of the most difficult problems facing normal school districts. Continually rising standards of educational and teaching requirements, greater diversification of courses, more elaborate facilities, high salaries for teaching staffs, administrators, and other personnel, all add to the cost of education. Many people enjoy the benefits of our school systems without making any appreciable contribution to their financial support. Rural people in Sangamon County have for several years given thought to how the nontaxpaying school patrons could be brought

into the school supporting group. In the 1954 and 1955 policy development and policy execution meetings in the county, rural people favored an increase in State sales tax with the provision that the increased tax funds would be set aside specifically for schools to be distributed on the basis of enrollment or attendance records.

Legislation was enacted during the 1955 session of the legislature increasing the sales tax, the increase to be for the benefit of schools and State institutions. Many of our people are unhappy with the new law, believing that most of the funds will be diverted to State institutions. The new act provides that school funds are to be distributed on a special distributive fund basis which will deprive some school districts of their fair share of the additional tax which they have contributed. We believe that the method provided by the new law is unjust and discriminatory, and recommend that the board of directors of the IAA, and in addition, rural school boards generally work for an amendment to that act so that all schools will share on a per-pupil basis.

Many groups are favoring a so-called Federal aid to education without controls. Our experience in the past has been that it eventually becomes impossible to have Federal aid without Federal controls. We are vigorously opposed to Federal aid to education as it has been proposed, as we believe it would eventually lead to a centralized and federally dominated educational system in this country.

We are opposed to Federal aid to education for the further reason that income taxpayers in Illinois will have to contribute $2 for Federal aid to education for every $1 returning as aid to Illinois schools.

RESEARCH

Research has been responsible for much of the progress that has been made by the people of America during the last century. Research has brought the answer to many problems which have confronted all segments of our population. Research in agricultural production has met the challenge of rapidly increasing population by making possible increased yields and increased efficiency of production. However, even though the discovery of new uses for agricultural products has been rapid during the last quarter century, we believe that this field now presents the greatest opportunities for much greater advancement. We urge the allocation of more funds for research work in the fields of new uses for agricultural products and more efficient distribution and marketing of agricultural products, such research to be carried on both on a national level and by the States through the agricultural experiment stations. We also urge the IAA and AFBF to endeavor to enlist increasing attention to research by private industrial companies associated or allied with the agricultural industry.

FEDERAL GASOLINE TAX

We commend the local, State, and National Farm Bureau organizations for their efforts to get the present 2-cent tax on gasoline refunded where such gasoline is not used on the highways. We also commend other individuals and agencies which are working to secure a change in the present law. We urge continued efforts to have the present law changes, and in addition, urge efforts to exempt any future tax on gasoline or diesel fuel not used on the highways.

FEDERAL ROAD PROGRAMS

We believe that the building of roads should remain primarily a State and local function, and are opposed to Federal programs of roadbuilding involving increases in taxes of any kind.

A License To Drive

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to the need for increased appropriations for the United States Tariff Commission.

The attached editorial from the Journal of Commerce under date of January 24, 1956, is an excellent presentation of the need for increased support for an agency that is so vital to our economic welfare.

The editorial follows:

A LICENSE TO DRIVE

Congress has given the United States Tariff Commission so much work and responsibility in recent years that there is a serious question of whether the agency is adequate to its tasks.

The Commission has been given the responsibility (formerly lodged with the Treasury) for making determinations in antidumping cases. Since 1951 it has been charged with the investigation of emergency conditions requiring quotas on agricultural imports. In 1954, it was saddled with the burdensome job of preparing by this year recommendations for simplifying the enormously complex customs classification system of this country. Last year it was also handed the job of investigating any competition from imports that might strike the Office of Defense Mobilization and the White House as threatening an industry essential to national defense.

All this is in addition to the Commission's regular job of determining "peril points" in advance of the conclusion of tariff negotiations, handling escape clause cases, and supplying both Congress and the White House with information on requests, among other things.

By almost any count this is a big responsibility, and since a very large number of the Commission's actions involve public hearings, which are time-consuming, the work load is heavy.

How large an agency bears this responsibility? Would its staff total 500, 1,000 or 1,500? Would its annual budget run closer to $5 million than $2 million, or would it be nearer $10 million?

The Commission normally consists of six commissioners. Its staff last year totaled 194. Its budget, nearly lost in the massive volumes of the Federal Budget, has been running between $1.3 and $1.4 million—less by far than the amount granted the National Science Foundation for the observance of the International Geophysical Year.

Interestingly enough, as the Commission's workload has increased, its staff has been cut. The number of persons on its rolls last year was two-thirds of that in 1945, and proportionately even smaller than in 1939.

This, in itself, is not reprehensible. An agency need not be large to be efficient. It speaks well for the Commission, in fact, that it has been able to do the job it has been doing with so small a staff and appropriation.

But as USTC indicates in its modestly phrased report on last year's activities, there can be too much of a good thing.

"With such a sharply reduced force and the mounting demands upon it, the Commission's staff for many years has had to devote nearly all its time to current projects of the highest priority," the report says. "It (the Commission) has had little opportunity * * * to undertake projects on other subjects that are of great interest to Congress, the Executive, and the public, and that fall within the scope of its functions, as prescribed by law."

It is manifestly unfair to impose so much work and responsibility on the Commission while denying it an adequate staff. It is, of course, unfair to the Tariff Commission. But more importantly, it is unfair to those—and they number in the millions—whose economic well-being is determined in large or small part by the manner in which United States tariff policy is administered.

Those who seek and those who oppose greater protection under the peril point and escape clauses have the right to expect their pleas will be given adequate and unhurried attention. The cost of faulty judgments produced in such cases by an overburdened Tariff Commission would be many times greater than the bookkeeping savings obtained by pruning the staff.

There is an urgent need for the simplification of the customs classification system on which the Commission is now supposed to be devoting much intensive thought and study. Will this be given adequate treatment under existing circumstances?

Finally, when it is considered that the foreign relations of the United States are directly affected by what the Commission does or does not do in specific instances, it is plain that there is a great deal more at stake in appropriating funds for the Tariff Commission than the simple question of whether it isn't cheaper to get along with a staff of 200 than a staff of 300.

These are questions that members of the House Appropriations Committee and other legislators having a direct interest in the subject would do well to raise sharply when considering the independent offices appropriations bill during the coming months.

Congress will do well to consider the matter carefully, because it is Congress that has been steadily loading the Commission with more work and more responsibility. President Eisenhower's budget request for the Tariff Commission (salaries and expenses) for fiscal year 1957 is $1,551,083—which seems quite modest in the circumstances. The question is whether it isn't too modest.

In winding up its 1955 annual report, the Commission observes laconically that it "does not own or operate any motor vehicles." Indeed, it does not seem to have been given much more than a license to drive.

Future Construction of Veterans' Administration Hospitals

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. TEAGUE of Texas. Mr. Speaker, today, the Veterans' Affairs Committee was fortunate in having the Administrator of Veterans' Administration Harvey V. Higley present to the Committee, at our request, a comprehensive long-range plan for replacement and modernization of hospitals in the Veterans' Administration medical system. In the current budget funds are requested for new hospitals at Downey, Ill., Washington, D. C., Oakland, Calif., Jackson, Miss. and Cleveland, Ohio.

Mr. Higley presented rather detailed information on the plans of the Veterans' Administration for replacement and modernization, not only in the fiscal year

1957 but through fiscal year 1962. This program, the committee was told, was formulated after considerable consultation with the Bureau of the Budget and the program as presented to the committee has been reviewed and approved by the President.

I personally view this program very favorably and believe that most Members of Congress will share my view. I commend the Bureau of the Budget and the Veterans' Administration for their work in planning this comprehensive long-range replacement and modernization schedule.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the statement by Administrator of Veterans' Administration, Mr. Harvey V. Higley:

Mr. Chairman and members of the committee, I am pleased to meet with you this morning to discuss our current program and long range plans for VA hospital and domiciliary construction and improvement.

As requested in your letter of February 2, 1956, the following information, as well as that contained in the prepared folder, represents tentative planning by the Veterans' Administration. I wish to make clear that this tentative planning is subject to adjustment as budget programs for specific fiscal years are developed.

Initially 16 hospitals were listed in the long range plan for replacement. Under date of February 7, 1956, I have been advised by the director, Bureau of the Budget, the President has approved 8 of these projects. Two hospitals, Cleveland, Ohio (GM) and Washington, D. C. (GM) had prior Presidential approval as a part of the post World War II expansion program. They will be accomplished as a part of that program.

More retailed analyses have resulted in the scheduling of the four hospitals at Augusta, Ga.; Hines, Illinois; Oteen, North Carolina, and Richmond, Va., for modernization rather than for replacement, since the ratio of temporary buildings to be replaced is less than the area of permanent buildings which can be improved. These will be programed concurrently with the replacement program.

We have a peculiar problem at Coral Gables, Fla. This project is being restudied to determine the most economical solution of producing a safe and functionally satisfactory hospital.

The VA hospital at Martinsburg, W. Va., has not been included in the Replacement or the Modernization Programs because the authorization for its use extended only through the period required to provide new beds in the State of West Virginia and the District of Columbia area.

Eight hospitals are now in the approved program for replacement, either wholly or in part, due to, either obsolesence, temporary construction (cantonment type), or a combination of both. Those to be replaced in part will eliminate cantonment type construction, followed by modernization of existing permanent buildings. These are Downey, Ill., and the second phase of Long Beach, Calif. They will be kept partially in operation during these replacement and modernization programs.

The replacement of Oakland, Calif., proposes to eliminate the potential hazard from future earthquake action, as well as unsatisfactory operating conditions that result in costly maintenance.

At Wood, Wis., it is highly desirable to vacate the domiciliary buildings—one of which dates from 1869, while others were constructed prior to 1890. By the replacement of the existing hospital with new construction it will correct an overcrowded condition as well as replace obsolete facilities. Following this phase, the present hospital buildings can be economically altered so as to provide very satisfactory domiciliary care, thus making it possible to vacate these very old and obsolete buildings .

The four remaining hospitals are of cantonment type World War II construction; rapidly reaching the end of their useful life expectancy. They should, therefore, be replaced. These are Jackson, Miss.; Memphis, Tenn.; Nashville, Tenn., and Temple, Tex. At Temple, Tex., it is proposed to construct a new permanent hospital, but continue the use of the buildings now housing domiciliary activities for the present through an extensive program of modernization.

The material distributed this morning provides details regarding these eight replacements and a tentative time schedule for accomplishment. It will be noted that the construction program is estimated to cost approximately $160 million, exclusive of architect-engineer services. This program tentatively contemplates a design period of approximately 6 years, with completion of the last unit in approximately 8 years. It is emphasized again that this schedule reflects only tentative planning on the part of the Veterans' Administration as to the optimum rate at which the program can be developed and does not imply a commitment on the part of the Bureau of the Budget as to budgetary allowances for the program.

We have revised the modernization category, as reflected on page 11, House Committee Print No. 27, 84th Congress. To this list has been added Augusta, Ga.; Cheyenne, Wyo.; Hines, Ill.; Lake City, Fla; Palo Alto, Calif., and Richmond, Va., with the removal of Downey, Ill.; Long Beach, Calif., and Wood, Wis., which are now being considered in the long-range replacement program. This results in a total of 58 hospitals, as shown on the charts.

On our tentative long-range planning chart we have shown the fiscal years 1955, 1956, and 1957 projects or phases in black, and the projected projects for fiscal years 1958 and 1959 by diagonal cross hatching. Fiscal year 1958 indicates either a continuing phase, or a start of a project; while fiscal year 1959 shows the logical continuation of existing projects with possible starts. For the fiscal years 1960 through 1966, a tentative schedule is indicated. This, no doubt, will be adjusted somewhat as on-site surveys are made. Because of the tentative nature of this planning and lack of on-site surveys, it is not possible to approximate the estimated cost of this program.

In paragraph 4 of your letter of February 2, 1956, you asked for information pertaining to the fiscal year 1957 appropriation request. A breakdown of expenditures for the $47 million under "Hospital and domiciliary facilities" and $4,447,000 under "Major alterations, improvements, and repair" is shown on the sheet "1957 Construction Appropriation Request."

It will be noted that technical-service funds for the design of the Cleveland, Ohio, Jackson, Miss., Oakland, Calif., and Washington, D. C., general medical hospitals are requested in fiscal year 1957. It is planned that these hospitals will be designed during fiscal 1957 and, subject to appropriation of construction funds in fiscal year 1958, will be placed on the market for construction. However, I should state that we are somewhat disturbed about our ability to meet this schedule, since the recent directive I–19 of the Office of Defense Mobilization raises some doubts as to the acceptability of the sites proposed for the Cleveland, Oakland, and Washington, D. C., hospitals. Unless the problem can be resolved expeditiously, the design and construction schedule will be retarded seriously. If the acquisition of new sites becomes necessary, further delay would result, since the 1957 budget request does not provide for additional expenditures for this purpose.

On separate sheets are shown the distribution of these projects by hospital. Under the fiscal year 1957 major rehabilitation and modernization program request, items in excess of $250,000 each are listed.

Under the schedule for major alterations, improvements, and repair program request, the distribution of items, the estimated cost of which is less than $250,000 each, is indicated.

Members of my staff who are with me this morning are available to discuss the details of this program as you may desire.

Tentative scheduling of VA for replacement construction

[In millions]

TECHNICAL SERVICES	*Estimated cost*
Fiscal year 1956: Downey, Ill	$2.9
Fiscal year 1957: Cleveland, Ohio, Jackson, Miss., Oakland, Calif., Washington, D. C	5.066
Fiscal year 1958: Nashville, Tenn., Wood, Wis	3.75
Fiscal year 1959: Long Beach, Calif. (2d phase), Memphis, Tenn	3.5
Fiscal year 1960: Downey, Ill. (2d phase), Temple, Tex	1.7
Fiscal year 1961: Wood, Wis. (2d phase)	.8
Total	17.716
CONSTRUCTION	
Fiscal year 1957: Downey, Ill	$21.2
Fiscal year 1958: Cleveland, Ohio, Jackson, Miss., Oakland, Calif., Washington, D. C	43.559
Fiscal year 1959: Nashville, Tenn., Wood, Wis. (1st phase)	34.75
Fiscal year 1960: Long Beach, Calif. (2d phase), Memphis, Tenn	32.5
Fiscal year 1961: Downey, Ill. (2d phase), Temple, Tex	20.3
Fiscal year 1962: Wood, Wis. (2d phase)	8.0
Total	160.309

VETERANS' ADMINISTRATION: SUMMARY OF CURRENT STATUS OF PLANNING FOR STATIONS LISTED IN LONG-RANGE PLAN FOR REPLACEMENT, PAGE 14 OF HOUSE COMMITTEE PRINT NO. 27, NONBED BETTERMENTS IN VETERANS' ADMINISTRATION HOSPITALS, MARCH 15, 1955

STATION AND DISPOSITION

1. Augusta, Ga.: Transferred to modernization category.
2. Cleveland, Ohio (GM): Included for replacement in 1948 new hospital program.
3. Coral Gables, Fla.: Under study in modernization category.
4. Downey, Ill.: Replacement program.
5. Hines, Ill.: Transferred to modernization category.
6. Jackson Miss.: Replacement program.
7. Long Beach, Calif.: Replacement program.
8. Martinsburg, W. Va.: Not scheduled for replacement or modernization.
9. Memphis (Kennedy), Tenn.: Replacement program.
10. Nashville, Tenn.: Replacement program.
11. Oakland, Calif.: Replacement program.
12. Oteen (Swannonoa), N. C.: Modernization category.
13. Richmond, Va.: Modernization category.
14. Temple, Tex.: Replacement program (domiciliary to be modernized).
15. Washington, D. C.: Included for replacement in 1948 new-hospital program.
16. Wood, Wis.: Replacement program.

Summary

Stations included in replacement program	8
Stations to be replaced in new hospital program	2
Stations transferred from replacement to modernization category	5
Stations deleted from construction program	1
Total	16

Details of tentative long-range replacement schedules

Hospital location	Proposed, fiscal year for technical service	Estimated, fiscal year for plans completion	Proposed, fiscal year for construction funds	Estimated, fiscal year ready for occupancy	Estimated cost including technical service and I. P. E.	Remarks
Augusta, Ga.						Transferred to modernization program.
Cleveland, Ohio [1]	1957	1957	1958	1960	$11,500,000 [2]	Approved in new hospital program. Technical services included in fiscal year 1957.
Coral Gables, Fla.						Subject to further study.
Downey, Ill.	1956 (technical services for phases 1 and 2). 1960 (2d phase)	1957 (1st phase).. 1960 (2d phase)..	1957 (1st phase).. 1961 (2d phase)..	1960 (1st phase).. 1963 (2d phase)..	$24,100,000 (1st phase, including technical services for phases 1 and 2). $10,000,000 (2d phase)..	Technical services funds appropriated in 1956 for replacement and modernization work. 1st phase budgeted in 1957 replacement program provides for replacement of temporary Lawrence-McIntyre beds on Downey site. 2d phase, to be budgeted in a future modernization program, will provide for modernization of existing Downey buildings.
Hines, Ill.						Transferred to modernization category. Survey now being made.
Jackson, Miss.	1957	1957	1958	1960	$13,600,000	Hospital and RO to be replaced on site. Technical services funds programed in fiscal year 1957.
Long Beach, Calif.	1959 (2d phase)	1959 (2d phase)	1960 (2d phase)	1962 (2d phase)	$12,000,000 (2d phase)	1,380 beds to be replaced. First phase to be placed under construction fiscal year 1956.
Martinsburg, W. Va.						To be continued in operation pending construction of new Washington, D. C., hospital.
Memphis, Tenn.	1959	1959	1960	1963	$23,000,000	Construct 1,000-bed hospital. New site to be considered. Crump Boulevard hospital to be phased out when and if TB load permits.
Nashville, Tenn.	1958	1958	1959	1961	$11,500,000	To be located on new site vicinity of Vanderbilt University Consolidate RO clinic only.
Oakland, Calif. [3]	1957	1957	1958	1960	$11,500,000	To be replaced with 500 beds on new site—technical services funds in 1957 budget.
Oteen, N. C. (Swannanoa).						Transferred to modernization program for consolidation at Oteen.
Richmond, Va.						Transferred to modernization program.
Temple, Tex.	1960	1960	1961	1963	$12,000,000	Construct 500-bed hospital. Modernize 350-bed domiciliary.
Washington, D. C. [1]	1957	1957	1958	1960	$11,500,000 [2]	Approved in new hospital program. Technical services included in fiscal year 1957.
Wood, Wis.	1958 (1st phase). 1961 (2d phase)	1958 (1st phase). 1962 (2d phase)..	1959 (1st phase). 1962 (2d phase)..	1962 (1st phase). 1964 (2d phase)..	$26,000,000 (1st phase). $8,800,000 (2d phase)	Construct new 1,250-bed GM hospital with RO clinic; convert existing hospital buildings to domiliary use. Waukesha to be phased out when and if TB load permits.

[1] Site determination pending—subject to dispersal requirements of ODM-I-GEN-DMO-19, Jan. 11, 1956.

[2] Estimated cost does not include possible additional facilities required by location.

Veterans' Administration hospital and domiciliary facilities appropriation, fiscal year 1957 major rehabilitation and modernization program request

Project location	Hospital type and number of constructed beds, June 30, 1955		Total estimated cost (thousand dollars)	Project title [1]
	Number	Type		
(1)	(2)		(3)	(4)
Grand total			[2] $20,552.7	
1. Bedford, Mass.	1,636	NP	2,141.9	Modernization program, phase II (new physical medical rehabilitation building, chapel building, canteen and theater building, and alterations to recreation building No. 10).
2. Bronx, N. Y.	1,482	GM	620.5	Modernization program, phase IV (alterations to buildings Nos. 1 and 21, provide adequate canteen facilities and replace elevators Nos. 4 and 10 in building No. 1.
3. Chillicothe, Ohio	2,116	NP	646.2	New therapeutic exercise clinic building (to augment existing small scattered therapeutic areas which are inadequate in size).
4. Columbia, S. C.	600	GM	510.5	Modernization program, phase II (alterations to buildings Nos. 1, 2, 4, and 5).
5. Danville, Ill.	1,719	NP	532.0	New theater building (to replace unsafe, nonfireproof existing theater building No. 47, which is badly deteriorated).
6. Dayton, Ohio	1,275 2,138	GM DOM	2,789.2	Modernization program, phase II (alterations and addition to GMS building D, Brown Hospital).
7. Fort Howard, Md.	389	GM	430.5	Modernization program, phase I (new warehouse building, utility building, pump and transformer house, and extend central heating to buildings Nos. 18, 20, 22, 23, 30, 43, 57, 59, and 70).
8. Hines, Ill.	3,092	GM	500.0	Replace 2 elevators, unit F, and provide a new electrical distribution system, building No. 1.
9. Kecoughtan, Va.	604 1,621	GM DOM	3,391.3	Modernization program, phase II (new administration wing, building No. 110, and new intermediate hospital building).
10. Kerrville, Tex.	449	TB	290.9	Replace 3 boilers and modernize outside utilities.
11. Lake City, Fla.	381	GM	662.0	Modernization program, phase I (alterations to buildings Nos. 15, 16, 17, 19, 38, and 64, new incinerator building.
12. Mountain Home, Tenn.	605 1,781	GM DOM	938.0	Modernization program, phase I (alterations to buildings Nos. 2, 26, 71, 72, 73, 74, 75, 76, and 78).
13. Murfreesboro, Tenn.	1,307	NP	2,261.4	Modernization program, phase I (new therapeutic exercise clinic and special services building).
14. Oteen, N. C.	1,996	TB	694.4	Modernize patients feeding facilities in 7 buildings, and alterations to provide small dining rooms in buildings Nos. 1, 19, and 20.
15. Portland, Oreg.	415 155	GM TB	1,889.9	Modernization program, phase I (alterations to buildings Nos. 1, 2, 3, 4, 5, 6, 16, and 25, and connecting corridor, general site work and outside utilities).
16. Tomah, Wis.	1,176	NP	1,230.0	New dining hall and kitchen and connecting corridors (to replace existing nonfireproof dining hall and kitchen building).
17. Tuscaloosa, Ala.	964	NP	313.9	Expand and modernize present laundry facilities.
18. Waco, Tex.	2,040	NP	613.7	Do.
19. Wood, Wis.	1,340 1,661	GM DOM	313.9	Modernize electrical distribution system, convert to alternating current, and replace elevators in buildings Nos. 20 and 43.

[1] In addition to specific items listed above, each project covers any necessary adjustments and related work to permit the rehabilitated or modernized facilities to tie in with and function as an integral part of existing plants. Even after all projects in this proposed program are completed, standards of affected hospitals though improved will still in most cases be below those approved for our new hospitals.

[2] Total estimated cost rounded off to $20,552.7.

Veterans' Administration fiscal year 1957 major alterations, improvements, and repairs program request

Project location	Hospital type and number of constructed beds (June 30, 1955)		Total estimated cost (thousands of dollars)	Brief project description [1]
	Number	Type		
(1)	(2)		(3)	(4)
Grand total			[2] $4,447.0	
1. Various stations			300.0	Administrator's discretionary project funds.
2. Various stations			927.0	Correction of fire and safety hazards (phase V of interim patients protection program).
3. Albuquerque, N. Mex	500	GM	131.3	Addition and alterations to building No. 1 to expand present inadequate central sterile supply service.
4. Alexandria, La	913	GM	149.3	Modernization program, phase III (alterations, building No. 1; replace elevator, building No. 2; addition to corridor between buildings No. 2 and 3).
5. Amarillo, Tex	156	GM	38.6	Manager's quarters and single garage.
6. American Lake, Wash	904	NP	241.5	New chapel building.
7. Augusta, Ga	1,632	NP	95.2	Detention screens for buildings Nos. 1, 2, 3, 4, and 5 (to replace existing diamond mesh grilles which are in a deteriorated condition).
8. Bath, N. Y	400 1,478	GM DOM	165.4	Alterations and addition to building No. 14 (to provide garage, guardhouse, and fire station).
9. Boise, Idaho	250	GM	142.2	Underground electrical distribution system.
10. Boston, Mass	941	GM	39.2	Relocate and expand research laboratory (to provide adequate space for medical research).
11. Danville, Ill	1,719	NP	62.1	Air condition operating suite, building No. 58.
12. Fort Harrison, Mont	262	GM	28.3	Elevator, building No. 47 (to eliminate hand carrying of supplies to 2d floor of warehouse, and to permit better utilization of storage space).
13. Hines, Ill	3,092	GM	12.6	Surface drainage and resurface roads.
14. Indianapolis, Ind	486	GM	39.8	Enlarge parking facilities (to alleviate critical shortage of parking space).
15. Iowa City, Iowa	484	GM	14.8	Additional parking facilities (to alleviate critical shortage of parking space).
16. Lexington, Ky	1,216	NP	30.7	Regrading and paving parking areas.
17. Los Angeles, Calif	1,842 1,403 2,370	NP GM DOM	218.0	New incinerator (of suitable size to handle station refuse and eliminate smoke nuisance).
18. Louisville, Ky	494	GM	18.9	Additional parking space (to alleviate critical shortage of parking space).
19. Louisville, Ky. (VARO)		RO	55.5	Air cool 5th floor.
20. Marion, Ind	1,650	NP	133.8	Replace worn elevator, buildings Nos. 16, 20, and 25 (with new elevators capable of safe and efficient handling of traffic).
21. Montrose, N. Y	1,965	NP	100.0	Water connection charge.
22. Northampton, Mass	933	NP	38.6	Detention screens, building No. 4 (to eliminate future injuries to patients from broken glass in suicide attempts; and to reduce extensive maintenance from glass breakage and insect screen damage).
23. Outwood, Ky	316	TB	119.9	Boiler plant improvements (replace and improve existing boilers and auxiliary equipment which is badly deteriorated).
24. Phoenix, Ariz	192	GM	57.4	Addition to building No. 1 (to provide adequate space for receipt and storage of supplies).
25. Providence, R. I	393	GM	36.7	Additional parking area (to alleviate critical shortage of parking space).
26. Reno, Nev	166	GM	19.9	Alterations, isolation ward, building No. 1 (to provide septic technique facilities for entire isolation ward and increase capacity from 5 to 6 beds).
27. Roanoke, Va	2,000	NP	163.8	Addition and alterations to warehouse building No. 15 (to provide adequate storage space for items other than subsistence, and consolidate supply activities located in 5 buildings into 2 buildings).
28. Rutland Heights, Mass	615	TB	210.4	Boiler plant improvements, building No. 22 (replace present wornout boilers with 3 new boilers equipped with automatic controls and modernize boiler plant electric system).
29. San Juan, P. R	200	GM	27.8	Shelter for Government vehicles (to protect vehicles from heavy winds, rains, temperatures, and corrosive effect of salt air).
30. Shreveport, La	449	GM	39.2	Alterations for mycology and TB laboratory; isolate electric circuits to operating room, building No. 1, and install explosion-proof electrical outlets and emergency generator.
31. Somerville, N. J. (VASD)		SD	19.5	Alterations and automatic fire sprinkler system, building No. T-83 (for flammatory storage, etc.).
32. St. Cloud, Minn	1,379	NP	105.8	Electrical changes, building No. 1 (and install explosion-proof electrical outlets and emergency generators sewer connection charge).
33. Syracuse, N. Y	488	GM	153.3	Animal laboratory (new building to provide animal quarters and laboratory facilities for station medical research and training program).
34. Temple, Tex	100 350	GM DOM	32.9	Hydraulic elevator for surgical service (to eliminate the hazard of transporting surgical patients up and down long ramps or stairs).
35. Togus, Maine	851	NP	33.8	Construct 300,000 gallon water tank to supplement present water supply and provide adequate storage to eliminate intermittent danger due to insufficient water pressure for normal hospital use on 6th floor of building or for use in case of fire.
36. Wadsworth, Kans	1,082 1,221	GM DOM	190.0	Modernize inadequate refrigeration systems and facilities and improve inadequate street lighting.
37. West Haven, Conn	872	GM	158.3	Animal laboratory (new building to provide animal quarters and laboratory facilities for station medical research and training program).
38. West Roxbury, Mass	304	GM	49.7	Additions and alterations to garage, building No. 10 (to provide adequate space for housing and servicing station vehicles, i. e., stock and parts room, wash rack, grease rack, etc.).
39. Wilmington, Del	320	GM	22.8	Construct minor addition adjacent to main hospital building to provide adequate and safe storage space for hydrocarbon and oxidizing gases, and trash.

[1] In addition to the specific items listed above, each project covers any necessary adjustments and related work to permit the altered, improved, or repaired facilities to tie in with and function as an integral part of existing plants. Some substitutions of projects may be anticipated as a result of changing conditions during the year. Experience has shown that there will be emergencies and changes in requirements that can neither be forecast nor reasonably estimated in advance. However, before any major alterations, improvements, or repairs (nonbed) project is started, it will be subjected to a thorough screening to establish the priority and the fact that it is necessary. Even after all projects in the proposed program are completed, standards of affected hospitals though improved, will still, in most cases, be below those approved for our new hospitals.

[2] Total estimated cost rounded off to $4,447.0.

The Primacy of Strategic Air Power Has Yet To Be Fully Recognized

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. ENGLE. Mr. Speaker, the Armed Services Committee, under the most able leadership of Mr. VINSON, has performed a splendid task in its report on the proposed naval shipbuilding and conversion program for fiscal year 1957. I would like to commend the committee and express my conviction that its members have been guided by the principle that this country must be provided maximum military security if it is to successfully resist Soviet aggression.

In considering this proposed program, however, it is imperative that we review it not only in terms of the needs of one service but that it be studied in relationship to the overall military requirements of this country. One statement contained in the report of the committee might well be rephrased to read: "The basic consideration in the preparation of a military program is, of course, the maintenance of the security of the United States. This requires a dynamic military program which, naturally, must take into consideration the overall military capabilities of unfriendly powers."

It is unfortunate, but a review of the report on this program does create the impression that here in one neat package is a military panacea that will take care of all of this Nation's security needs. The fact of the matter is, however, that here in this second decade of the atomic

air age and some 5 years after the first Soviet nuclear explosion, the primacy of strategic air power has yet to be fully recognized by many in whom the security of the country is invested.

The disquieting disclosures of Admiral Burke of recent Soviet naval growth and her achievements in the development of new naval weapons is indeed sobering. Yet air power and the Air Force, because it is inherently capable of operating anywhere and at anytime and because it is not restricted by the definitive boundaries of land or sea, flies over those very same weapons that are a threat to our naval supremacy. The very barriers that in times past have hindered and restricted the movement of surface forces are today neutralized because of air power.

In the near future we can expect to be called upon to consider the requirements of the Air Force for the coming fiscal year. In so doing, it is important that we realize that, regardless of what action we take here today on the naval shipbuilding program, the common denominator of our strategic and our military discussions must be the fact that air power is the dominant factor in modern war. Our security and civilization as we know it is entirely dependent upon the state of readiness and degree of modernity of our Air Force.

Reported qualitative and quantitative improvements in the Soviet air force have become distressingly evident. The adequacy of the presently contemplated 137-wing Air Force has now become problematical. Even this planned level of Air Force readiness may not be possible, in view of the handicaps imposed by current limited Air Force operating funds. It faces a similar difficulty in fiscal year 1957. This is all the more serious when we consider that, except in the category of medium-range bombers, the Soviet Union has overtaken us in all categories of warplanes.

Unquestionably, long-range airpower, whether it be strategic or tactical, is the most portentous single fact of modern life. It has given the free world a true and trusted defense. Our strategic Air Force has prevented postwar Europe from falling an easy prey to Communist pressures. It has proven to be the sole factor responsible for forging the system of alliances that have united most of the free nations of the world.

It is a fact that American airpower has pointed at the very core of incipient aggression. Surprise Soviet attack no longer remains inviolate against retaliation.

Whether American nuclear airpower will succeed in remaining an effective tool for the prevention of war depends entirely upon this Congress. Based upon our actions alone, the Soviets can be made to realize that they cannot defeat the United States or if they irrationally decide to attack us there will be little chance of forestalling even more devastating counterblows.

The price we will pay for these measures will not be small but the cost of an atomic holocaust directed against this country would be incalculable.

Americanism Script of Ruth Miller Steese

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. MARTIN of Pennsylvania. Mr. President, Dr. Ruth Miller Steese, past department president of the American Legion Auxiliary, Mifflinburg, Pa., delivered a very important radio address on January 28, 1956. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICANISM SCRIPT OF RUTH MILLER STEESE, PAST DEPARTMENT PRESIDENT, AMERICAN LEGION AUXILIARY, MIFFLINBURG, PA., JANUARY 28, 1956

With the opening of this new year of 1956, newspapers and magazines, radio and television have iterated and reiterated a few potent words of one of our great living Americans. The words are, "if we remain strong."

To historians interested in words and their impact and influence upon the present and the future, based upon the authoritative findings of the past, these words are dynamite, they are consolation, they are heartwarming words of encouragement.

Today, the 28th of January, we stand in the very midst of anniversaries, of names and dates which should be carved permanently in the hearts and minds, in the very lives of every true American.

Benjamin Franklin, the godfather of our country, born in Boston, January 17, 1706.

George Washington, the Father of Our Country, born on the Bridges Creek Plantation, Westmoreland County, Va., February 22, 1732.

Abraham Lincoln, the savior of our country, born in Hardin County, Ky., February 12, 1809.

Due to the fact that for 1 entire year, we shall be observing the 250th anniversary of the birth of Benjamin Franklin, we can be pardoned for speaking of him at greater length than of the other two equally eminent Americans. Franklin has merited many titles, including "the first civilized American" and "the father of all Yankees." One author asserts that Franklin possessed "the most eminent mind that has ever existed in America, a mind that moved with perfect ease to its countless tasks."

Another has spoken thus: "Franklin is the most complete and the most characteristic of Americans. Washington is remote; Jefferson belongs indubitably to the 18th century; John Adams is pure Yankee; Hamilton never accepted his adopted country and never understood it. But Franklin could fit into American life at any point, in any decade, and accept it all cheerfully enough and set about improving it with efficient amiability; he is as contemporary as today's newspaper, as entertaining, as informative, as indispensable, and, in the best sense, as commonplace."

These three Americans, Franklin, Washington, and Lincoln, are noted for the versatility of their accomplishments and their abilities.

Franklin, the eldest, was an editor and publisher, a writer and a printer; he was a soldier, a legislator, and a statesman; he was a scientist, an inventor, and a philosopher.

Washington was not without his diversified interests and capabilities. He presented a magnificent figure on horseback and excelled in all sports. He earned the rank of lieutenant colonel at the age of 22. At the age of 28, he was elected to the house of burgesses, and when the time came to elect deputies to the First Continental Congress, he ranked third among the seven elected from Virginia.

When during the Continental Congress, it became necessary to elect a Commander in Chief to lead the small band of 2,000 Colonial soldiers, Washington was the unanimous choice. As he reviewed the motley array of poorly clad farmers, shopkeepers, backwoodsmen, etc., he spoke these signnficant words, "They are now the troops of the United Provinces of North America; and it is hoped that all distinctions of Colonies will be laid aside; so that one and the same spirit may animate the whole, and the only contest be who shall render, on this great and trying occasion, the most essential service to the great and common cause in which we are all engaged."

Lincoln did not possess the distinguished appearance of the exceptional lineal and educational background of George Washington. His tools represented the crudities of sheer dire poverty, but the product of his mind found no superior at any time or any place. A rail splitter, a nature lover, a mighty reader; a legislator, a debater and a soldier—

"Chosen for large designs, he had the art
Of winning with his humor, and he went
Straight to his mark, which was the human heart.
Wise, too, for what he could not break, he bent."

As we ponder on these great Americans, we realize that their challenge to activity, to leadership and to accomplishment is very similar to ours but expressed in a different terminology. Where we today "sound forth" with the words "if we remain strong," these representatives of two vastly different generations, rallied behind the single word "united."

The colonists under the leadership of such patriots as Washington and Franklin suddenly and unexpectedly became citizens of the various newly created States. They just as speedily became those persons referred to in that newly created Constitution, those to whom these words refer, "We, the people of the United States of America," a new term, the United States of America. They were not merely the citizens of the newly created States but they were the citizens of the very new United States, the United States of America.

Their thoughts were reflected even in their music. "Hail Columbia," written by Joseph Hopkinson, the Pennsylvanian, and first played in 1789 when Washington went to New York to be inaugurated, incorporated these words:

"Firm, united let us be
Rallying round our liberty."

The words of this song were penned not long after Franklin wrote a speech to be delivered at the Constitutional Convention, a speech intended to sway the wavering delegates into signing the brandnew, the infant Constitution, the Constitution of the United States. Consider his well and aptly chosen words:

"On the whole, sir, I cannot help expressing the wish, that every member of the Convention who may still have objections to it, would with me on this occasion doubt a little of his own infallibility, and to make manifest our unanimity, put his name to this instrument."

The words "to make manifest our unanimity" are very logical, a very reasonable, a very practical way to say, let's be united.

In a letter to Horace Greeley in 1862, Lincoln wrote: "My paramount object in this struggle is to save the Union."

Through this brief analysis of some of the highly pertinent doctrines of these American immortals, we have striven to impress upon you the fact that they lived and preached the principle, the creed, the belief in unity and in strength. Every thought and act were directed to make manifest the dogma of unanimity.

Today, if we as Americans remain strong and if we as alert citizens make manifest the doctrine of unanimity, we in these United States of America will travel far in 1956. The task is not easy but it is surmountable. We would not urge anyone to forget or lay aside his personal, his political, and his spiritual tenets. Those if sincere are inherent. But no American is infallible, no American. Franklin, when the very fate of our infant Constitution was at stake, dared to call on all the delegates to the Constitutional Convention to doubt a little of their own infallibility. Can we with sincerity observe the birthdays of these men who gave to us and saved for us, these United States of America and, at the same time not accept their challenge, their challenge to help America, these United States of America, remain strong; their challenge to us to manifest a spirit of genuine and sincere unanimity.

At the recent dedication of a memorial to one of the distinguished four chaplains who went down on the steamship *Dorchester*, February 3, 1943, this thought was expressed as the sentiment that these men would like to convey to us, today, and I quote: "Ours was a unity that transcended all differences. Ours was a unity that was not uniformity. Ours was a unity that strengthened within each of us every worthy individual loyalty of family and of faith. Ours was a unity that, at its highest and its best, is the United States of America. To this unity, in which we died together, we call upon you of all faiths, of all racial strains, and of all economic conditions, to live together, to live together that those who died shall not have died in vain."

To such a type of unity, a unity that transcends all differences, Benjamin Franklin, George Washington, and Abraham Lincoln gave their lives. With faith in them and the doctrines they instilled, and with national unity, national unanimity as our slogan, American in 1956 shall be on the march.

Resolution Favoring Pest Mosquito Research Adopted by Illinois Mosquito Control Association, Urbana, Ill.

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a resolution adopted by the executive committee of the Illinois Mosquito Control Association on January 12, 1956, at Urbana, Ill., favoring the enactment of legislation for pest mosquito research:

"RESEARCH ON PEST MOSQUITOES

"Whereas the Conference of State and Territorial Health Officers meeting at Washington, D. C. on November 8, 1955 and the American Public Health Association meeting at Kansas City, Mo., on November 16, 1955, and the Florida Anti-Mosquito Association meeting at Clearwater, Fla., on December 2, 1955, did each express concern regarding the mosquito problems of the Nation and by passage of resolutions requested that a comprehensive program of research, demonstration, and technical consultation be undertaken by the United States Public Health Service for the purpose of developing better techniques for controlling pest mosquitoes, and on January 9, 1956, a bill known as Senate bill 2870 providing for the establishment of such a comprehensive program was introduced in the Senate of the United States; and

"Whereas such a comprehensive program would importantly benefit the aims and objectives of the Illinois Mosquito Control Association thereby enhancing the physical, mental, and social well-being of the people of Illinois, as well as those people of all States with such problems: Now, therefore, be it

"*Resolved*, That the Illinois Mosquito Control Association in executive session at Urbana, Ill., on this 12th day of January 1956, does hereby support the above national movement and urges the adoption of Senate bill 2870 providing for a comprehensive program of research, demonstration, and technical consultation in controlling all mosquitoes that affect the health, comfort, and welfare of the Nation."

The above resolution was unanimously adopted on January 12, 1956.

J. D. WILLIAMS,
Secretary, Illinois Mosquito Control Association.

Cincinnati Branch, National Association for the Advancement of Colored People

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. HESS. Mr. Speaker, recently the Cincinnati branch, National Association for the Advancement of Colored People, wrote me regarding two legislative matters in which the association is deeply interested. One of these is an amendment to the bill providing for Federal aid to school construction which would deny funds to States which continue to practice segregation. The other measure is one which would give stronger assurances of civil rights.

Upon receipt of my reply, in which I set out my stand on these two matters, the president of the Cincinnati branch of the National Association for the Advancement of Colored People sent me the following letter:

CINCINNATI BRANCH,
NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE,
January 30, 1956.

Hon. WILLIAM E. HESS,
House Office Building,
Washington, D. C.

DEAR MR. HESS: This acknowledges receipt of your letter of January 24, in reply to two letter from me, one requesting your support of a clause in the imminent school-construction bill to deny funds to those States defying the Supreme Court order to desegregate, the other requesting your active support of stronger civil-rights legislation to prevent the recurrence of such atrocities as the Till and other murders in Mississippi.

Permit me to thank you for your clear and unequivocal stand on both very important issues. We are aware of your having once sponsored antilynching legislation and we are grateful that you pledge your wholehearted support of similar legislation soon to be introduced by Representative DIGGS, of Michigan.

Also, we thank you for your forthright statement that you believe that Federal funds should not be granted to States which practice segregation, and that you shall vote in accordance with this belief when the matter comes up in the House.

Sincerely yours,

WEBSTER W. POSEY,
President.

Issues Facing the Nation

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. MURRAY. Mr. President, the coming election raises some monumental issues which must be determined by the voters. Their decision in large measure rests upon the record made by the respective political parties and the men who carry their banners in every contest. That decision depends, as well, upon the statement of the issues, and the public's grasp of the problems encountered and the answers given.

Because the senior Senator from Washington [Mr. MAGNUSON], put so simply and so well many of the issues facing the Nation, I request unanimous consent to place in the Appendix of the RECORD the message he delivered to legislative delegates of the CIO steelworkers, at their January 18 meeting in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am pleased and honored to be here at your invitation to discuss some of our mutual problems. I always feel at home with a group like this, because I have worked with labor throughout my 25 years of public life.

In a way, our problems are similar.

When I entered politics as a State legislator back in 1933, we were in the depths of the depression. We were fighting for great social reforms.

For example, I piloted through the legislature a bill abolishing the poorhouse in my State. I participated in drafting one of the first old-age assistance laws in the Nation. Many of its provisions became a model for the national statute.

We were fighting to save people's homes—we were fighting for FHA—for federally insured bank deposits—for the Wagner Act—for a square deal for the people—for a square deal for the farmer.

We were successful—over the constant opposition of the Republican Party and their financial backers.

Since that time a whole new generation of young people have become eligible to vote—are participating in the political life of the country. They take for granted many of the things we fought and bled for.

The problem of a man in political life is to reach these people—to make them understand that the things they now enjoy did not just happen.

It took leadership—statesmanship—and the willingness to put your political neck on the block. These things did not just happen—they happened because we believed in them and fought for them.

In labor, too, you have had problems. Many of the rank and file simply take for granted the present-day wage scales, working conditions, and the protection written into law.

Because these things are in existence—are enjoyed by the rank and file—they are apathetic. Their attitude is—they will always be there.

You and I know that is not true. It is a continual fight to maintain the gains labor has won—it is a continual fight to make further progress.

For example, in my State this fall, there will be a "right to work initiative" on the ballot. "Right to work" is a misnomer—it is a slogan dreamed up by the Madison Avenue advertising boys. It has public appeal—but you and I know it would set labor back for 30 years.

We will defeat that initiative—but it is going to take work—and you people here must somehow make the rank and file realize what they have at stake.

The same people who have sponsored these right-to-work measures across the country are in large part the people who financed the Republican Party. They have been clever—they have organized the drive around the local front—but behind that front stand the boys with the money bags, who have never been for labor.

I don't like to inject politics into a meeting like this, but I feel you want me to speak to you frankly—and I must say, in all sincerity, we are dealing with a big-business administration.

The executive branch of this Government is riddled with corporate executives—from the Cabinet on down. Now, there is nothing wrong with the corporate executive—but I raise the question whether just one segment of our economic community should have such a dominant voice in policies and programs that affect all the people.

Suppose we Democrats win the election in 1956—and I am convinced that we will. Then suppose that we proceeded to set up an all-labor Cabinet.

Suppose we make John L. Lewis Secretary of Labor, that we make Dave Beck Secretary of Commerce, that we appoint Walter Reuther—and I have just the job for him—Secretary of Health, Education, and Welfare, and so on down the line.

Can you hear the screams that would go up? People would say we were crazy. Labor itself would not stand for such a program—labor would not let itself be put in that position.

Yet in reverse, that is exactly what this administration has done. They have made it a big-business Cabinet and big-business Government—and those who are not corporate executives are either lame ducks or retired generals.

Our Government is too one-sided and the effects of that are beginning to show up on the economic scene and I think—in the long run—it spells economic trouble.

There are three great economic groups in this country—the farmer, the wage earner, and our corporate or business structure.

For sustained prosperity—for economic stability—these three great segments must move along together. Each must obtain its balanced and equitable share of the Nation's income.

Now what has happened since this administration took over?

The farmers' income has been cut by over $6 billion. Corporate income—business income—has gone up about $6½ billion.

The wage earner is just treading water. His wages have gone up a little, but prices have gone up a little and he is just about where he was in January of 1953—maybe a little worse off because his wages don't buy quite as much.

The farmer is in trouble—and he represents a great reservoir of purchasing power in our Nation. The income—the money—through profit, is piling up at the corporate end of the scale.

We Democrats always operated on the principle that if the wage earners and the farmers have purchasing power, business will do all right.

Farmers' and the wage earners' dollars are spent for a thousand different things and that spending keeps the wheels of the business community turning.

The Republicans and their backers have always operated on the trickle-down theory. I just don't believe it will work—

Unless we can get these three great economic groups moving back on the road together, we are heading for real trouble—in my opinion.

Just a word now about some of these terrible New Deal laws we heard so much about in the 1952 campaign.

I defy anyone in this room to point to a single New Deal law—social security, FHA, unemployment insurance—that this administration has changed.

No; they don't change the law—they don't make a frontal attack. They whittle at these gains by subterfuge and backdoor methods.

The favorite technique is to appoint a man to administer the law who does not believe in it.

You know what they have done to pack the Labor Relations Board—what they have done to the Federal Power Commission—what they have done to the Federal Trade Commission. They picked a man to be Chairman of the Federal Trade Commission who had spent 25 years of his life fighting with the Federal Trade Commission as the legal representative of some of the biggest firms in the country cited for violations.

You do not have to change the law. You can get an administrator who does not believe in it.

I think labor has a terrific stake in the coming election.

The Madison Avenue boys can dream up slick slogans—but slogans are no substitute for performance—and in this administration there is a veritable chasm between what they say and what they do.

No Republican administration—to my knowledge—ever helped the trade union movement. On the contrary—they have subtly sabotaged it. They may play you for votes but they don't believe in what you are trying to do for the average man.

They believe in the specific privilege few—at your expense.

It has been a pleasure to be with you tonight. My final admonition is to be vigilant—be militant—and give your people the facts.

The Meaning of Interposition

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What Does Interposition Mean," written by John Temple Graves, and published in the Birmingham Post-Herald of February 4, 1956. Dr. Graves is one of the great columnists of this country, and his article is very interesting.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MORNING

(By John Temple Graves)

"They might as well try to dip the Atlantic dry with a teaspoon."

What does "interposition" mean?

Today it means "null and void" in Alabama, "illegal encroachment" in Virginia, simple protest in other Southern States.

Strictly and historically, it is the assertion by a State of a sovereignty not surrendered.

John C. Calhoun called it "the negative power—the power of preventing or arresting the action of the government—be it called by whatever term it may—veto, interposition, nullification, check or balance of power—which in fact form the Constitution."

None of the Southern States talking interposition seem to have decided exactly what they mean or to be prepared to implement a meaning. Yet "interposition" means something.

With it are to be understood all the other measures against Supreme Court encroachment on rights of States and Congress, it seems to me—school placement laws, the three-way school plan, the private school one, the not-guilty jury verdict plan, the legal obfuscations, hairsplittings and delay, and the now innumerable citizens' councils.

Interposition is all the ways the South can conceive of saying it will not submit to integration of its public school masses in what it deems plain violation of the Constitution.

It is Mississippi's new Governor, James Plemon Coleman ("the calmest, least racialistic of the five candidates," Time called him) declaring that "those who propose to mix the races in our public schools might as well try to dip the Atlantic dry with a teaspoon."

Interviewed over NBC a few days after the first desegregation decision in 1954, this writer predicted that "the decision has tortured the Constitution, and the South will torture the decision."

That is another definition of interposition.

If there is a constitutional crisis—and there is—it isn't because Alabama has called the decision null and void, and Virginia has called it illegal. There is constitutional crisis because, in calm and sorrow, the South is refusing to mix its school masses.

Interposition was proposed first and most famously, of course, in the Virginia and Kentucky resolutions of 1798 against the Federal sedition law.

Written by Thomas Jefferson for Kentucky and James Madison for Virginia, the resolutions avowed that in the event of a "deliberate, palpable and dangerous" exercise by the Federal Government of powers not granted to it by the Constitution, the States "have the right, and are in duty bound, to interpose for arresting the progress of the evil and for maintaining, within their respective limits, the authorities, rights and liberties appertaining to them. * * *"

After reading the speech entitled "Interposition: The Barrier Against Tyranny" delivered in the House January 25 by Congressman JOHN BELL WILLIAMS, I marvel that so scholarly, thrusting and competent an effort, impressive with legal and historic references, should have been dismissed by a part of the Nation's press as ignorant, emotional "southern oratory."

Or rather, I do not marvel. Mr. WILLIAMS is from the ceaselessly libeled State of Mississippi.

Congressman Jack Brooks, of Texas, and His Subcommittee on Special Government Activities Reflect Credit on Congress by an Able, Dignified, and Effective Use of the Investigative Power

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. ENGLE. Mr. Speaker, the recent resignation of Mr. Mansure as the head of General Services Admiinstration was brought about by the investigations made by the Subcommittee on Government Operations, chairmaned by Congressman JACK B. BROOKS, of Texas. The Washington Post of February 8, 1956, in an editorial pays a very high tribute to Congressman BROOKS in the conduct of that investigation, describing it as "most able, dignified, and effective." The editorial goes on to state that "this kind of supervision of executive agency conduct is one of the most important uses of the congressional investigating power. He and his subcommittee have made a real contribution toward that end." We all know that some investigations have not merited this kind of praise, which makes it all the more important to call it to the attention of our colleagues. I join with the Washington Post in commending Congressman JACK BROOKS, of Texas, and his subcommittee, on their excellent work conducted in the best traditions of the exercise of the congressional investigating power. Members of the Subcommittee on Special Government Activities are JACK BROOKS, chairman, Texas; LESTER HOLTZMAN, New York; JOHN E. MOSS, JR., California; HENRY S. REUSS, Wisconsin; PORTER HARDY, JR., Virginia; R. WALTER RIEHLMAN, New York; J. ARTHUR YOUNGER, California; and OTTO KRUEGER, North Dakota.

The editorial is as follows:

PRIVATE AND PUBLIC INTEREST

Whatever may be said in extenuation of Edmund F. Mansure's official conduct, the fact remains that he was guilty of an indiscretion that ended his usefulness to the administration. By his own admission, he allowed political favoritism to enter into contracts falling under the supervision of the General Services Administration which he headed. "Practical politics," he said in his testimony before the House Government Operations Committee, dictated that a major brokerage contract should not go to a firm that did "not help this administration get into office." Personal friendship with Mr. Mansure, moreover, did not appear to be any handicap in obtaining business in connection with the GSA.

Mr. Mansure's behavior was, to say the least, exceedingly obtuse. Like former Air Force Secretary Talbott and former Federal Buildings Commissioner Strobel and former Interstate Commerce Commissioner Cross, Mr. Mansure seemed to have no real awareness of his obligation to keep his private interests wholly divorced from the public interest. This kind of obtuseness is peculiarly unbecoming in an administration which campaigned for office in part on a pledge to "clean up the mess in Washington." The prompt resignation of these officials was indispensable to maintenance of the standards the President has set.

Representative BROOKS' subcommittee of the House Committee on Government Operations, which uncovered Mr. Mansure's indiscretions, conducted its investigation in a most able, dignified, and effective way. This kind of supervision of executive agency conduct is one of the most important uses of the congressional investigating power. "I hope," said Mr. BROOKS in commenting on Mr. Mansure's resignation, "that this will result in a more efficient and economical administration of GSA." He and his subcommittee have made a real contribution toward that end.

President Eisenhower Takes Lead in Putting Highway Program on Right Track

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. SCUDDER. Mr. Speaker, the February 2, 1956, edition of the San Francisco Examiner carried an editorial crediting President Eisenhower with putting the road problem back on the bipartisan track.

The editorial, entitled "Ike Saves Road Bill," recognizes the statesmanlike action by the President in agreeing to a compromise approach because he realizes the necessity of putting an expanded highway program into motion as expeditiously as possible.

Better and safer roads and highways should not be made a matter of partisan politics. Everyone is affected, and concerned. I decried the maneuvers which led to defeat of the highway bill last year, and I trust that the President's lead will result in this must legislation being enacted promptly.

The editorial, which I desire to include with my remarks, is as follows:

IKE SAVES ROAD BILL

In agreeing to a Democratic "pay-as-you-go" Federal highway bill, President Eisenhower put the road problem back on the bipartisan track from which it had sadly wandered.

He gave up his own bond financing plan because, in the words of GOP Minority Leader JOSEPH W. MARTIN:

"The President wants roads.

"He thinks it is very imperative for the safety of the Nation as well as for the progress of the country.

"We concluded we did want a highway bill.

"We wanted roads as fast as you can get them and, therefore, we would go along with a pay-as-you-go system."

This statesmanlike action by the President makes all the difference in the world in estimating the chances of passage of an adequate highway bill in the present session of Congress.

Without such administration support, all highway legislation was in grave peril.

With the backing of the President, the Democrats who are writing the legislation in the House will be able to count upon Republican support when the bill comes to a test on the floor.

It was precisely the lack of Republican support last year that started the landslide of votes against the highway bill.

Now both parties can take credit for the passage of a good bill and both can shoulder the responsibility for the tax increases that will be needed.

And a great deal of the credit for the bill will have to go to President Eisenhower.

His willingness to abandon his own position in the greater interest of the better roads movement is what will make passage of the legislation possible.

American Participation in International Trade Fairs

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 8, 1956

Mr. WILEY. Mr. President, I have just today introduced a bill, recommended by the executive branch, which includes a vital provision to enable the President of the United States to secure the further participation by our country in foreign trade fairs.

I regard this as one of the finest types of investments in our overseas activities. Through our participation, we are telling and selling the free enterprise story to the world. American products and services, produced by the genius of the system of private profit and initiative, are being demonstrated to the peoples of the world and, in particular to the businessmen of the world.

The response throughout our country to our trade-fair work has been most encouraging. A number of enthusiastic articles have appeared in the Nation's press. I have in my hand several such articles. The first is from the Reader's Digest, issue of December 1955, entitled "the U. S. A. Goes to the Fair."

The second is from the famed magazine, the Rotarian, written not only by a Rotarian himself, but by a man who, by virtue of his position in the Department, is in one of the strongest possible positions to appraise the effectiveness of our fair participation. I refer to Secretary Sinclair Weeks' able associate, Hon. Walter Williams, Under Secretary of Commerce.

I send to the desk the texts of these two articles and ask unanimous consent that they be printed in the Appendix of the RECORD. I trust that they will help highlight the need for prompt and favorable action on this phase of the legislation which I have introduced today.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Reader's Digest of December 1955]

THE U. S. A. GOES TO THE FAIR

(By J. D. Ratcliff)

In Bangkok, Thailand, a 2,000-seat theater was jammed day after day with people who came to see the wonders of Cinerama. In Bari, Italy, farmers listened fascinated while a six-foot wooden chicken, with egg-producing organs exposed, gave a tape-recorded

lecture on modern poultry practice. In Bogotá, Colombia, throngs jostled around a stand offering free ice cream made from surplus powdered milk from Wisconsin. The United States was going to the fairs—the world trade fairs—and registering a smash success.

Each year there are something like 130 large fairs, ranging from the giant International Trade Fair in Paris, with nearly four million visitors, to the agricultural fair at Verona, Italy, which attracts about 130,000. Totally unlike United States State and county fairs, the trade fairs are market places where new goods are displayed, where businessmen go to buy and sell.

Although United States businessmen long ago saw the wisdom of buying space and displaying goods, the United States Government stood aloof until 1954, when President Eisenhower reviewed some disturbing facts. Since the war, Russia and her satellites had participated with spectacular exhibits in 133 fairs. Personable young Chinese sipped tea with German businessmen; Russians talked the virtues of Soviet tractors; Czechs demonstrated heavy machinery and spoke of booming production. The impression was left that the United States was too busy preparing for war to take part in such peaceful pursuits.

President Eisenhower decided to correct this. He earmarked $2,250,000 from an emergency fund to be spent at trade fairs to "put the United States in the best possible light overseas."

The Departments of Commerce and State and the United States Information Agency drew the planning job. There were two main objectives: To sell the idea that this Nation's vast industrial production is the result of a free-enterprise system, and to stress trade as a two-way affair.

To direct the program, the Commerce Department borrowed Roy A. Williams, New England industrialist and executive vice president of Associated Industries of Massachusetts, who recruited a team of architects, designers, idea men. With only 3 months to design and build an exhibit for the fair at Bangkok, where a year earlier Russia had taken first prize with a costly and elaborate pavilion, Williams chose Fruits of Freedom as the United States theme. The exhibit would emphasize ways and means by which United States industrial techniques could help lift living standards in the east. Cinerama was an added eye catcher.

Russia had 242 crates of murals on the Bangkok fairgrounds—heroic representations of Soviet industrial might. Getting wind of United States plans, the Russians didn't bother to unpack them. They withdrew from the fair.

A similar situation arose in Paris last May. When it became clear that the lively United States exhibit was almost sure to be the hit of the fair, the Russians packed up and went home. Altogether, the Soviets have withdrawn from five fairs rather than face United States competition.

The United States exhibit, America at Home, was the outstanding success at Paris, drawing as many as 70,000 people a day. It included a five-room house through whose open windows visitors could look while "Mother" prepared meals in a model kitchen equipped with freezer, garbage-disposal unit, dishwasher, mixers, and other gadgetry. "Father" puttered with the car in the carport, worked with power tools in the home shop, broiled steaks on the terrace. But the real delight was the playroom, where children of United States soldiers stationed in France concentrated on toys, oblivious of the crowds.

A similar display at the Vienna fair in September caused a newspaper to comment: "The Americans stole the show. They show us how we could live if we had plenty of money. But they do it in a way that makes us forget we do not have it."

When possible, exhibits are related to local problems. Italian farmers are keenly interested in United States agricultural methods. Hence, at the agricultural fair in Verona the United States exhibit included a small field of hybrid corn in which farm machinery was demonstrated. A model cow, cut away to expose internal organs, lectured on cow diets that increase milk production.

Spain has always had export difficulties with her valuable citrus crop. Fruit is often poorly sized and packed. Losses due to spoilage are high. For display at the Valencia fair the United States imported a citrus-packing plant from Lakeland, Fla. In a continuous, automatic operation the plant cleaned, sized, and waxed oranges. (Waxing retains juice and cuts spoilage.) Another exhibit suggested a new market for the Spanish and a new market for United States machinery: it showed how orange juice is extracted, concentrated, and frozen—all new to Europe.

Lately Pakistan, the world's largest producer of jute, has worried about the growing competition of other fibers. Jute is used mainly for burlap and coarse sacking. The United States exhibit at the Karachi fair included ingenious new machinery which converts coase jute into a soft fiber—suitable for dress and other fabrics. Knitting machines, poultry-raising equipment, TV, and a fashion show rounded out the lively display.

The Communists spread the story that the United States is planning to hydrogen-bomb the world. Atoms for Peace, which tells of our peacetime atomic projects, has been a key United States exhibit in a number of fairs. Including a 30-foot model reactor, mechanical hands to handle "hot" atomic materials, and other eye-catching displays, it presents the atom as a friend of man, the producer of medically useful isotopes, the source of curative radiations, a future producer of commercial power.

At the fair at Jakarta, Indonesia, last summer the United States exhibit included a glass-walled TV studio broadcasting to 24 receiving sets spaced around the fairgrounds—the first TV the country had seen. A model train built by Lionel, puffing and whistling its way through a maze of tracks, gave Indonesians an idea of what a modern transportation system looks like.

At the Berlin fair, hordes of people swarmed over from Soviet-controlled East Berlin to see the Western World on display. Two United States labor unions—the Amalgamated Clothing Workers and the International Ladies Garment Workers Union—provided a stirring rebuttal to the Communist story that the American worker is the slave of a capitalist economy. Pictures showed union health centers, camps, clubs; explanatory material told about the wage scales, pension plans, and arbitration procedures.

In state-controlled stores in Communist East Berlin shoddy clothing brings sky-high prices. On living models at the Berlin fair a large United States clothing chain displayed a complete winter wardrobe for a family—mother, father, two children. A large tag carried the price of each garment. Total cost of outfitting a family: About 3 weeks' pay for an American carpenter. To East Berliners this was an impressive demonstration of the fruits of free enterprise.

The key part of every United States exhibit is a trade mission—a six-member panel (usually), drawn half from the Department of Commerce, half from industry. These men answer questions about buying goods from the United States and about exporting to the United States market. In 8 fairs last spring such panels handled a total of 26,000 queries.

In Hanover, Germany, the woman owner of a linen shop seeks and gets information about importing the bath towels displayed in the model United States home. In Salonika a dealer wants the agency for a small tractor. He is put in touch with several makers. At Cologne a grocer wants floor plans of American supermarkets. Several United States firms can supply them.

Such advice often bears immediate fruit, advantageous to all concerned. At Milan an Italian was interested in exporting ceramics. Two Americans interested in importing ceramics happened to be present. They got together on the spot.

This American readiness to do business now has been impressive. At the International Trade Fair at Lyon, France, Red China had a lavish display of motorcycles, saxophones, heavy machinery—much of it clearly handmade. When asked about prices and delivery dates, the Chinese were noncommittal. It became apparent that the goods displayed were pure propaganda, not for sale. Meanwhile, the United States trade panel was doing a land-office business—a fact duly observed in the French press.

Trade panels occasionally get hecklers. A man with clear Communist leanings denounced the group in Hanover: the United States was interested only in war, he said, not in helping people. Panel members questioned the man about his interests. He was an out-of-work salesman of household appliances. It was arranged for him to get the agency for a United States refrigerator. The line went well, he prospered, and has altered his political outlook.

By next July 1 the United States will have been represented in 34 fairs. No one will hazard a guess as to how much trade has directly resulted, but Roy Williams is sure that the small investment has been repaid many times over. The business world apparently agrees. The year before official United States participation at Bangkok there were 47 American industrial exhibitors. This year there were 140. At Hanover the number increased from 13 to 47; at the giant Milan fair from 571 to 700.

Thirty million people are expected to see our exhibits this fiscal year. "They will all go away," says Williams, "with a new realization of what free enterprise in a democracy really means."

[From the Rotarian magazine of December 1955]

It's Fair Weather

(By Walter Williams, Under Secretary of Commerce)

(Walter Williams has been United States Under Secretary of Commerce since 1953. Before that he was a businessman in Seattle, Wash., engaged in real estate and insurance. He is a former president of the Mortgage Bankers Association of America, and a past president of the Rotary Club of Seattle.)

Just a year ago the United States, in cooperation with industry, launched a global-wide trade-fair program "to tell adequately the story of our free-enterprise system and to provide effective international trade promotion cooperation," in the words of President Dwight D. Eisenhower.

Uncle Sam's first exhibit in the trade-fair movement last December in Bangkok, Thailand, showed that we were really in business to sell the American way of life; how the United States operates under a free political economy and how our productive capacity is dedicated to peaceful purposes and the progress of free nations.

Eager throngs flocked to view American trade exhibits, See Yourself on TV exhibits, the movie This Is Cinerama, latest model automobiles, and farm equipment. More than 140 American firms exhibited their products under the general theme The Fruits of Freedom.

Many Americans will recall the Bangkok event. They will remember the difficulties encountered before opening the first United States exhibit—difficulties of time, inexperience, and weather. A typhoon even threatened to wreck a ship bringing vital

displays. Even so, they will recall with satisfying memories of being awarded Bangkok's first prize, of meeting thousands of Thailanders, and of strengthening the ties of trade.

Since that opening event of the United States Department of Commerce's international trade-fair program, it is estimated that 15 million people have seen joint industry-Government exhibits in 16 fairs during the first or "crash" year of our program. Almost double that should see the second year's program since it will be principally in the heavily populated Near and Far East sector.

Record turnouts have been reported this fall in Djakarta, Indonesia; Stockholm, Sweden; Karachi, Pakistan; Salonika, Greece; Bari, Italy; Vienna, Austria; and Berlin, Germany. It is also estimated that more than 25,000 firms representing 10 countries asked business questions of United States trade missions during the spring fairs. And 5,000 of them had consultations ranging from 15 to 45 minutes to help them in their problems of import, export, licensing, etc.

Far more impressive than mere figures, though, are the personal results. Let us take the Frankfurt, Germany fair, of which Kartl T. Steidler, director of the foreign section of the fair, said: "The American exhibit has been the highlight of the National Pavilion section. Tremendous interest."

Last March, 70,000 Germans strolled through the portals of the United States main pavilion; its theme was America at Home. Here they saw a completely furnished full-scale 5-room American home. Actors impersonating an American family—husband, wife, and 2 children—demonstrated what their standard of living meant; using the kitchen appliances, tuning the television set, and so on. In a separate display the Germans saw products used in American homes—a magic kitchen, sewing machines, refrigerators, gardening equipment.

So successful was this exhibit that it was repeated in Brussels in April, was requested by the Munich Fair officials and by department stores in Sweden, Belgium, and France. As a businessman and a Rotarian, I am glad to say the United States Government shared credit for the show, shared it with private businessmen. We would have given a false impression if our free-enterprise system had been illustrated only by Government. Private businessmen—some of my country's best—freely gave weeks of their time to make this exhibit possible. They loaned more than 300 products to the display. They registered with our information booth, which was an integral part of our trade mission, and helped answer questions asked by interested Germans on doing two-way trade.

American businessmen called the Frankfurt Fair an unqualified success; in 5 days more than 1,300 meetings were held with German businessmen interested in American products. It is interesting to note that about one-third of these queries were concerned with selling to and the remainder with buying from the United States.

The spirit of our private businessmen joining our trade mission in answering import and export problems of the Germans was equalled by a large number of personable, wholesome young American women. When the United States exhibit needed more personnel to answer the questions, hostesses from United States air lines serving the Frankfurt area volunteered for duty. A German visitor might ask, "Does every family have a power lawn mower?" And a pleasant young lady could tell him from her own experience, "My father does, but our next-door neighbor doesn't."

The official United States exhibit at Frankfurt, which is characteristic of all American pavilions at international trade fairs, was organized to give two kinds of information. First, we helped visitors who wanted to buy United States products they saw on display; we put them in touch with United States suppliers and gave them useful information about purchases.

The second part of our message broke with tradition. It was directed to the European seller rather than the consumer. We tried to explain to this European exporter how he could sell more goods to United States buyers. We explained our marketing techniques, the preferences of United States housewives for certain kinds of packages, and other useful facts. So that this information would be to the point, our trade missions had gone to Germany several weeks before the fair opened, to talk with German businessmen at trade meetings and conferences. From them we learned what kind of questions to expect and what sort of information the Germans would find of help. Our trade-information centers also had on display all sorts of American trade magazines, directories, Government publications, and various data about the American market. What were questions like?

Well, a German businessman from Cologne had seen the model of a United States supermarket. "Is this setup the usual one in your stores?" he asked. It was. He learned that canned goods are usually kept in one place, meats in another, dairy products in another. "Could I have a floor plan of such an arrangement?" he asked. He got one.

A woman manufacturer of novelty playing cards wanted to know whether she should export her wares to the United States. "Every novelty store in the United States has cards like those," said the United States consultant. "But those"—he pointed to another design, facsimilies of 14th century playing cards—"are individual. Try exporting those to the U. S. A."

The success of this two-way message was so great that it has been applied at succeeding fairs. We feel that American exhibits should be far more than a national boast. Or, put in terms familiar to all Rotarians, we believe in genuine International and Vocational Service.

Records clearly show that businessmen in other lands agree. Merchants and manufacturers in Paris, Lyon, Verona, Valencia, Palermo, Hanover, Tokyo, Stockholm, Vienna, Berlin, Djakarta, Karachi, Salonika, and New Delhi have shown enthusiasm about our central exhibits and trade missions.

One French businessman drove 100 miles for a 10-minute trade-mission interview. He said he was completely satisfied with his journey. Another Frenchman remarked that while he had to wait 2 hours for his interview—there was quite a long line, about 76,000 crowded the American pavilion—he found the information well worth his while. Several of the foreign countries have requested the trade missions to return at their expense, so well were they received in their advice-giving.

A measure for the success of these face-to-face talks can be found in Tokyo's first great trade fair last May. Japanese manufacturers negotiated 265 technical licensing agreements with United States firms. Who can question the mutual advantage of such transactions? The American companies are rewarded for their research; the Japanese companies open profitable new markets and create new jobs.

To accommodate the many persons—more than 20,000 visited daily for a total of 200,000 during the fair (May 5–18)—the American exhibit at the Japanese Fair was opened to the public for a period of 2 weeks after the fair ended and drew several thousand visitors. The Economic Journal of Japan sponsored an exhibition of 28 of the American products in a tour of the cities of Osaka, Nagoya, Fukuoka, Sapporo, Sendai, and Kanazawa. This was done with the support and cooperation of the economic section of the Japanese Foreign Ministry.

We have tried to keep local interests in mind even with our exhibits themselves. In Djakarta, Indonesia; Karachi, Pakistan; and New Delhi, India, for example, we produced those countries' first televison shows. Local talent and American films were shown over a closed-channel circuit.

So popular has been this first demonstration of television that it was necessary for the American programs to end half an hour before closing time so officials could clear the fairgrounds for the day. In Karachi, where the fair had been delayed a week (until September 16) because of the heavy damage wrought by rain and monsoon, the huge crowds at the American show, viewing it on the twenty-four 21-inch sets scattered throughout the fairgrounds, created a problem to other nations. According to a newspaper report, their outdoor displays were blocked off by the backs of hundreds of fans getting their first glimpse of television on the American screens..

Do we hope someday to sell television equipment to the Asians? Certainly, we hope so. And, so they can afford it, we also hope to buy more products from their fast-developing lands. While on television, the Morning News, of Karachi, on its editorial page, had this comment: "Participation of the United States for the first time in the Pakistan International Industries Fair has enabled the people of Pakistan to view that dream invention of modern times—the television."

In such hopes we see a basic and worthy motive for trade fairs: the mutual exchange of products, services, and ideas. Such was the one reason for the trade fair that Sidonius Apollinaris reported in Brue, France, in A. D. 427. Such is a motive in the young international fair in my home city of Seattle, Wash. But trade is not the only motive. Since that unrecorded day when a farm girl put a flower in her hair to attend the first fair on earth, there has been a social motive.

Folks do not long remain strangers in the exciting atmosphere of a fair. Exchanging praises and problems, the businessmen attending the 100 or more international trade fairs each year are widening their understanding. When we see excellent products made in other lands, our own competitive instincts are stimulated. And from sharp, honorable competition comes greater gain for all; on that point my own free countrymen are solidly united.

This month, crowds of citizens in many parts of the world will file through fairgrounds of other lands. Thousands of them will be viewing the million dollars' worth of products loaned by more than 1,200 private United States companies, small and large.

In New Delhi they will see the largest atoms-for-peace exhibit we, or anyone else, ever assembled. In Addis Ababa, Ethiopia, they will examine a model 175-acre United States-style farm, a United States voting machine and voting booth. In Bogota, Colombia, the story of antibiotics and their contirbution to mankind and in Trujillo, Dominican Republic, the story of agriculture, coffee, and cotton will be told through animated exhibits.

The exhibit of products of American industry, dedicated to peace, demonstrates the vital arteries of economic development without which no nation can prosper. Our trade-fair program is another step promoting friendship and commerce and meeting other nations' needs for two-way trade.

The American People Have Confidence in President Eisenhower

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks, I desire to include an editorial from the January 30, 1956, edition of the Petaluma (Calif.) Argus-Courier.

Entitled "After 3 Years, Ike Is Still Popular President," this editorial is an expression of the confidence that the American people have in President Eisenhower. It was 3 years ago last month that he was inaugurated as President of the United States, the highest honor that the people of this country can confer on a fellow citizen.

President Eisenhower, during his 3 years in office, has earned the confidence and high esteem in which he is held. Under his leadership we have achieved peace, and the highest degree of peacetime prosperity ever enjoyed in the history of our country.

He is a man of outstanding ability, dedicated to the tasks of the presidency which he approaches with dignity and firmness of purpose. The people like the results.

I consider it a distinct honor to be serving on the same team with President Eisenhower, and I commend to this body the following editorial:

AFTER 3 YEARS, IKE IS STILL POPULAR PRESIDENT

Three years have gone by since President Eisenhower was inaugurated, and he still seems to be at the height of his popularity. In the 3 years the American people have had a chance to weigh his administration, and to determine what kind of a President he has been. If popular opinion polls accurately reflect the feelings of the American public, then President Eisenhower enjoys such confidence as the American people have given to few Presidents.

In the past few days there have been celebrations all over the country honoring the President. To be sure they have been Republican celebrations. But there is evidence to believe that many others would have joined in paying their respects to a popular President. Certainly the reaction of the people, not only in the United States, but in other parts of the world as well, at the time of his illness, indicated in what high esteem he is held.

As General Eisenhower, he had led the American people successfully through a great war. As President Eisenhower, he has devoted himself just as intensely to peace, at the same time preparing our defenses against the prospect of another war. But it is as a man intensely dedicated to the preservation of peace that he has earned the esteem of the American people and the respect of the peoples of the free world.

In the domestic realm, his policies are generally credited with the enormous prosperity that the country is now enjoying. He tends to be a liberal in matters concerning the individual, a conservative in matters concerning the Government. He is a man of decency and sincerity, and he has stamped these qualities on the public life of the country. He has brought a feeling of unity to the country, after a period when extremists were stirring up angry currents.

The President has his critics in both parties. There are some Republicans who think he is too much of a Democrat. There are Democrats who claim that he benefits from the "illusion" rather than the fact of peace and prosperity. But he stands above the criticisms as a man whom the people like. And if he should decide to run again, his adversaries would have a hard time proving that the peace and prosperity we now enjoy are an "illusion."

The people have watched President Eisenhower perform the functions of his office for 3 years. They still like what they have seen.

Vital Void Is Apparent in Public Works Policy

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the RECORD an article appearing on Saturday, January 25, in the Sacramento Bee entitled "Vital Void is Apparent in Public Works Policy":

VITAL VOID IS APPARENT IN PUBLIC WORKS POLICY

The fallacy in the national administration's public-works policy, of the Federal Government building only those projects which private or local interests are unable or unwilling to construct, has been exposed dramatically by the flood disasters of the past year in the Northeast and West.

The fallacy stems from the fact the Federal Government and the private interests have totally different approaches to the matter of building dams on the rivers.

Whereas the Government concerns itself primarily with constructing the huge multipurpose dams to provide flood control, irrigation, power generation, recreation, and other benefits, the privately owned utilities are interested in only one thing, and that is the generation of electric power.

In the West the crying need is for all of the benefits which the Government's great multi-purpose projects like Shasta and Folsom can provide.

By reason of their sizes and the nature of their operation, dams constructed only for power generation do not measure up to the full potential of the big multi-purpose dams designed to meet all of the needs of the area with respect to flood control and water conservation.

NOR, in fact, should the power companies be expected to build structures to provide the maximum in flood control and water conservation.

The point is it would be a shame and an improvident misuse of the people's rivers were the Government to waive its responsibilities to erect a big multi-purpose dam whenever and wherever a private company proposed to construct a power dam.

That is precisely what is happening on the Snake River in Idaho where the Federal Power Commission has granted licenses to a private company to erect three small power dams on the site of the proposed big Hells Canyon Dam which, under Government construction, would provide flood control, irrigation water, and power for three States.

Shasta Dam is a striking example of the necessity of such multiple-purpose undertakings. Flood waters held back this winter will irrigate the arid fields next summer. And the power generated there is what makes the other benefits feasible.

A Philosophy of Economic Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Business Week of February 4, 1956:

THE TREND—A PHILOSOPHY OF ECONOMIC GROWTH

The new economic report of the President has a significance that will outlast any immediate arguments about the current state of the economy and what—if anything—the Government should be doing about it. For in this report the Eisenhower administration sets forth a thoughtful and eloquent statement of the principles it has evolved in the last 3 years. Moderates of both parties will find this a clear and forceful expression of the philosophy they live by.

It is a philosophy of growth—a growth that arises from the qualities of the American people: "A strong devotion to family life; a deep-seated, widespread urge to improve one's position; * * * and the cherishing of freedom, independence, and individual initiative." An expanding economy, the report declares, "is the natural fruit of such a people."

But it is also a philosophy that recognizes that the very qualities that give the economy its expansive power make the process of growth irregular: Production will periodically get out of kilter with sales, or confidence will turn to overconfidence and threaten to cause inflationary boom, or caution will degenerate into pessimism and threaten to create depression.

The administration does not think government should stand by and watch such swings go wild. "We have come to believe," the President's report declares, "that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy."

Extremists find this economic philosophy incomprehensible and pernicious. One group, the arch-conservatives, finds efforts to restrain inflation but the very soul of sound national economic policy, but efforts of Government to curb deflation and depression appear to them as a form of "New Deal" madness, a presumptuous tampering with the divine law of the market.

The other extremist group, the arch-liberals, broods over the stagnationist tendencies of an enterprise economy, wants government to be the force that perpetually keeps the economy growing, sees little danger in inflationary tendencies.

The administration's economic philosophy gets caught in the cross-fire. But the record shows that the Administration effectively checked the downslied of 1953–54 and turned it into the prosperity of 1954–55. Administration policymakers think they can handle whatever lies ahead by the same flexible methods.

No one can be dead certain which way the economy is now tending. "In a high-level economy like ours," the report declares, "neither the threat of inflation nor the threat of recession can ever be very distant." But whichever way the trend develops, the Ad-

ministration's philosophy prescribes prompt and effective ways of dealing with it.

"The only rigid rule that we can afford to admit to our minds," said the President, is the principle that the best way to fight either a recession or an inflation "is to try to prevent it from occurring."

Asian Cultural Exchange

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. SCOTT. Mr. Speaker, I am introducing by request the summary of an interesting program designed to encourage the growth of knowledge of Asian Culture, particularly at the high school level. The importance of better understanding and greater attention to the great world of Asia is so obvious as to require no elaboration. Therefore, I think the readers of the RECORD will be glad to know of this activity begun in Washington. The article follows:

ASIAN CULTURAL EXCHANGE

(By Walter E. Hess, managing editor of Student Life)

In the belief that the increasing importance of the Asiatic countries with their 1.3 billion people in today's world demands a greater understanding and knowledge of Asian peoples by the citizens of the United States and that a sure and sympathetic knowledge of the essential cultural values of a nation is gained through acquaintance with the arts and crafts of that nation, the Asian Cultural Exchange Foundation, Inc., has made it possible for schools of our country to develop a collection of artifacts from Oriental countries. Such a collection which a school might have would show the development of art forms within each culture, the relationship between cultures, and the religious and traditional significance of art forms. With such an art exhibit permanently available within the school, classroom instruction in the various subject areas can be immensely enriched and vitalized by the circulation of these art objects in the classrooms of the school.

Last year five high schools of Washington, D. C. (Calvin Coolidge, Dunbar, Eastern, Spingarn, and Woodrow Wilson) obtained a collection of Asian art and handicraft articles. John P. Collins (now retired), principal of Eastern High School, when the 104-piece art exhibit was received at his school, termed the collection 'remarkable and a wonderful educational vehicle." Charles S. Lofton, principal of Dunbar High School, which has a 135-piece collection, stated: "Educationally, we believe that this action is most sound. The benefits to be derived from the collection will permeate, all areas of the school curriculum. I can easily envision the departments of English, art, social studies, and language, both individually and collectively, benefiting from this gift. It will afford stimulation in an area that has been largely overlooked. It is my sincere hope that this movement will develop and grow so that all students in the Nation's Capital and those throughout the United States will eventually become united in their awareness of the cultural contributions of the peoples of Asia." Vice President Nixon was the speaker at the formal opening of the Dunbar exhibit, March 17, 1954.

John F. Brougher, principal of Woodrow Wilson High School, speaking about the exhibit in his school, remarked: "One gains a feeling about people through the study of their creative work that is unobtainable in any other way. Our students exhibit a keen interest in the pieces, and it is my opinion that contacts with these items give them an insight into the culture of the people who created them that they did not have before." This year some Baltimore, Md., schools are establishing similar exhibits.

Quite a number of high school principals outside of Washington have already indicated their interest in establishing a permanent exhibit in their schools. This certainly is a direct means of rapidly spreading knowledge of far eastern culture through the organization of small collections showing cross sections of Asian arts and crafts from Burma, Cambodia, Ceylon, China, India, Indonesia, Japan, Korea, Laos, Nepal, Pakistan, Afghanistan, the Philippines, Thailand, Vietnam, Tibet, etc. Such diversified and individual collections can be owned by any high school or library in the United States.

Student councils, chapters of the national honor society, and other school organizations could select this as a most worthwhile project. A collection with a fairly informative cross section of Asian arts and crafts can be started with as little as $500. This could be added to each year until a collection of $2,000 or more would be available for supplementing classroom instruction. Certainly, this would be an educational project from which the school will reap benefits over innumerable years. So worthy is the project and so appealing has it been to the public, that local community organizations and institutions should be interested in making a collection as a gift to the school. The Anacostia National Bank of Washington, D. C., became so interested in the potentialities of a collection of this type it is financing the cost of one comprehensive collection of some 200 artifacts through the Asian Cultural Exchange Foundation and making it as a gift to its local community high school—the Anacostia High School. Without a doubt, business institutions in many other communities could readily be interested in making similar gifts to their local schools. The foundation, being a nonprofit organization, will, as its treasury permits, add additional items to the collection being sent.

The pictures accompanying this article represent a meager sampling of materials that are available. The school can send $500 or more to the foundation. Its personnel, with its extensive familiarity with Asian culture, will make selections on as broad a cross-section basis as the money sent will permit.

However, it is suggested that any school, civic, commercial, or other organizations as well as individuals interested should write to the foundation of the following address: Asian Cultural Exchange Foundation, Inc., 4700 Morgan Drive, Chevy Chase, Md. Complete information about the materials available and about the services rendered by the foundation will be sent upon request. In selecting the articles for the collection, the foundation works with the principal and the teachers in a school in order that the collection will be most usefully tied in with class instruction in practically any course in the school. It is important to know that gifts or donations made to the Asian Cultural Exchange Foundation, Inc., are tax exempt.

Another service which the foundation is including is that of providing names of English speaking persons in foreign countries for high-school students who wish to correspond to foreign high-school students. This project will add additional sources of information on the arts and culture of people of other nations.

The Asian Cultural Exchange Foundation, Inc., is in the process of organizing a program of exchanging various items and correspondence between Asian and American schools. Tentative plans call for a kind of central post office in the foundation, through which United States schools and other groups can ship gifts of books, stamps, educational materials including laboratory equipment, art exhibits, and handicrafts by American students to Asian schools in general or to specific schools in the Far East.

The foundation will greatly appreciate any of the above items. School yearbooks are particularly desired, as they best reflect school life in general in the United States.

The GATT Scheme

EXTENSION OF REMARKS
OF
HON. DONALD W. NICHOLSON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. NICHOLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sunday Standard-Times of New Bedford, Mass., of Sunday, February 5, 1956:

THE GATT SCHEME

For the second time, President Eisenhower has requested Congress to approve United States membership in the Organization for Trade Cooperation. This is the administrative organ of the General Agreement on Tariffs and Trade, otherwise known as GATT. Congressional resistance to OTC and GATT is clearly justified, as even cursory examination of the subject indicates.

From 1945 to 1948, when one-worldism had its brief heyday, some State Department planners conceived and brought to fruition an International Trade Organization. Its charter was signed by 50 nations, including the United States. It would have set up a governing board on which the United States would have 1 vote out of 50 plus. The ITO's objective was free trade, through progressive reductions of tariff and trade barriers.

ITO provisions went so far beyond the powers delegated to the President, empowering him to enter into trade agreements, that it was regarded as necessary to submit the ITO Charter to Congress for ratification.

Meanwhile, it was decided to enter into a general trade agreement with several countries, in 1947. This was GATT, to which 35 nations adhered, including the United States. The ITO was to administer GATT, according to State Department plans, when the ITO Charter was ratified by a sufficient number of nations.

But Congress recognized ITO as a program that viewed nations as units in a worldwide master plan, not as individual countries working within the framework of their own governments. So emphatically did Congress repudiate the ITO that its charter was never reported out of committee.

GATT, not having been submitted to Congress, obviously has no legal standing, but still acts as the supreme arbiter of United States tariffs and similar matters. It has reviewed sovereign acts of the Congress and the President; it binds members against using import quotas other than in exceptional cases. This is strong action, considering that GATT is an illegitimate organization and the Constitution authorizes Congress to regulate United States commerce.

Worse, in 1951, Congress, by law, directed the President to withdraw all trade-agreement concessions from the Communist-controlled countries. The President signed the law.

Yet the United States had to wait for approval from GATT before it applied this law to Czechoslovakia, a GATT member which is Communist controlled. Thus Congress is deprived of its constitutional powers because the State Department wants to use tariffs as diplomatic pawns.

The State Department denies the United States is bound by GATT or that GATT has the power of review over the United States. The latter denial was repudiated by the 1951 precedent, now established; Americans already have permitted GATT the power of review over its affairs. As for the former, if the United States is not bound by GATT, why not submit GATT to Congress for ratification?

Submitting OTC to Congress is mere sham. It contains only the administrative features of GATT without its substance; yet congressional approval of OTC would give GATT the stamp of legality without having to put it before Congress. And GATT is essentially the same thing as the International Trade Organization which Congress refused even to consider.

A Cost of War

SPEECH
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. RADWAN. Mr. Speaker, the other day I received one of those general information pamphlets from the Veterans' Administration. It was full of statistics, and not easy reading, but the title caught my eye. "Cost of War," it read. At long last, I said to myself, the powers that be are beginning to recognize veterans' benefits for what they are—not charity, not a handout, but a "cost of war."

Obviously this is so. The cost of a veterans' program is just as much a cost of war as the planes and ships and shells that were hurled at the enemy. And they should be viewed in the same spirit of urgency and sacrifice as are other more readily recognizable war costs.

I have often repeated a phrase which I think sums the situation up pretty neatly. "Veterans do not create the wars which create veterans." This is a one-package answer to those critics who complain that there are so many veterans we should do something about cutting down the cost of their benefits. The care of these men and women is an aftermath of war, and directly although belatedly a cost of war.

All the veteran did was win that war. If he had not, we would not have a nation, rich and strong and powerful enough to give the veterans a helping hand, or to look after the well-being of any of its citizens, for that matter.

The number of men and women who have been aided in one form or another by our veterans' program is very impressive. But so is the number of veterans. Over 16 million Americans participated in World War II alone, and over 15 million of these are living today. Then, almost 5 million more entered service after Korea and over 4 million of these are with us today.

America did not lose by coming to the aid of these men and women. The 7,800,000 veterans who received education and training benefits will, by 1970, have paid the entire cost of that program back, because they have with their education reached an income level at which they are paying an extra billion dollars a year in Federal income taxes.

Veterans have purchased 4 million homes under the loan-guaranty program. Did that hurt America? Can you imagine what an influence that has had on our postwar and our present prosperity? And do not forget that these homeowners pay their communities and States real-estate taxes.

Many prominent economists actually feel that the veterans' program helped prevent an economic crisis after World War II by stimulating civilian demand. The benefit to the Nation did not stop there, however. Now that the country is desperately in need of engineers, scientists, and doctors, where would we be without the 145,000 engineers, 744,000 scientists, 63,000 doctors, 238,000 teachers, 700,000 mechanics, and 380,000 construction workers trained under the GI bill?

Two weeks ago, I had the warm satisfaction of introducing a bill which is most essential to the continued progress and security of our Nation. It would extend the education benefits of the GI bill to peacetime veterans. In my view, this bill should encourage enlistments in the Armed Forces, encourage the post-service training of urgently needed scientists and engineers and, at the same time, show the veteran he is not forgotten.

This is one cost of war which is a lot easier to take than some of the others. It is always repaid—and with heavy interest.

Common Termination Date of Shoreside Labor-Management Agreements

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. PELLY. Mr. Speaker, the announcement of the distinguished chairman of the House Merchant Marine and Fisheries Committee regarding a possible agreement on a common termination date of shoreside labor-management agreements of the east and west coasts is of great significance. It has been established that lack of such a common expiration date has been detrimental to the maritime industry. I understand all parties, except the New York ship operators, have assured Chairman BONNER that August 1 is a satisfactory date. It would be tragic if the latter do not approve.

In my district in the Pacific Northwest, intercoastal service has diminished until this important segment of transportion is almost a thing of the past. I have felt a common anniversary date of labor agreements is a necessary step toward restoration of such shipping service.

I commend the gentleman from North Carolina [Mr. BONNER] for his action and express the hope a final understanding will soon be consummated. It is unthinkable that the New York operators would fail to approve this agreement.

Doubts About the Budget

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. EBERHARTER. Mr. Speaker, there is a growing belief among Members of Congress that the budget for fiscal year 1957, recently submitted, has several serious weaknesses. It errs on the side of allocating too little to such things as supersonic aircraft, guided missiles, and atomic power. And yet if we are to hold our lead against the Russians, it is to these items that we must give most serious attention. In this race, however one defines it, we simply cannot afford to fall behind.

These thoughts are expressed very ably in an editorial which appeared in the Washington Evening Star of January 24, 1956, under the title, "We Must Stay Ahead."

The editorial itself was inspired by the publication of the 41st annual report of the National Advisory Committee for Aeronautics, currently edited by Dr. Jerome Hunsaker of the Massachusetts Institute of Technology. The NACA is no special pleader for any branch of the armed services or for any partisan political interest. As the editor of the Evening Star says:

Its annual report * * * is as objective as any such document can be.

Dr. Hunsaker has said nothing to encourage a belief that we can maintain our present position of world leadership in the air without a very great effort. Dr. Hunsaker said that the decisions we make now regarding the extent of our research effort may well prove to be the decisive factor in this respect—

At a time when the world is searching for the means to an enduring and honorable peace, it is vital that we in the United States maintain our qualitative lead in aeronautics and the resulting economy of effective air power. We will do well to remember that to maintain such a lead depends on the vigor and skill with which we press our fundamental and applied research.

Mr. Speaker, under leave to extend my remarks I insert in the Appendix this editorial from the Evening Star, which reiterates my contention that our position tomorrow depends on the ac-

tions this Congress takes. The editorial follows:

WE MUST STAY AHEAD

The 41st annual report of the National Advisory Committee for Aeronautics lends some perspective to the confused picture of American military strength. And the comments of this group, headed by Dr. Jerome C. Hunsaker of the Massachusetts Institute of Technology, should carry special weight. For the NACA cannot be accused of serving as special pleader for any branch of the armed services or for any partisan political interest. Its annual report, one would think, is as objective as any such document can be.

In his letter of transmittal to Congress, Dr. Hunsaker spoke of past gains and future problems. In his view, the United States now enjoys a position "of world leadership in the air." But he said nothing to encourage a belief that we can maintain this position without a very great effort. Instead, he said that the decisions we make now regarding the extent of our research effort may well prove to be the decisive factor in this respect. These two paragraphs from the Hunsaker letter should be of special interest:

"Today, problems associated with a nuclear engine suitable for aircraft propulsion and with an intercontinental ballistic missile are perhaps the most pressing. An airplane powered by a nuclear engine would have range limited only by the endurance of the crew. An intercontinental ballistic missile traveling at speeds from 10,000 to 15,000 miles an hour would be extremely difficult to intercept. Only seconds would elapse between the time such a missile could be detected and the time it would reach its target.

"At a time when the world is searching for the means to an enduring and honorable peace, it is vital that we in the United States maintain our qualitative lead in aeronautics and the resulting economy of effective airpower. We will do well to remember that to maintain such a lead depends on the vigor and skill with which we press our fundamental and applied research."

The encouraging aspect of this comment—its suggestion that the Russians have not pulled ahead of us qualitatively—is similar to a statement made in Oklahoma City on January 13 by General Twining, Air Force Chief of Staff. General Twining said that in quality—quality of planes, weapons, bases, equipment, men, and training—we have maintained our lead in the air. But he added that we are concerned over the rapidly improving quality of the Communist air force, and he came to this conclusion: "We are not in an arms race in the traditional sense. It has become a race for quality—or better, more effective weapons. Today we are in a good position in this race. Our position tomorrow depends on what we are doing now."

In other words, it is the decisions we make now which will be critical for the future. Are spending and planning to spend enough, or too little? Dr. Hunsaker doesn't say. But his letter implies a belief, and General Twining undoubtedly believes, that the 1957 budget errs on the side of allocating too little to such things as supersonic aircraft, guided missiles, and atomic power. Of course, the President and his advisers disagree, and their judgment is apt to prevail. Nevertheless, the difference of opinion, considering the area it touches, is a most critical one, and Congress should insist on the fullest exploration and debate of the various points of view. For in this race, however one defines it, we simply cannot afford to fall behind.

Flood Protection Needed

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the most urgent and important matters before the House of Representatives during this session is the matter of flood insurance. During the last year the need for some such program has become ever more apparent. Many of us right here in the House have had first hand experiences with the tragedy which major floods can bring to the areas which we represent. A program for some measure of protection is urgently needed.

The bill which I have introduced would establish a Federal Flood Insurance Administration which could issue policies at rates within the capacity of property owners to pay. The amount of coverage authorized would be up to $10,000 on 1- to 4-family residences, including contents, and up to $100,000 on any other single piece of real or personal property. Private insurance companies, which are presently unable to offer flood insurance at a reasonable rate, would be assisted by Federal reinsurance to provide coverage for loss in excess of the limits of the Federal program. The program would be financed through premium receipts, salvage transactions, and borrowing from the United States Treasury, up to a limit of $1.5 billion. No insurance would be offered under the provisions of the bill to cover risks which are insurable on reasonable terms through private or other public sources.

The past year has been the most expensive year on record in the matter of flood damage, but it must not go down in history like the previous most expensive year, 1951. That was a year which prompted Congress to stir a bit under the consciousness of a national problem, but it failed to take effective action. The private-insurance companies state most emphatically that they cannot do the job. It is up to Congress to act, and the time is now. Legislation to bring about a Federal flood-insurance program of the people at home. This is clearly shown by an editorial which appeared on February 1, 1956, in the Trentonian, one of the leading newspapers in my district. I should like to include it here as a part of my remarks:

[From the Trenton (N. J. Trentonian of February 1, 1956]

PROTECTION NEEDED

A New York engineering firm's prediction that New Jersey, Pennsylvania and other Northeatsern States must anticipate rains and storm tides considerably worse than those created last August by Hurricanes Connie and Diane underlines the need for immediate action on both flood relief and flood prevention.

On the basis of the engineers' prediction of greater disasters, the American Insurance Association reiterates that no form of private insurance against flood damage is feasible.

Therefore, it must be concluded that the only possibility of flood insurance lies with the Federal Government. Congressman FRANK THOMPSON said in his weekly report on this page yesterday that many measures have been introduced in Congress, one of them cosponsored by himself and New York's Senator LEHMAN, and that they have been assured high priority in the legislative mill.

It is interesting to note that THOMPSON sees no tendency in Congress to insist on the passage of any one measure as introduced. This could mean that the legislation which eventually reaches the floor will embody the good points of most if not all of the proposed bills.

While insurance of some sort naturally takes priority, it goes without saying that flood prevention will, in the long run, be much more important than relief from losses incurred. Support for dams on the upper Delaware is growing rapidly, and perhaps New Jersey and Pennsylvania can look forward to the day when the river's newly discovered flood potential can be appreciably mitigated. Again, it appears that the Federal Government must lead the way toward that end.

A Former President Speaks

EXTENSION OF REMARKS
OF
HON. WILLIAM L. DAWSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. DAWSON of Illinois. Mr. Speaker, under leave to extend my remarks marks in the RECORD, I include the fol- in the RECORD, I include the following speech delivered by our former beloved President, the Honorable Harry S. Truman, in New York City, February 2, 1956:

I am very glad to be here tonight. I always like to come to New York. And, of course, New York has a special attraction for Mrs. Truman and me now that a certain young lady is living here.

It does my heart good to be here with so many wonderful people and fine Democrats.

When I take a look at the Democratic leaders here—and all over the country—it is easy to see why the Democratic Party is getting stronger all the time. And it is also easy to see why all the signs point so strongly to a Democratic victory in 1956.

Among our great advantages over the Republicans is the fact that we have a number of men of outstanding character and ability who are available to head the ticket. Some of these outstanding men are active candidates for the nomination—some are not. Some of them are here with us tonight—some are not. But whether our candidate is here tonight or not, I can tell you this: We are going to give the American people a chance to vote for a President—and not a regency or a part-time chairman of the board.

The Republicans, on the other hand, are desperate. They know they don't have a chance with anyone except Ike; and the pressure they are putting on him to run in spite of everything is indecent. They are in trouble no matter what they do—and I wouldn't care very much for their prospects, in spite of all their money.

Now, I want to talk a little about the duties of the Democratic Party in the coming campaign.

It is not our duty to win at any price. It is our duty to maintain the honesty and integrity of our party. I don't want to see the Democratic candidate making any campaign promises he is not prepared to try to keep. In the past 3 years, I have seen Republican campaign promises not only deliberately broken—but also flatly denied. That is not my concept of political morality—nor is it the concept which has enabled the Democratic Party to endure through the years. In the long run, it is not the way to win elections.

Let me give you an example of what I mean. Last month I made a speech in St. Paul, Minn. Many of the people in the audience were farmers. They had decorated the hall with huge signs that said:

"In Ike we trusted. Now we are busted."

Oh, yes, my friends; the loose talk of 1952 about 100 percent of parity and the glib promises about 90 percent price supports may have won some votes then. But now the chickens are coming home to roost. The farmers know that not only have they been let down—they have also been double-crossed. And you can take it from me—the prairies are on fire. And this duplicity is not only going to backfire on the Republicans in 1956—it is going to haunt them for years to come.

The farmers, of course, are not the only victims of broken Republican promises. There are many others. And don't think the people will forget these broken promises at election time.

I have heard complaints from some of my fellow Democrats because the Republicans are now copying so many items of our program which they once said they were against. But I am not complaining about this. Frankly, I think it is a good thing. I am glad to welcome the Republicans to the 20th century. They have been living in the 18th and 19th.

Sometimes, however, it seems to me they may be overdoing it a little. I am constantly amazed at their claims that they are the real authors and champions of various New Deal and Fair Deal measures. It used to be only the Russians who claimed to have invented everything.

Now that we have come to another presidential election year, the Eisenhower administration has finally come out in support of several other programs that I recommended to Congress when I was in the White House—such as Federal aid to education, better health services, extension of social security, and others. Whether this belated conversion is genuine, I don't know. It looks to me like death-bed repentance. But at least it is a move in the right direction. And I think the American voters will be able to distinguish properly between those who have labored for years for these programs for the benefit and welfare of the people and those who jump on the bandwagon at the last minute for no other reason than that of political expediency.

The thing that worries me most in the political scene for 1956 is the shambles that is being made of our bipartisan foreign policy. I believe in a bipartisan foreign policy. I tried to practice it. I did everything I could to keep foreign policy out of partisan politics. I gave many top positions in the State Department and the Department of Defense to Republicans.

But the Republican politicians brought foreign policy into the 1952 campaign in the most cynical way. And ever since that campaign, they have continued to seek a partisan advantage in the conduct of foreign affairs.

They had attacked our foreign policy so violently in the 1952 campaign, they were stuck with their own propaganda. They had to pretend to change our foreign policy whether the change was good for the country or not.

They began by claiming to "unleash" Chiang Kai-shek, for no reason in the world except partisan politics—and in a state of the Union message at that. And they ended up having to leash Chiang up again in circumstances that made the United States look ridiculous before the whole world. This was not because Chiang was a menace to anyone, but only to save him from disaster—just as I kept the Seventh Fleet in the Formosa Straits to save him from Mao and Chou, not to chain him up.

They cut down on our Armed Forces—in the face of growing Communist strength—so they could claim to reduce Government spending. When they boast about the reduction, they don't tell you that every last nickel of the net reduction came out of our national defense—but it did.

The reduction in our Armed Forces was accompanied by talk about "massive retaliation," which meant bluff and bluster with atomic weapons. This didn't frighten our enemies, but it surely did scare our friends.

Democrats were systematically excluded from participating in the administration of foreign policy, because the Republicans had made political capital of general charges of treason against the Democratic Party, and they wanted to be in a position to do it again.

And now, the Secretary of State comes along in an authorized interview, boasting of his doctrine of massive retaliation, saying that we were brought three times to the brink of atomic war, describing diplomatic defeats as diplomatic victories, claiming advance where there has been withdrawal, and success where the plain result has been failure—and on top of all this, so twisting the facts of history that he brought dishonor to our national reputation for truth and honesty. He now wants to change "brink" to "verge"—but what's the difference?

What is the reason for all this? Politics, pure and simple. The ignoble and partisan use of foreign policy.

And what are the results? The results have been to dismay our friends, comfort our enemies, weaken the position of the free world, and drive other nations closer to the Communist bloc.

The situation in Europe is more precarious than it has been since 1947. We have lost heavily among the millions of uncommitted people in Asia. We seem to have no strategy for defending the Middle East against Communist subversion. We watch the Communists pour arms into that area—arms that may be used in local wars, unless we achieve a peaceful settlement that will safeguard the independence of the countries located there—both the Arab countries and the State of Israel.

And as the world situation worsens, the Republican leaders continue their frantic efforts to discredit the Democrats, and fail to develop new ideas or policies to deal with these critical situations.

My friends, this is not the kind of bipartisanship I believe in.

I hope that some day the United States may once again have a true bipartisan foreign policy. We don't have one now, and I don't think the best interest of the country is served by pretending that we do.

Remember this—the responsibility for bipartisanship in foreign policy rests squarely on the administration in power. It is impossible for anyone else to bring it about. In that responsibility, the Eisenhower administration has failed.

In these circumstances, where does our duty lie?

I believe that the policies of this administration are leading us into a situation of growing danger where the balance of strength may shift strongly against the free world. This would be a terrible disaster. I think it is our inescapable duty to point out this danger to the American people. If we stand quietly by and let the people think that all is well, then we will share the blame and the guilt. This I am unwilling to do.

I am glad to see that a number of Democrats in and out of Congress have been speaking up on this subject. They are doing a great service to our country.

Our criticism should be responsible. I hope it will have constructive results. But it must be plain, forthright, and persistent. The Republicans will not welcome this criticism and they will do all they can to silence it. They are likely to be pretty nasty about it—and their techniques in that regard are highly developed.

But we should not be deterred or frightened into silence. The national interests involved are too vital for us to fail in our duty.

If the leaders of the Democratic Party—in Congress and out—will speak out plainly and bluntly on this subject in the year ahead, I think the results will be very beneficial. If the American people are fully informed on these matters of life-and-death importance, I have no doubt as to how they will respond.

Bee Photographer Tells of Rescue by Ducks

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, I wish to include herein a column by Mr. Harlin Smith which appeared in the Sacramento Bee on January 24, 1955, entitled "Bee Photographer Tells of Rescue by Ducks." The column provides a gripping eyewitness account of the recent devastating floods in northern California:

BEE PHOTOGRAPHER TELLS OF RESCUE BY DUCKS

(By Harlin Smith)

YUBA CITY, SUTTER COUNTY.—I saw all these houses and cars under water, the cars filled up inside, and you could see Christmas packages floating at the windows. I couldn't see inside the cars. I don't know if anybody was trapped in them or not. There were people on top of buildings, on little islands of high ground, everywhere. A lot of them climbed trees.

PICK UP 34

The duck I was on with three national guardsmen picked up 34 people and took them to safety.

I'll never forget the happy looks on their faces when they saw us. The water was anywhere from 12 to 15 feet deep at the worst spots. There were big signboards almost all under water.

In one large residential section the water was at the rooftops. I don't know what happened to the people there.

Our duck passed over the tops of many cars, you could see just the tops of them below the water. I have no way of knowing if there were people inside.

We had reports of people being trapped in cars but I couldn't see far enough through the murky water to tell.

NEVER FORGET SIGHT

It was a sight I'll never forget. I've seen lots of disasters but this was the most impressive thing I've ever seen.

It was especially heart tugging coming at Christmas. The streets and houses still had

these sodden decorations, hanging. Many of them were still lit. Christmas tree lights in the windows. And all around was desolation.

I boarded the duck at the Yuba City side of the 10th Street bridge from Marysville. When we started, they were just bringing four people to the bridge approach in a rowboat. They were bedraggled, exhausted. They were still frightened. You could see it in their faces.

One woman could still smile, though. "I spent the night in this gentleman's house," she said, "and his wife wasn't there."

AIRCRAFT FILL SKY

As we drove the duck into the water, the sky was filled with every type of aircraft, beginning the rescue work. Amphibian planes, helicopters and light craft.

There were small boats with outboard motors appearing out of nowhere, it seemed.

The city itself looked like nothing but empty buildings and water, water everywhere lapping the sides of the walls.

Lights were still on everywhere. Street lights and in the stores and homes. That's how fast the people had to get out.

PLOW THROUGH WATER

Our duck plowed through the water to people stranded wherever we could find them. We plucked them off doorsteps, high points of ground everywhere. We worked for 6 hours picking them up and ferrying them to the west side of town. From there they were taken by bus to Gridley.

The 34 people we picked up were still stunned, shocked at the suddenness of the flood.

SAFE THROUGH NIGHT

One woman said that when the flood hit, she yelled to her next door neighbor that the water was at the door step, and then started to get blankets and food to take with her family, and by the time they did that and started for the car the water was too deep to leave. Luckily their house was high enough the water only covered the floor by a few inches and they were safe through the night.

Her next door neighbor told me that by the time she gathered up her family and went to the door, the water was too deep for her to leave.

DRIVES SWIFTLY AWAY

One man said he was working on the levee by the place where the Feather broke through. He said he jumped into his car and drove swiftly home.

But by the time he got his family together and started to load the car, the water was already 3 feet deep and he figured he was safer at the house. As it turned out, he was.

RUN TO HOUSE

One of the first ones we picked up was a 72-year-old woman and her grandchildren, two boys and a girl. The youngsters were on the roof and their grandmother on the second floor. The water filled the first floor.

The grandmother said they had to run 150 yards from a car to the house when the water suddenly swept down on them.

One of the boys had a cast on his leg, but he said he ran with the others.

The grandmother said she had to leave $70 in her purse in the car, but 1 boy said he stuffed $100 in his boots when they left the house earlier.

PERSUADED TO LEAVE

At another place a man did not want to leave his dogs. His wife persuaded him they would be all right and he came with us.

We saw a cat up on top of a tree. The water around it was a good 10 feet deep. The cat was curled up all by itself.

There was a box nailed to the side of one house. The water was just under the box. In the box, leisurely scratching himself, was a small puppy.

DANGER OF FIRE

At one house three families, men women, and children, were so glad to see us they left the house with a fire blazing in the fireplace. We had to tell them there was the danger of fire—silly as it seemed with all that water around.

Another woman left her dinner laid out in the kitchen ready to cook. She figured the house would smell something awful when she gets back, but at that point she did not care.

TRAGIC ACCOUNTS

We heard accounts of tragic scenes from the men on other ducks.

In one case a father left his wife and baby stranded in a tree and swam for help.

When the duck got there the tree was empty.

In another account a woman climbed a tree with her baby. Finally her arms were too weak from the cold and exhaustion and the baby fell and was swept about by the water.

Small boats tried to rescue the woman, but could not get near the tree. Neither could the ducks because the current was too swift. The men in the other duck do not know what happened to the woman.

CANNOT GO TO RESCUE

Another thing that hit me and the men in the duck I was in was having to leave two men stranded in a house across a rapid current from us. We had 30 refugees with us and it was too much of a risk to their lives to go after the men.

The two men were waving and signaling for help but we had to leave them. I don't know if they got out.

ONE DUCK OVERTURNS

The water was calm in some places and raging torrents in others. Three ducks were damaged. One was overturned by the swift water. Another was hurled against a telephone pole. The third hit a submerged car.

The duck which tipped over had a refugee inside. The refugee was picked up by a helicopter; the crew was rescued later by another duck.

The rescue work the men on the ducks did was terrific. It was hard, grinding work and dangerous throughout, mainly due to the swift water.

Those men of the 184th Infantry Regiment, national guardsmen, deserve a tremendous hand.

GENERATOR BURNS OUT

Our duck burned out a generator and fan belt and broke down after we had the 34 refugees aboard.

The current was so swift, we had to put all men on the nose of the duck to give the driver traction in steering.

We were in a bad way. We had no radio contact. It looked like we'd have to spend the night, stranded out there, ourselves.

Suddenly, around the corner came another duck—empty, on its way for refugees. He got a load quicker than he had expected.

We transferred our refugees to it, leaving our duck's crew behind, and came out on the other duck.

HARD TO DESCRIBE

When it was all over, I came out with a feeling that—well, it's hard to put into words.

I felt that with all this tremendous damage, how anybody ever came out of it alive—

Well, God must have had a hand in it. I can't put a thing like that into the right words. But that's all I can think.

It must have been Gold's help.

Nutter's 10 Years at International House

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. BOGGS. Mr. Speaker, I am very pleased to insert in the CONGRESSIONAL RECORD a splendid editorial tribute to Mr. Charles Nutter, managing director of International House in New Orleans, La., which appeared in the New Orleans Item for Sunday, February 5.

International House has become a famous institution of the free world. Mr. Nutter has brought to the institution great vision and understanding.

I am particularly pleased to see this tribute, not only because of my great regard for Mr. Nutter but because of my own personal interest in International House.

Back in 1943 I served as first executive secretary of this institution, which is founded on the concept of mutual respect between the peoples and nations operating through private enterprise and not through Government largess. International House has pioneered relations particularly between our country and the republics to the south of us. It has demonstrated the many fields of common interest between our countries and has also opened up new vistas of trade and commerce of great benefit to all of the nations involved.

NUTTER'S 10 YEARS AT INTERNATIONAL HOUSE

Shortly after 8 o'clock last Wednesday morning, Charles Nutter left his home at 4030 Carondelet, walked over to St. Charles and caught a streetcar downtown. By 8:30 he was at his desk at International House.

For Nutter it was just another workday, and we're sure he wanted it that way.

But Wednesday was also his 10th anniversary as managing director of International House—and, it seems to us, an appropriate time to take note of a man who symbolizes the great international program of New Orleans.

Too often we take community leadership for granted—especially when it's by those who eschew the limelight.

But one cannot travel very far in this hemisphere without hearing admiring mention of Nutter and of the ever-expanding International House program which he, William G. Zetzmann, the late Mr. Hecht and a number of other Orleanians have so remarkably advanced.

The Cincinnati Enquirer recently hailed Nutter for having "spearheaded the most imposing trade development plan any city in America has instituted."

He was one of those who long ago recognized our city's destiny as a great port and as a gateway to the hemisphere. During his first residence here he had repeatedly urged that the city take advantage of its potential.

As Fortune magazine observed some time ago, when the New Orleans program was formalized Nutter "was brought back to work it out." That he has done so is, of course, a matter of record. But Nutter is less interested in credit than in results. He works in the present, looking to the future. He is that rare dreamer who performs.

Six years after he envisioned and proposed a Louisiana Purchase celebration, it was a

wonderful actuality, participated in here by President Eisenhower, some 30 ambassadors to the United States and a French mission sent especially for the occasion.

In the last seven year Nutter has organized and directed 23 trade missions to Latin America and Europe and taken part in most of them.

Under his guidance, International House has played a major role in two recent historic assemblies here—the Inter-American Investment Conference and the meeting of the Inter-American Press Association.

James G. Stahlman, Nashville publisher and new IAPA president, said he had never worked with any one man who had done as outstanding a job as Nutter in planning such a session. "There has never been a meeting like it," Stahlman added. Suffice it to say several hundred North American and Latin American publishers and editors returned home singing the praise of our town.

For 20 years before coming to International House, Nutter worked around the world as writer and executive for a press service—in New Orleans and other major United States cities, in Europe and particularly in Latin America.

He has for more than 30 years been a firm believer in, and a dedicated worker for, trade and cultural exchange as the most effective path to world peace.

Charlie Nutter is dreaming and performing more fruitfully than ever. Right now, he is trying to promote a 4-year southwide celebration, with New Orleans as the focal point, to mark Dixie's progress in the 100 years since 1865. It's our guess you'll hear a lot more of this in the months ahead.

As Charlie Nutter begins his second decade at International House, we salute him and we wish him well in the years to come. We in New Orleans are fortunate to have him.

Construction of Government Buildings in Large Metropolitan Areas

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. PELLY. Mr. Speaker, complexities of modern living and transportation have given rise to many new problems with respect to the construction of Government buildings in large metropolitan areas. One of the major problems is that of adequate parking. Some of our large cities have already incorporated parking provisions into their building codes. Unfortunately, however, in the majority of cases no such provision exists. Consequently, except in instances where it is required by ordinance, no parking facilities are required in construction of Federal plants.

The postal department is presently engaged in a large scale new construction program with proper parking furnishing one of the major headaches. Recognizing the seriousness of this problem, I have introduced H. R. 9135, to provide adequate parking facilities for employees and patrons where needed in all recent, present, and proposed construction of postal installations. I hope the distinguished Members of this House will give this legislation serious consideration. Traffic conditions in any of our larger cities are a major factor in any new construction.

A case in point is my own city of Seattle, where the Postal Department has just completed construction of a vast new postal annex to serve this ever-expanding community. This beautiful new facility, a source of pride to employees and patrons alike, has no parking facilities of any kind save the surrounding busy streets and avenues. This creates an almost impossible situation for literally scores of postal employees who for one reason or another are compelled to use private cars in going to and from their jobs. An equally bad situation is imposed on the patrons whom this station was designed primarily to serve. Every attempt made thus far to solve this problem administratively has failed; hence the recourse to legislative action. If this legislation receives the approval of Congress, which I believe it richly deserves, an important step forward will have been taken toward solving a portion of the complex traffic problems besetting our modern cities of today.

Federal Disaster Insurance

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. FORAND. Mr. Speaker, under leave already granted me by the House I include herewith a statement I made at the February 1, 1956, hearings of the House Banking and Currency Committee, urging prompt enactment of legislation providing for a Federal disaster program.

The statement and the discussion I had with the committee follows:

Mr. Chairman and gentlemen of the committee, unless you have lived through a flood or a hurricane you cannot appreciate what an ordeal it is.

You read about it and see pictures of it and your sympathies are aroused, but to use the vernacular, "you ain't seen nothing."

Gentlemen, I tell you from personal experience, it's a nightmare. Your morale goes to bits and your spirit leaves you. You feel for the moment that the end of the world has come.

That, in a few words, is what happened to us in Rhode Island last August and again in October. It had also happened on several occasions in the past. In 1954 the southern part of the State was hit badly. In 1955 it was the northern part.

I have here a booklet which records the 1954 hurricane disaster, and a sheet of pictures on the 1955 flood. I ask you to study these. They will move you, I am sure. Fortunately, we of New England are a hardy type of people. We soon regain our composure and set outo reestablish our homes and our businesses, hoping that, without too much delay, the Federal Government, the only agency able to do so, will take the necessary measures to control flood damage in the future and establish a program of Federal disaster insurance, at reasonable rates—and when I say "reasonable rates," I mean ranging anywhere from 50 cents to $1 a thousand. I say that because I feel that the Federal Government itself is the only agency that can help in this case, and with full realization that it would be a cost to the Federal Government, a cost to the taxpayers. But, after all, the taxpayers are now footing the bill to a great degree when the Federal Government steps in to give relief in this type of case.

I hope that the rates will be reasonable and within the means of those who may in the future be the victims of natural disasters so that they may be compensated to a degree for their losses and be enabled to rehabilitate their homes and their businesses rather than have to seek public relief.

Private insurance companies will not issue policies against flood or other water damage. It is, therefore, the responsibility of the Federal Government to do it, in view of the fact that natural disasters know no geographical lines.

When I speak of natural disasters, I mean floods, hurricanes, earthquakes, dust storms, tornadoes, cyclones, and so forth, the type of catastrophe that the President proclaims to be a disaster and orders that the facilities of the Government be used to bring relief.

On January 3, I introduced the bill H. R. 7897, to provide for Federal disaster insurance and reinsurance.

It represents a great deal of study and an effort to be practical in approaching a subject which I consider most important and most urgent. And here I want to pay tribute, as Mr. Dodd did, to the legislative counsel's office, because they went out of their way to try to put into legislative language the ideas that I advanced.

My bill is intended to have broad appeal and thus bring in a larger amount of premiums to sustain the fund that if the coverage were restricted to one particular type of disaster, such as a flood or a hurricane.

Disasters of different types strike different parts of the country and for that reason I feel that all the potential victims of disasters are entitled to, and should be given, an opportunity to purchase this type of insurance.

In brief, the bill provides insurance coverage against natural disasters, as defined in the bill itself, for industrial and commercial buildings, homes and household effects.

Household effects, as you will note in section 3 (11) on page 6 of the bill, is defined to mean furniture, furnishings, and equipment necessary and appropriate for the operation of a household. It does not include objects of art nor antiques, nor negotiable papers or bonds, or the like

No one may obtain insurance or reinsurance under the provisions of this bill except to the extent of his insurable interest, nor if such insurance is available to him from other sources at reasonable rates.

The potential liability of the United States is limited to not to exceed $500 million at any one time, except that on July 1, 1957, and on July 1, 1958, the President may, in his discretion, increase it by another $500 million.

The bill provides that the Administrator of the Small Business Administration shall administer the program. From time to time he is to determine the aggregate amount of such insurance outstanding in each geographical area of the United States and take into account the needs for such insurance in each area.

He shall establish premium rates at the lowest practicable level, taking into consideration the risks involved, and the desirability of providing such insurance at reasonable rates shall be uniform throughout the United States.

Insurance contracts written on household effects are limited to $3,000, with the first $50 of damage deductible.

On real estate the payment of claims would be in full for the first $15,000 and 50 percent of the excess over the first $15,000, with a deductible clause of $100, but the maximum

claim allowance on a single item of real estate would not exceed $250,000.

Through an oversight there is nothing in this bill providing insurance coverage of inventories.

I respectfully urge your committee to include inventories in any bill you report out on this subject.

To cite an example of the need of disaster insurance coverage of inventories, let us take the city of Woonsocket, in my district.

Woonsocket has a population slightly in excess of 50,000 with 120 industrial firms providing employment for 11,000 workers.

In the 1955 floods 34 of these firms, employing over 6,000 workers, more than half of the city's work force, were victims of flood damage.

The losses to these firms ranged from a few thousand dollars to a maximum of $750,000.

The aggregate damage to industrial firms—including real estate, machinery, and inventories—was estimated at $4,500,000.

Commercial losses, while more widespread and involving a far larger number of individual firms were lower in dollar value but equally devastating. Nearly 200 commercial firms, many of them small owner-operated businesses and a great majority comprising retail stores, were reduced to almost total loss.

In many instances, accumulations of a lifetime of hard work were entirely wiped out. Losses to these businessmen ranged from a few hundred dollars to well in excess of $100,000 in a few instances. While no exact figures are available, these losses are estimated to aggregate in excess of $2 million.

These amounts do not seem large when we think of the billions in our national budget but I assure you gentlemen that in view of the serious economic situation that has existed in Woonsocket for the past few years, due to the depressed condition of the textile industry, the loss of some $6 to $7 million of property in this area is a most severe loss.

Disaster insurance to communities of this type is really a must if we are to avoid ghost towns.

Getting back to the bill—

The Administrator would issue regulations relative to adjustment and payment of claims.

He would be authorized by contract or otherwise to utilize the facilities, services, information and agencies of private insurers.

If a claim were disallowed the claimant would have a year to institute action in the United States District Court for the district where the property is located or in the Court of Claims.

A Disaster Insurance Fund would be established in the Treasury of the United States, into which would be deposited all premiums and appropriated funds and interest on these funds.

Claims would be paid out of the Disaster Insurance Fund in accordance with awards by or under authority of the Administrator.

Administrative expenses would not come out of the fund but would be paid out of appropriations for that purpose.

The administrator would appoint an advisory committee of not less than three experts in the field of insurance to advise him with respect to the execution of his functions under this act.

The Administrator would report to the Congress each year, in February, on the operation of the act and recommend legislation needed to improve it.

Persons making fraudulent claims would be liable to a fine of not more than $10,000 or imprisonment of not more than 5 years, or both.

The authority, responsibility, or function of the Administrator would not be affected by the termination of the Small Business Act. He would continue as the Administrator of the Federal disaster insurance program.

That, Mr. Chairman, is my statement.

The CHAIRMAN. Mr. FORAND, I know how interested you are in obtaining some help for your people who are in distress, and I think we all share that desire, but don't you think it would be absolutely essential, when we go back and tell our people that we have some help for them, to let them know just exactly what they would have to pay for this insurance?

Mr. FORAND. Very definitely, Mr. Chairman.

The CHAIRMAN. That is one of the main questions. I don't think we can sell them the insurance unless they know what they are going to pay.

Now, the administration witnesses have appeared, and they have introduced a bill, and they say that they cannot tell us the amount people would have to pay for this insurance, that it is purely problematical now. However, they did make 2 surveys, in 2 communities, and the cost in those 2 communities—which I suppose were typical communities—ranged from $115 to $620 per thousand. Now, the insured would have to pay from $69 to $372 per thousand dollars for insurance. What do you think about that?

Mr. FORAND. Mr. Chairman, I personally think the sponsors of that type of legislation are thinking of self-sustaining programs. I take a very different view. I believe this program should be sponsored and paid for by the Federal Government, in participation with the people who are going to be insured, and it is for that reason that I suggested that we fix the rates arbitrarily, between the brackets of 50 cents a thousand to $1 per thousand, realizing that the Federal Government may eventually have to pay out some money, and for that reason I suggest the appropriation of $500 million to start with.

We must realize that each year we have a disaster fund that we in the Congress vote to the President. That disaster fund becomes exhausted, and we vote additional money. Why would it not be wiser, instead of having to continually make appropriations for that purpose, to set up a definite amount of money, $500 million to start with, sell the insurance contracts at the rate where we realize we may be losing money, make it 50 cents to a dollar a thousand, but bearing in mind always the thought that if you have a low rate it is going to appeal to more people. And if you have a wide base, such as I suggest here, you will operate practically on the same basis that the war risk insurance operated on. You will recall we were selling war risk insurance for about $10, and working through the insurance brokers and agencies, each one would receive a dollar for writing a policy contract for the Government.

That program made money. I don't have the figures here, but with your permission I should like to insert them in the record, showing that the war-risk insurance that we had in World War II actually made money for the Government, and unless we have a broad base—and that is the principal reason why I include all these natural disasters—unless you have a broad base the Government will have to foot the major portion of the bill, but through this suggestion it is my thought that people will be hungry to purchase that type of insurance, particularly those who have been the victims of disasters. The premiums collected would lower the cost of the program to the Government.

Mr. MULTER. Mr. FORAND, the figures on war-damage insurance, premiums collected, amounted to this: We collected about 250 times as much in premiums as we paid out. That is because we had no damage.

Mr. FORAND. I agree with you a hundred percent, but the appeal was there. Now, the damage has been done in these cases, and I believe there will be more appeal. There will be more appeal to the people to try to purchase this type of insurance.

The war-risk-insurance figures referred to above are as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, D. C., September 26, 1955.

Hon. AIME J. FORAND,
House of Representatives,
Washington, D. C.

DEAR MR. FORAND: In response to your questions on war-risk insurance, the following information is submitted:

1. How much was collected by the Government in premiums for war-risk insurance during World War II?

The Maritime Administration reports that total premiums collected by the Government during World War II for war-risk insurance amounted to $544 million.

2. When was the war-risk agency dissolved?

General administration of war-risk insurance was handled by the Wartime Insurance Committee which was established under the Maritime Commission on December 19, 1941. By Executive order of February 7, 1942, the Wartime Insurance Committee was transferred to the War Shipping Administration. On April 7, 1942, the Administrator of the War Shipping Administration appointed a Director of Wartime Insurance who took over the responsibility for administration of war-risk insurance. By the act of July 8, 1946, the War Shipping Administration was terminated and its functions were transferred to the Maritime Commission on September 1, 1946. By this act, all unobligated funds remaining in the marine and war risk insurance fund on December 31, 1946, were to be covered into the miscellaneous receipts of the Treasury.

3–4. How much money was left on hand at the time of dissolution? What became of this money?

The Treasury Department reports that the remaining balance of $57,751,884.92 in the marine and war risk insurance fund was carried into the surplus fund of the Treasury on June 30, 1948.

Sincerely yours,

ERNEST S. GRIFFITH,
Director.

The CHAIRMAN. I believe I made a misstatement when I cited what the cost would be. That was not per thousand dollars. That was $69 for $10,000 and $372 for $10,000. That was the range. Not per thousand dollars. I would like to make that correct.

Are there any questions?

We are very glad to have your views, Mr. FORAND, and we want your assistance.

Mr. FORAND. Mr. Chariman, I am deeply appreciative of the fact that this committee has allowed me to appear, and I also appreciate the fact that each and every member of this committee is sincerely interested in this subject. We all realize it is a difficult problem to solve, but it is one that must be solved, otherwise our people are going to be wiped out completely in several places, and the Lord knows that our public welfare rolls are swelling too fast as it is. We don't want to add to that.

The CHAIRMAN. I know what it will do. In my section it keeps coming.

Mr. FORAND. You have had it.

The CHAIRMAN. We have had it. It has made slums of cities, destroyed property, and if we can give them some relief it will not only relieve them of the effects of disaster, but will also relieve their minds from the apprehension of floods that are coming.

Mr. FORAND. I believe, Mr. Chairman, there is one thing we must realize, and that is this is a type of program that cannot be made self-sustaining, and that the Federal Government will have to appropriate money if we are going to render this type of service.

Mr. MULTER. Mr. Chairman, I have a question.

Mr. FORAND, before you go, and I think the other Members of Congress here ought to know some of the difficulties we are meeting in considering these problems. Most of us who are concerned with the problem have tended to put in bills of one type. All of us were agreed that that was the approach to this type of problem. Of course, the easy answers, let us cure the situation by proper flood control, and so forth. But that is a long-term program, which is going to cost a lot of money, and eventually it will have to be done. But some of us are beginning to feel that this is not the right approach, and I am one of those who introduced a comprehensive disaster-insurance bill. Your bill points it up. Let me indicate to you why.

You recall the national life insurance we had. We found it was costing more to administer the program than we were paying out. Not only premiums collected, but actual administration of the program cost more than we were actually paying out in liabilities. So we decided instead of having all that administration we would give each man a policy, and the Government would make the payment. We were saving money by doing that. We may have the same situation here.

In the case of the crop-insurance program, in the first 7 years we lost $71 million. It is still not a self-sustaining program. In the last few years we have lost $2 million. And that is limited to loss, and to areas, and on a selected basis, and insuring only certain crops and only to the good farmer. In other words, if a farmer has a history of not being able to do a good farming job he cannot get the insurance.

Mr. NICHOLSON. Will you yield?

Mr. MULTER. I yield.

Mr. NICHOLSON. You are talking about flood control, long range and everything, but Representative FORAND and I don't have those troubles. Our trouble is from hurricanes and salt water. That is where our trouble comes from. It is not flood control because our rivers apparently take off all the water and dump it into the Atlantic Ocean.

Mr. FORAND. Unfortunately, last August we did have floods.

Mr. NICHOLSON. Well, we had them in Massachusetts, but we also had tidal waves and that is what we are interested in.

The CHAIRMAN. When these disasters occur America has always responded to the necessity of her people. We have aided not only our own people but we have sent immense sums to assist other nations. And I think we will have to take part of the responsibility if we are going to get any relief.

I feel as you do, Mr. FORAND, on the subject. It has to be in some form.

Mr. FORAND. It is a realistic approach, I consider, and that realistic approach is the fact that the Federal Government will have to bear the greatest burden. We are doing it indirectly anyway, so why not let these people feel that they are paying a part of the risk, paying for a premium on insurance for a possible risk, and if you broaden your base by including the several disasters throughout the country, of one type or another, I think the appeal for the purchase of this insurance will be very great.

Mr. MULTER. Have you any idea what it would cost per year to administer this program?

Mr. FORAND. I have not.

Mr. MULTER. Will you tell us your thinking as to why you selected the Small Business Administration to administer this program rather than an independent agency or some other agency?

Mr. FORAND. It would be a separate agency. The Administrator of the Small Business Administration is also the administrator of disaster loans under the present system. That is why he was selected.

But if you have noticed, there is a clause in this bill providing that even if the Small Business Administration is wiped out at any time this would be a continuing program, and the Administrator would continue his functions as the administrator of the disaster insurance program.

Mr. MULTER. But I am wondering why you pick an agency that has had no insurance experience as against an agency which has had insurance experience; for instance, the Housing and Home Finance Agency, which has had tremendous insurance experience. They are taking policies all the time, and are adjusting policy losses, and have an insurance department as part of the Agency now. The Small Business Administration is a lending agency, even under the disaster loan program.

Mr. FORAND. That is correct.

Mr. MULTER. Why should we give it to that kind of an agency rather than another agency? If you give it to them they will have to set up a new bureau. Either set up an independent agency or give it to an agency of Government that has had experience in the field.

Mr. FORAND. I am not wedded to this idea, but I felt that when I came before you I should have something concrete to offer. Anything that the committee does to carry out the principles underlying my proposal would be very acceptable and very agreeable.

Mr. MULTER. I am in agreement with you that if you can sell this insurance at a dollar a thousand, you are going to have a lot of takers in the disaster areas. I doubt if you will get any takers if it is on a voluntary basis in the areas which have not yet been visited by floods. As testimony indicates, the fellow on top of the hill is not going to take any flood insurance, but the man down at the bottom of the hill is going to have to pay a high rate.

Mr. FORAND. The fellow at the top of the hill may be struck by a hurricane.

Mr. MULTER. That insurance is presently available to him.

Mr. FORAND. To a very limited degree. I happen to be an insurance broker, and I can tell you that, if you read the fine print in your policy, you will find you don't have the coverage you think you have.

Mr. MULTER. Because in Rhode Island you are in what is now the hurricane area. But you could have gotten that insurance very cheaply 20 years ago, because the area had not been visited by hurricanes. The same as New York. In those days the companies were giving it to us for 10 cents per $100.

Mr. FORAND. That may be true. But don't forget the publicity in the newspapers and over the radio and television have stirred up thinking in the minds of the people in every section of the country.

Mr. MULTER. Let us consider one other phase of your program as you have outlined it, having in mind that you would fix a uniform rate of $1 per thousand, with a maximum liability of $500 million. On that basis you can collect $500,000 a year in premiums. The direct damage only as a result of just the August 1955 floods, in the New England area, was well over half a billion dollars.

Mr. FORAND. True; just direct damage.

Mr. MULTER. Direct and indirect, $1,600,000,000, just as a result of that flood.

Mr. FORAND. But how much money did the Federal Government spend by way of relief work, and is it still spending, as a result of that? Charge that amount against the losses that would be paid under these policies and I think you will find that you have reduced the cost of the insurance program by quite a margin.

Mr. MULTER. As you compare what happened there, just taking one flood, any one of the floods we have had in the last 12 months, as against this kind of a program, I think it would be much smarter for us to say to the people, "In the event of a loss come in and prove your damage, the Government will pay it to you," instead of setting up an insurance program and getting not even the cost of administration of the program out of it. We would only be fooling the people.

Mr. FORAND. Well, Mr. MULTER, I don't care how you do it. I want relief for the people. That is the important thing. And I know that is what you are trying to work out.

Mr. MULTER. We would like to give it to you.

Mr. FORAND. Thank you very much.

The CHAIRMAN. We are glad to have your views, Mr. FORAND. We will consider them in executive session.

Mr. FORAND. Thank you very much.

Thomas Alva Edison, Great American Scientist and Humanitarian

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KLEIN. Mr. Speaker, February 11 is the birthday of the late Thomas Alva Edison. I would like to include in the RECORD an editorial written by Harry H. Schlacht for the East Side News in commemoration of the 109th anniversary of this great benefactor of mankind. I am sure my colleagues will enjoy reading it:

THOMAS ALVA EDISON, GREAT AMERICAN SCIENTIST AND HUMANITARIAN

(By Harry H. Schlacht)

They are truly great, who as the centuries slowly pass, are found by each succeeding generation nearer to the heart of human love. Such a man was Thomas Alva Edison. On February 11 we commemorate the 109th anniversary of his birth. We salute the American and patriot. We honor the scientist and humanitarian. We hail the greatest benefactor of mankind.

His life is the story of progress. His ideal was service to humanity. His monument is in every home. His epitaph is written in every heart.

He was a precious asset to the world. He was the universal lamplighter. He was the prophet of the machine age. He was the father of American industry.

He gave 1,100 inventions to mankind. He gave light and understanding to the world. He gave to humanity the greatest ascendancy over the forces of nature. He gave us the dawn of a new civilization to man.

He was a mighty conqueror. He conquered the elements. He flashed thought over the continents. He garlanded cities in light.

He struck the shackles of drudgery from the backs of millions. He lighted the pathway of art and science and industry. He has made light a social force. He has brought happiness to the humblest.

Wherever there is an incandescent light, wherever there is a phonograph, wherever there is a radio, wherever there is a motion picture, silent or sound, Edison will live. He stands as a shining symbol of America. He rises in glorified silhouette against the horizon of the ages. He symbolizes electricity and good will. He will live forever in sound, light, and electric power.

Thomas Edison has never created an electric light which has shone with greater brilliance and beauty than his own noble

character. It is recorded that before he lapsed into the final sleep, his face became illumined, as from an inner light. Opening his eyes, he said to those about him: "It is very beautiful over there."

It would seem that this greatest of all apostles of light had caught a foregleam of that splendor which lies beyond the shadows of the earth. He died as he lived. He was joyous and intrepid. He was dauntless in mind and heart. He was indeed the supreme pathfinder of the last half century.

Let us recall some of his famous utterances:

"Genius is 1 percent inspiration and 99 percent perspiration."

"The greatest of all studies is human nature."

"The world owes nothing to man, but every man owes something to the world."

"Until man duplicates a blade of grass, nature can laugh at his scientific knowledge."

"From his neck down a man is worth a couple of dollars. From his neck up he is worth anything that his brain can produce."

"The thing with which I lose patience is the clock. Its hands move too fast. The only time I become discouraged is when I think of all the things I would like to do and the little time in which to do them."

If Thomas Alva Edison could speak to us today, he would say: Let us be American. Let us be loyal to our country. Let us adhere to the principles of personal initiative. Let us urge free cooperation among all classes of citizens. Let us work for the good of all which has made our Nation the hope of the world. Let us in spite of clouds and darkness and difficulties have faith. Let us go forward.

Chautauqua, N. Y., Leads Farm Income in New York State

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. REED of New York. Mr. Speaker, I am very proud of the counties in New York State of which I have the honor to represent. The farmers rank the very highest in skill, training, and production.

I want to call attention particularly to the record made by Chautauqua County, inasmuch as it leads the income for the whole State of New York. In this connection I am inserting an article which appeared in the Jamestown (N. Y.) Post-Journal of February 6, 1956:

The New York State Commerce Review, just issued by the New York State Department of Commerce, and called to our attention by Seidman and Seidman, shows that in 1954 Chautauqua County's farms led every other county in the State with its $6,600,000 income. While the 1955 figures are not available a similar trend is anticipated.

Nearest county to Chautauqua in farm income was Orange, with $6,200,000. Broken down into farm production areas under the new measuring device of the department for gauging area consumer markets the survey shows the Rochester area, with nine counties included, far ahead of all other upstate sections with a total farm income of $36,500,000. Chautauqua County is bracketed with Cattaraugus and Allegany under the heading "Southwest Gateway." Cattaraugus County's income was $4,100,000, and Allegany's $2 million, giving this group a total income of $12,700,000.

Under the heading of income from wages this county ranked 11th in the State in 1954 with a total of $165 million. Leading us in wages outside the metropolitan area were Broome, Albany, Schenectady, Dutchess, Orange, Oneida, Erie, Niagara, Monroe, and Onondaga, a comparison that reflects mostly the fact they contain many large cities and consequently many more large factories.

Chautauqua County also rated 11th in the State in business and professional income with $15,900,000, the same 10 counties being ahead of us.

Erie County led the State outside New York City on a where-earned basis with a $1,952,000,000 income. Of the $35,100,000,000 intotal personal income $21.5 billion was earned in the five counties of New York City, although many of those working in the city lived outside of it. Nine hundred million dollars was earned in the State by persons living outside it.

Although citing no tables the survey declares overall business activity in the State during 1955 was at an all-time high, establishing the year as the best on record.

Opinion Poll Results

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. CORBETT. Mr. Speaker, during my years of service in the House of Representatives, beginning in 1939, I have regularly conducted polls in my congressional district of public thinking on vital national issues. These polls have been in the form of a printed questionnaire, requiring simply yes and no answers, mailed to registered voters in my district, regardless of their political affiliation.

Response to these questionnaires have always been excellent. The tabulated results, which virtually constitute a referendum of the district, have proved of enormous value to myself and, I hope, to my colleagues in the Congress.

My congressional district is probably as representative and contains as many varied interest groups as any in the Nation. It has a high concentration of labor, white-collar workers, small business, large industries and some of the finest farm lands found anywhere. Many nationality groups reside therein and the Negro population is considerable. The district includes a thickly populated section of Pittsburgh and many large and small residential towns in northern Allegheny County and extends to important rural areas.

The percentage tabulation of the answers on this latest poll are included below without comment. I trust they will prove as interesting and informative to all who study them as they are to me.

POLL RESULTS

1. Is a tax cut more appealing to you than a balanced budget? Yes, 15 percent; no, 83 percent; no opinion, 2 percent.

2. If a budget surplus is apparent, would you prefer a tax cut to debt reduction? Yes, 29 percent; no, 68 percent; no opinion, 3 percent.

3. Should the United States resist with arms Communist aggression anywhere the people attacked desire help? Yes, 52 percent; no, 38 percent; no opinion, 10 percent.

4. Should the $25 billion interstate highway program be financed with a combination of increased use taxes and bonds? Yes, 67 percent; no, 22 percent; no opinion, 11 percent.

5. Would you object to paying 4 cents, instead of 3 cents postage, for nonlocal first-class mail (ordinary letter)? Yes, 26 percent; no, 73 percent; no opinion, 1 percent.

6. Do you think we are moving with satisfactory rapidity to establish full civil rights for everyone? Yes, 80 percent; no, 15 percent; no opinion, 5 percent.

7. Do you think we are going too far, too fast with the reclamation and irrigation program? Yes, 25 percent; no, 59 percent; no opinion, 16 percent.

8. Do you believe that the proposed $4½ billion foreign-aid program should be cut 25 percent or more? Yes, 77 percent; no, 16 percent; no opinion, 7 percent.

9. Should the Government encourage and guarantee private health insurance programs? Yes, 47 percent; no, 47 percent; no opinion, 6 percent.

10. Do you agree that the administration's farm-price-support program is an improvement over previous programs? Yes, 70 percent; no, 15 percent; no opinion, 15 percent.

11. Eisenhower says our defense preparations are adequate. Do you agree? Yes, 68 percent; no, 19 percent; no opinion, 13 percent.

12. Do you believe that Eisenhower can and should stand for reelection? Yes, 64 percent; no, 22 percent; no opinion, 14 percent.

The Weekly Newspaper Editor

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. HÉBERT. Mr. Speaker, I certainly have never concealed the great admiration which I have for the ability of Bob Stewart, editor of the Westbank Herald, published in New Orleans and one of the finest weekly newspapers published anywhere in this country. I have even been moved on occasion to compare him to William Allen White and if there was ever any doubt about the justification of such a comparison it should be removed after reading one of Bob Stewart's latest editorial contributions entitled "No Apologies."

In this editorial he gives an unmatched appreciation of what the weekly newspaper editor should be. This editorial is a human document which should take its place alongside some of the finest editorials which Bob Stewart has written and for which he had won Freedom's awards.

In the recent gubernatorial campaign in Louisiana, Editor Stewart supported one of the losing candidates with vigor and energy and opposed the successful candidate with equal characteristic vigor and energy. There is no halfway mark with Bob Stewart. It is all the way or nothing. That is the way he plays the game and that is the way he writes. When he lost he did not sulk and surely did not back a fraction of an inch. In-

stead he wrote this editorial "No Apologies" and even those who do not agree with him in his political views and actions, in all fairness, must admit that here is an editor with courage and conviction. Although the editorial is directed to the local situation at hand, I am bringing it to your attention because it so well applies to any weekly newspaper editor anywhere a Main Street exists. Here it is:

NO APOLOGIES

There is no ivory tower of solitude to which the editor of a weekly newspaper may retire after saying his say and speaking his piece. Unlike the editorial writers of great metropolitan dailies who remain, more or less, in anonymous background, the weekly editor must mingle with the crowd and bear the plaudits and brunts with equanimity. Praise or criticism is accepted as part of his job. He would have it no other way.

By the same token any weekly editor, who is worthy of his salt, becomes immune to the barbs, the jibes, the accolades—and, sometimes the insults, of those who may agree or disagree with him.

For this would be a sad world, indeed, if an editor were influenced by public opinion and disregarded the force and beauty of truth. It would be almost as bad for those who disagree with him, as it would be for the writer. For if this were true then the editor would prey upon the dream world of fancy in which most of us like to live, and he would become a weaver of fairy tales.

It isn't that a weekly editor is an unusually brave man, or that he possesses less the weaknesses of the flesh and more of the virtues, but it is simply that he has a job to do, and he takes pride in this job. It isn't that an editor has less sensitiveness to barbs and more composure in the face of criticism because like all other men he cries for affection, sympathy, and understanding—when there is so little in the world. But he knows that unless he speaks the truth he is a fraud. He knows that if he veneers and varnishes over the facts he practices hypocrisy.

An editor should never compromise truth with half-truth or fact with fancy. If he is a good editor and worthy of your leadership he must lay the truth bare, although it be harsh and irritating. And because there is no compromise between that which is right and that which is wrong he cannot and never will apologize, ingratiate, or excuse himself. Truth needs no apologist no matter how unpalatable the dose. But the tonic always seems to cure us of the ills of illusionment.

No ivory tower we say. No place of solitude. Who wants an ivory tower? Who wants solitude? The greatness of this life is in the living of it. Every breathing moment of it. Not in avoiding the collisions of disagreement, or apologizing for truth.

Remember, an editor is like that good Admiral Farragut, who said, "Damn the torpedoes, full speed ahead."

And also like the great bard who said, "The play's the thing." But we also add, "Aye, there's the rub."

Get Mission 66 Rolling

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DAWSON of Utah. Mr. Speaker, at long last, Congress has been presented with a long-range and realistic program to protect and develop our national parks and monuments. This program is long overdue, and President Eisenhower, in recommending this development, deserves the praise and support of every American.

Need for such action is pointed up by the situation in Utah. In my State, there are five national monument areas, totaling hundreds of thousands of acres of magnificent, unequalled, scenic beauty. All of this areas has been a part of the national park system for nearly 2 years, yet there is within this area not 1 mile of surfaced road. As I said recently in a letter to the Department of the Interior:

If these areas are worth reserving, they are worth being seen.

I commend to Members of Congress the following editorial from the Salt Lake Deseret News:

GET MISSION 66 ROLLING

It takes a farsighted and courageous man to look at the statistical history of our national parks, to face realistically what those statistics mean for the future—and then to do something about it.

Conrad L. Wirth, director of the National Park Service, has shown himself to be such a man by the comprehensive, long-range program he has given Congress for park and monument development.

This is the long-awaited Mission 66, aiming for an adequate national parks system by 1966. It is to be hoped Congress will have equal courage and vision to get started on it and follow through.

These are the statistics that stagger the imagination and that might well discourage the timid: From the time they were established in 1916, visits to the national parks doubled every decade up to 1941. Up to that point, the National Parks Service did a reasonably good job of keeping park facilities equal to demand. Then came the war, which ended all development. At its end, the pent-up vacationing energies and spending power of Americans broke out in an astonishing flood of visitors. By 1954, 48 million tourists were tramping over trails and bulging lodges, cabins, and campgrounds whose capacity was 20 million at the most. Deterioration was inevitable of facilities and in some cases even of the scenery itself.

The flood continues to rise. Increasingly shorter workweeks and longer vacation periods made the use of leisure time one of American's great future problems. The national parks will bear a tremendous share of the burden. The estimate that by 1966 there will be 80 million visitors a year to the parks seems a modest one.

Obviously, a tremendous and expensive task faces America in getting ready for such a flood. The $66 million President Eisenhower asked for the National Park Service this week is only the beginning. He will ask increasing appropriations for the next 10 years.

Should we undertake such a burden?

On a cold cash basis, the answer must be yes. The natioanl parks are the major touring destinations of the American public, which is spending $16 billion a year on pleasure travel. Exactly how much of that spending is stimulated by the parks is difficult to say, but Yellowstone visitors in 1954 spent $20 million in and immediately around that park alone—not counting expenditures coming from and returning to their homes. The Bureau of Internal Revenue estimates that of every dollar spent in America, 25 cents ends up in some form of tax. If 1954's 48 million park visitors spent an average of $10 apiece—and this is conservative—the income in tax receipts was in the neighborhood of $120 million. An investment of this magnitude is worth preserving and developing.

But the real value of these forests and lakes and mountains, these historic shrines, these natural wonders and relics of antiquity, is not to be measured in dollars. As Mr. Wirth told editors in Washington some months ago, these are the shrines to which Americans can come and leave, knowing within their souls that "This is my country, and it is good. These are my people, and they are worthy." America cannot neglect this source of strength and inspiration.

Utahans know all this; we live among some of the most spectacular real estate in the national parks system. We appreciate the increased appropriations requested to improve facilities and open up new country in our national parks and monuments. We are in a position to know how sadly this development has been neglected.

But Mission 66 is not a matter of pleasing the localities in which national parks and monuments happen to be located. These resources belong to all Americans. The visitors to them come from all America.

All Americans should be—and, we believe are—willing to pay the cost of preserving them for our own use and for future generations.

Hearings on the Administration and Effects of the 50–50 Cargo Preference Act

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. PELLY. Mr. Speaker, the House Merchant Marine and Fisheries Committee, of which I am a member, has been holding hearings on the administration and effect of the so-called 50–50 cargo preference act. Certain foreign governments have objected to this legislation and our State and Agriculture Departments seem to support their position. On the other hand, the Commerce Department and the Maritime Administrator state that the very existence of our merchant marine depends on this law.

Since our defense is dependent on the maintenance of an adequate active merchant marine and since the objection to the cargo preference act is ideological, I have suggested a substitute. I am having legislation drawn which would substitute a fair labor standard provision for the preference. This would provide that all Government-financed cargoes would have to be transported in vessels regardless of nationality which are manned by crews whose rates of pay and working conditions conform to approved American standards. Thus, my legislation would apply the Davis-Bacon theory to Government-financed cargoes as it does to federally financed construction.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Middle East Situation

SPEECH

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. SCOTT. Mr. Speaker, this is not a new subject. Ever since the end of World War II and the coming into being thereafter of Palestine as the State of Israel, there have existed tensions and controversies in this area. During that period, when the Secretary of State was Mr. Dean Acheson, many of us urged on the then Secretary of State the importance of the recognition of the integrity of the new state and many of us opposed plans for the shipment of arms and aid of one kind or another to various of the Arab States.

The other day I came across a headline of the year 1950. That headline said: "Scott Raps Acheson on Arab Arms Aid."

It did not get me anywhere, and I have about come to the conclusion that attacks on Secretaries of State, be they Mr. Acheson or Mr. Dulles or anyone else, probably will not be as effective an approach as the continuing logical presentation of the reasons why we believe that the preservation of the integrity of the State of Israel can be achieved by preventing the growth of an imbalance in arms between Israel and the Arab world, at least on a temporary basis, but can only be permanently achieved by the negotiation of peace between the parties to this controversy in their troubled area. These negotiations have a better chance of success if promptly and vigorously pursued.

Together with several other Members of Congress, and representing 40 Republican Members of Congress, we called the other day on Secretary Dulles, having presented him with a letter which I am including in the RECORD, stating our views. Those views included our belief that there should be immediate shipment of arms to Israel to counter the Communist activity in the area, and the shipment of arms from Soviet satellites to Egypt. Those views also included our concern over the resettlement of the refugee problem, the Jordan Valley development; but most of all they concerned means by which we might preserve the peace of the area through the implementation of the Tripartite Pact or by use of the framework of the United Nations if, in proceeding within the framework of the United Nations, we would have a reasonable hope of success.

We talked to Secretary Dulles and from that talk emerged several important developments. In the first place, in an editorial in the Philadelphia Inquirer of January 27, I noted that the Secretary of State at that time had implied that it might be months before a decision would be reached on the arms bid. I think it is real progress to be able to report that peaceful negotiations looking toward peace are now presently being undertaken; that those negotiations are with other members of the Tripartite Pact and presumably with other nations; that as one member of this delegation said to the press after leaving Mr. Dulles, it was expected and the clear implication was received that some determination which would permit the Secretary to make some further announcement could be expected in about a month. This is a great improvement over previous reports that decision might be delayed for many months. If we have succeeded in advancing the time limit in that degree. I think that is an important contribution. We have not changed our mind. We still think that arms to Israel to counter this imbalance are necessary. But the position of the Secretary is that he should be given an opportunity to work out peaceful solutions on the basis as suggested in our letter particularly through the implementation of the Tripartite Pact, the guaranty of existing frontiers, as we suggested, and other methods, including the increase in the number of persons engaged in neutral patrols along the borders.

It is, I think, fair to state that it would be the Secretary's opinion that time is needed to work out some of these problems. Some of us think that that time should not be very long, because we recognize the danger to peace and the menace to our own national security through delay.

But we learned something else. We secured from the Secretary in that conversation a firm policy statement which was reported in the press conference, and that statement is this:

> It is one of the basic tenets of American foreign policy that Israel be saved.

Another restatement of the same policy as used by the Secretary was:

> It is one of the basic tenets of American foreign policy that the integrity of the State of Israel be preserved.

I think we may say categorically that in learning from the State Department something that we have been very anxious to hear for some time, that the Department has a basic intent that the people who live in Israel shall not be attacked without action on our part and on the part of other friends of Israel who are tremendously concerned about her danger, is an important assertion of policy. An even more important development occurred today when President Eisenhower gave flat assurance that every constitutional method would be used by the United States to avoid outbreak of war in this area.

Naturally the negotiations themselves looking to peace cannot be spread open to the public gaze as each step is taken, because to do that would in itself defeat the purpose of the negotiations.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to the gentleman from New York.

Mr. CELLER. However, the gentleman, I am sure, feels that arms should be sent immediately?

Mr. SCOTT. I have said so.

Mr. CELLER. I am sure he feels that any kind of a declaration may be unable to save Israel if there is any aggression, a sudden aggression on the part of Egypt. The United Nations brought Israel into being. That was a declaration. We joined in that declaration. Then immediately seven hostile Arab nations converged on Israel and sought to destroy her. Israel therefore was sorely put to and had to defend herself with great difficulty. Israel may not be able to defend herself as well now as she did then because of the superiority of arms that Egypt now possesses. So that it is the arms to which we must address ourselves immediately.

Mr. SCOTT. I appreciate the import of what the gentleman has said and I am particularly aware of the danger through the attainment of air superiority on the part of Egypt. That is why I think that what is called for here in the treatment of this matter is expedition. The sooner we act to assure the free world's security, the better.

I think at the same time we have to take at face value the statement of the Secretary of State that within a near period, within some early period, the United States should be aware of whether its steps directed toward a permanent peaceful solution are going to succeed.

The position of the State Department is, "We believe there are better solutions than are now proposed." They say that in their opinion something can be done within the near future. We say if that cannot be done, then at the very least there should be arms aid at that time. We are going to continue that position,

we are going to maintain that view to the State Department. We have stated to the Secretary of State that we would like to act as a continuing committee to keep in touch with him because, as the gentleman from New York himself has indicated, we do not look with complete trust upon the intent of the enemies of Israel. Therefore, the watchword, I think, is to be eternally vigilant day by day in the hope that an early solution will appear. I believe we will get that solution sooner if we do not at this time waste our energies in an attack on the Secretary of State, as I used to do when I attacked Mr. Acheson. Mr. Acheson and his administration never did anything for us. I think there are better ways to do it, than to make attacks on Cabinet officers, which confuse the issue with partisan politics.

Mr. KEATING. Mr. Speaker, will the gentleman yield?

Mr. SCOTT. I yield to the gentleman from New York.

Mr. KEATING. Is it not a fact that in that same conference the Secretary most emphatically made it clear that he was not ruling out the necessity of arms to Israel and that that would be very seriously reconsidered at the time when the present negotiations warranted it?

Mr. SCOTT. The Secretary made the point that what he was saying was more of a revelation and much more of a forward step than had been indicated as American policy up to that time, and, further, that the question of arms to Israel is wide open if other solutions are not arrived at. In fact, the release of arms to Israel remains very much in the picture, if peace negotiations bog down. Yes, in our call on Secretary Dulles, we succeeded in clarifying the picture and we advanced, in our opinion, chances for the solution of this problem.

FEBRUARY 3, 1956.

The Honorable JOHN FOSTER DULLES,
Secretary of State, Department of State, Washington, D. C.

DEAR MR. SECRETARY: As you know many of us, in our individual capacity of Members of Congress, have been in continuing communication with the Department of State concerning the tragic increase of tensions in the Middle East. Your statement of August 26, 1955, outlined the basic concepts which could, through effective implementation, bring peace to this troubled area. In your statement, you outlined certain specific problems requiring solution in order to bring about peaceful conditions. You referred to the lack of fixed permanent boundaries between Israel and its Arab neighbors, the fear of an imbalance of power which might lead to violence on the part of one of the parties to the controversy against the other, and to the tragic plight of the 900,000 refugees whose displacement presents a continual problem.

We, therefore, proceed from the premise that you recognize the great danger to peace in the Middle East. We and the millions of constituents whom we, collectively, represent are gravely concerned about the immediate necessity for finding means to bring about a treaty of peace between Israel and the Arab world.

We, therefore, would like to state in further detail some of the problems which we consider need to be met by our Government and associated governments particularly Great Britain and France. Under the tripartite declaration of 1950, our Government recognized "that the Arab States and Israel all need to maintain a certain level of Armed Forces for the purpose of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole." Because of a fear of growing imbalance of arms, the Government of Israel desires to purchase through private sources defensive arms strictly for purposes of self-defense. We have individually, and now collectively, taken the position that Israel as a firm part of the free world should be allowed to obtain in the open market such weapons as would assure her protection against aggression. What is the position of the State Department on this matter?

We do not contend that tension in the Middle East can be finally resolved by the provision of defensive arms alone. We are convinced that immediate negotiations for the conclusion of a treaty of peace between Israel and the Arab world should be undertaken. These negotiations should be effectively implemented by our Government in association with those governments which joined in the Tripartite Declaration of 1950.

It is vital that prompt and decisive measures be taken to end the threat of war in the Near East.

To achieve this end, the negotiation of formal treaties guaranteeing the existing frontiers of Israel and the Arab nations is essential but essential also is a willingness to negotiate such treaties. We believe that a treaty of peace and a guaranty of existing frontiers should be offered to all interested parties in the Middle East and should be implemented promptly as to the frontiers of that nation or those nations which accept the proposed peace terms. Otherwise we continue to be faced with the refusal of some nations to enter into peace negotiations or even to recognize the existence of the State of Israel. What is the position of the State Department in this regard?

There are two additional matters as to which we seek information from the Department: first, we do not believe that economic aid should be extended to any nation which is engaging in warlike or aggressive maneuvers against any part of the free world. Therefore, we would like to go on record as urging our Department of State to consider most carefully further extension of economic aid, denying such aid to those countries which by their actions endanger the peace and security of free nations. What is the position of the State Department in this regard?

Second, we agree with your August 26, 1955, statement concerning the immediate desirability of economic and technical help in resettling those Arab refugees whose continued presence in their present location delays or impedes the possibility of a total solution of the Arab-Israel problem. What progress has been made by our Government and associated nations toward the solution of this matter?

We recognize that the continuing effort of our Government to counter the spread of world communism has many facets. Action taken anywhere may have repercussions in all parts of the world. But we do urgently feel that our constituents will be better informed by frank statements of the position of the Department of State wherever that is possible, consistent with national security. As Members of Congress, who support the aims and objectives of this administration, we are particularly anxious that our constituents be advised that the Department is taking positive steps toward the protection of free nations such as Israel and toward the dissolution of dangers which in threatening the peace of Israel, threaten also the peace of the free world.

We would much appreciate an early response to this urgent expression of our concern.

HUGH SCOTT, 6th District, Pennsylvania; ALBERT P. MORANO, 4th District, Connecticut; KENNETH B. KEATING, 38th District, New York; EDMUND P. RADWAN, 41st District, New York; JAMES G. FULTON, 27th District, Pennsylvania; THOMAS M. PELLY, 1st District, Washington; THOR C. TOLLEFSON, 6th District, Washington; KARL M. LECOMPTE, 4th District, Iowa; R. WALTER RIEHLMAN, 35th District, New York; ALBERT W. CRETELLA, 3d District, Connecticut; HOWARD H. BAKER, 2d District, Tennessee; HORACE SEELY-BROWN, Jr., 2d District, Connecticut; TIMOTHY P. SHEEHAN, 11th District, Illinois; ALVIN M. BENTLEY, 8th District, Michigan; LAURENCE CURTIS, 10th District, Massachusetts; GORDON CANFIELD, 8th District, New Jersey; ROBERT W. KEAN, 12th District, New Jersey; JOHN P. SAYLOR, 22d District, Pennsylvania; JOSEPH L. CARRIGG, 10th District, Pennsylvania; STUYVESANT N. WAINWRIGHT, 1st District, New York; STEVEN B. DEROUNIAN, 2d District, New York; FRANK J. BECKER, 3d District, New York; FRANCIS E. DORN, 12th District, New York; KATHARINE ST. GEORGE, 28th District, New York; BERNARD W. PATTERSON, 5th District, Connecticut; WILLIAM E. MILLER, 40th District, New York; ROBERT J. CORBETT, 29th District, Pennsylvania; JACKSON B. CHASE, 2d District, Nebraska; PAUL A. FINO, 25th District, New York; RUTH THOMPSON, 3d District, Michigan; GORDON L. MCDONOUGH, 15th District, California; DEWITT S. HYDE, 6th District, Maryland; FREDERIC R. COUDERT, Jr., 17th District, New York; CARROLL D. KEARNS, 24th District, Pennsylvania; DONALD L. JACKSON, 16th District, California; PETER FRELINGHUYSEN, Jr., 5th District, New Jersey.

FEBRUARY 6, 1956.

GENTLEMEN: I have your letter of February 3. I share your concern at the continuing tense situation in the Near East, and at the persistent threat it represents to the peace. Let me say that the foreign policy of the United States embraces the preservation of the State of Israel. It also embraces the principle of maintaining our friendship with Israel and the Arab States.

The Government of Israel, feeling that its peaceful existence is threatened by the large amount of arms now made available to certain Arab countries by the Soviet bloc, desires to purchase from the United States and other countries additional armament to balance what it considers to be the increased threat against it.

The United States recognizes that current developments could create a disparity in armed force between Israel and its Arab neighbors. However, we are not convinced that that disparity can be adequately offset by additional purchases of arms by the State of Israel. Israel has a population of under 2 million, whereas the Arab population amounts to tens of millions, and they apparently have been offered access to huge stores of Soviet bloc material. Under this circumstance the security of Israel can perhaps better be assured by means other than an arms race.

The having in hand, by Israel, of equal or superior arms is not the only deterrent to aggression. Israel is a creation of, and mem-

ber of, the United Nations; the Arab States are also members, and all are solemnly bound by that Charter to refrain in their international relations from the threat or use of force. The United Nations organization is capable of providing many forms of protection. Furthermore, the United States in 1950 joined with the United Kingdom and France to declare a policy of action within and without the United Nations to deter aggression by either side against the other. United States policy in that respect has recently been reemphasized in the statement issued on February 1, 1956, by President Eisenhower and Prime Minister Eden. The combined influence of the nations which would, under the United Nations Charter and the Tripartite Declaration, be against any armed aggression is a far more effective deterrent to any potential aggressor than any amount of arms which could be obtained by either side.

We do not exclude the possibility of arms sales to Israel. But it is our belief that the security of states in the Near East cannot rest upon arms alone but rather upon the international rule of law and upon the establishment of friendly relations among neighbors. We are actively working toward the establishment of such relations.

In my speech of August 26, 1955, made with President Eisenhower's concurrence, I referred to the fear and tension arising in the area from the lack of fixed permanent boundaries and indicated United States willingness to assist the parties in substituting agreed frontiers for armistice lines. To encourage the parties to work toward such agreement and to assure them that the United States would be prepared to make its contribution to the maintenance of international respect for such boundaries, I stated that the President would recommend that the United States participate in an international guarantee of agreed frontiers. That statement still stands.

You inquire about economic aid. United States policy in the extension of economic aid is based upon the desire to strengthen other free nations. In the case of each aid program we take into account the nature of the project in question and the purpose for which it was intended. I can assure you that United States aid would not be extended for purposes or under circumstances which we judged would undermine peace in any part of the world.

The Arab refugees remain perhaps the most important single source of bitterness existing between the Arab States and Israel. In my speech of August 26, 1955, I proposed that the problem of the Arab refugees be attacked in several ways. I suggested United States participation in an international loan to Israel to assist her in funding her obligation to pay compensation for property left in Israel by the refugees and which is now being utilized by Israel. I recommended assistance to Israel and the Arab States in the rehabilitation of the refugees both by repatriation to Israel to such extent as might be feasible and resettlement in adjoining Arab States. In this connection the Arab States and Israel have accepted, on a technical basis, the Jordan Valley plan which would provide new economic opportunities for several hundred thousand refugees. But final political approval remains to be achieved. Thus, some progress has been realized, but much remains to be done.

I know that you all understand that it is not practical, or in the interest of the goals we seek, to discuss publicly all of the factors involved in this complicated situation. I know you also recognize that the problems of this area must be studied in the larger context of the free world's unceasing struggle against international communism. I have, however, no hesitation in declaring that the United States, seeking for itself to avoid involvement in war, is earnestly striving as a friend of both Israel and its Arab neighbors to relieve the present tension in the area. If the political and economic developments should subsequently become such as to make congressional action desirable or necessary, the President would, of course, promptly communicate with the Congress.

Sincerely yours,

JOHN FOSTER DULLES.

Mrs. KELLY of New York. I want to thank the gentleman from Pennsylvania. However, I want to point out I made that statement in my opening remarks prior to yielding to other Members. I do want to bring out this point that as a member of the Committee on Foreign Affairs, I took a trip to Europe with a subcommittee and it was only there in Europe that we learned of the Czech-Egyptian arms deal. That is in the record of the subcommittee. It was known to the Department of State as a rumor in the spring. I think it should have been brought to the attention of the House during the session last year. I also feel that had it been brought to the attention of the House, we might have, which I also wrote into the report of th subcommittee, we might have and we should have called off and postponed the Foreign Ministers' Conference in the fall and thus show to the world the insincerity of the Russians.

Mr. MULTER. Mr. Speaker, will the gentlewoman yield?

Mrs. KELLY of New York. I yield.

Mr. MULTER. I would like to ask a question of the gentleman from Pennsylvania [Mr. SCOTT]. We all appreciate the intense interest that the gentleman from Pennsylvania [Mr. SCOTT] has had in this problem all through the years and his very sincere approach to it. We all appreciate how important it is that peace negotiations in a delicate situation such as this be carried on behind the scenes, but I would like to have the House advised about, and if it cannot be answeerd orally at least to have the record completed by supplying for the record, a single instance where the Secretary of State has said to the head of any of the Arab States that the United States as a part of our foreign policy guarantees the integrity of the State of Israel. I think that should be made clear—not to us—not to a press conference, but to the Arab States. Now, if we can supply that for the record, I think we will have moved forward a long way. Can that be supplied?

Mr. SCOTT. I would answer the gentleman by saying that, in effect, that is exactly what was accomplished by the tripartite declaration.

Mr. MULTER. That, too, I am sorry to say is not a declaration to the heads of the Arab States. Let us have a statement from the Secretary of State to the heads of these Arab States that this is it.

Mr. SCOTT. I think the gentleman also said that in August of 1955.

Religious Persecution in the Ukraine

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, citizens of Boston who regard religious oppression behind the Iron Curtain with profound sorrow and dismay have forwarded to me the following statement with regard to the situation in the Ukraine. I desire to bring it to the attention of the Congress and include it under leave to extend my remarks in the RECORD.

The statement follows:

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December 1917 Communist Russia invaded Ukraine and in 1919–20 occupied the estern provinces of this country. The Soviets were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terrorized the people with threats of exile, torture, and death.

First, the Communists attacked the church in eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as, for example, the Golden Domed Michalivsky Monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters, and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet Constitution, which is binding in Ukraine as well as the U. S. S. R. explicitly recognizes freedom of religion, yet, during the first Red occupation of western Ukraine (1939–41), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This anti-Christian terror adopted more hideous means of exterminating Christianity in Ukraine during the second occupation of this country beginning in 1945. On April 11, 1946, the Soviets arrested the Metropolitan of Halych and Archbiship of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more,

when Archbishop Joseph Slipyj's or other bishops' term expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic Bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the "Church of the Catacombs," as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to achnowledge the Patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave labor camps. The Reds exterminated all 5 dioceses of the Ukraine Catholic Church, desecrated 4,440 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church and faith.

Our Mental Health Program—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. ROGERS of Texas. Mr. Speaker, proper care and more attention to individuals can result in a decrease in the number of patients confined in hospitals for the mentally ill all over the country. The following article, the fifth in a series on the mentally ill which appeared in the Amarillo Globe-Times, illustrates what can be accomplished when a State tackles the problem realistically:

THE MENTALLY ILL CAN BE CURED—72 YEARS IN A STATE HOSPITAL AND SHE WAS NEVER CRAZY

(By Louise Evans and Mary Tom Rasco)

The little white-haired woman who walked from the Topeka State Hospital last spring had a doubtful distinction.

She had spent more years in a State hospital for the insane than any other American. But she was never insane.

At 85, she had spent 72 years in the Topeka institution. She was 13 years old when she became the 313th patient, only 3 years after the hospital doors opened.

"Pale, fair health, is cross, talks foolishly," reports the admission card for No. 313.

The cause of insanity? The card says "Sincerity and love of truth and finding that nearly everything was a lie."

But the child never received any treatment. She simply sat out the years. As late as 1927, records show she was alert and understanding.

In the years afterward a wall of silence grew. When the staff was reorganized in 1948, even she could help little to trace her history.

She was too old to support herself—this child born in 1869. She could not get old-age assistance. Even residency requirements under the law could not be proved.

But a persistent social worker went to the history books and found the record of her family. Her father was an author and public official. Her case was reviewed, and the assistance check was granted.

So in the spring of 1955—72 years too late—she walked out of Topeka State Hospital for the Insane and went to a nursing home to spend her last years, an old lady as entitled to her pension checks as any other Kansan. (This could happen in Texas, too. Hundreds of our patients have never been diagnosed.)

PATIENT POPULATION DROPS

Today every worker in the Kansas State hospitals is dedicated to the goal of finding the best solution to the individual problem—the patients are not statistics; they are individuals. With no more attention than this, many a patient is kept from becoming chronically ill.

It is well understood that in mental cases, as in surgery, speed in treatment is essential. Adequate treatment from the admission date can bring about a 90-percent chance of recovery, which in 5 years drops to less than a 5-percent chance.

In 1948, for every 3 patients admitted into Kansas hospitals, only 1 left cured or improved. In other words, 2 out of 3 were accepting a life sentence. In Kansas today 82 percent of first admissions are released in the first 6 months.

Within the Topeka hospital the average daily patient load dropped from 1,844 to 1,422 in 5 years. Including the other two Kansas hospitals, the overall daily population in Kansas mental hospitals dropped from 5,148 to 4,551.

But it took skilled workers to accomplish these results: In 1949 there were 2 physicians in the Topeka unit; today there are 24. Psychologists increased from 1 to 7, social workers from 0 to 12, nurses from 5 to 40, therapists for 0 to 24, psychiatric aids from 125 to 140.

The successful dismissal program can be traced directly to such a staff-patient ratio. As the number of staff members has grown steadily the number of patient dismissals has grown as steadily.

OUT OF THE SHADOWS

The staff did not concentrate all of its attention on new admissions. It rediagnosed (unfortunately, in many cases, made the first diagnosis) those already in the hospitals. Some of these, like the little 85-year-old woman, had spent most of their lives in the institution.

Typical of the cases dismissed is a 76-year-old woman who had been in the hospital for 20 years. After a short stay in a nursing home, she was able to get out and find an apartment of her own and at 78 is living satisfactorily in her own home.

Another woman who had been in Topeka for 20 years had not spoken a word for the past 8 years. Her doctor, a young man, refused to be discouraged. He went on talking to her until she answered. Gradually she began to get well. Today she is a practical nurse making a good living, after spending 22 years in a State hospital because no one ever took enough interest to talk to her.

Sent back to Denmark was a man who was in the Kansas Hospital for 19 years because he couldn't speak English. After a brush with a law he didn't understand, he was sent to the hospital because he couldn't tell in precise English that he didn't understand the law. At the hospital, he couldn't find the English words to explain that he wasn't sick.

TEXAS COULD SAVE, TOO

In 1954, of the 1,000 patients discharged from Topeka Hospital, 55 had been in the hospital a total of 1,331 patient years. (Had those patients been in Texas hospitals, based on the cost of $2.13 per day, they would have cost the State $1,034,785.95. Since the other 945 patients released in Kansas in 1954 had an average stay of less than 2 years in the hospital, Texas will save more than $1 million on 55 such patients, if a program similar to that of Kansas is instituted.)

Since the courts are not involved in the original commitment proceedings of a patient—no more than in the treatment of an ulcer in a general hospital—the superintendent of the hospital signs the dismissal order, which carries full return of civil rights. If a jury trial has preceded admission, the person is returned to the court's jurisdiction. In the case of the criminally insane, when sanity is established, the patient is returned for trial on the original charge, if the charge was insanity at the time of the commission of the crime, rather than established insanity afterward. One hospital, Larned, houses the criminally insane of Kansas.

Of course, patients may leave the hospitals without such final dismissal orders. They may go out on a parole, or into boarding and nursing homes, or report only for outpatient treatment, but they remain in the custody of the Department of Social Welfare—of which the Kansas State hospitals are an arm—until rehabilitation is believed complete.

By Kansas law, no patient who is violent, dangerous, or unusually troublesome or filthy shall be released or returned to any county not provided with suitable facilities for the proper care of the patient.

It is obvious that Kansas hospitals, therefore, are not clearing out their patient load by that good old human method of passing the buck.

MANY ON PAROLE

If a man has been actually ill for a long time, it is expected he may have to learn to walk again when he leaves his hospital bed. If his leg has been broken, he may well limp a little the rest of his life. If he were to return to his job and find that his coworkers gather around the water fountain and whisper "That man has been ill" with overtones of fear, apprehension and even cruelty, he might well return to his sick bed.

Now, people act exactly the same after mental illness as they do after physical illness. But because of the group that always gathers around the water fountain, the State hospital workers have to be sure the person who has been mentally ill is well enough to tolerate such reaction.

Therefore, many people go out on parole, as it were. Others actually return to the hospital to spend the nights after they take their first jobs.

Boarding homes are used for those who do not require hospital treatment or the more costly care of a nursing home. Boarding and nursing home operators and their workers come into Topeka State Hospital for 6 days of intensive training. Many come with an irrational fear of the patients they are to take, but they leave after an educational program knowing, as do staff members, that very few of the patients are violent. The patients who are sent into these boarding homes and nursing homes are for the most part the aged, but the homes also serve rehabilitated patients as way stations from the hospital back to normal community life.

Social workers in the counties are used in the follow-up work of dismissal patients, when the hospital social workers release the patients. In many cases, these are the same social workers who persuaded a man to voluntarily commit himself or assisted the probate judge in placing the patient in the hospital for the 90-day observation period.

The Kansas system is integrated and the pay-off is a steadily reduced patient-load cost; a high rate of rehabilitation; and among the community centers, training schools, day hospitals and out-patient clinics, much mental illness is prevented.

DEATH RATE DROPS

There is another form of dismissal from a State hospital, death. The death rate of patients in the Kansas hospitals virtually was halved in the first 4 years, and in the past 2 years it has been cut another 24 percent. This can only come from improved medical care.

Of the 66 who died in 1954 in the Topeka hospital, 50 were 65 years of age or over. Of this number, 30 died from one cause—cerebral arteriosclerosis and senile disease, a combination of physical and mental causes that add up to plain old age.

(The Texas Research League noted the manner in which cemeteries for those who had died in Texas institutions were kept—in many cases so poorly that no one knows exactly how many persons were buried during the past year. Burial procedures are extremely informal, says its 1954 report.)

WHAT LOCAL CLINIC COSTS

Here is a sample of a community psychiatric clinic, as worked out by the National Association for Mental Health:

Salaries:	
Psychiatric-director	$12,000
Clinical psychologist	5,000
Chief psychiatric social worker	5,000
Psychiatric social worker	3,600
Office manager and secretary	3,000
Stenographer	2,600
Total	31,200
Rent	2,000
Heat, light, water	300
Telephone and telegraph	400
Stationery and office supplies	300
Postage	100
Insurance	250
Social security	300
Retirement	1,000
Conference travel	300
Repairs and replacement to equipment	150
New equipment	100
Educational supplies and toys	150
Dues	100
Publications	75
Miscellaneous	200
Total	36,925

The Non-Russian Nations of U. S. S. R. in the Current World Picture

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the strategic importance of the non-Russian nations in the Soviet Union to the free world is a matter of common knowledge in many of our universities and private and public agencies. Ukraine, Byelorussia, Lithuania, Estonia, Latvia, Georgia, Armenia, North Caucasia, Turkestan, Azerbaijan, and Idel-Ural, once formerly independent nations, now constitute the first ring of captive nations in the Russian Communist empire. On the basic theme of Russian Communist colonialism and imperialism, we have not as yet made the strongest possible appeal to the peoples of these captive non-Russian nations whose desire for restored independence and national self-determination is unsurpassed anywhere in the world today.

Presenting several concrete ideas on the appeal that could be made is an address delivered last fall by Dr. Lev. E. Dobriansky, who is a professor of economics at Georgetown University and also national chairman of the Ukrainian Congress Committee of America. Major portions of this interesting address have appeared in the Courier, publication of the internationally renowned School of Foreign Service at Georgetown University. I wish to submit into the Appendix of the RECORD the full text of this address on the non-Russian nations of U. S. S. R. in the current world picture:

THE NON-RUSSIAN NATIONS OF U. S. S. R. IN THE CURRENT WORLD PICTURE

It is a veritable privilege for me to be given this opportunity to address the Pan-American Ukrainian Conference which in its august representation encompasses the greater part of this continent and the largest nations of Latin America. Within the limited time allotted to me I should like to dwell on a subject that only in recent years has attained to international status of discussion and about which in the past few months certain baseless doubts have emerged. In developing this critical subject in succinct outline the orientation is established from my own vantage point in Washington and in the States generally, but the prime aim is to indicate the boundless possibilities that are opening up for the spirited endeavors of each of our organizations and certainly for this Conference in its work through the United Nations in the immediate future. For, contrary to the obtuse thinking of some, the position of the non-Russian nations of the U. S. S. R. in the current world picture—particularly that of Ukraine, the largest of these nations—is both promising and bright.

This, in substantial measure, is both the fruit of our recent intensified efforts and, at once, a formidable challenge to our continued imaginative endeavors and plans. If, perchance, I appear to wax a bit too optimistic, forgive me. But if you are in with a stalwart and patriotic American group that for the good of all knows what it wants, that with patience and perseverance fights for what it wants, and that in justice and truth is confident it will obtain what it wants, then this is not even optimism but rather hopeful wisdom. It is in the luminous spirit of this hopeful wisdom that many are by conviction and passion committed to the noble goal of the liberation and independence of the non-Russian nations in the Soviet Union. It is in this spirit that they pragmatically view the final collapse of the colossus of the Russian empire, now in the immediate form of the Soviet Union, as indispensable to the lasting security interests of the United States, as prerequisite to the foundation of permanent peace with freedom and justice among all nations, and as crucially essential to the real independence and freedom of the minority Russian nation in the U. S. S. R. from centuries of autocratic totalitarianism, political tyranny and costly imperialist adventures. It is in this reassuring spirit that the prospect of the non-Russian nations in the U. S. S. R. is viewed with stimulating hope and sound wisdom.

WHAT WE STRONGLY BELIEVE

It goes almost without saying that in any field of studied interest the ability to discern and assess real possibilities and prospects presupposes a vivid awareness of the flexible realities of the field in its manifold ramifications. So in this particular field, complicated and complex as it is in its interrelationship with the free destiny of human existence itself. In truth, there exists no other ground but this for what I have called hopeful wisdom. It is from this firm "hopeful wisdom." It is from this firm ground that we can properly characterize as peculiarly emotional the notion—which has even spread into many emigre quarters—that present developments spell the abandonment of the captive nations in the Russian Communist empire, that concrete coexistence and the status quo between free nations and Communist-enslaved nations are in the making, that the once heralded American policy of liberation is only a faint echo of the 1952 presidential campaign. This is a notion of unbridled emotion than of considered analytic thought. It is a notion that springs from the inability of some of to see beyond their long cherished beliefs the emergent possibilities of the current world situation which, to be sure at great risk, might be realized for the very materialization of their innermost hopes and beliefs.

The essentials in which we believe are in no way altered by the transient changes of the current world picture. Formed by study, experience and moral conviction, these essentials of guiding belief are as follows:

1. That, in historical perspective, there can be no genuine peace in our time without the compelling expansion of freedom—freedom realized for all nations and peoples, especially those entombed in the very fortress of imperial Communist totalitarianism, the Soviet Union itself. The pressures of freedom are no respecters of borders, be they the present ones or the pre-1939 ones in eastern Europe. The advocacy of this belief is by no means discouraged by present developments. On the contrary, present world developments provide food for the expanded advocacy and realization of this grounded belief;

2. That the peace offensive of Moscow is a colossal Red masquerade to gain time in order to meet the long-anticipated problems of empire consolidation, to augment toward relative superiority their weapons of nuclear warfare, to sow seeds of disunity among the free nations, and to strengthen their subversive network of world conspiracy. Few Americans can take pride in the adolescent statements of some of our legislators—"the 9-day Russian experts"—who toured the Soviet Union. However, we are grateful for the sobering observation of the Honorable PATRICK HILLINGS, of California, who came, who saw, and then concluded that Moscow's peace offensive is "the biggest con act in history." As a member of the former Select House Committee on Communist Aggression, Congressman HILLINGS could not be fooled for he had learned too much. For him as for others the outstanding fact, so far, is that no real, conclusive evidence can be advanced to justify the genuineness of Moscow's exhibited desire for peace. The expendable frills of farm delegations, sports events, congressional tours, the cession of Finnish real estate, amnesty to political prisoners in the U. S. S. R., the release of German, American, and other war prisoners and so forth can scarcely be counted as real, substantial evidence. Some may construe this as only the beginning and we, in good conscience, cannot deny such hope. Yet at the same time neither can they deny us this opportunity to press critically for demonstrations of real evidence and impressive tests of the much advertised Russian Communist desire for peace and civilized relations;

3. That a peaceful policy of liberation, founded, as it is, on a fixed moral commitment to all the captive nations, is alone in the best interests of our country and the free world. It is a dynamic policy of innovation—the innovation of free institutions—as against one of reckless evolution as expounded by Mr. Kennan and some of his followers in our Government. In almost subservient alacrity to the misleading goddess of evolution, Mr. Kennan writes, "Evolution occurs everywhere, if only as response to change in physical conditions—alterations in population and resources and tech-

nology. Does anyone really suppose that a nation could undergo so violent a process of technological change as has marked the Soviet Union in these past decades and yet remain unaffected by its social and political life" (Realities of American Foreign Policy, p. 92)? Now, isn't it really strange that after these many years of American public enlightenment on the non-Russian nations in the U. S. S. R., a man who is supposed to be an expert on Soviet affairs should persist in obscurantizing this truth by implying that the Soviet Union is a nation? Furthermore, for these familiar with the most advanced trends of thought in the social sciences, his intellectualist appeal to evolution in our relations with the totalitarian empire of the Soviet Union can be accurately dated some 30 years behind our time. Innovation and the moral responsibility of men and governments for their acts are the paramount forces recognized in our day. To pray at the altar of evolution for the conversion of Russian Communists to the good by technological change revives some of the romanticism one can find in the writings of Thorsten Veblen. It contributes not to the realities of American foreign policy but rather to its unrealities. The present world picture allows for considerable innovation that a peaceful policy of liberation alone is capable of—to innovate freedom for true world peace; and

4. We strongly believe that this phase of world events is another chapter—indeed, the most hazardous and tenuous—of the cold war. It is not, as some wishfully hope, a new period succeeding the cold war. Here, too, it is most significant that all of the frills staged by Moscow are speedily exploited by its far-flung apparatus for propaganda and psychological warfare reasons. Only witness the propaganda usage of its generous cession of Finnish real estate the other day, bases without strategic value and, to boot, not even Russian property. This founded conception of present world events, as another chapter of the cold war, fundamentally guides us as to what we can powerfully do and still be utterly consistent with the essentials of our beliefs. In short, and in great essence, our challenging task now is to innovate and generate pressures of freedom against not only the outlying portions of the Russian Communist empire but also, and more importantly so, against the very heart of this empire, namely the Soviet Union. Thus, with this broad understanding, who can fail to see the buoyant opportunities and the bright and promising picture that surround today the position of the non-Russian nations in the U. S. S. R.?

WHAT WE CAN POWERFULLY DO

The general approach to this challenging task is necessarily a pragmatic and flexible one, adapted to the fluctuating circumstances of the international scene and constantly poised in the direction of capitalizing on them. Within the limits of this address allow me to cite only a few of the solid directions in which our combined efforts may be channeled. They may be grouped as follows:

1. Primarily to all else, the continued expansion of our educational and informational work on Ukraine and other non-Russian nations in the U. S. S. R. As many of you know, in the United States tremendous strides have been made in this respect. Beyond question of doubt, the most authoritative source of public opinion and judgment on this vital subject is the disclosures and reports of the Select House Committee on Communist Aggression, otherwise internationally known as the Kersten Committee. In a democracy such as ours, foreign policy adjusts itself in time to the will of the people and nowhere is this will more clearly crystalized than in the elected representatives of the people. The work of this former committee is being steadfastly carried on through the measures, addresses, and various other activities of its many members for whom freedom is indivisible and cannot be restricted to only 1 or 2 sectors of the Russian Communist empire. For example, Congressman Dodd recently showed many of his colleagues and the general public that the record of Russian Communist violation of treaties and pacts extends back to the Russian imperialist conquest of Ukraine, Georgia, Armenia, and the other non-Russian nations in the period following World War I.

Our determined fight against the unsound and unrealistic restriction of freedom to the so-called satellite countries must continue unabated. It has contributed to solid results these past few months. Our good friend, the Honorable John W. McCormack, of Massachusetts, definitely saw to it that his resolution on opposition to colonialism and Communist imperialism (H. Con. Res. 149) was generally inclusive for it to be the sense of Congress—

"That the United States should administer its foreign policies and programs and exercise its influence so as to support other peoples in their efforts to achieve self-government or independence under circumstances which will enable them to assume an equal station among the free nations of the world."

Passed by Congress unanimously, this resolution was accompanied by Senate Resolution 127 on the restoration of sovereign rights of self-government to the enslaved peoples, which also embraces by thought and direct implication all of the non-Russian nations in the Soviet Union. Likewise in unanimous passage, it resolves—

"That the Senate proclaim the hope that the peoples who have been subjected to the captivity of alien despotisms shall again enjoy the right of self-determination within a framework which will sustain peace; that they shall again have the right to choose the form of government under which they will live, and that the sovereign rights of self-government shall be restored to them all in accordance with the pledge of the Atlantic Charter."

Equally salutary was the address delivered last month by President Eisenhower before the American Bar Association. As an overdue response to the mounting pressure against the lulling effects of the dubious spirit of Geneva, his address emphasizes that true peace cannot be had without justice and freedom, which, incidentally, was the poignant theme of our memorandum to him before Geneva, and states that the "domination of captive countries cannot longer be justified by any claim that this is needed for purposes of security" (New York Times, August 25, 1955). The term of captive countries or nations is the only accurate and consonant one with the realities of the entire Russian Communist empire—indeed, with the concept of indivisible freedom itself.

2. The skillful initiation and development of measures bearing on Ukraine and Byelorussia, especially from the point of view of their representation in the United Nations. It is heartening to note the views of Edward Weintal, a Newsweek correspondent who attended the Geneva Conference and now observes that "Serious American thought also must be given to the nationally conscious Soviet components such as the Ukraine and Byelorussia. The fact that these two nations have their own representatives in the United Nations has never been properly utilized by the United States. To encourage their independence and to strive for the decentralization of the Soviet Union into its separate though not necessarily unfriendly components is likely to become one of the chief United States objectives" (Newsweek, August 29, 1955). It is evident that our past concentration on this matter, as demonstrated in the House hearing on United States diplomatic representation in Ukraine and Byelorussia, and in Senate hearings on United Nations Charter revision, was not without results. The idea of diplomatic relations with Ukraine and Byelorussia is still attractive to many of our legislators and executive officers. The idea of testing the secession right in the Soviet constitution also intrigues many. There are innumerable other ideas, such as the foundation of American institutes in Ukraine, the publication and distribution of American papers and periodicals in the native Ukraine language, that can be pursued in the spirit of expanded freedom.

3. Systematic opposition to the liberalization of trade with the Russian Communist Empire without political concessions in return. Last winter and spring we were engaged in this battle and along with others succeeded in forestalling measures calculated to expand trade and ship American farm surpluses to the Soviet Union. Since Geneva business pressure in the United States has been mounting and the next session of Congress promises to be in a more sanguine mood for liberalized trade. Our efforts will be pitted on an economic leverage for political concessions in the name of expanded freedom.

4. Persistent pressure toward the abolishment of the Iron Curtain. The very existence of the Iron Curtain is a mockery to the concept of peaceful coexistence of nations. Greater social and cultural intercourse with peoples in all areas of the Russian Communist Empire should and could be developed. An official delegation to Vorkuta, made up of knowledgeable people who would know what to look for, is just one example of the implementation of the pressures for freedom.

5. The expansion and improvement of our informational services to the nations behind the Iron Curtain. Contrary to the myopic suggestions of some on the supposed need of contraction, present developments necessitate the expansion of such services, today more than ever. The opportunities of the present, which might be highlighted by the pressure for Soviet cessation of radio jamming, should not be missed, and it is with this thought in mind that we wholeheartedly support the Feighan resolution (H. J. Res. 433) which seeks to achieve these very things.

These are only a few general directions open to us in the conduct of our work and toward the realization of our set objectives. These do not involve, as Mr. G. V. Ferguson, the editor of the Montreal Star, naively believes, "the feuds of Europe to be perpetuated inside (your) borders" or ours. They bear on issues that today encompass the globe. If Mr. Ferguson were more informed on these issues, and someone here should see to it that he is, he certainly would not have written such patent untruths as that "The Ukrainians have never achieved any extended period of national identity and have never been able to accomplish their dream of a separate Ukrainian state"; or that Canadian Ukrainians are violently anti-Russian, instead of anti-Russian Communist: or that the recent Russian visitors are a "harmless group of agricultural scientists and managers * * *" (Washington Post, September 11, 1955). Perhaps the demonstrations here were more enthusiastic than what we staged in the United States. In both instances, however, they symbolized a living conscience against the crimes and the designs of imperialist Russian communism that threaten the security of all free nations, including Canada.

To maintain this living symbol of moral opposition and to work in terms of pressures of freedom require the full resources of united action. In addition to these other opportunities, present developments provide us with the much needed opportunity to bolster and extend our respective unity and

our united action for the certain events that lie ahead. We would prove derelict of duty to fail in the seizure of this opportunity. Such unity and action we possess in the States and we mean, with all the power of moral responsibility, to preserve it. Such unity and action are necessary among groups in Europe and we mean, with all our power of moral suasion, to contribute to it. Such virile unity and action are now more than ever required in this Pan American Conference and we mean, with all reciprocal moral and financial support, to acheive it. Our people look to such expression of leadership and we are determined to serve them and the overriding convictions that possess all of us.

Was 1955 a Boom Year?

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1956

Mr. ROOSEVELT. Mr. Speaker, I have read the economic report of the President with great interest, particularly that portion which deals with the problems of small business. As a member of the Select Commttee on Small Business, I would at this time like to make the following statement concerning our general economic situation and the plight of small business during the 3 years of the present administration as revealed by the President's economic report.

WAS 1955 A BOOM YEAR?

The economic report of the President reveals that in the last 3 years our country has—

(a) Failed to maintain the rate of economic growth which took place in both war and postwar periods.

(b) Brought about a rapid inflation of prices in the big-business industries and an offsetting deflation in the more competitive segments of the economy, namely the farm and small business segments.

(c) Resulted in very little increase in productive capacity but in greatly increased corporate profits, at the expense of farmers and consumers.

(d) Resulted in the greatest increase in the Federal debt of any peacetime period in history, as well as the greatest increase in consumer debt and in the debt of State and local governments of any like period in either peace or war.

Rates of economic growth

	3 years, 1952 to 1955	3 years, 1949 to 1952
	Percent	*Percent*
Gross national product in 1955 prices	8.4	21.2
Per capita personal income in 1955 prices, after taxes	7.0	7.3

In 1955 the gross national product, which is the value of all goods and services produced in the Nation, was only 8.4 percent greater than in 1952. This represents an average growth of 2.8 percent per year in the 3 years of this administration. The Nation's output of goods and services would have to increase between 3 and 3.5 percent per year just to keep up with increasing productivity per man-hour of work, to say nothing of the effects of increasing population and increased numbers of people working.

In the last 3 years of the Truman administration, 1949 through 1952, the gross national product increased 21.2 percent, or an average yearly rate of 7.1 percent. Similarly the growth between 1939 and 1952 was 6.8 percent per year. The above comparisons are all based on goods and services valued at 1955 prices.

The 1955 per capita personal income, after taxes, also failed to keep pace with the growth in the Truman and Roosevelt administrations. The comparisons shown in the economic report in terms of 1955 prices reveal that the 1955 per capita income, after taxes, was 7 percent above 1952, which was equal to a yearly increase of 2.3 percent. Also in 1955 prices, there was a 3.6 percent average yearly increase in per capita income between 1939 and 1952.

Big corporations were the beneficiaries in the 1955 boom

[Dollars in billions]

	1955	1952	Percent change from 1952
CORPORATIONS			
Corporate profits, after taxes	$41.4	$36.9	+12
Corporate depreciation and amortization allowances [1]	$14.5	$10.4	+39
Dividend payments	$11.1	$9.0	+23
Stock prices (December index)	$333.6	$203.4	+64
Big manufacturers' profit rate [2] percent	14.1	11.1	+27
Small manufacturers' profit rate [2] percent	6.4	11.4	−39
PERSONAL INCOME			
Income from interest	$15.6	$12.3	+27
Salaries and wages	$215.4	$190.5	+13
Proprietors' income	$27.3	$25.7	+6
Farm income	$11.1	$14.3	−22

[1] Excludes banks and insurance companies.
[2] Annual rates of profits, after taxes, as percent of stockholders' investment, 1st 9 months of 1952 compared with 1st 9 months of 1955—corporations with more than $100 million of assets and corporations with less than $¼ million of assets.

Nineteen hundred and fifty-five was a boom year—the greatest in history—for the big corporations. Compared to 1952 total corporate profits, after taxes, increased $4.5 billion, or 12 percent, despite the fact the profits of smaller corporations were way below 1952.

In addition, industrial and utility corporations alone had another $4.1 billion of increased income from depreciation and amortization allowances, largely as a result of the 1953 and 1954 changes in the tax laws—income from depreciation and amortization for banks and insurance companies is not reported.

Corporations paid out 23.3 percent more in dividends, and the price of corporate stocks was 64 percent higher at the end of 1955 than at the end of 1952.

Small-business profits since 1952 have, however, fared much like farmers' income. In the first 9 months of 1952, profits of manufacturing corporations with less than one-fourth million dollars of assets were at an annual rate of 11.4 percent of stockholders' investment. Profits of the giant manufacturing corporations—those with more than $100 million of assets were at a corresponding rate of 11.1 percent. In the first 9 months of 1955, the profit rate, after taxes, of the smaller corporations had dropped 39 percent, while the rate for the giant corporations had gone up 27 percent.

Other comparisons between 1955 and 1952 were as follows:

With the higher interest rates, persons who received personal income from interest received 26.8 percent more such income.

Labor income increased 13 percent although there were 3 percent more people employed.

Proprietors' income, from professions and unincorporated business increased only 6.2 percent.

Farm income dropped 22.4 percent.

The administration has claimed that the changes it has brought about in corporate taxes, interest rates, and credit policies would encourage investment and increase productive capacity. Although corporate operations in 1955 took $4.5 billion more in profits after taxes, and $4.1 billion more in depreciation and amortization, than in 1952, the corporate outlays for plant and equipment—including new and replacement items—was only $2.1 billion more than in 1952.

In 1955, the total investment made in producer plant and equipment, by both corporate and noncorporate business, was only $3.6 billion more than in 1952, and most of this was taken up by increases in prices of producers' durable goods and increased construction costs. In 1952, investment in new plant and equipment was $8 billion more than 1949, and in 1948 it was $14.3 billion more than in 1945.

I have, with reluctance, concluded that it is a sorry record set out in the economic report of the President.

Debt charges

[In billions]

	3 years postwar, 1952 to 1955	3 years Korean war, 1949 to 1952	3 years postwar, 1945 to 1948
U. S. Government	+$13.4	+$10.2	−$25.8
State and local governments (net)	+12.6	+7.7	+2.5
Consumer debt	+10.4	+8.7	+8.7
Home mortgage debt	+37.7	+26.9	+14.7

The record of the national debt draws a neat distinction between promises and performance. In spite of all of the campaign promises to reduce the national debt, the Federal debt has been increased by $13.4 billion between the day this administration took office in 1953, to the end of 1955.

This staggering peacetime increase in the Federal debt has been made despite the fact that substantial assets inherited by the administration, such as the synthetic rubber plants, have been sold or otherwise separated from Federal ownership, the liquidation of which should have gone to reduce the debt. Moreover, services to the public have been severely cut back; for example, loans for small

business such as were made by RFC have been virtually stopped.

The Truman administration increased the Federal debt only $10.2 billion in the preceding 3 years, although it had the expenses of the Korean war, plus substantial economic aid and assistance to our allies in that period. In the first 3 postwar years following World War II, between the end of 1945 and the end of 1948, President Truman reduced the Federal debt by $25.8 billion. While the Federal debt has been piling up during the past 3 years, other debt obligations of the general public have been growing by leaps and bounds. The debt of State and local governments has increased by $12.6 billion; consumer installment debt and charge accounts has run up another $10.4 billion; and home mortgage debt has shot up by $37.7 billion.

The supposed economic achievements of 1955, cited in the President's report claims that these have "been accomplished without the specious aid of price inflation." That is just specious reporting of the facts. There has been a tremendous inflation in the prices of the big industries since the beginning of 1953, and most of this has taken place in the last year and a half. Faced with galloping inflation in these prices, the administration has maintained the overall buying power of the dollar by policies which have brought rapid deflation in farm and small-business prices.

Prices of steel, aluminum, copper, and other metals have jumped 16 percent since the first of 1953, and the profits in these industries last year, after taxes, was 13 percent of the stockholders' investment. Prices of all machinery and transportation equipment together have increased 9 percent, and the after-taxes profit rate in these industries last year was 15 percent.

Prices of motor vehicles have increased 6 percent, and the profit rate in this industry was 21 percent last year.

The fact that increased prices of the giant corporations have gone into increased profits is reflected in the phenomenal rise in stock prices and stock dividends. Although big business profits were already lush in 1952, they have now shot up to unparalleled levels. In the first 9 months of 1952 profits, after taxes, of the giant manufacturing corporations, those with more than $100 million of assets, were at an annual rate of 11.8 percent of stockholders' investment. In the first 9 months of 1955, their profit rate had shot up to 14.1 percent, or a 27 percent increase in the profitability of these giants, not counting about equal increases in their income resulting from the generous depreciation and amortization allowances which have been put into the tax law since 1952.

While big business prices have shot up, many small business prices have gone down. For example, prices of textiles and apparel have gone down 5 percent since the first of 1953, and the profit rate in these industries last year was only 5 percent. These are typical small-business industries. The prices received by farmers have fallen by 16 percent since the first of 1953.

The administration sponsored tax relief for the big corporations in 1953 and 1954, on the theory that these corporations would be induced to make capacity expansions, which the country needs. These tax changes, particularly dropping the excess profits tax, merely gave the big corporations an incentive for raising prices and taking more profits. The excess profits tax tended to place a ceiling on the amount of profits a corporation could take without increasing its investment. Dropping the tax removed the ceiling. The exorbitant prices and profits which have resulted have done almost nothing to increase productive capacity, but they have stimulated the big corporations to buy up and merge the capacity of smaller firms. The inevitable result will be even less competition to check prices and profits.

I do not suggest putting the excess profits tax back on the books, but I point out that it is urgently necessary to adopt a graduated corporate tax, similar to the graduated rates for personal taxes. Such a graduated rate would tend to put a ceiling on monopoly profits and at the same time encourage an expansion of smaller firms.

This or any succeeding administrations cannot continue policies of plundering our economic system, robbing the poor to fatten the rich, without bringing us to economic disaster. Feeding the poor on slick propaganda is no substitute for sound economic management.

Interposition

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. DIGGS. Mr. Speaker, under the unanimous consent of my colleagues, I include in the RECORD an editorial from the Norfolk, (Va.) Journal and Guide of January 21, 1956. It concerns the issue of civil rights and the latest invention of defiance the State of Virginia proposes to counteract the Supreme Court order for desegregation of schools. It is reason for the gravest alarm on the part of our Federal Government, since the plan, which is to pass a resolution of interposition, is one which asserts the right of a State to declare null and void an act passed by the Congress of this United States. The plan is one born of a desperate drive to retard this Nation's attainment of full and impartial rights for all its citizens, but it is very evident that any success in such a proposal would establish a pattern relieving the Federal Government of authority in regulating the actions of States on other matters extending over an unlimited area. I offer it to you as further evidence of the need now for forceful action by the Federal Government to end such reckless and shameful defiance of the highest laws of this land:

INTERPOSITION DOCTRINE

Since Virginia suddenly sidetracked consideration of the Gray plan constitutional convention—at least temporarily—to ponder the notion of having the general assembly pass a resolution of interposition by which backers of the idea think that the State could avoid compliance with Supreme Court decisions on school desegregation, it is in order to clarify what the doctrine of interposition, revived from pre-Civil War days, is all about.

At least four States, Virginia, Mississippi, Louisiana, and South Carolina, are considering resolutions of interposition by their legislatures. Delegate Boatwright offered a bill on interposition on the opening day of the current session of the Virginia Legislature. It was promptly declared to be a fantastic project by the principal antiorganization Democrat in the house of delegates, Robert Whitehead.

"Interposition is popularly equated with the doctrine of nullification," says the January issue of Southern School News, established to give nonpartisan reports on the school segregation issue.

The first proponent of the idea in this State was the Richmond News Leader, and it commented that "this plan contemplates an assertion of fundamental principles, coupled with an appeal to our sister States to decide, by ratifying or rejecting a proposed constitutional amendment, whether the power to operate racially separate public-school facilities should be prohibited to the States."

In Mississippi, however, the plan is opposed by the incoming Governor, James P. Coleman, although its chief advocates in that State are two members of its congressional delegation, a judge and a former governor.

The Cyclopedia of American Government offers the following definition of interposition:

"The Virginia resolution of 1798 declared that the powers of the Federal Government result from the compact to which the States are parties, and 'that, in case of a deliberate, palpable, and dangerous exercise of other powers not granted by the social compact, the States, which are parties thereto, have the right and are in duty bound to interpose for arresting the progress of the evil' for maintaining their rights.

"What was meant by interposition? It has sometimes been asserted that it meant nothing more nor less than nullification by a single State. Madison declared, in later years, that such was not the meaning. It is not unlikely that nothing more was intended than to secure, by cooperation among the States, a general expression of opinion.

"But it is possible that the framers had in mind a convention of the States to pass upon the Constitution or that they planned authoritative interpretation by amendment."

And the New Dictionary of American Politics gives this definition of nullification, which interposition effectively is:

"An alleged right of a State in the American Union, acting in a sovereign capacity through a convention of its people, to declare an act of Congress 'null, void, and no law, not binding upon the State, its officers or citizens.'"

Interposition

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. DIGGS. Mr. Speaker, under the unanimous consent of my colleagues, I include in the RECORD the following article from the Norfolk, (Va.) Journal and Guide of January 28, 1956. It is

the second editorial appearing in that paper on the proposal of the State of Virginia to introduce a resolution of interposition, designed to nullify the provisions of the 14th amendment. Again, it is pointed evidence of the extent to which defiance of Federal law may go and of its threats to democratic concepts and the total pattern of American social relations:

INTERPOSITION IS NULLIFICATION

Those who are advocating interposition (nullification of the Supreme Court decision of May 17, 1954), are ignoring the 14th amendment entirely. True, some of them express the opinion that the 14th amendment has been incorrectly construed by the present Supreme Court. They place their own private opinions above the considered decisions of the unanimous court.

The interpositionists are bent upon invoking theories about the rights of States which were debatable issues long before the Civil War occurred, resulting in the 13th, 14th, and 15th amendments to the Constitution.

The Civil War and the incorporation into the Constitution of these amendments cut the ground from under the doubtful validity of a State's right to interpose itself between the Government of the United States and the people of a single State or a group of States, in the matter of individual rights conferred by the United States Constitution.

It is clear that the issue which prompts the present interposition movement is one of race. The theory or contention of those who wish to interpose or to nullify is the right of States to deny certain minorities within their borders due process of law, or equal protection of the law.

Without citing them, (they are there in the records for all to examine) enough decisions were made during 25 years of Chief Justice John Marshall's tenure to firmly establish the right of the Federal Supreme Court to review the laws of the 48 States composing the Union, and to pass upon their constitutionality.

The claim that the decision of the Supreme Court on the school-segregation matter was made on a basis of sociological theses written by "foreigners" is the height of absurdity. The decision was made on the content of the 14th amendment. The States' attorneys general, especially Virginia's, used many sociological arguments in presenting their case to the Supreme Court in behalf of racial discrimination.

It is just as logical to say that the Supreme Court's legislated in 1896 when it established the doctrine of separate but equal as to say that the Supreme Court legislated or amended the Constitution in 1954.

The Constitution was originally drafted when slavery was an established, legal institution in the United States. It is unreasonable to suppose that the framers of the Constitution did not intend that it would apply to all free Americans if and when slavery was abolished; and many of the framers had disturbed consciences on the slavery question when they drafted the Constitution.

There was nothing inherent in slavery which placed upon the Government of the United States the responsibility to keep an American minority from enjoying equal protection of the laws as freemen.

There are no good reasons to suppose that the framers of the Constitution intended that the separate States should keep a minority in civil slavery after chattel slavery was abolished.

Questions now bothering Virginians are: (1) If interposition (nullification) is a part of the Gray Commission's plan, why was an extra session of the general assembly called for the purpose of authorizing a referendum on repealing a section of the State constitution?

(2) If the State intends to nullify the Supreme Court's decision by interposition, why adopt the Gray proposals?

What the general assembly is doubtless giving serious thought to is the obvious fact that interposition now would be just as much of a step toward secession as it was in 1832, the last time it was tried.

There is little sentiment in the South, other than among a few extreme racists of the Griffin, Eastland type, who would want to put themselves in the position of appearing to favor a step in that direction.

Disposition of Agricultural Surpluses

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. GRIFFITHS. Mr. Speaker, we are experiencing a most unusual paradox in our country today—in the midst of plenty there is want.

We are told the Government holds $8 billion in various food commodities in storage. At the same time we see hundreds of thousands of our own people subsisting on inadequate diets because they lack the income to purchase our bountiful food production.

A food stamp or certificate plan would be one excellent way for us to feed our hungry and dispose of large amounts of our stored food. I have sponsored legislation—H. R. 3773—along with other distinguished Members to accomplish this objective.

Similar legislation has also been introduced in the other body and it is my hope that this session of Congress will approve this type of program.

The legislature of the State of Michigan has come to the same conclusion and has expressed its concern on this subject in the following memorial.

Under leave to extend my remarks, I should like to have printed in the RECORD this joint resolution of the Michigan Legislature:

Senate Concurrent Resolution 3

Concurrent resolution memorializing President Dwight D. Eisenhower; Ezra T. Benson, Secretary of Agriculture; and the Congress to humanely dispose of surpluses

Whereas the agricultural surpluses of the United States have risen to an alarming proportion; and

Whereas said surpluses are costing the American people a million dollars a day storage; and

Whereas said surpluses are costing the American people a tremendous sum in spoilage, depreciation and deterioration, and through other losses; and

Whereas these surpluses have tended to depress farm prices and greatly reduce the income of the farmers; and

Whereas the Federal Government and the various States of the Union are paying many people aid to dependent children, old-age benefits, and welfare assistance; and

Whereas these sums are grossly inadequate to the needs of these most deserving recipients; and

Whereas a humane disposition of these surpluses would not encroach upon the storekeeper in the regular disposition of his commodities because of lack of buying power of these deserving people: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Congress take such steps as are necessary to distribute these surpluses as rapidly as possible to these deserving people, so that they and their children may receive the benefits of the bounties of this country; and be it further

Resolved, That these benetfis shall be distributed in such manner that no reduction shall be made in the benefits now being made to these recipients, it being the intention to make these benefits in addition to the benefits now being received through small grants of cash; and be it further

Resolved, That copies of this resolution be transmitted to President Dwight D. Eisenhower; Ezra T. Benson, Secretary of Agriculture; our 2 United States Senators and 18 Congressmen; and to the county welfare departments and the county boards of supervisors of the State of Michigan.

Adopted by the senate, January 12, 1956.
Adopted by the house, January 27, 1956.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLES,
Clerk of the House of Representatives.

Speech Delivered by Maj. Gen. A. J. Drexel Biddle, Jr., the Adjutant General of Pennsylvania, at the Annual Banquet of the Polish-American Citizens League of Pennsylvania, February 5, 1956, at the Hotel Adelphia, Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

My warmest greetings fellow countrymen, so many of you of Polish descent. This is not the first time I have had the pleasure of being among you. Over 15 years ago, during the tragic days of World War II turmoil, I met with many of you at Moose Hall. I was at that time just back from the country of your forebears where I spent, as Ambassador of the United States, between 3 and 4 of the most memorable years of my life. I learned then to know Poland and the heroic Polish nation for which I shall always guard the deepest respect and affection.

The qualities which have preserved the Polish people throughout history will assist them today.

The dauntless courage which has, for centuries, characterized their spirit—their love of their native soil, their devotion to family and to God, their tenacity, and their patriotism—these qualities will survive all attempts at suppression.

The Americans of Polish extraction and the Poles who adopted the United States as their new home may well be proud of the people in the land of their forebears.

They may furthermore be justifiably proud of their important contribution toward the advancement of our Nation. It is a record of patriotism and achievement for which I have abiding admiration and respect.

The ideals and principles, to which all of us are dedicated, are not lifeless abstrac-

tions. They are living things, and like all other living things, their survival depends upon their nourishment and sustenance. This would be true, even under the least threatening of conditions. However, we live in a world in which the fundamental values that make up our priceless heritage of freedom are actively menaced. This menace is militant communism; it has economic, political, and psychological facets.

Moreover, these evil forces would, by the persecution of religion, deny the soul and its relation to God.

The danger to human freedom from power-mad, evil forces is by no means an empty one, and this in spite of recurrent peace offensives. In the world-power climate of today, the scope and magnitude of the threat with which our Nation is faced may be weighed mainly in terms of the strength of all major components of the unprecedented peacetime military power of the Soviet bloc. They may also be assessed in terms of the Soviet's fundamental attitude of hostility toward the free world in general, toward the United States in particular. And hardly less importantly, they may be measured in terms of the Communists' capability for conducting political subversion throughout the world. To fully grasp the scope of this disruptive technique, we have only to realistically evaluate what has been taking place over the past few years in a number of critical situations abroad, to recognize it as deterioration. And lest we become entangled in the trip wires of wish thinking, let us not exclude the possibility that at least part, if not all of these situations might worsen before they grow better; that consequently the thin ice, underlying the theater of cold-war operations, might turn dangerously thinner.

I have in mind the creation of certain trouble spots by Moscow and Communist China; as well as their exploitation of existing trouble in other areas. I am also thinking of a comparatively new problem, which is apt to render the cold war bitterly competitive, namely, the Soviet diplomacy of blandishments in the field of economic aid to underveloped countries.

In the past 10 years we have made great strides toward containing and countering Communist expansion. But there is still much to be done. Meanwhile, these critical trouble spots, and the problem created by the Soviet trade and aid program, urgently require the contrivance and exercise of effective measures to deal with them.

Now, a word about the Soviets' dangling of offers of assistance before the non-Communist countries.

In light of the Soviets' record of absorbing other nations, it would be only natural that their venture into the field of economic aid would be apt to incite free-world suspicion, lest the program might be aimed at enticing non-Communist countries into the Communist embrace.

It was with a great splash that the Soviets embarked last year on a trade-and-aid program, but when compared with the investment of the United States in the welfare of other countries the Soviets' contribution was incalculably small.

For this and perhaps other reasons, some may be inclined to minimize the importance of this Soviet action; they may tend to assume that the Communists would not be able to deliver the goods.

But, I think, we must not underestimate either the Communists' intentions or their capabilities.

In the past decade 14 nations and more than 600 million people have been drawn into the Communist orbit.

Hence, nations presently confronted with these Communist trade-and-aid temptations should take a good look at the record. They would find the wholesome good neighborly spirit motivating our assistance against the potentially sinister purpose behind Soviet aid. They would find that the purpose of our economic aid is not to purchase friendship, but to strengthen other countries, to enable them to remain free economically and politically of any foreign domination in order that they can remain independent members of the family of nations.

Now let us compare this with the grim fate that befell other less-fortunate countries which have become dependent for aid upon Soviet Russia. They were enveloped in the suffocating wet blanket of Communist domination. And today behind the Iron Curtain the will and actions of their peoples are controlled by the "gun in the kidneys."

And the Iron Curtain is there not merely to prevent entry, but to hold the insiders captive.

Yes; nations tempted by Soviet blandishments would be well advised to examine the record. For those, which might be considering the Communists' offers of assistance and toying with the illusory idea of coexistence, without the backing of free world collective security, would be risking the fate of becoming the "truck" with the Communists in the driver's seat. This fate is similar to that which so often befalls misguided individuals, beguiled into cooperation with the Communists. The latter find themselves rapidly involved beyond their depth; thereupon hopelessly compromised, consequently victimized by blackmail, and end up as the truck with the Communists in the driver's seat. When the truck has outworn its usefulness the driver junks it, and goes in search of another vehicle.

It is pertinent to recall what was said in 1931 before the Lenin School of Political Warfare by Soviet Diplomat Dimitry L. Manuilsky. He said: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win, we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin, by launching the most spectacular peace movement on record. Then will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

This was spoken in 1931, about 25 years ago.

Since the close of World War II, we have observed the cynical, mercurial switches in Soviet foreign policy: from bluster to affability and back again to bluster. When the wave of affability, which marked the Soviet approach to the conference at the summit gave way to renewed bluster, the chief of the Soviet Union Communist Party, Nikita Khrushchev, had something significant to say. He announced the approaching downfall of the free world through a worldwide triumph of communism. He, moreover, confirmed the Cominform as a boring-from-within spearhead, aimed at achieving this end by every means, including the violent overthrow of free governments. This would mean, of course, the Cominform on the outside, working hand in hand with the Moscow-controlled Communist parties and their agents on the inside of each targeted country.

As Mr. Khrushchev is the molder and spokesman of Soviet foreign policy, we should be in error to underestimate the boundless ambitions, or the formidable armed force behind his vehement utterances.

The ultimate objective of the Soviet Union's foreign policy remains global preeminence.

To the Soviets, coexistence means a temporary gap in the process of achieving ideological domination.

In our way of thinking, it implies acceptance of differing political systems.

We believe the nations of the world can live in peace and mutual acceptance of their several forms of Government, but only if there is removed the atmosphere of hate and suspicion, generated by Moscow.

A declaration by the Reds that they do not want war is not sufficient. Adolph Hitler said that. No; the most effective way to steer a course away from war is to abstain from actions that may lead to war.

It is abundantly clear that the greatest threat to the inherent rights of free men today is militant communism.

A decade ago, in Poland, I saw the Soviets operating in pursuit of their clear and oft-stated objective to secure world domination.

I saw how they cynically disregarded their stated beliefs, by allying themselves with Nazi Germany, which until then the Soviets had held up as the antithesis of all they stood for.

The record of Soviet actions, since 1939, has consistently followed in the direction indicated by the Soviet-Nazi deal to dismember Poland.

Although, from time to time, Soviet policies may have seemed to veer sharply, the fact is that they have invariably followed a single course—unscrupulous opportunism in the pursuit of extending their power, regardless of what innocent people may suffer. The fall of Poland, of Czechoslovakia, the achievement of Communist domination in China, the Berlin blockade, all provided a lesson which the aggression in Korea drove home.

The lesson is, that communism is the political tool of despotic imperialism, and is no more than any other of the historic attempts by totalitarian states to seize and extend power.

Their weapons are not limited to the rifle, the machine gun, the cannon, the atomic bomb. Besides the boring-from-within technique and coercion, their weapons include misrepresentation and falsehood, and half-truths. With these they would turn neighbor against neighbor, friend against friend.

Their methods include the probing for and exploitation of weakness, with a view to gaining a foothold and eventually control over a given area, which in turn is intended as a springboard for expansion further afield.

Experience has taught us that the imperialist-minded oligarchy, which rules the Soviet police state, does not negotiate, unless it believes it cannot lose; that a contract with the Soviets is good only as long as the Soviets consider that the contract serves its own interests. Furthermore, Moscow has shown itself capable of exchanging toasts with a smile, while brewing trouble behind our backs.

The results of the recent summit Conference at Geneva would certainly have dashed any illusions that might possibly have been entertained concerning Soviet sincerity.

In any evaluation of sincerity of their motives, we have only to recall that among the nations, which have accepted Russian nonaggression pacts, have been Estonia, Lithuania, Latvia, Finland, Poland, Rumania, and Nationalist China. The first three—the Baltic States—were overrun by the Soviet forces following the fall of France in 1940, and have since been incorporated into the Soviet Union. In 1939 the Red army invaded Poland and Finland. The following year the Soviets seized Bessarabia from Rumania. The Soviet's pact with Japan endured only until Germany had been defeated in 1945, at which time the Soviet forces invaded Japanese-held territory in the Far East.

Moreover, Nationalist China was invaded by Russian troops in 1945, and Russian arms helped Mao Tse-tung to conquer it. This adds up to 10 nonaggression pacts broken in 16 years—and 12 treaties of alliances

broken by the Soviet Union. Figures show that armed aggression has followed a nonaggression treaty by an average of 8½ years.

And let us not forget the promises already made, yet unfulfilled by the Soviet—promises made at Yalta, at Potsdam, at Panmunjom. Let us be mindful of these unfulfilled promises, when reading of the acts of Soviet officials traveling abroad, in the pose of the placid good neighbor, warning against the West—declaring that the Soviet Union was bent upon freeing oppressed people, and upon giving them self-government. For you and I know that the Soviet has refrained from applying these principles in the cases of Poland, of Czechoslovakia, of East Germany, of Estonia, of Latvia, of Lithuania—or, for that matter, in any other countries the Soviet has brought within the clutches of its colonial structure.

The President's Christmas message to the captive nations of Europe brought forth an unjustifiable bitter tirade from No. 1 spokesman for communism, Nikita Khrushchev. His attack upon the President was an affront to the conscience of all Americans, and of all free peoples.

It revealed the Kremlin's acute sensitivity concerning this crime against the rights of peoples to choose the form of their respective governments.

The President's message, expressing, as it did, hope for the ultimate liberation of the captive nations, was clearly based upon the President's oft-stated position, that the United States intends, by peaceful means, to help attain freedom and justice for the oppressed peoples of the world.

This indeed reflects the traditional American point of view. And this point of view stems from the spirit of the Declaration of Independence, whose stirring proclamations concerning the God-given rights of free men have long thrilled the hearts of oppressed peoples wherever they might be. There would be no man today who could not understand their meaning.

Were Mr. Khrushchev willing to acknowledge the facts, he would necessarily agree that the United States, established out of revolution and a demand for freedom, has long been the source of spiritual inspiration to millions in many lands.

Lafayette said: "America's independence will implant liberty, and make it flourish throughout the world."

And Woodrow Wilson said: "The interesting and inspiring thing about America is that she asks nothing for herself except what she has a right to ask for humanity itself."

The answer lies in our basic conception of freedom and equality of opportunity.

Communism is no match for this—its aims are not to free the peoples from exploitation, but rather to maneuver them into a new form of selfish exploitation.

And let us not be misled by the Soviet's claim to have cut military spending. The Soviet's budget is far from a carefully detailed document. Hence, it affords many opportunities for disguising military expenditures.

Only when the Soviet rulers permit outsiders to scrutinize their figures, should we attach any degree of credence to Soviet propaganda concerning cuts in military expenditures.

It is possible that the Soviets are shifting from spending for outmoded means of waging war, to newer and potentially more dangerous weapons (only recently the Russians offered to furnish atomic weapons to the armed forces of the captive countries) but it is safe to say that their overall military effectiveness is unimpaired.

It would be well to write off this claim to subtly timed propaganda.

As matters stand, the dimensions of the Communist military threat are impressive. On land, on sea, and in the air, the threat from the East comprises a force in being of considerable magnitude—also, these forces are in position. And, as the decision to attack is up to the Soviets, we probably would not get very much warning.

These huge armed forces are far in excess of anything needed to defend Soviet territory.

Such are the Soviet military capabilities, and when using the term "capabilities," I do not mean to imply intentions. For intentions involve risky guesswork, potentially dangerous speculation. Soviet intentions are known only to the men in the Kremlin.

Meanwhile, the fears, engendered by the threat of the Soviet's formidable military capabilities, are exploited by the Kremlin to the advantage of its imperialistic aims.

And we know that fear is the breeding ground of suspicion and distrust; that it preaches the text of surrender, of spineless acquiescence; that it leads to the abandonment and denial of all the qualities which elevate and ennoble human life.

At this point, let me make it emphatically clear that, while we live with the constant possibility of war, that does not mean, I am convinced, that the outbreak of war is inevitable.

It is extremely important that we maintain a dignified, deliberate, cool position, whether the Soviet resorts to threats or cajolery; that while recognizing the danger of war, we remain open to all conciliatory gestures the Communists may advance, and that we continue to strive for an honorable, just, and equitable peace.

At the same time, it would be only prudent for us to be mindful of Soviet objectives, of Soviet methods, and of Soviet capabilities. For to approach negotiations, and not to bear in mind these facts of life, would be to risk being taken for a sleigh ride of unwarranted hopes, only perhaps to find ourselves headed up a blind alley of disillusionment.

What is more, in light of the historic duplicity of the Russians, and until they demonstrate a willingness to translate words into such concrete acts, as would warrant some measure of free world trust, we would be justified in insisting, as did that much quoted, sage gentleman from Missouri, that we "want to be shown."

The lesson implicit in Communist actions has been recognized by the nations of the free world for what it is. Clearly, moral suasion has no impact upon the unscrupulous.

The only effective deterrent is strength, which entails force and the capability of using it. The only world opinion, for which the Communists have any regard, is that which is so backed up.

It is this language that the leaders of militant communism understand.

Let us now briefly examine what measures we and other nations of the free world have taken to counter the overhanging threat.

Our Nation is engaged in a defense effort which dwarfs anything we have had in time of peace before. For reasonable preparedness in peacetime is essential to our hope for victory in war. At the same time we must maintain our strength—economically and psychologically, as well as militarily—so that we are prepared, if need be, to deal with whatever dangers may arise.

It is also essential to our hope for maintaining peace on acceptable terms. This is true, because successful diplomacy depends upon our ability to negotiate from a position of strength. A policy which depends for effect upon military capability becomes nothing but bluff—an obvious bluff—when the military capability for backing it up is patently inadequate.

The purpose behind our defense effort is to build up such a posture of strength as to enable us to keep the peace by deterring aggression—to make it unprofitable to attack, to forewarn a potential aggressor that an attack would be to risk national suicide—and to develop that strength to such a point that, in event we fail to deter an attack, we may meet it successfully. And, in all likelihood, we shall have to maintain this strong posture, perhaps for decades to come.

Such preparedness has taken on a greater importance than it ever had before. It is the only way, under the circumstances of our times, to insure the respect of our enemies and the confidence of our friends.

All of us know the price that has already had to be paid 3 times in less than 40 years, for our Nation's lack of military readiness, when hostilities broke out.

If we are to avoid the errors of the past, we must face up to the realities of the future.

Because of the free world's vulnerabilities in areas of contact with Communist nations, and because of the emergence of Communist China, as well as of the Soviet Union as the chief partners in the Communist bloc, and as potential aggressors, action had to be taken to fill the vacuum wherever its existence constituted a serious threat to peace and security.

The United States took steps specifically in this direction.

We have had to undertake an extensive program of military assistance to help to develop military strength in the nations located in threatened areas. In addition, we have provided forces of our own military strength in such areas, or in locations from which those areas are readily accessible.

Moreover, we do not stand alone in defense of the great cause of freedom. Recognizing the value of collective security, we joined hands with the free nations in regional defense pacts, both in the Atlantic and in the Pacific areas—and we helped to form collective strength in the Middle East.

Hence, collective security, an instrument of enlightened self-interest, forms the bulwark against possible Communist aggrandizement. It helps to protect the territory of our allies, and it protects our own territory as well. If aggression should occur, it is obviously to our own national advantage to meet it as far as possible from our own shores.

We must maintain balanced forces, not at war strength, but capable of absorbing initial blows, and capable also of providing the nucleus around which rapid expansion can take place.

Never before have the demands upon our youth and upon our veterans been greater, nor the tasks before them so worthy of their finest efforts.

Necessarily, our defense effort places a heavy obligation upon all of us, and especially upon our youth. They are required to interrupt or delay their civilian careers, to postpone their personal plans, to serve in uniform in strange lands, sometimes under hazardous conditions. But there is a compensation. That compensation is that through their service to the Nation, they are helping to guard the rights and liberties, without which there could be no free choices, no personal plans—for all that would be subservient to totalitarian authority.

This obligation and the privilege of service are not confined to our youth and to our veterans, however. Since our freedom is shared by all, it should be safeguarded by all. There are limitless opportunities for service in all forms of human endeavor.

Our people have not sought the easy way; they have placed right before convenience.

Nothing is free, and nothing worthwile is cheap.

From our forebears we inherited a priceless birthright of freedom, of justice, and equality.

We must fulfill the trust which has been passed on to us.

We must preserve this heritage and pass it on to our successors, not only unimpaired, but enriched.

It is a challenging responsibility which faces us.

Inspired by the deeds of the courageous men and women who have gone before; armed with the ideals for which our Nation stands; and strong with the determination to uphold those ideals, regardless of the personal cost, we can look to the future with courage and confidence.

Imprisonment in Communist China of Very Rev. Harold W. Rigney, of Chicago—Part I

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. DOUGLAS. Mr. President, on July 25, 1951, after years of brave resistance as rector of Fu Jen Catholic University in Peiping to the intimidations of the Chinese Communists, the Very Reverend Harold W. Rigney, a native of Chicago, Ill., was arrested as an American spy and sent to imprisonment and torture that were to last for 4 long, heartbreaking years.

On September 17, 1955, Father Rigney was finally released and soon after returned to this country to travel the long road back to health in the atmosphere of freedom, and with his mother, Mrs. Addie Rigney, relatives, and friends in the back-of-the-yards council who did so much to press his case and secure his release.

Father Rigney's struggle against Communist tyranny did not end with his release, however. For the information of the free world he has written up the account of his bitter experience with the Communist terror, and the Chicago Sun-Times has been running this account as a fine public service in its news columns.

For the information of Members and others across the country, I ask unanimous consent that the first installment of this story of human courage be printed in the Appendix of the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

FOUR YEARS IN A RED HELL—FATHER RIGNEY TELLS OWN STORY OF TERROR

(By the Very Reverend Harold W. Rigney, S. V. D., Divine Word missionary)

"You are arrested as an American spy," said a woman member of the Sepo (security police of Communist China) who had accompanied the police to my living quarters where they had handcuffed me. As she spoke, she held up to my view a piece of paper with Chinese characters on it.

I was arrested as a spy—an American spy.

For 5 years I had fought the Chinese Communists to protect the Fu Jen Catholic University of Peiping from their infiltrations and destructive tactics. I had tried to preserve this university as a citadel of learning and culture and to keep it from being taken over by the Communist government.

These were my "crimes," the real reason for my arrest.

It happened on July 25, 1951, the day when a decision was expected on whether the cease-fire talks at Kaesong, Korea, would resume.

I had felt unwell and had taken a long rest after my noon dinner. At 3:40 p. m., I arose, intending to listen to the 4 o'clock Voice of America broadcast for the latest news of the cease-fire talks.

As I started to dress, I was startled by the sound of many men running near my living quarters. Alarmed, I looked through a window and saw helmeted policemen with tommyguns surrounding my residence.

Six of them formed in a line near the entrance to my quarters, their rifles pointed at the doors and windows. I knew then that I was going to be arrested. I had been expecting this since the Communist armies had occupied Peiping on February 1, 1949—and especially since the "people's" government of China had taken over Fu Jen University.

I was dressing as fast as I could when I heard a pounding on my door. I opened it and in a moment my modest quarters were filled with armed Sepo men.

Two seized me by the arms while others searched my bedroom and toilet. One of the guards took from me a silver medal of the Blessed Virgin Mary, a gift of my brother, that I wore around my neck. As I didn't have a shirt on, they got one from my chest of drawers and gave it to me. I was then handcuffed with my hands behind my back.

SHOWED CARDLIKE PIECE OF PAPER

The policewoman then showed me the cardlike piece of paper and spoke in Chinese and English.

"You are arrested as an American spy," she said. To this, I could only smile wryly. Another policeman took my picture.

My brain was flooded with thoughts and conjectures. Perhaps the Korean cease-fire talks had been called off; perhaps a state of declared war existed between Red China and my country and, as a consequence, I was being arrested by the Communists in retaliation against the United States.

Maybe, I thought, I would be questioned and given rough treatment for a few hours or days and then be deported like other missionaries. I was in a daze. I could not know what was in store for me.

I was led out of my quarters and ordered to stand in the compound, facing some 40 or 50 children of the parish catechism school. In the past, whenever these children saw me, they would run and surround me, holding my hands, all laughing and talking at the same time.

Now it was all so different. I looked at them, their little faces distorted and torn by strong conflicting emotions: fear of the Communist police; love and sympathy for me. They were crying, but some dutifully and fearfully clapped their hands. I blessed them, making a little sign of the cross with my right hand, handcuffed as I was, behind my back.

DRIVEN IN AMERICAN-MADE JEEP

My picture was taken again and I was ordered into an American-made jeep, with 3 or 4 police guards. The rest of the Sepo boarded a truck.

I was then driven in front of Fu Jen University where all could see me in chains.

After this, the guards drove to the Ts'ao Lan Tzu Hutung (a Peiping prison), near the national library. The jeep slowly drove through the open gate at No. 13 of the hutung. I was ordered out and placed in a small room. I wondered: What next—was I to be shot, was I to be deported immediately, or was I to be questioned and then deported?

Soon a policeman removed my handcuffs and ordered me into an office. There I was searched and my rosary, watch, fountain pen, automatic pencil, pocketknife and money were taken from me. I was given a list of these articles, which I signed first in English, then in Chinese. Lastly, my fingerprint was added to it.

I was then led through a dark and damp corridor of an old one-story building into cell No. 10. The heavy wooden door slammed behind me and was bolted.

I was in prison.

There were six other prisoners, all Chinese, in the small cell. They looked at me in silence, then motioned me to sit on the wooden kang (bed).

"What is your name?" one asked.

"Rui Ko Ni," I said, giving my name in Chinese.

"What is your nationality?"

"Mei Kuo jen (American)."

INFESTED BY RATS

I looked around the cell. It was about 11 by 10 feet. The wall was white and bare. The kang, 6 by 10 feet and a foot-and-a-half high, was made of rough boards. There was one window, about 2 by 3 feet, with heavy iron bars.

In one corner of the damp, earthen floor was a hole; rats scurried in and out of it. There was another such rathole under the kang. A strongly stinking bucket was used as a urinal and in emergency cases for bowel movements. In the center of the ceiling was a single light of 15 candlepower.

Under the kang were two small bowls. One was for drinking water and the other for food which was usually "wo tou," a tasteless and unleavened mixture of steamed maize and water. Most of my cellmates had a little cup with a toothbrush and soap; these were kept under the kang. They used their small bundles of extra clothes for pillows.

DAILY ROUTINE HEAVY ON BRAINWASHING

The cellmates had a daily routine. It follows: Rising, 6:15 a. m.; toilet, 6:30 a. m.; study (brainwashing), 6:45 a. m.; breakfast, 8 a. m.; study (brainwashing), 9 a. m.; free period, noon; study (brainwashing), 1:30 p. m.; supper, 4:30 p. m.; toilet, 5:15 p. m.; study (brainwashing), 7 p. m.; retiring, 9:30 p. m.

On Sundays, the study periods after breakfast and supper were dropped and the prisoners were free to sew clothes. Some—those who progressed in brainwashing—were allowed to play cards or other games. The prisoners made the cards of several sheets of paper pasted together with the figures drawn on them. Chinese chess was also played.

My imprisonment started at about 5 p. m. Prison supper was over. When my cellmates asked me if I had eaten, I told them I had had a heavy noon dinner and was not hungry.

I sat on a kang next to the well. A cellmate who knew some English told me that all the prisoners in this cubicle had been arrested because they were spies and friends of the then President Harry S. Truman, stigmatized by the Communists as an enemy of the Chinese people.

THOUGHT CELLMATES PLANTED BY REDS

At first, I suspected that one or all of my cellmates were Sepo guards planted in the prisons to trick me into a confession.

I discarded this notion later. The Sepo didn't have to plant any agents in the cells because the prisoners, with few exceptions, were more than eager to show how they had become converted from anti-Communists to pro-Communists. They demonstrated this change of heart by cooperating with the prison authorities on every possible occasion. They readily and vehemently joined in tou chengs.

A tou cheng is a sort of brainwashing procedure used by pro-Communist prisoners to break down the resistance of an anti-

Communist cellmate. It is a form of mental torture, occasionally accompanied by physical blows, in which the pro-Communist converts would gather around the anti-Communist "black sheep."

The pro-Communists would shout at the anti-Communist, insult and curse him, point accusing fingers at him and do everything possible to soften him up to the point where he would even confess crimes he did not commit to gain a moment's surcease.

A nerve-racking procedure, the tou cheng would often last for hours, and few could stand it for any considerable length of time.

The bulk of the prisoners also strove to give proof of their conversion to communism by vigilantly reporting every infraction of prison rules or other reactionary acts committed by unconverted cellmates. The Chinese called a cellmate who become such an informer a "running dog."

THEY ACT SPEEDILY AND UNIFORMLY

At 9:45 that first night, an officer blew a whistle and shouted: "Shui, chao" (sleep). In a moment's time the cell was a hive of activity. The prisoners quickly put away their books, unrolled their thin cotton mattresses, took off their shirts and pants and went to sleep. I was impressed by the speed and uniformity of action. No one delayed. No one was at a loss what to do.

I had no mattress, no covering for the cool of the evening. I saw a coat hanging on the wall and asked if I could use it as a cover. But my cellmates forbade me to touch it. It was against the rules to use the belongings of others, I learned later; the permission of the chu chang (cell leader) was necessary and my chuh chang offered no such permission.

So I lay on the hard wooden kang in a place next to the wall allotted me by the chu chang. All seven of us slept on the kang.

Fifteen minutes after I lay down on the kang, the cell door opened and an officer called out: "Rui Ko Ni." When I answered to my name, he motioned to me to leave the cell. As I started to put on my shoes, my cellmates, eager to demonstrate before their jailers that they were no longer anti-Communists but fervent pro-Communists, began to shout: "Kuai, kuai" (hurry, hurry).

It was dark. As I passed through the entrance of the compound, I came to open ground, but I could not see 10 feet beyond me.

GUARD URGES HIM TO MOVE QUICKLY

I hestiated, not knowing which way to go. Also, I was afraid that I might be tricked to walk into the open and be shot for attempting to escape. The guard was angered by my hesitation and he shouted: "Tsou, tsou. Kuai, kuai." (Go, go. Quick, quick.)

He pointed the way and trailed close behind me, with his pistol drawn and his finger on the trigger.

When I reached a row of rooms in a long, 1-story building, he ordered me to halt, and announced my arrival. A voice replied: "Lai." (Come in.)

I followed the guard's shouted command to enter and found myself in courtroom No. 4 of the "People's" military court.

The chamber was 18 feet wide and 27 feet long. At one end, the judge sat at an ordinary office desk. To his right sat the recorder who took down the minutes of the proceedings, and to his left an interpreter. Nearby sat the guard, his pistol aimed at the concrete floor near my feet.

On a wall in back of the judge hung a picture of Mao Tse-tung.

I was ordered by the Sepo guard to stand before a wooden chair facing the judge. My eyes were only half a foot from an electric light suspended from the ceiling. Swarms of insects buzzed around the light. Soon they began to crawl over my face and neck, but I was forbidden to shoo these pests away. The light hurt my eyes. The Sepo guard tore off my spectacles and threw them on a window sill.

QUERIED BY JUDGE, ASKED TO CONFESS

The judge, a lean man about 30 years old, eyed me for a minute, then ordered me to sit down. He spoke in Chinese, I in English. The interpreter translated for us.

Question. "What is your name?"

Answer. "Rigney, in English; Rui Ko Ni in Chinese."

Question. "What is your full name?"

Answer. "Harold William Rigney."

Question. "Where do you live?"

Answer. "Li Kwang Chiao, Nan Chieh, No. 1."

Question. "What is your nationality?"

Answer. "American."

Question. "What is your occupation?"

Answer. "I am a Catholic priest, a missionary, the rector of Fu Jen University."

Question. "Now tell me what crimes have you committed against the Chinese people?"

Answer. "I have committed no crimes against the Chinese people."

"Shih ma." (What.) He shouted, banging his fist on the desk. "Chan chi lai." (Stand up.)

I stood up. The insects swarmed around me again and the glare of the electric light was painful.

So started my trial that was to last 3 years and 2 months. The first phase of this ordeal lasted 60 days and nights. In the first week of my trial I stated clearly and emphatically, "I am a Catholic, and I will not give up my religion; I would rather die. Moreover, I will not become a Communist."

The judge replied, "No one asks you to give up your religion, and you could not become a Communist even if you wanted to."

ONE HUNDRED AND FIFTY SESSIONS DURING SIXTY DAYS

I think I had about 150 court sessions during these 60 days and nights. The sessions would run variously; usually I had 1 or 2 during the day, starting in the late morning and resuming in the late afternoon.

During the entire period I was permitted only 2 nights of rest. One was given me because I had a fever and the prison physician prescribed rest. The other was granted by the judge for the obvious purpose of making me realize how sweet a night's rest was, even on boards.

Those were 60 terrible days and nights.

Imprisonment in Communist China of Very Rev. Harold W. Rigney, of Chicago—Part II

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 8, 1956

Mr. DOUGLAS. Mr. President, I also ask unanimous consent that the second installment of Father Rigney's story of imprisonment in Communist China from the Chicago Sun-Times be printed in the Appendix of the RECORD together with comments of Chicago leaders on the story.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

FOUR YEARS IN A RED HELL—FATHER RIGNEY TELLS STARVATION PRESSURE TO CONFESS

(By the Very Reverend Harold W. Rigney, S. V. D., Divine Word missionary)

During my first weeks in the Ts'ao Lan Tzu Hutung (the Chinese Communist prison in Peiping), I gradually wasted away and became very thin.

At the time of my arrest, I weighed about 180 pounds, a considerable figure, since I am small-boned. Not long after my internment, I dropped to less than 100 pounds.

I was hungry all the time, since I could not eat the food served me. Even the pigs in America ate better than I did.

Our regular menu consisted of "wo tou" and "pai tsai." Wo tou was made of 3 or 4 ounces of steamed corn meal, unleavened and unsalted. One mouthful was enough to make me lose my appetite. It took me 4 months to get used to it and eat enough to stave off hunger for an hour or two. During these months, the prison authorities, to keep me alive added boiled rice to my menu; it also was unsalted and tasteless.

BOILED WATER WITH A LITTLE CABBAGE

Pai tsai was boiled water with a little Chinese cabbage in it. While it could hardly be called soup by American standards, I liked pai tsai. But, for the first 3 months, I was given less than half a bowl of it, while the other prisoners received a full bowl. There was no reason to reduce this one food item I could eat, unless it was part of a scheme to starve me or keep me undernourished.

We ate twice a day, in the late morning and late afternoon. By nightfall, I was very hungry.

Throughout my imprisonment in Ts'ao Lan Tzu, we were served special meals about 12 times a year. We prisoners looked forward to these meals long in advance and ate them like hungry dogs.

They consisted of kan fan (dry, steamed rice) or man tou (Chinese steamed wheat flour bread) with meat soup. The meat was cut to the size of bouillon cubes. Each prisoner usually received 3 or 4 meat cubes, but sometimes none at all. In my first year in prison, I think I received at most 3 or 4 ounces of meat.

How I longed for a good meal. But how I longed for salt, too.

I was salt-starved because our diet was deficient in this very important respect. Most prisoners had private supplies of salt, either purchased or sent them by relatives. I was not allowed at first to buy salt or receive any items from the outside.

A cellmate, quite a decent fellow who had his own supply, once gave me a pinch of salt in my bowl of water when no one was looking. I still recall how delicious the water tasted. A week later I asked him again for a pinch of salt, but he refused.

Later I learned it was against the rules to give anything to a fellow prisoner without permission of the chu chang (cell leader). Giving was regarded as an imperialistic way of making friends, and friendship between prisoners was strictly forbidden.

Hell is like this. There are no friendships there.

I considered salt the most important item I could buy or have sent to me during my first year in prison. Next in importance was toilet paper and the third was soap.

Our toilet paper consisted of a coarse paper about 2½ feet long and a foot wide. On receiving it, the prisoners tore it into oblongs 4 inches long and 2½ inches wide.

The Government supplied toilet paper and soap only to those prisoners who lacked money or permission to buy anything and to those who failed to get supplies from the outside. But since Government supplies were inadequate, the prisoners were on the alert for scraps of paper of any kind and

for used laundry water with suds, which they reused to wash their clothes.

After a month or so in prison, I was allowed to buy toilet paper and soap. The rats, however, ate the soap and for about 4 months I washed by face and hands in cold water without soap.

I remember the morning I washed my face for the first time. I had returned from a court session early enough to get a nap of an hour or so. When the signal for rising was given, everybody jumped up, dressed, and began to wash.

First to wash was the cell leader. He washed his face and hands in about a pint of water. Then the others followed.

DIRT ACCUMULATES

I was last. By that time, the pint of water was full of dirt.

Bathing was another problem. In my quarters at Fu Jen Catholic University in Peiping, I bathed 2 or 3 times a day. But in prison it was different. From the time I was incarcerated on July 25, 1951, until mid-November of that year, I had only 2 or 3 sponge baths in my cell, each with about 1 quart of cold water.

During this time I accumulated layers of sweat and dirt. I was wretched. I often asked the court to allow me a hot bath, but was always told that I had to confess first.

My cellmates scolded me and said I gave off a disagreeable smell and one day the cell leader shouted that he didn't like my smell and ordered me to sit in a corner. I replied that all I needed was a hot bath.

Before long I was full of lice. Later, the prisoners linked the fact that I had lice with the Communist charge that the Americans were carrying on germ warfare in Korea. During that period, whenever a cellmate found he had lice, he would usually point to me and say: "These came from that American imperialist."

Searching for lice on one's clothing becomes a daily routine. Each prisoner undressed and thoroughly examined his clothing for vermin. I always felt relieved when I discovered and killed any of the insects. The more I found, the more relieved I felt. The most I ever found in one search was nine, and I became quite expert in the technique of lice hunting.

That such an occupation could become a form of mental relief indicates how dull was prison life at Ts'ao Lan Tzu.

My first day in prison was spent in a court session that lasted until long after daybreak. Fatigued from my night's ordeal, I returned to my cell and lay down on the wooden kang (bed) to sleep. But my cellmates soon swarmed around me, telling me it was forbidden to sleep in the daytime.

During the court sessions that followed, the judge insisted I was a spy. I denied it. At one of the hearings during the initial phase of my imprisonment, the judge informed me that I disclosed the price of millet (hsiao mi), the staple food of North China in one of my monthly reports to my superior general in Rome.

This, he said, was economic intelligence and was as important as military intelligence. Furthermore, he declared, this economic information that I gave to the Vatican and to America was responsible for the economic embargo that Washington had imposed on China.

I replied that I only reported to my superior general that the price of millet was going up in an effort to explain why we increased salaries at Fu Jen University. In the early days of the Communist occupation, salaries were calculated in terms of catties, or pounds of millet.

Angrily, the judge accused me of arguing. I was not allowed to argue, he said; I was only in court to confess my crimes.

But my only "crimes" were that I sent those reports to my superior general and had copies sent to Father Ralph in Chicago.

I dispatched them either by mail from Peiping or via travelers bound for Hong Kong, where they would be given to the Reverend Joseph Henkels, S. V. D., to forward them to their destination.

On one occasion a friend, who was leaving Tientsin by ship for Hong Kong, took two of my monthly reports to deliver to Father Henkels in Hong Kong for remailing.

REPORTS SEIZED

My friend was searched by a customs officer who confiscated the reports, but who assured him they would be returned in a few days.

Weeks passed and they were never returned.

The judge told me (and I am certain this was a lie) that the court had all those monthly reports. Therefore, he said, I could not hide anything from the court but would be forced to confess everything about them. If I failed to confess about any item in the reports, the court would know that I was dishonest, he concluded. He then emphasized that my reports contained economic intelligence.

JUDGE STRESSES POINTS

The judge hammered on these points for the next 3 or 4 days.

Finally, I said that if the Communist government considered the gathering of newspaper reports about the price of millet and the relaying of this information to others as intelligence work, then I did intelligence work. But, I insisted, I was not a professional spy.

This angered the judge. He shouted that I was a spy and that was all there was to it.

LEADERS HAIL RIGNEY STORY AS GREAT HUMAN DOCUMENT

Reactions to Four Years in a Red Hell, the dramatic story of the Very Reverend Harold W. Rigney's imprisonment in Red China, stress its importance as a significant document of our times.

Following publication of the first installment in the Sun-Times Sunday, community leaders, students of the Far East and educators recognized that the Chicago priest's ordeal and his objective, firsthand account of it—published exclusively in the Sun-Times—comprise a major contribution to the world's knowledge of communism and its meaning.

There was universal agreement that Father Rigney's own story should be read by every American. There was lavish praise for the illustrations by famed cartoonist Milton Caniff. And there was unanimous expression of interest in succeeding installments of the epochal narrative detailing the stark, incredible story of indomitable faith.

Governor Stratton called it an education in Red policies. He said: "I hope every American gets to read it. It's a revelation. I urge all people in the State to follow this important document carefully."

The governor congratulated the Sun-Times for presenting this as a public service in citizenship. He called the Caniff illustrations technicaly impressve and obviously the result of extensive research.

Dr. Hans Morgenthau, professor of political science and director of the Center for the Study of American Foreign Policy at the University of Chicago, commented:

"This is an excellent piece. Really very moving and impressive. It gives a concrete demonstration of the regime of Chinese communism. You can read a lot of books on the general character of communism, but an outstanding, personal, life story such as this makes an indelible impression."

Mayor Daley said he read the installment through twice and then read it aloud to his children.

"It is a shocking and brutal story," he said. "The Sun-Times is to be congratulated for bringing the public this firsthand, clear, and objective story that exposes the tactics used by the Reds. This gives us some idea of what we're up against in this world conflict of ideologies."

Joseph B. Meegan, director of the Back of the Yards Council, declared: "It's simply terrific. I think it is one of the great accounts of all time of an experience of this sort. I hope every living American has an opportunity to read it.

"What impresses me most is the realism and objectivity of it. You feel as though you're actually going through the same experiences as Father Rigney."

Carter Davidson, executive director of the Council of Foreign Relations: "Father Rigney's story is not only a great human document, but it is also a document of high political significance."

NAACP Civil Rights Leadership Conference

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a news release from the office of the National Association for the Advancement of Colored People, which announces a leadership conference on civil rights to be held here in Washington, March 4–6. This conference will be composed of 50 national organizations, representative of the total American population, and they will be gathered to express the views of those they represent on the status of civil rights in our Nation today and to demand in their behalf enactment of civil-rights legislation in this session of the 84th Congress. There has been abundantly sufficient evidence presented to Congress and our Federal Government of the need for enforcement and the protection of constitutional guaranties for all citizens. Further, there has been abundantly sufficient evidence of the fact that the majority of the people of the United States want this action now. The test of a democratic government is in its ability to recognize threats to its way of life and to respond to those dangers as pointed out by the majority of the people it represents.

The news release follows:

LEADERSHIP CONFERENCE ANNOUNCES CIVIL RIGHTS ASSEMBLY, MARCH 4–6

NEW YORK, February 2.—Anticipating a showdown fight for enactment of civil rights legislation in this session of the 84th Congress, the leadership conference on civil rights has issued a call for a national delegate assembly for civil rights in Washington, March 4–6, Roy Wilkins, chairman, announced today.

Mr. Wilkins, who is also executive secretary of the National Association for the Advancement of Colored People, heads the leadership conference composed of 50 national church, labor, fraternal, civic, and minority group organizations. Arnold Aronson of the national community relations advisory council is secretary of the conference.

In making the announcement, Mr. Wilkins stressed the need for wide geographical dis-

tribution of delegates. "The influence of the assembly on the Congress," he pointed out, "will depend less upon the number of individual delegates in attendance than upon the number of States and congressional districts represented."

The participating organizations were urged to send delegates from as many different congressional districts as possible. The conference anticipates an attendance of about 2,000 delegates. Registration for the assembly is scheduled for Sunday, March 4, at the Willard Hotel. The opening session will be held that night in the Interdepartmental Auditorium. Monday and Tuesday, March 5 and 6, the delegates will visit their respective Representatives and Senators and attend a night session Monday at the Willard. The assembly will close Tuesday afternoon with a report session in the Interdepartmental Auditorium.

Citing the breakdown of law and order in some parts of the South, the call charged that the Constitution and the Supreme Court are being flouted openly. Citizens are being denied their constitutional rights and persecuted for demanding them. To permit these violations to continue is to sanction lawlessness and defiance of the Government of the United States.

"It is essential," the call declared, "that Congress enact legislation in this session to safeguard the civil rights of American citizens and the processes of orderly government."

The conference seeks enactment of an eight-point legislative program including job equality through the establishment of an effective Federal FEPC, withholding of Federal funds from any institution which defies the constitutional prohibition against segregation in public facilities, making lynching and other race-inspired acts of violence Federal offenses, abolition of the poll tax and protection of the right to vote, establishment of a Civil Rights Division in the Department of Justice with authority to protect civil rights in all sections of the country, creation of a permanent Federal Commission on Civil Rights, elimination of remaining segregation and other forms of discrimination in interstate travel, and provision for majority rule in the Senate and the House of Representatives.

The supporting organizations include the following: A. M. E. Zion Church, Alpha Phi Alpha Fraternity, American Civil Liberties Union, American Council on Human Rights, American Federation of Labor and Congress of Industrial Organizations, American Jewish Committee, American Jewish Congress, American Veterans' Committee, Americans for Democratic Action, Anti-Defamation League of B'nai B'rith, Brotherhood of Sleeping Car Porters, Catholic Interracial Council, Colored Methodist Episcopal Church, Congress of Racial Equality, Delta Sigma Theta Sorority, Hotel, Restaurant, and Bartenders' International Union of America, Improved Benevolent and Protective Order of Elks of the World.

Also the International Ladies' Garment Workers' Union, International Union of Electrical, Radio, and Machine Workers, Japanese-American Citizens' League, Jewish Labor Committee, Jewish War Veterans, National Alliance of Postal Employees, National Association for the Advancement of Colored People, National Association of Colored Women, Inc., National Baptist Convention, United States of America, National Bar Association, National Catholic Committee on Race Relations, National Community Relations Advisory Council, National Council of Jewish Women, National Council of Negro Women, National Frontiers Club, National Negro Business League.

Also the National Newspaper Publishers' Association, National Religion and Labor Foundation, National Supreme Council Scottish Rite Masons, Phi Beta Sigma Fraternity, Phi Delta Kappa Sorority, Textile Workers' Union, the American Ethical Union, the Workmen's Circle, Transport Workers' Union of America, Unitarian Fellowship for Social Justice, United Automobile Workers of America, United Hebrew Trades, United Rubber Workers, United Steelworkers of America, United Transport Service Employees of America, Workers' Defense League, and the Young Women's Christian Association.

Promise of the Trees

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1956

Mr. TOLLEFSON. Mr. Speaker, I should like to call to the attention of my colleagues an article which appears in the current issue of the Reader's Digest. It is an advertisement by the Weyerhaeuser Timber Co., which has its headquarters in my home city, Tacoma, Wash.

The article to which I refer describes a new and highly successful facet of the lumber industry which started formally in 1941 in Washington State and is rapidly spreading over the Nation. It is known as tree farming.

This undertaking is especially deserving of note because it is an excellent example of the effectivenesss of cooperative effort on the part of industry and Government in behalf of the conservation of our natural resources. I hope that many of the Members of Congress will read the article, either in the Appendix of the RECORD or in the magazine in which it appears.

The article follows:

PROMISE OF THE TREES—THE STORY OF MODERN FORESTRY AND TREE FARMING IN THE PACIFIC NORTHWEST

For 300 years, the people of America have gained an abundance of wood products, game, sport, and enjoyment from the vast forests growing on this continent. Today, many of these forests still remain * * * carrying on their role as man's most versatile natural resource. It is important that they continue to serve the needs of present and future generations. Toward this end, multiple use of tree-growing lands must be considered, particularly the relationship of timber growing and harvesting to grazing, watersheds, recreation, and wildlife. The forest industry is applying these management principles in growing timber as a crop on privately owned tree farms. This is true forest conservation because it means that the Nation's forests can be both wisely used and perpetuated.

As our Nation's economy continues to expand, an increasing amount of wood is required for lumber, plywood, pulp, fibers, chemicals, and many other forest products. To help meet this demand, man and nature are working together to grow and harvest crop after crop of trees on millions of acres of privately owned forestland. These timbered areas are operated under a scientific system of modern forest management known as tree farming.

A tree farm is a privately owned area of forestland voluntarily dedicated to the growing of timber as a perpetual crop. All tree farm owners agree to protect their trees from fire, insects, and disease, carry out a clean, systematic log harvest and grow new trees to replace those harvested. The tree farming concept recognizes the fact that a forest is not static, but is a living, dynamic unit * * * and that, given a chance, it will reproduce itself as a renewable natural resource.

The primary goal of tree farming is to provide a perpetual supply of forest raw materials. Foresters know, however, that tree farms also supply other benefits to both man and wildlife. They give consideration to proper use of timberlands and the relationship of tree growing to such other factors as agriculture, recreation, game management and protection of watersheds.

This improved philosophy of forest management has not always been in existence. Early settlers were concerned about timber supply, but only in the sense that there seemed to be too much. Forests stood in the way of fields to grow food, and they were cleared away. Vast areas of trees were cut and burned to provide clear land for the building of roads and cities. As the Nation's economy became more industrial, the timber that was once a nuisance became a necessary commodity. This was the real beginning of the forest industry in America.

Early in this century, both private industry and Government agencies began to take an active interest in perpetuating timber as a valuable natural resource. They knew that the key to future forests lay in their ability to manage two natural assets—forest soil and the reproductive power of trees.

The industrial tree-farming system that grew out of this thinking was designed to maintain a favorable ratio between the number of trees grown and the amount harvested. Foresters say this balance is now being achieved.

Dedication of Clemons Tree Farm, owned and operated by Weyerhaeuser Timber Co., took place in June 1941, marking the actual beginning of the formal tree-farm movement. Since that time, the movement has spread rapidly across the Nation, as shown on the chart below. Today, the figures show that about 7,400 private timberland owners are managing more than 38 million acres as tree farms.

In the United States, certain areas of land are more suitable for growing trees than other crops. This is particularly true throughout the Douglas-fir region of the Pacific Northwest. In this area, the natural combination of wet, mild climate, rugged terrain, and good soil favors abundant forest growth.

On western tree farms, harvesting methods are based on the life cycle and growing habits of the species being cut. Douglas-fir trees, for example, grow in dense stands on steep mountain slopes. In such forests, most mature firm trees are about the same age and size. Usually, there is an understory of smaller shade-tolerant species such as western hemlock, western redcedar, and true firs.

The growth habits of Douglas fir are such that its seed will not germinate nor its seedlings thrive in the deep shade of mature trees. As a result, planned harvesting in the fir region is done by area selection. This is a logging system that requires clear-cutting of selected small areas or corridors of timber, leaving adjacent islands of mature trees to serve as a natural seed source. This method provides the open, sunlit ground needed to establish new crops of fir seedlings. Where a natural seed source does not exist, the land is artificially reforested by hand-planting or aerial seeding.

Ponderosa pine tree farms are located in a dry inland plateau region, east of the Cascade Mountain Range. In contrast with the dense, evenly aged fir growth, pine timberlands contain trees of all ages and sizes, growing in very open, park-like stands. Here are found seedlings and young trees intermingled with older, larger pine trees which are ready for cutting. Since the

climate of the pine region is quite dry, there are fewer trees per acre than in the moist Douglas fir region to the west.

Harvesting of mature pines is done by individual tree selection, which is a planned system of cutting that removes individual trees as they reach marketable size. The vigorous smaller trees left standing continue to grow and increase in usable volume until they are marked for harvesting. In the meantime, they serve as a natural seed source to reforest nearby areas. The selective removal of mature trees provides growing room and permits more sunlight and rain to nourish the younger trees, improving their rate of growth.

PROTECTING TREES FROM FIRE, INSECTS, AND DISEASE

Long-range programs for planned harvesting and natural reforestation of tree farms are worthless without adequate protection of both trees and land for future use. Loss of timber from forest fire, insects, and disease is one of the major hazards faced by all tree farmers. To combat such forest enemies, each new tree must be protected from seedling to harvestable size. In the Douglas fir region, this is a period of 80 to 100 years.

On tree farms in the Pacific Northwest, every precaution is taken to prevent and control forest fires. Tree-farm owners pool resources, maintaining constant protection in cooperation with State and Federal forest agencies. They man lookouts, construct and maintain thousands of miles of forest roads, operate mobile mechanized fire-fighting equipment, and speed communication in the field by shortwave radio.

Industrial forests are also guarded against insect and disease epidemics by removal of both afflicted and susceptible trees, aerial spraying, and other preventive measures. The Nation's privately owned tree farms are among the best-protected forest lands in the world.

FOREST PRODUCTS ARE IMPORTANT TO OUR WAY OF LIFE

Wood is one of America's most versatile and valuable raw materials. It is used daily by every person, business, and industry in such diversified items as lumber, plywood, pulp, paper, textiles, cellophane, felts, cork, glues, plastics, insulation, and chemicals. Through product development, market research, and improvement of manufacturing techniques, the forest industry is continuing to expand wood's economic usefulness to the Nation.

Forest industry scientists no longer look upon trees only as round logs to be sawn into square lumber, but rather as bundles of wood fibers packaged in bark. As a result of this new concept, it is now possible to use a greater variety of tree sizes and species, as well as to more completely utilize each log delivered to the mill. Many useful products are now being made from bark, slabs, chips, shavings, edgings, and other secondary forest raw materials.

The potentialities of wood are almost without limit. To assure a supply for the products of tomorrow, the Nation's privately owned tree farms are managed as permanent wood-producing forestlands, growing timber as a crop under the direction of trained industrial foresters.

RESEARCH IN THE FOREST INDUSTRY

Contributing to our American standard of living are the various wood products developed through forest industry research. Weyerhaeuser Timber Co. is active in four fields of research—forestry, chemical pulp, new product development, and marketing.

In forestry, new methods of growing, harvesting, and protecting timber crops are always under study. Pulp research is resulting in more diversity of chemical cellulose products, better wood utilization, and improved processing methods. Product development and marketing research are bringing about a steady flow of new wood, wood fiber, and wood chemical products.

Such research and development programs are economically sound because the wood for tomorrow's products is growing on the Nation's industrial tree farms today.

University of Alabama Riots

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial published in the New York Times of February 7, 1956. We all are aware that Alabama is another of the rebel States presently testing the authority of our Federal Government and the highest courts of our land through open, irresponsible, and reprehensible defiance. The latest episode of defiance is national news and concerns the admission of Miss Autherine Lucy, a Negro, to the University of Alabama. The reaction of the writer for the New York Times is representative of that of the majority of American people of all races and walks of life. With other articles I have previously inserted in the RECORD on the matter of civil rights, it is further evidence that the alarm of the American people who, through labor, ingenuity, and sacrifice of life—their faith in democratic principles—have brought our Nation to the position of esteem it holds today, is exceedingly prudent. This shameful defiance by a growing number of Southern States is establishing a pattern in America, which will ultimately endanger and destroy the liberties of all people, regardless of race. The editorials, daily appearing in the Nation's press, and the voices that are daily being raised in alarm are certainly evidence which is as pointed as it is possible to have that the American people are demanding forceful action on civil rights. It should be sufficient to every requirement our Federal Government might have for action.

MOB RULE AT TUSCALOOSA

Is it "white supremacy" that is being demonstrated when a mob of a thousand demonstrators turns on one mild-mannered little Negro girl, guilty of no other act than attending classes which the Supreme Court of the United States says she has every right to attend, and pelts with rocks and eggs the car in which she is being spirited across the University of Alabama campus? Is it "respect for law and order" that is being shown, when the trustees of that university, instead of standing up to this threat, vote to suspend not the instigators of the outrage but the Negro girl herself?

We are glad to note some opposition among the University of Alabama students to what has happened here, and we honor them for this opposition. They are better defenders of the good name of their university than the rock-throwers. For the rock-throwers themselves there is only this much to be said: they are not the real makers of opinion in this sorry business; they are merely immature young men who have taken a tip from some of their more irresponsible elders who happen to be in positions of high power. What does a man like Senator EASTLAND expect to happen, on the student level, when he declares that a unanimous decision of the Supreme Court is the result of "leftwing brainwashing of that Court? This is what he is asking for. This is what he gets.

The Anniversary of the Yalta Pact

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. MACHROWICZ. Mr. Speaker, tomorrow marks the 11th anniversary of the signing of the Yalta Pact, which resulted in the enslavement of millions of people of central and eastern Europe and Asia.

Since that fateful day of February 11, 1945, Soviet Russia has grown in leaps and bounds as a menace to world peace, and in direct proportions the position of the United States has dropped as a leader of the free world.

The time has long passed for futile and partisan recriminations for our part in the Yalta agreement. The fact remains that, though we entered into the agreement with a misplaced faith in Soviet promises—promises which have been systematically violated—the results are a national disgrace and the time is long overdue for a formal recognition of that fact.

The sad fact is that, despite political recriminations and protestations of the errors of judgment of those who participated in the Yalta agreements, the bitterly criticized tactics and policies then used are still in force and effect in our State Department. We still continue to deal with Soviet Russia as an honest partner and not as an unscrupulous outlaw. And all this despite the fact that we know so much more about Soviet treachery now than we did in 1945, when the Yalta agreement was entered into.

Our position of free-world leadership can be maintained only if we adopt and adhere to a policy of firmness and of refusal to compromise on matters of principle. It was that willingness on our part to compromise on matters of moral rights that has helped the expansion of the Communist empire and is continuing to bring about a loss of our own international respect and prestige. We can regain it only by basing our foreign policy on moral principles and not on expediency. We have no moral right to build up the hopes of the capitive nations and then cruelly shatter them, by continuing to barter their lives and future for sham promises which we accept as a pure matter of expediency, and which we should know from past bitter experience, will eventually be broken again, as they always have been in the past, when it serves Soviet Communist purposes.

On this sad anniversary, let us soberly analyze our errors of the past and in the interest, not only of justice, but of our own national security, resolve to learn from past experiences, and deal with the Communist threat to world peace in a resolute manner, with courage and moral strength, which is the only way to gain respect not only for our loyal allies in the free world, but also of the Communists themselves.

Middle East Affairs

EXTENSION OF REMARKS
OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram recently sent to Hon. John Foster Dulles, Secretary of State, by the Jewish Community Council of Metropolitan Detroit and its numerous affiliated organizations. Eighty-five of my distinguished Democratic colleagues and I joined in a declaration on February 6, 1956, similarly urging the Government to take immediate action to end the threat of war in the Near East. This telegram serves as a further illustration of the gravity with which many Americans view the powderkeg situation:

FEBRUARY 3, 1956.

Hon. JOHN FOSTER DULLES,

Secretary of State, Washington, D. C.:

The undersigned presidents of organizations affiliated with the Jewish Community Council of Metropolitan Detroit share the deepest concern with the direction that may be chosen by our Government in respect to the critical turn of events in the Middle East. In the perspective of the history of recent decades we are mindful of the folly and futility, of the danger to freedom and peace, inherent in a policy of appeasement. We prayerfully hope that timeless considerations of morality and justice will not be yielded to a phantom expediency in shaping the dedecisions of our Government. At an emergency meeting in Detroit on February 1, the undersigned unanimously resolved to respectfully urge that United States action be guided by the traditional will of our Government to protect democracy and to preserve the peace in the face of the strident threats and belligerent actions of those who would irresponsibly destroy it. In consonance with American principles we are convinced that the ultimate interests of our country and of world peace can best be served by the immediate offer of security pacts to all Middle East countries demonstrating a willingness to respect peace, by sound economic aid and rehabilitation, and by rapid provision of defensive weapons to Israel to offset the present Communist engineered imbalance in that area.

Samuel J. Rhodes, president, Jewish Community Council of Metropolitan Detroit; Michael Wainer, Aesculapian Pharmaceutical Association; Mrs. Bernard A. Breyer, Aesculapian Ladies' Auxiliary; Rabbi Leon Fram, American Jewish Congress, Council of Michigan; Dr. Bernard Weston, American Physicians Fellowship Committee, of the Israel Medical Association; Frank Mersky, Berdichewer Progressive Aid Society; Ben Eizelman, Bereznitzer Aid Society; Morris Indianer, Beth Abraham Free Loan Association; Samuel H. Rubin, Bialostoker Western Aid Society.

B'nai B'rith: Jack Caminker, Greater Detroit Council; Mrs. Henry P. Onrich, Greater Detroit Women's Council; Miss Sarah Steinberg, B. & P. Chapter; Julius Tapper, Ivan S. Bloch Lodge; Mrs. Bernard Indenbaum, Ivan S. Bloch Chapter; Norton J. Taylor, Louis D. Brandeis Lodge; Mrs. Louis Magedman, Louis D. Brandeis Chapter; Nathan D. Rubenstein, Detroit Lodge; Mrs. Alan Hagenjos, Detroit Chapter; Carl Agranoff, Downtown Lodge; Mrs. Saul Schwartz, Downtown Chapter; Sherman M. Fisher, East Side Lodge; Mrs. Albert Cooper, East Side Chapter; Max Freedman, Donald Fox Lodge; Mrs. Arthur J. Frayne, Donald Fox Chapter; Mrs. Leonard Miller, George Gershwin Chapter; Larry Harwoods, Philip Handler Lodge; Mrs. Charles D. Jones, Philip Handler Chapter; Dr. Moses Cenker, Theodore Herzl Lodge; Mrs. Goldie Roth, Theodore Herzl Chapter; Jack Goldfarb, Israel Lodge; Mrs. Fred Weinstein, Israel Chapter; Harry Thomas, Harry B. Keidan Lodge; Mrs. Max Yorke, Harry B. Keidan Chapter; Max Sussman, Louis Marshall Lodge; Mrs. Leonard R. Levin, Louis Marshall Chapter; Alex Adelberg, Henry Morgenthau Lodge; Mrs. Fred Rapoport, Henry Morgenthau Chapter; Stanley A. Baar, Oak Woods Lodge; Mrs. William Litt, Oak Woods Chapter; Isadore Perlman, Pisgah Lodge; Mrs. Allan Laban, Pisgah Chapter; Robert Burk, Rex Lodge; Mrs. Sidney Pianin, Rex Chapter; Mrs. William Fogelman, Louis Stone Chapter; Morton Lewis, Tikvah Lodge; Mrs. Seymour Weiss, Tikvah Chapter; Hyman Matoff, Rabbi Mandel M. Zager Lodge; Mrs. Henry Schore, Rabbi Mandel M. Zager Chapter.

Mrs. Pearl Hoffman, Bobrowskar Ladies Society; Sam Freedman, Brezner Aid Society; Joe Zeidman, Brisker-Mlawer Umgegend Verein; William L. Stein, Brith Shalom of Detroit; Mrs. Louis Markzon, Center Mother's Club; Louis Rosenberg, Chaim Weizmann Society; Hyman Halberg, Chenstochover Rajoner Verein; Harry Rosenthal, Chernigover & Loyever Aid Society; Eugene J. Epstein, City of Hope, Detroit Businessmen's Group; Charles H. Charlip, Adas Shalom Synagogue; Jack Shenkman, Beth Aaron Synagogue; Dr. Albert Schwartz, Beth Aaron Men's Club; Mrs. Irving Chaiken, Beth Aaron Sisterhood; Mrs. Jerome Kirschbaum, Congregation Ahavas Achim Sisterhood; Rabbi Israel Halpern, Congregation Beth Abraham; Mrs. Oscar Rosenberg, Beth Abraham Sisterhood; Isadore Rosenthal, Congregation Beth Itzchock; Charles Keif, Congregation Beth Moses; Mrs. Sam Arlin, Beth Moses Ladies Auxiliary; Max Dobrowitsky, Congregation Beth Shalom; Mrs. Louis Goldman, Beth Shalom Sisterhood; Isadore Rosenberg, Congregation Beth Shmuel; Morris Dorn, Congregation Beth Tefilo Emanuel; Harry Stolsky, Congregation Beth Yehudah; Mrs. Charles P. Koenigsberg, Beth Yehudah Ladies Auxiliary; Mr. Charles N. Shere, Congregation B'nai David; Mrs. Zeick Needle, B'nai David Ladies Auxiliary; Lew Kruger, B'nai David Men's Club; Mrs. David Liebow, B'nai David Sisterhood; I. M. Faxstein, Congregation B'nai Israel; James Landsman, B'nai Moshe Men's Club; Mrs. Fred Weiss, B'nai Moshe Sisterhood; Mrs. Rebecca Bialick, Congregation B'nai Zion Ladies Auxiliary; Morris Snow, Congregation B'nai Zion; Benjamin Goldstein, Congregation Emanu-El, Suburban Temple; Mrs. Maurice B. Weiner, Sisterhood of Congregation Emanu-El; Isadore Sosnick, Congregation Ezras Achim; Siegfried Cahn, Congregation Gemiluth Chassodim; Mr. John Hurtig, Congregation Gemiluth Chassodim Men's Club; Mrs. Jack Wildstrom, Women of Congregation Gemiluth Chassodim; Abram Shainak, Congregation Mishkan Israel; Max Kaplan, Congregation Mogen Abraham; Nathan Borinstein, Mogen Abraham Men's Club; Mrs. Harry Altman, Mogen Abraham Sisterhood; Dr. Leonard Sidlow, Congregation Shaarey Zedek; Dr. Max Lichter, Shaarey Zedek Men's Club; Mrs. Baer Keidan, Shaarey Zedek Sisterhood; Hubert J. Sidlow, Young Married League of Shaarey Zedek; Herman Sussman, Evergreen Jewish Congregation; Harry L. Blitz, Northwest Israel Synagogue and Center; Sydney Sarasohn, Temple Beth El Men's Club; Louis H. Schostak, Temple Israel; Irving A. Levy, Temple Israel Men's Club; Mrs. Irving S. Wolfe, Temple Israel Sisterhood; Sidney Dworkin, Temple Israel Young Married Group; David I. Berris, Young Israel of Detroit; Mrs. David J. Cohen, Women's League of Young Israel; Mrs. Oscar Warren, Council of Jewish Women's Reading Circle; Rabbi Isaac Stollman, Council of Orthodox Rabbis of Detroit; David I. Zide, David Horodoker Benevolent Society; Mrs. Moses Moiseev, David Horodoker Independent Ladies Society; Mrs. Charles P. Koenigsberg, Davison Mothers Club; Marshall Wallace, Detroit Alumni Club of SAM Fraternity; Mrs. Vera Rom, Detroit Ladies Lechem Aneeim; Milton K. Mahler, Detroit Service Group; Mrs. Ben Katz, Dexter Mothers Club; Dr. Emanuel Zingeser, Downriver Jewish Community Center; David H. Rom, Eishishker and Umgegend Society; Mrs. Michael J. Kushner, Equality Club.

Farband Labor Zionist: Hyman Wiener, Order No. 79; Maurice I. Gelfand, Order No. 114; Morris L. Schaver, Order No. 137; Berl Hearshen, Order No. 552.

Mrs. Louis Saginaw, Fenkell Mothers Club; Sam Kaufer, First Galician Society of Detroit; Mrs. Harry L. Goldberg, First Galician Society Ladies Auxiliary; Louis Phillips, Gombiner Society; Joseph Rosson, Goodfellowship Club; Mrs. Charles Weinbaum, Goodfellowship Women's Auxiliary.

Hadassah: Mrs. William B. Isenberg, Detroit Chapter; Mrs. Harold Hoffman, Greenfield Chapter; Mrs. Herman Prady, Southern Oakland County Chapter; Mrs. Leo Rozanoff, Halevy Singing Society; Joseph Koller, Hapoel Hamizrachi of Detroit; Mrs. Max Brumer, Hebrew Ladies Aid Society; Mrs. Sidney Tauber, Home Relief Society; Paul Kron, Independent Protective Association; Mrs. Jack Hencken, Infant Service Group; Jacob Natow, Jericho Lodge I. O. O. P., No. 90; Mrs. Paul Shapiro, Jewish Consumptive Relief Society, Detroit Ladies Auxiliary; Joseph Bernstein, Jewish Labor Committee; Irving W. Schlussel, Jewish National Fund Council; Mrs. Sidney Ravin, Jewish National Fund, Ladies Auxiliary; Philip Slomovitz, editor, Jewish News.

Jewish War Veterans: Jack Kraizman, department of Michigan; Mrs. Sam Spolan, department of Michigan Ladies Auxiliary; A. Albert Sugar, Memorial Home Association; Eliot J. Raskin, Joseph Bale Post; Mrs. Seymour Kraft, Joseph Bale Auxiliary; Mrs. Thomas Tannis, Bloch-Rose Auxiliary; Julius Perry, Detroit Post; Mrs. Morris Tulupman, Detroit Ladies Auxiliary; Jack Gormezano, Ginsburg-Rosenberg Post; Mrs. Jack Gormezano, Ginsburg-Rosenberg Auxiliary; Joseph Newmark, Gold Star Parents; Sam Spolan, Lieutenant Roy F. Green Post; Mrs. Harold Weiss, Lieutenant Roy F. Green Auxiliary; Jules J. Sanders, Lawrence Jones Post; Mrs. Herman Bregman, Lawrence Jones Auxiliary; Dr. Robert S. Greenisy, Charles and Aaron Kogan Post; Mrs. Morton Margolis, Charles and Aaron Kogan Auxiliary; Irving Marshall, Lieutenant Eli Levin Post; Jane Remer, Lieutenant Eli Levin Auxiliary; Bernard Schwartz, Robert Rafelson Post; Mrs. Harry Partrich, Robert Rafelson Auxiliary; William Greenberg, General Maurice Rose Post; Leo Panzer, Sholom Post; Mrs. Louis Weinstein, Sholom Auxiliary; Isadore Silverman, Silverman Post; Mrs. Lawrence Gubow, Silverman Auxiliary; Florence Steinman, Lieutenant Jack Winokur Auxiliary; Al Selick, Sol Yetz-Morris Cohen Post; Mrs. Harry Shapiro, Yetz-Cohen Auxiliary; Sam Bernstein, Lieutenant Raymond Zussman Post; Mrs. Irving Sims, Lieutenant Raymond Zuss-

man Auxiliary; Mrs. Sadie Bienenfeld Haut, Jewish Women's European Welfare Organization, North Woodward Branch; Irving H. Cantor, Keshenever Bessarabier Aid Society; Hyman Friedman, Korostishever Aid Society; Joseph Katz, Kvutzah Ivrith; Mrs. Julius Ring, Kvutzah Ivrith Ladies Auxiliary.

Labor Zionist Organization of America: Mrs. David Sislin, Detroit Branch No. 1; Morris Ginsburg, Detroit Branch No. 3; Ben Harold, Detroit Branch No. 4; Irving Pokempner, Detroit Branch No. 6; Henry K. Faigin, Detroit Branch No. 7; Morris Ginsburg, Labor Zionist Youth Commission.

Abraham E. Betensky, Lachowitcher Aid Society; Morris Malin, Landsmanschaft Council of Detroit; Mrs. Philip Bernstein, League of Jewish Women's Organizations; Joseph Linden, Lutzker Voliner Society; Josseph Rosson, Maccabees, Mattathias Tent No. 1005; Mrs. Max Steiner, Maimonides Medical Society, Women's Auxiliary; David Feldman, Meseritcher Progressive Benefit Society; Sol Selman, Minkowitz Podolier Verein; Philip Stollman, Mizrachi Organization of Detroit; Mrs. Emil Spilman, Mizrachi Women, Fanny Gluck Chapter; Mrs. Morris Goldberg, Sisters of Zion Mizrachi; Abraham Ginsberg, Mogilover Progressive Aid Society; Louis Lifshitz, Mozirer Society; Morris Lieberman, National Committee for Labor Israel; Mrs. Arthur Gould, National Council of Jewish Women, Detroit section; Mrs. Joseph Katz, Northern Progressive Ladies Society; Jack B. Ormond, Odessa Progressive Aid Society; Harry Climstein, Ostrowitzer Friendship Society; Louis Gorelick, Pinsker Progressive Aid Society.

Pioneer Women's Organization: Mrs. Gerson Berris, Detroit Council; Mrs. Albert Herman, Avodah Chapter; Mrs. Ben Schwartz, Brandeis Chapter; Mrs. Morris Friedman, Channa Czenesh Chapter; Mrs. Dora Kumove, Club 1; Mrs. Movsas Goldoftas, Club 2; Mrs. Charles Bronson, Club Israel; Mrs. Isadore Cohen, Club Kinneret; Mrs. Max Kanarek, Hanita Chapter; Mrs. C. G. Sarasohn, Massada Chapter; Mrs. Sara Diamond, Golda Myerson Chapter; Mrs. David Schrage, Negbah Chapter; Mrs. Theodore Sallen, Sharona Chapter.

Nathan Zack, Progrebishtcher Progressive Society; Mrs. Joseph Rodman, Primrose Benevolent Club; Mrs. W. H. Landsman, Progressive Ladies Aid Society; Mrs. Henry Wilner, Pythian Sisters, Greater Detroit Temple No. 152; Samuel H. Rubin, Radomer Aid Society; Louis Warren, Rovner Progressive Farein; Hyman Karp, Ruzhiner Progressive Verein; Morris Wasserman, Sokolivker Progressive Verein; Philip Greenwald, Sosnovitzer Bendiner Aid Society; Saul Rubin, Turover Aid Society; S. A. Kayne, Vladimiretzer Emergency Relief; Mrs. Oliver A. Ruby, Women's American ORT, Michigan region; Mrs. Anna Berg, Women's Golden Rule Aid Society; Mrs. Isadore Levin, Women's Sabbath League.

Workmen's Circle: Mayer Schneider, District Committee; Alex Levitt, Branch No. 111; Jacob Reissman, Branch No. 156; Isadore Katz, Branch No. 181; Kune Greenbaum, Branch No. 227; Eugene Brownstein, Branch No. 460E; Robert Israel, Branch No. 470E; David Feldman, Branch No. 945; Edwin Shifrin, Branch No. 1000; Bernard Broder, Workmen's Circle Schools; Mrs. Adolph Gottfurcht, Workmen's Circle Singing Society.

Wolf Cohen, Yeshivath Beth Yehudah; Mrs. Hyman Rottenberg, Ladies of Yeshivath Beth Yehudah; Rabbi M. Rothenberg, Yeshivath Chachmey Lublin; Mrs. Anna Bennett; Yeshivath Chachmey Lublin Ladies Auxiliary; Israel Finkelstone, Yiddish Folks Ferein of Detroit; Max Nusbaum, Young Israel Center of Oak Woods; Mrs. Samuel Glanz, Sisterhood of Young Israel Center of Oak Woods; Mrs. Joseph Viedrah, Young Women's Bicur Cholem; Mrs. Ben Feldstein, Youth Education League; S. Elbom, Zamosc Tomashover Progressive Society; Mrs. Joseph Stalburg, Zedakah Club; Harry Gote, Zhitomir Progressive Verein; Irving W. Schlussel, Zionist Council of Detroit.

Higher Postage

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. JOHANSEN. Mr. Speaker, under permission to extend my remarks, I include an editorial from the February 4 issue of the Washington Daily News regarding the proposed postal rate increase.

I think it is significant that this Washington newspaper is on record in support of rate adjustments which will, at least, lessen the deficit of post office operations.

At the same time, I reject the seeming blanket indictment of Members of Congress on this issue. The debate on the floor of this House on last Tuesday has made it a matter of record that the distinguished chairman of the House Committee on Post Office and Civil Service, of which I am a member, favors a rate increase. The debate also focused attention on the statement in the report of the appropriations subcommittee that—

> The committee cannot avoid again expressing concern that some action must be taken to get postal rates more appropriate to the costs of the service.

There is room for honest difference of opinion as to the allocation of the rate increase. There is no escaping the fact, however, that postal service must be paid for in one way or another—either through higher postal rates, through tax dollars, or by future generations to whom this part of the Federal deficit and national debt is transferred.

The editorial follows:

HIGHER POSTAGE

The reaction in Congress to President Eisenhower's request for increased postage rates is disappointing. There is as yet no indication that the Democratic leadership intends even to bring the matter to a vote. Indeed, some Congressmen seem to think it odd a bill for additional revenue of any kind should be offered in an election year.

Such an irresponsible attitude toward Government deficits is nothing new. But the cost of Government goes right on during campaign seasons as well as the rest of the time.

The Post Office Department has been running in the red for years. And there seems not the slightest chance of its being made to pay its way unless it is authorized to charge users of the mail more for its services.

The cost of delivering the mails has increased, as have the costs of most other things, during the period since the depression. Yet most postage rates are the same.

So, as long as the deficits continue, all the taxpayers will be forced to subsidize those who use the mails heavily. And Congress doesn't seem to care.

Liquor in the Air

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Christian Science Monitor of Monday, February 6, 1956, entitled "The CAB Needs Information." The letter to the paper was written by Mr. Daniel B. Scully, of Highland Park, Ill.

The article follows:

THE CAB NEEDS INFORMATION

To the Christian Science Monitor:

The letters, editorials, and articles which you have published regarding the serving of alcohol on commercial airlines have been both interesting and educational. Although United States airlines have been serving liquor only 1 year, the problem has mushroomed to the point where the airlines are losing control of it. Fortunately, some airlines put the comfort and safety of their passengers above the erroneous competitive advantage of serving liquor aloft. They deserve our support and thanks.

The reaction of flight crews to the serving of liquor can be summed up very quickly: they are against it. This statement is based on personal conversations with pilots and stewardesses and the stand the Airline Pilots Association and the Air Line Stewards and Stewardesses Association have taken.

Not only is the serving of liquor unfair and distasteful to the nondrinking majority, but the safety factor is a great deal more serious than most passengers realize.

Every stewardess I have talked to says that it is a small group of the passengers who drink. Many who drink when on the ground will not do it in an airplane. However, we all pay for the liquor consumed by the few.

Recently I received a letter from the Civil Aeronautics Board which said in part: "For more than a year the Board has been seeking factual information from flight crew members, airline personnel, and the public, concerning specific instances that adversely affected safety due to the serving of alcoholic beverages aboard air carrier aircraft. Attached hereto is a statement issued by the Board in response to several hundreds of letters received during the past 4 months. As of this date, not a single incident has been verified to the Board."

The most competent person to judge the safety of an aircraft is the pilot. Paradoxically, if he reports a safety violation to the CAB he will put his job and possibly his career in a precarious position. No airline management will stand by while one of its pilots reports violations to the CAB. They will either fire the pilot or correct the situation.

Section 404 of the Civil Aeronautics Act states that air carriers must provide safe and adequate service, equipment, and facilities. A CAB interpretation of this section states: "It is conceivable that if service of liquor were carried to such an extent that passengers become boisterous, unruly, or offensive in their conduct to other passengers, there would be a violation of this section." The word "offensive" can mean different things to different people. However, keep in mind that "offensive conduct" can be interpreted as a violation of a Federal law. The airlines should be held accountable.

The Board has held in the past that the liquor laws of the several States can be ap-

plicable to the serving of liquor on aircraft and the matter is one subject to State law enforcement. Many States prohibit the serving of liquor on railroads. Why are airlines allowed a special privilege and, in the minds of some, an unfair competitive advantage?

The CAB needs information and facts from the paying passengers. I would like to suggest the following action:

1. Report incidents of doubtful flight safety and/or offensive conduct to Mr. Ross Rizley, Chairman, Civil Aeronautics Board, Washington, D. C.

The report should include what happened, name of the airline, flight number, date, and the cities where you boarded and left the flight. Names and addresses of other witnesses would make a stronger case, but they are not absolutely necessary.

2. Send a copy of your letter to Representative THOMAS J. LANE, Democrat, of Massachusetts, Washington, D. C.

Representative LANE has introduced a bill prohibiting the serving of liquor on interstate flights.

3. Send a second copy of your letter to the president of the airline concerned.

4. Contact your State government and ask them why they permit airlines to serve liquor and not railroads. If there is no law against the serving of liquor on railroads in your State then go on record as opposing liquor on airlines as a "dangerous custom * * * a potential nuisance to passengers and crews and a threat to safety of all." (Representative LANE.)

DANIEL B. SCULLY.

HIGHLAND PARK, ILL.

Private and Public Interest

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MOSS. Mr. Speaker, it has been my pleasant experience to serve approximately 13 months as a member of the Special Government Activities Subcommittee of the House Committee on Government Operations under the able chairmanship of the distinguished Congressman from Texas, the Honorable JACK BROOKS.

This subcommittee has conducted a number of hearings and studies which have resulted in substantial savings for the Government and has reviewed practices which were not in the best interests of the Government. Some of the subjects studied have been of a type which would lend themselves to political exploitation. It is to the credit of the chairman that he has avoided that opportunity, has applied himself, and insisted upon the subcommittee maintaining an unusually high degree of objectivity with the paramount thought at all times that the subcommittee should act only to bring about better, more economical administration of our Government.

The following editorial from the February 8 issue of the Washington Post and Times Herald recognizes the constructive nature of the work done by this subcommittee under Chairman BROOKS:

PRIVATE AND PUBLIC INTEREST

Whatever may be said in extenuation of Edmund F. Mansure's official conduct, the fact remains that he was guilty of an indiscretion that ended his usefulness to the administration. By his own admission, he allowed political favoritism to enter into contracts falling under the supervision of the General Services Administration, which he headed. "Practical politics," he said in his testimony before the House Government Operations Committee, dictated that a major brokerage contract should not go to a firm that did "not help this administration get into office." Personal friendship with Mr. Mansure, moreover, did not appear to be any handicap in obtaining business in connection with the GSA.

Mr. Mansure's behavior was, to say the least, exceedingly obtuse. Like former Air Force Secretary Talbott and former Federal Buildings Commissioner Strobel and former Interstate Commerce Commissioner Cross, Mr. Mansure seemed to have no real awareness of his obligation to keep his private interests wholly divorced from the public interest. This kind of obtuseness is peculiarly unbecoming in an administration which campaigned for office in part on a pledge to "clean up the mess in Washington." The prompt resignation of these officials was indispensable to maintenance of the standards the President has set.

Representative BROOKS' subcommittee of the House Committee on Government Operations, which uncovered Mr. Mansure's indiscretions, conducted its investigation in a most able, dignified, and effective way. This kind of supervision of executive agency conduct is one of the most important uses of the congressional investigating power. "I hope," said Mr. BROOKS, in commenting on Mr. Mansure's resignation, "that this will result in a more efficient and economical administration of GSA." He and his subcommittee have made a real contribution toward that end.

The Late J. Mark Wilcox

SPEECH
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. MATTHEWS. Mr. Speaker, I wish to join with my colleagues from Florida expressing my sadness because of the death of the Honorable J. Mark Wilcox, who was the former Congressman from the Fourth Congressional District of Florida.

Mr. Wilcox had many friends in the Eighth District of Florida, that I have the high honor to represent. He died on his farm at White Springs, Fla., on Friday, February 3, 1956. This community is in my district, and I think there is a Divine Providence in the fact that Mark Wilcox died surrounded by the beautiful Suwannee River and the trees that he loved so well.

As a Congressman, his colleagues will remember that his Municipal Bankruptcy Act saved many cities in this country from financial destruction. Mark Wilcox believed in peace through national preparedness, and he sponsored the National Frontier Defensive Act, which was so important in making America conscious of the need for an adequate defensive system.

When Mark Wilcox was a Member of Congress, he represented a district which extended along the east coast from Jacksonville to Key West. With enormous energy he dedicated himself to the task of representing this great area and all of Florida was the beneficiary of his constructive legislative action.

In later years, Mr. Wilcox was busy in the practice of law, which absorbed most of his time. I saw him frequently, however, in Hamilton County in the Eighth District of Florida, and in other areas of that section which he loved so well.

I want to extend to the family of Mark Wilcox, and to his many friends, my heartfelt sympathy, and I know we all recognize with sadness that Florida will sorely miss one of her most illustrious citizens.

Urgent Deficiency Appropriation Bill, 1956

SPEECH
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9063) making appropriations for the fiscal year ending June 30, 1956, and for other purposes.

(Mr. HESELTON asked and was given permission to revise and extend his remarks.)

Mr. HESELTON. Mr. Chairman, I want to continue reading from the letter from which the gentleman from Connecticut just quoted, I think it is extremely important to all of us in New England. When we suffered from these 2 floods, 1 in August and 1 in October, this report which has been discussed had already been filed. This is the last of the paragraph of the letter:

While the Chief of Engineers is authorized within limitations to transfer planning funds between projects authorized for planning, and construction funds between projects authorized for construction, he cannot transfer either planning or construction funds to meet survey requirements.

That is what we are emphasizing. That is what has been eliminated.

The survey funds available now to the Chief of Engineers are completely committed, and unless an appropriation is made available for this survey, this program, which we consider of the utmost importance, cannot be funded.

The Chief of Engineers testified before the committee that—

The purpose of this review will be to determine in the light of the 1955 floods, and predicated upon sound basin planning, what additional projects and measures may be necessary and feasible to protect against or reduce the damages from flood occurrences.

I do not have the figures readily at hand, but it is my impression that only something like 20 percent of the funds

authorized have been granted to all of New England. I am glad that the gentleman from Massachusetts [Mr. BOLAND] will ask to restore this $330,000. Without it, as the majority leader has stated, New England will be stopped dead in its tracks. Remember, these were the worst two floods in New England history. We must have action now—not 6 months or a year from now.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield to my colleague from Massachusetts.

Mr. BATES. I want to commend the gentleman for his very fine statement. I am glad he stresses the urgency of this matter because time is of the essence. If we try to save a few pennies we are going to lose millions of dollars and many lives later on.

Mr. HESELTON. I appreciate the gentleman's point. It is an excellent one. Even though these two floods did not reach his district he has worked hard and effectively to bring about the comprehensive flood-control system New England needs so much and to which it is entitled. I know that the gentleman from Massachusetts, the chairman of our Massachusetts delegation subcommittee, agrees with us. I am certain that he shares our conviction that these funds are needed now.

Mr. PATTERSON. Mr. Chairman, will the gentleman yield for a unanimous-consent request?

Mr. HESELTON. I yield.

Mr. PATTERSON. Mr. Chairman, I ask unanimous consent to revise and extend the remarks I made during this debate.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. CRETELLA. Mr. Chairman, will the gentleman yield?

Mr. HESELTON. I yield.

Mr. CRETELLA. The gentleman has read from the letter of General Itschner, and parts of it have been read by others, but I think there is a very important sentence that has been left out up to this time. It is as follows:

The frequency of disaster storms in the Northeast seems to be increasing and we believe it would be unwise to delay action on certain projects because they were not in the August or October patterns. New England has a lower degree of flood protection now than any other section of the country.

I think that is very important.

Mr. HESELTON. That was stressed repeatedly in New England last year and it was presented forcefully by General Itschner. I do not believe anyone, considering the contributions New England has always made whenever disaster struck any other part of our country, would be unwilling to accept the responsibility of helping New England now to have the fair degree of flood protection to which it is entitled. I am certain that this House will approve that principle this afternoon.

A Hindu Would Convert Americans to the Christian Religion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, an interesting article has come to my attention which appeared in the Saturday Review. I believe it was written by Mr. Norman Cousins.

The Plan of Satis Prasad is a challenge to every Christian; and it is certainly out of the ordinary, for we like to believe that most of us need no conversion to the Christian religion. However, I repeat, his theme is most challenging in this day of the hydrogen bomb and screaming missiles.

The article follows:

THE PLAN OF SATIS PRASAD

In a village in the hills below Jakarta, Indonesia, I met a man whose name, if I recall it correctly, was Satis Prasad. He was a Hindu priest who had come to Indonesia to look into the religious situation of the many people of Indian descent who lived in the area.

"I am not what you in the West would call a missionary," he said. "My purpose here is to find out how strong the attachment is to Hinduism of the present generation. But I would in fact like to become a missionary and perhaps you can help me."

"Help you? How?"

"By telling me if it is true that the American people believe in missionaries and support their work."

"To a very large extent, yes," I replied.

"Then they would be agreeable to my coming to the United States to work as a missionary among the Americans?"

"You would like to convert Americans to the Hindu religion?"

Satis Prasad smiled. He rose to his feet and slowly circled my chair.

"No," he said. "I would like to convert them to the Christian religion. You see, there are no basic differences in the moral substance of Hinduism and Christianity. Historically and theologically, of course, each has its own distinct character. But in the moral teachings they have far more in common than most people realize. I would like to concentrate on making Americans aware of the need to believe in these moral teachings, by whatever name they go. The important thing is not what I call it but the teachings themselves."

I asked Satis Prasad several questions. First, exactly what moral teachings did he have in mind that both Hinduism and Christianity had in common. Second, why did he feel the American people were in particular need of this kind of missionary work.

"I have made a study of the similarities," he said. "It is a pity, a great pity, that the Americans know so little about the religions of other peoples. That is one thing, incidentally, I should like to help to correct. For it is un-Christian not to understand one's neighbors. Let me give you just a sample of the moral teachings shared by both religions."

He produced a card. In parallel columns he had written out in longhand passages from the Old and New Testaments to correspond with similar passages from the Mahabbarata, the epic poem of the Hindu religion. Under the Golden Rule, for example, he had copied the following:

"This is the sum of all true righteousness—Treat others as thou wouldst theyself be treated."—Mahabbarata.

"Whatever you do not wish your neighbor to do to you do not unto him."—Old Testament.

"Whatsoever ye would that men do to you, do ye even so to them; for this is the law and the prophets."—St. Matthew.

"A man obtains a proper rule of action by looking on his neighbor as himself."—Mahabarrata.

"Thou shalt love thy neighbor as thyself."—St. Matthew.

Under "Evil and Righteousness" he had copied out:

"Love ye your enemies, and do good, and lend, hoping for nothing again."—St. Luke.

"High-minded men delight in doing good; without a thought of their own interest; when they confer a benefit on others they reckon not on favors in return."—Mahabbarata.

"Overcome evil with good."—St. Paul's Epistle to the Romans.

"Overcome the evil man by goodness."—Mahabbarata.

"Behold, God will not cast away a perfect man, neither will he help the evildoers. The eyes of the Lord are upon the righteous, and his ears are open unto their cry."—Old Testament.

"Then shall the righteous shine forth as the sun in the kingdom of their Father."—St. Matthew.

"Then, in a religion bright with golden luster—Center of light and immortality—The righteous after death shall dwell in bliss."—Mahabbarata.

Under the heading "Moral Conduct":

"If thine enemy hunger, feed him; if he thirst, give him drink."—St. Paul's Epistle to the Romans.

"Even to foes who visit us as guests, due hospitality should be displayed."—Mahabbarata.

"A soft answer turneth away wrath; but grievous words stir up anger."—Old Testament.

"Lay not up for yourselves treasures upon earth, where moth and rust does corrupt, and where thieves break through and steal; but lay up for yourself treasures in heaven, where neither moth nor rust does corrupt, and where thieves do not break through and steal."—St. Matthew.

"Lay up the only treasure; do good deeds; practice sobriety and self-control; amass that wealth which thieves cannot abstract, nor tyrants seize, which follows thee at death, which never wastes away nor is corrupted."—Mahabbarata.

"Straight is the gate, and narrow is the way, which leadeth unto life, and few there be that find it."—St. Matthew.

"Heaven's gate is very narrow and minute; it cannot be perceived by foolish men, blinded by vain illusions of the world."—Mahabbarata.

"This is only one side of one card," he said. "Actually, the parallel teachings could fill many pages."

"But the same could be said of all the world's great religions," I replied. "The oneness of man is nowhere expressed more dramatically than in the similarity of the spiritual teachings."

"Precisely," he agreed. "But the important thing is to get people to act on the basis of these teachings. And that is why I am so eager to help save Christianity. Christianity cannot survive in the abstract. It needs not membership but believers. The

people of your country may claim they believe in Christianity but from what I read at this distance, Christianity is more a custom than anything else.

"Your very way of life, your whole economy, your foreign policy, your values—surely you must see the great inconsistency between them and the teachings of Jesus. Christianity is a religion of humility, of renunciation, of sacrifice, of moral purity. It is not a power doctrine for a nation or an individual. Yet even as you flout Christ's will you call yourselves Christians. My mission will be to get you to realize what you have to do before you have a right to use the term.

"I say this not in anger. America has given much to the world and can give more still. But in recent years you have lost much strength in direct proportion as you have departed from the literal acceptance of the doctrines you profess to follow. I can think of no country in history that weakened itself more than America did when it dropped two atomic bombs on living creatures. Please do not stop me by saying that there can be no religion in warfare. When you kill without meaning, you go beyond war.

"Atomic energy transcended warfare and was the beginning of a new age on earth. You had sole possession of the bomb. Your leaders knew the end of the war was at hand. They did not tell the truth when they claimed they were trying to save the thousands of lives that an invasion would cost. All the documents which have come out since the war have proved that your leaders knew the atom bomb was not necessary to win the war. Yet they used it not once but twice. If there was an excuse for the first bomb, what excuse do you give for the second a few days later?

"These things weigh very heavily on me. Americans are my brothers. So are the Russians. But the Russians are opposed to the Hindu-Christian spiritual development of man. You at least accept it in theory, and that is why I want to come to America to see if I cannot get you to accept it in fact."

"What is it you would have us do?"

"I would ask in good conscience and in good faith that you first of all come to terms with yourselves. I would ask that you cease justifying your inconsistencies by saying, as so many of you often say, 'Of course, Christianity does not exist here in its pure form, any more than it exists anywhere in the world in its pure form; it is an aspiration and we are moving toward it.' I would ask that you not take refuge in this argument. It is a trick of reasoning and is meaningless. Can you imagine Jesus explaining away the present Christian paradox by pointing to an aspiration?

"I would ask that you either accept the teachings of Jesus in your everyday lives and in your affairs as a nation or stop invoking His name as sanction for everything you do.

"Perhaps without realizing it, you have a superiority complex. You claimed that only you could do certain things, as in science, and it turns out that you were as wrong as everyone else in history who had made claims of superiority. Mistakes like these come at heavy price.

"America has much to offer the world. But it will continue to weaken itself unless it throws off its assumptions of superiority and thinks in terms of mutuality. True strength can only be in moral principle come to life.

"One has the impression you are made uneasy by talk concerning the literal application of such principles. You are impatient, for example, with anyone who says you should reexamine fearlessly all the circumstances and aspects concerning the decision to use atomic weapons on living targets. You are annoyed by this and would prefer to drop it and forget it. But you cannot drop it or forget it. You cannot because the same faulty reasoning which led you to use it expresses itself in so many other ways and decisions. And faulty reasoning creates its own punishments.

"I want to come to America to make you try to understand that retribution is not a random divine act for a random event but something men themselves fashion out of continuing error and out of a continuing failure to see the validity of moral law in their actions. I should like to tax the Christian individual with responsibility for the group.

"But most importantly, I should like to do what I can to help America prepare itself for the big developments of the next few years. Asia and Africa are now awake. They are tearing themselves free of their bondage. They are learning how to read and write and make things. Soon they will be more powerful even than you. What will happen when America discovers that it no longer is the most powerful nation in the world? Will it become resentful and antagonistic? Will it learn how to abide the fact that it is not predominately a white man's world? It must not be a dark man's world either; and both white and dark will have to make the adjustment.

"I would like to be able to convince the Americans that their guideposts at such a trying hour can be found in their own spiritual legacy, and not in striking out fiercely and wildly in an attempt to hold back history. For I would persuade them that the greatest honor and source of pride is to be found not in the banners of the group but in human brotherhood.

"I preach. I know I preach. That is exactly what I would like to do in America. I want to be a missionary in your country. I want to help save Christianity for the Christians. How do I go about doing this? Do the Americans believe in missionaries? Will Americans welcome me."—N. C.

The Boy Scout Movement

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MACK of Washington. Mr. Speaker, this week marks the 46th anniversary of the Boy Scouts of America.

Within the brief period of one generation, 46 years, the Boy Scouts of America has grown from a handful to a membership of 2,765,000 boys and nearly 1 million leaders. Nor has this growth ended. Last year the scouting movement in this country added 280,462 additional members. No organization could have grown so great so fast unless it offered something very worthwhile to American living and culture.

Boy Scouting does offer much of great and enduring value to the youth of America and for the well-being and happiness of our country and its people.

The equalities of character which every Boy Scout is pledged to seek to develop within himself are those of self reliance, courage, reverance for God, helpfulness to others, good health, mental alertness, and moral straightness. All of these are qualities that make for that good citizenship upon which good government depends.

The greatest and most important resource that this Nation possesses is its boys and girls. Upon the development of a nation's youth, more than upon anything else, depends the nation's future. The Boy Scout movement, since it develops boys into better citizens, builds wisely and well for a better, stronger and happier America. May the Boy Scout movement continue to grow and prosper because it serves all that is noblest and best in our national life.

Inside Sarasota

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I would like to include in the CONGRESSIONAL RECORD at this time a very pertinent newspaper article which was written by one of Florida's outstanding young journalists, Mr. Paul Einstein, who writes for the Sarasota Herald-Tribune. The article appeared in the Sunday, January 29, 1956, edition of the Sarasota Herald-Tribune. Mr. Einstein is concerned with our need for better highways and the methods by which a highway program can be financed. It is a very timely article and I sincerely hope that each of my colleagues will take the opportunity to read Mr. Einstein's pertinent words on this important subject. The article follows:

INSIDE SARASOTA
(By Paul Einstein)

TAX TALK

The "something for nothing" boys are at it again with this talk about Federal aid for highway construction.

They would make you think the Government is going to wave a magic wand and presto, we will have highways without so much as a blink of the eye.

Someone will have to pay for the program and the record shows a few States carry the burden of the Nation's gasoline tax and receive fewer roads.

And Florida is one of those States.

Florida motorists are paying some $22 million in gasoline taxes to the Federal Government each year. And the State road department gets back only $14 million for roads.

We feel that the States should foot the bill for their own highways.

We need more and better highways and we think there should be a 1- or 2-cent tax per gallon increase to get them, if necessary. But it should be done by the States.

Records show that Federal gasoline taxes collected in Florida go to build roads in 10 western and midwestern States, in the dust and desert belt. These are North Dakota, South Dakota, Nevada, Montana, New Mexico, Wyoming, Utah, Arizona, and Oregon.

Bearing the brunt of the tax burden for highways in these States along with Florida are New Jersey, Maryland, Connecticut, California, Pennsylvania, New York, Indiana, Ohio, North Carolina, Massachusetts, and Michigan.

Most of the other States are getting roads back for the tax money they shell out.

The State of North Dakota gets the biggest hunk out of the pie. It receives 285 percent of the gasoline taxes collected in the State. Nevada gets 259 percent; South Dakota, 252 percent; Montana, 230 percent; and on down the line to Oregon with 122 percent.

It just isn't right for a few of the more progressive States to bear the brunt of the cost for new highways in sparsely settled areas while they are being forced to go to toll turnpikes to provide adequate facilities to handle fast-growing populations.

Even after giving taxes to the Federal Government for roads, the State has to go through a lot of red tape to get back any of it.

Plans must be approved by the Federal engineers, matching funds must be supplied, and the road funds can only be used on certain types of projects.

Any highway-aid program which may come out of the present Congress can be expected to mean more dollars from the motorists here to build roads in the West.

Peace-Debts Payments

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. BOGGS. Mr. Speaker, on December 31 the British Government paid its fifth installment in repayment of the reconstruction loan negotiated with this country at the end of World War II. At the time that the loan was made a number of Americans prophesied that not one cent would ever be repaid, and I am sure that they, to say nothing of the American taxpayers, are only too happy to find themselves proved wrong.

The American taxpayer should, however, be aware of what this repayment means in the world economic situation as it exists 10 years after the loan was made. The payment of this year's installment cannot have been easy for Britain at a time when her gold and dollar reserves were under heavy pressure and she was having to take special internal measures to expand her export trade. It is important that we should realize how much Britain's ability to service her debts depends upon her export trade. This year's payment to the United States represents the value of her exports to this country for 3 months—a heavy burden indeed. Britain's ability to continue payments on the loan and to buy from this country the products of farm and industry which she needs will depend to a large extent on whether American trade policies permit her to earn enough.

We cannot have tariff walls, complicated and uncertain customs procedures, quotas and trade restrictions, and at the same time expect repayment of debts from abroad. It is futile for us to expect other countries to buy American exports and to pay back their debts unless we are prepared to allow them to earn the dollars with which to do so. Let us therefore press forward instead with trade policies suited to our own enlightened self-interest.

[From the New Orleans Times-Picayune of January 3, 1956]

PEACE-DEBTS PAYMENTS

With Britain's fifth annual installment of principal and interest on the loan made by the United States to Britain in 1946, a payment amounting to the value of about 3 months of British exports to the United States has been made. The 1946 loan of approximately $4.3 billion is repayable in 50 equal annual payments of $138 million, which includes interest at 2 percent. Of the 5 payments made thus far, which total $690 million, $266 million has been paid on principal and $424 million as interest. This peace debt, which was incurred primarily to cover essential purchases by Britain from the United States after the war, still amounts to considerably more than $4 billion.

This annual loan payment at year's end serves to focus attention on Britain's race to close the dollar gap—an attempt that seems to be almost as far from success as it was several years ago. The trouble is that Britain annually buys more from the United States than this country buys from Britain. Even the all-out effort in 1955 to close this dollar gap, which brought British exports to the high of $560 million during the year, still left Britain in the red by some $320 million. For the British bought $880 million worth of American products.

This situation points up once more the need for continued American efforts to buy more abroad from Great Britain and other friendly nations. It's good business to increase our purchases from our own good customers.

A Federal Judicial Appointment

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. REED of New York. Mr. Speaker, the late Federal Judge John Knight, who served for 24 years as a distinguished jurist on the United States District Court for the Western New York Judicial District, passed away on June 15, 1955. Judge Knight was an esteemed member of the bench and was to me a beloved personal friend.

In the interest of assuring that his successor was imbued with the same measure of personal integrity, human understanding, and professional ability, I undertook to support the candidacy of Joseph Rubenstein, Esq., of Dunkirk, N. Y., for the nomination to replace Judge Knight. I took this action because of my personal knowledge of Mr. Rubenstein's record of professional achievement and his reputation for outstanding personal character. My decision to support his candidacy was also motivated by the countless letters of endorsement of Mr. Rubenstein I received from prominent citizens throughout the western New York area.

In addition to support from private citizens, Mr. Rubenstein had the endorsement of the majority of the county chairmen in the 17 counties in western New York that had an interest in the appointment. That Mr. Rubenstein did not receive the nomination is, I believe, a loss to the quality of our Federal judiciary. The character of Mr. Rubenstein's conduct during the entire period that this matter was pending is a tribute to his professional ethics and personal integrity. It is also convincing proof of the good judgment of those many persons who were privileged to support him.

Mr. Speaker, I would like to insert in the RECORD a few of the letters I received endorsing the candidacy of Mr. Rubenstein for appointment to the United States District Court for the Western New York District:

DUNKIRK PRINTING CO.,
Dunkirk, N. Y., November 21, 1955.

Hon. DANIEL A. REED,
Washington, D. C.

DEAR DAN: During the period of your convalescence I urged you to pay no attention to pressures or political matters which might require the slightest worry or energy on your part.

However, I understand you have put yourself back in the harness now and so I dare to address you on a matter which I am sure must be troubling you as it has been troubling me. I am afraid some members of our party are stooping to tactics which will be harmful to the party, and dreadfully distressing to those of us who believe in the Republican Party, not as professionals in the hope of reward, but as rank-and-file members who have long believed in the Republican Party as the way to good citizenship and good government.

My own republicanism dates back to a grandfather who introduced Lincoln to several audiences in western Ohio. It is a matter of faith with me, and consequently I am doubly distressed by the apparent bad faith and shortsightedness, if not bigotry, on the part of some leaders who have opposed the appointment of Joseph Rubenstein to the Federal judgeship.

Mr. Rubenstein is a close and valued personal friend. But more than that he is an able, conscientious, thoroughly honest, and completely respected Republican leader. He is a competent lawyer who has made an avocation of service to our party and to our country. Lately he has been beset by a peculiarly vicious form of attack, which, in my opinion, was inspired by professional jealousy. The courts and public opinion have completely exonerated Mr. Rubenstein.

Mr. Rubenstein is your candidate for the Federal court in the vacancy created by the late Judge Knight. He has been endorsed by the majority of western New York county chairmen. His service to the party places him clearly in line for the position. His capabilities qualify him superbly. The opposition comes at least in part from sources inspired by considerations other than the best interests of the party and the country.

To me, this is a test of the party to which I have always given my allegiance. I always shall, but any failure of the party to act properly and decently in this matter will be a sad blow to my faith and the faith of others.

As Republicans we believe in tolerance, in the melting pot, in justice to all men of whatever creed. We profess to fight for those things for our country. We should fight with equal zeal to preserve them within our party. This is not prompted by an emotion of friendship, but by a sense of political reality. The whole party suffers any time there is a departure from ideals. To support the best fitted for the office, uninfluenced by prejudice or vicious, trumped-up and insupportable charges is to be true to the ideals of the party. In short it has reached a point where the support of Mr.

Rubenstein is the only course which can be right both politically and morally.

I know that you personally agree with this viewpoint just as you have always been on the side of decency and justice throughout your long career. Because you are what you are you have always personally reflected great honor and credit on the Republican Party. That has been true of all your acts. It has been true in the Rubenstein case. As a citizen I am very proud of you and Joe, and of our party. Your stand in this matter enhances my pride in the party.

I had resolved never again to be one of those who transgressed upon your time to add to your burdens. And I would not do so now were it not for the extreme importance of this matter which transcends personalities and relates to the ideals which, I know, we share for our party. A square deal for Joe symbolizes a party which must be incapable of acting on lesser motives.

With good wishes always for your continued good health, I am,

Cordially,

WALLACE A. BRENNAN,
Editor, Evening Observer.

GOWANDA, N. Y., *November 16, 1955.*

Re Joseph Rubenstein.

Hon. DANIEL A. REED,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN REED: We represented Joseph Rubenstein in the disciplinary proceeding prosecuted by the Bar Association of Northern Chautauqua, Inc., in the appellate division, 4th department, which resulted in an unanimous dismissal and his complete exoneration. Recent developments and publicity concerning the nomination of an United States judge for the Western District of New York compel us to give you the background and facts of this disciplinary proceeding.

Joseph Rubenstein has practiced law in western New York for over 25 years. He is a member of a busy and successful firm of excellent repute, locally and statewide. For some years past he has also been the Chautauqua County Republican Chairman.

The disciplinary proceeding was instituted on the complaint of lawyers, not laymen or clients. These lawyers were dissatisfied and disappointed, either professionally or politically, or both. The bar association was officered by gentlemen of comparative inexperience and recent admission to the bar. The president of the bar association appointed the complainants as the grievance committee. This committee, as might be expected, scoured the countryside for witnesses, investigated thoroughly, and recommended prosecution, which landed the matter in court. The proceeding was prosecuted vigorously by the district attorney, assisted throughout by the grievance committee which at times seemed to run the show.

And a show it was. In total disregard of the law, established procedure, and any consideration for the rights and reputation of Mr. Rubenstein, the whole proceeding was conducted in a pitiless glare of publicity, radio, newspaper, and by word of many mouths. This was not only a disciplinary proceeding. It was a whispering campaign, pushed by jealous lawyers and disappointed politicos, to break Rubenstein professionally and politically.

The appellate division referred the proceeding to the Honorable Earle S. Warner, official referee, to take proof. Four days were consumed in the taking of testimony before the referee in Mayville. There were two appearances before the appellate division in Rochester. The lay witnesses, relied on by the bar association to establish its charge, gave testimony completely vindicating Rubenstein. An impressive array of character witnesses, headed by the Honorable Frank Moore, and including leaders of the bench, bar, and business, gave eloquent testimony of Mr. Rubenstein's reputation for ability, integrity, and ethics.

The learned official referee, in a 23-page report to the court, stated:

"I find and report that, in the light of all the surrounding and rather anomalous circumstances, not of the respondents making, which are shown by the proof to have existed, the proven acts and conduct of the respondents, which are complained of, were warranted by personal relations and may not fairly and properly, in my opinion, be found to constitute an improper and unethical solicitation of legal business in violation of the provisions of paragraph 27 of the Canons of Ethics; * * *.

"I conclude, after consideration of all the proofs offered before me, in relation to the issues raised in this proceeding which were referred to me by your honorable body, that the petitioners have not sustained their charges of violation, by Joseph Rubenstein * * *.

"I respectfully recommend that the proceeding against the respondents herein, Joseph Rubenstein * * *, be dismissed." (Matters affecting other persons and not pertinent to this résumé, are omitted.)

The appellate division unanimously confirmed the referee's report and dismissed the proceeding. No appeal has been taken and the time to do so has expired.

Speaking from long experience in bar association work, both on the grievance committees and as past presidents of our respective associations, we state without hesitation, that the proceeding against Joseph Rubenstein has no parallel in our knowledge. It was vicious. It was conceived in politics, weaned on professional jealousy, and flourished on both. Its object was to destroy a respected practitioner rather than to protect the public and the profession. The final result reflected adversely on the attackers and officially confirmed the excellent reputation of the attacked.

With kind personal regards and best wishes for your health,

Respectfully yours,

MICHAEL D. LOMBARDO,
MARVIN M. SIMON,
Attorneys at Law.

CANANDAIGUA, N. Y., *November 21, 1955.*

The Honorable DANIEL A. REED,
Member of Congress,
Dunkirk, N. Y.

MY DEAR CONGRESSMAN: I want you to know that I approve your strong stand for Joe Rubenstein and the county chairmen in the matter of the appointment of a United States district judge for the western district of New York to succeed Judge Knight.

Upon Judge Knight's death, the people who run the New York Republican State committee bestowed the judgeship upon Mr. Justin Morgan and then set out to make their choice look genuine. They called a meeting of the seventh judicial district Republican chairmen at Rochester in July. Morehouse told the chairmen that Mr. Morgan was the only serious candidate. The county chairmen had no reason to believe that Morehouse was false and went along with him when he asked them to recommend Mr. Morgan. Besides, it was really an eighth judicial district matter anyway and nothing to them.

Morehouse then called a meeting of the eighth district chairmen in Buffalo. I am told that before the meeting took place, the State committee had already passed the word to the White House that Mr. Morgan was the unanimous choice for the job. Actually, at the meeting, the chairmen were for Joe Rubenstein and said so.

I was formerly county chairman of this county. In that capacity I became well acquainted with Joe. I knew he was seeking the office. I knew that he deserved it more than any of the others. I knew that he had all the qualifications for the office, including the important but frequently overlooked one of being an experienced, successful practicing trial lawyer. I was disappointed to read in the newspapers that Joe had not received the appointment. I felt that the county committee system had been dealt another blow.

Later I found that Mr. Morgan had not in fact been appointed and that you had been able to get some of the true picture through to the White House. I attended the meeting of the rural chairmen at Batavia in October, and their resolution supporting Joe and reaffirming the position they took at Buffalo was encouraging indeed.

It's no longer just a question of who is going to be the Federal judge. There are now two other very important questions. First, shall the county organizations, the basic sources of political strength in our system, be deprived of any voice in political appointments important to them, in favor of the Albany crowd, who produce nothing of political value? Second, shall the White House, by appointing their candidate, indicate approval of the methods used by the Albany crowd in trying to have their own way with this appointment?

I do not know Mr. Morgan very well. I presume he is deserving as are scores of others. I doubt that the devious means employed in the name of the State committee were his doing.

Joe Rubenstein has been an outstanding contributor to Republican strength. The county chairmen are behind him and it is now their fight as well as his. I hope you will stay with them and, for the good of the party and the community, I hope you win.

Sincerely,

THOMAS CROUCHER,
District Attorney.

ROGERSON & HEWES,
Jamestown, N. Y., November 21, 1955.

Hon. DANIEL A. REED,
House of Representatives
Office Building,
Washington, D. C.

MY DEAR DAN: It appeared a few weeks ago that the appointee to fill the vacancy caused by the death of John Knight in the District Court for the Western District of New York had been determined. I am now informed that such determination is not irrevocable and that my good friend, Joe Rubenstein, is receiving serious consideration. Such being the case, I wish to add my word of commendation in support of Mr. Rubenstein's candidacy.

Over a period of 15 to 20 years Joe has established himself as a leader at the bar, learned in the law and with a fine personality which commands affection and respect. He enjoys an excellent reputation for integrity, industry, and ability among his fellow lawyers and with the public generally and I believe he is fully capable of carrying out the duties of the office to which he aspires.

I am glad to hear that your recovery is continuing and that you fully expect to be a candidate for reelection next fall.

With warm personal regards, I am

Very truly yours,

RUSSELL ROGERSON.

MAYVILLE, N. Y., *November 23, 1955.*

The Honorable DANIEL A. REED,
United States Representative,
House of Representatives Office
Building, Washington, D. C.

DEAR CONGRESSMAN: I should like to take this opportunity to urge your consideration and support for the appointment of Hon. Joseph A. Rubenstein to the highly important post of Federal judge recently vacated by the death of Hon. John H. Knight.

It has been my privilege to have been associated with the county of Chautauqua for

a period of approximately 18 years and more recently to have served as county treasurer. In this capacity, I have had the opportunity to become intimately acquainted with Mr. Rubenstein; and I am sure that I not only speak for myself, but also for many other people who have been closely allied with him for many years.

Mr. Rubenstein is recognized as one of Chautauqua County's outstanding attorneys, having been in the practice of law for many years. He has had a wide variety of legal experience, therefore, providing excellent qualifications and background for the highly important post of Federal judge. He is a tireless and efficient worker. Throughout his service as chairman, good government has become a byword in Chautauqua County.

Through my close association with Mr. Rubenstein, I have found him to be extremely fair and a most diligent and aggressive chairman for the Republican Party. This is substantiated due to the fact that Mr. Rubenstein has been elected and reelected to the important position of chairman; and as further proof of the esteem in which he is held, he has been selected as chairman of the Western New York Association of County Chairmen for several years.

In closing, I again most sincerely recommend the Honorable Joseph A. Rubenstein for Federal judge and feel that he would lend himself of his talents and afford dignity to the office.

Best personal regards.

Cordially yours,

ROBERT H. MILLER,
County Treasurer.

OLEAN, N. Y., *November 21, 1955.*

Hon. DANIEL REED,
United States Congressman, House of Representatives, Washington, D. C.

DEAR DAN: I have known Joseph Rubenstein for the past 15 years as an attorney.

He is a good lawyer and a highly respected member of the bar.

I am proud to be his friend.

Sincerely yours,

JOSEPH A. NEVINS,
Children's Court and County Judge, Cattaraugus County.

JAMESTOWN, N. Y., *November 21, 1955.*

Hon. DANIEL A. REED,
Washington, D. C.

DEAR DAN: Our mutual friend, Joseph Rubenstein, is available for appointment as a judge of the District Court for our district. I am sure that his candidacy meets with your unqualified approval and I wish you to know that I heartily concur.

In our years of acquaintance, and particularly during the 12 years of my judicial tenure, I have naturally had occasion to gain first-hand knowledge of his character and capabilities, both personally and professionally, as he has enjoyed an active practice.

I consider him very well qualified for the judgeship by all standards and anticipate for him a long and honorable judicial career in the event of his appointment.

With all good wishes.

Sincerely,

HUGH V. N. BODINE,
County Judge and Surrogate, Chautauqua County.

BUFFALO, N. Y., *November 21, 1955.*

Hon. DANIEL A. REED,
Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN: May I congratulate you on your support of Joseph Rubenstein for United States District Judge for the Western District of New York?

I have known Mr. Rubenstein for 25 years, and believe him to be eminently qualified for this office.

He is an able and experienced practicing attorney, and his morals and integrity are above reproach.

In my opinion he will be a worthy successor to Hon. John Knight who served for so many years with credit to himself and the district.

Very sincerely yours,

WILLIAM H. MUNSON,
Justice, Supreme Court, State of New York.

JAMESTOWN, N. Y., *November 21, 1955.*

The Honorable DANIEL A. REED,
Member of Congress,
Washintgon, D. C.

DEAR SIR: Last summer, the death of the late John Knight, Judge of United States District Court for the Western District of New York, left a vacancy which has not yet been filled.

I am glad to recommend for appoint to that position of United States District Judge, Joseph Rubenstein of Dunkirk, N. Y.

Joseph Rubeinstein is especially well qualified for this judgeship. He has an active general practice of wide scope. His life has been lived in an atmosphere of keen interest in public affairs, and he has a well developed sense of fairness and justice. He is an able lawyer of broad vision. He is possessed of good commonsense, and is of the highest integrity.

I heartily recommend him for this important appointment.

Sincerely,

LEE L. OTTAWAY,
Justice, Supreme Court, State of New York.

CUBA, N. Y., *November 22, 1955.*

Hon. DANIEL A. REED,
Dunkirk, N. Y.

MY DEAR CONGRESSMAN: I am writing this letter in behalf of Joseph Rubenstein, of Dunkirk. I understand that Joe is still being considered as an appointee for the Federal judgeship in western New York.

I would like to state that I have known Joe for a number of years last past and I have always found him to be a friendly and courteous gentleman. I believe that his temperament, integrity, and abilities would qualify him for a Federal judgeship and I sincerely hope that this letter may be of some help in furthering his cause.

Very truly yours,

WARD M. HOPKINS,
Allegany County Judge and Surrogate.

CHURCH OF ST. JOHN THE BAPTIST,
Dunkirk, N. Y., November 21, 1955.

The Honorable DANIEL A. REED,
Member of Congress, House of Representatives Office Building, Washington, D. C.

DEAR CONGRESSMAN REED: May I respectfully urge you to use your influence to secure the appointment of Joseph Rubenstein, of Dunkirk, to the Federal judgeship now vacant in this district?

I have known Joe for over 25 years, and consider it an honor to number him among my close friends. He is a man for whom I have the greatest affection and admiration.

His honesty and integrity are beyond question. His professional reputation is above reproach. He is learned and experienced in the law; he is a deeply religious man, and is fearless in his defense and advocacy of what he knows to be right.

Joe has always been foremost in every good work for the betterment of the community, and is esteemed and respected by his fellow citizens, irrespective of race, creed, or party.

He will be a distinct asset and adornment to the Federal judiciary, and we trust our great President will be prevailed upon to appoint him.

I hope you are completely recovered from your recent illness, and enjoy good health once more.

With warm personal regards and best wishes,

Sincerely yours,

LESLIE F. CHARD,
Rector.

ALBANY, N. Y., *November 21, 1955.*

Hon. DANIEL A. REED,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have been requested to write to you to give my opinion of the character and legal attainments of Mr. Joseph Rubenstein of Dunkirk, N. Y. My opinion can be given succinctly and unequivocally: I believe that Mr. Rubenstein is a man of unquestionably good moral character and that he is an able, thoroughly competent lawyer.

I have known Joe Rubenstein since his law-school days. While I was engaged in the practice of law in Buffalo, I was associated with him as counsel in many litigated matters and I had ample opportunity to observe his conduct and to form a judgment as to his character and ability. I found him at all times to be fair and honorable in his conduct; I can vouch for his integrity and trustworthiness. As a lawyer, he showed a sound grasp of fundamental principles; he was always diligent and conscientious in the performance of any task undertaken by him. He was always courteous and considerate, even-tempered and genial, and very pleasant to work with. In my opinion, by character, temperament and ability, he is well qualified for judicial office.

Sincerely yours,

PHILIP HALPERN,
Associate Justice, Erie County.

CHAUTAUQUA COUNTY, N. Y.,
November 23, 1955.

Hon. DANIEL A. REED,
Washington, D. C.

DEAR FRIEND DAN: I understand there is some opposition from some of the State politicians to the appointment of Joseph Rubenstein to a Federal judgeship which was promised him.

In my opinion, and I know this to be the opinion of a great many people in Chautauqua County, Mr. Rubenstein is well qualified to fill this judgeship.

I have had the privilege of working with Mr. Rubenstein in several different capacities in the past 10 years and have never found him wanting. He has an unlimited amount of energy to always follow through with whatever he starts.

Mr. Rubenstein's loyalty and honesty cannot be questioned by anyone who has ever worked with him. I know that Mr. Rubenstein has always conformed to a strict code of loyalty and honesty with everyone, never stooping to anything which could be questioned for either political or financial gain for himself or friends.

Mr. Rubenstein is, without question, one of the best attorneys in this district, and I know that he would conduct himself and his court in a manner which would be a credit to the office, and bring to the courts and judgeship the high honor and esteem to which we all wish the people to have for them.

Sincerely yours,

HALL R. CLOTHIER,
Chairman, Board of Supervisors.

WOODIN & WOODIN,
Dunkirk, N. Y., November 21, 1955.

Hon. DANIEL A. REED,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: In the first place, we are all very happy that you are well on the road to recovery. In the same way, we are very thankful that President Eisenhower has been spared to us.

In the second place, I am very pleased to endorse whole-heartedly, the candidacy of my old friend, Joseph Rubenstein, for appointment as United States district judge. I have known Joe all his life. For many years, we have practiced law together in this community. He is sound in mind, heart and body. He has had an excellent education. He has practiced law successfully for 20 years. The country will not have to pay for his education upon the bench. He is qualified to render excellent service from the first day of his appointment. Intelligent, industrious, honest, he will, if appointed, be a credit to himself and his sponsors.

Further, we feel strongly that the county districts of western New York are entitled to recognition. Joe has served this community for many years, loyally, intelligently, and effectively.

We urge his appointment without any reservation of any kind.

With kind regards and best wishes, I am

Very truly yours,

GLENN W. WOODIN,
Counselor at Law.

SENECA FALLS, N. Y., *November 21, 1955.*

Re Mr. Joseph Rubenstein, Dunkirk, N. Y.

Hon. DANIEL A. REED,
House of Representatives,
Washington, D. C.

DEAR MR. REED: This is a letter of recommendation for the above named in connection with his candidacy for the office of United States District Judge for the Western District of New York.

I have known Mr. Rubenstein for over 30 years. He is highly regarded, not only in his home town of Dunkirk, but also in western New York State, and in fact throughout the State of New York.

The professional standing of Mr. Rubenstein is beyond reproach, and he is of the highest integrity and character.

He is a good lawyer, has a well rounded practice and is a man of experience, well qualified to assume the roll of a United States judge.

Sincerely yours,

PHILIP SERLING,
Attorney at Law.

THE FIRST NATIONAL BANK
OF SILVER CREEK, N. Y.,
November 22, 1955.

Hon. DANIEL A. REED,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR DAN: I wish to take this opportunity to commend you for your efforts in behalf of Joseph Rubenstein for appointment to the Federal judgeship.

We feel that Joe is capable and well qualified and if appointed would serve in a manner reflecting credit and admiration on himself and this community.

We of this county are well aware of his party efforts and accomplishments, and if possible to select a man from Chautauqua County it would be appreciated.

If there is anything we could do up here to advance his chances for appointment, we will be glad to hear from you.

With best personal regards, I am,

Sincerely,

HERBERT J. CRANDALL,
President.

BUFFALO, N. Y., *November 22, 1955.*

Hon. DANIEL A. REED,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: This letter is to express to you my endorsement and support of Joseph Rubenstein, of Dunkirk, for the office of judge of the United States District Court for the Western District of New York.

I have known Mr. Rubenstein in his public and professional life for the past 25 years and have always found him to be an estimable and upright gentleman and an able and energetic lawyer. In all of his public service, he has maintained a reputation for integrity and forthrightness which is rare in public life; while his private and professional activities have been of a character to furnish ample assurance of his qualifications and fitness for the high judicial office for which he is a candidate.

I am certain I am expressing the conviction of all of us here who know him that he will carry out the difficult duties of a member of the Federal judiciary in exemplary and notable fashion.

With kind personal regards,

Faithfully yours,

SIDNEY B. PFEIFER,
Attorney at Law.

DUNKIRK TRUST CO.,
Dunkirk, N. Y., November 21, 1955.

Hon. DANIEL A. REED,
New House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REED: As you know, Joseph Rubenstein, a member of the legal firm of Towne, Rubenstein, and Foster, Dunkirk, N. Y., is a candidate for appointment as Federal judge to fill the vacancy caused by the death of Judge John W. Knight.

I have known Mr. Rubenstein for more than 20 years and have been acquainted with his family for nearly twice that length of time.

Joseph Rubenstein is an active, practicing attorney in this city and he has handled many legal matters for both this trust company and myself. I have always found him to be diligent in his work, a forceful attorney and a man of excellent character and unquestioned integrity.

In addition, I have had a long period of association with him in various civic affairs and for many years he has taken an active part in practically every project for the betterment of the city.

In my opinion, he has the experience, mind and temperament to make a good Federal judge, and I feel very sure that if he is appointed Federal judge to fill the vacancy caused by the death of Judge Knight, he will perform his duties in a capable and distinguished manner.

I know that Mr. Rubenstein has many friends throughout this area who are very much interested in his appointment to this judgeship and I hope that he may receive favorable consideration for the office.

Very truly yours,

ROBERT R. DEW,
President.

CHAUTAUQUA COUNTY, N. Y.,
November 22, 1955.

Hon. DANIEL A. REED,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR DAN: We have been reading quite a lot in the press of late about the Federal judgeship in our district. I felt I wanted to tell you how some of us feel back home.

Joseph Rubenstein, in my opinion, is one of the most capable attorneys in our area. I have observed his work in court several times, my office being, as you know, adjacent to the courtroom, and his appearance and ability has always seemed to me to be outstanding. I have had many private contacts with him and have always found him to be a man of integrity, indeed the type of individual who would add stature and prestige to any activity in which he might be engaged. As you know, I have been a supervisor and a county officer now for 16 years, and in my work I contact a great number of people about the county. It has been my observation that, with practically no exceptions, others feel the same as I do.

Anything that you can do to aid him in his candidacy would certainly have the wholehearted backing of this area, and I also believe, from the adjoining rural counties.

I trust that you are pretty well recovered from your recent illness. From reports I have been hearing I am sure you are back in the saddle, doing your usual excellent job.

Kindest personal regards,

EVERETT F. NECKERS,
Clerk, Board of Supervisors and
County Auditor.

Educational Broadcasting

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed resolutions adopted by the National Association of Educational Broadcasters favoring the continuance of the reservation of television channels for noncommercial educational stations, and requesting that there be no encroachment on the FM band presently used by schools:

Whereas many school systems, colleges, universities, educational and public service agencies, and commercial broadcasters are licensed to operate FM stations, or present educational broadcasts over such facilities; and

Whereas the educational and cultural programs broadcast over these stations have proved to be valuable to their communities: Therefore be it

Resolved, That the National Association of Educational Broadcasters, assembled in Chicago for its annual convention, urge the Federal Communications Commission to retain for FM broadcasting the entire frequency band between 88 and 108 megacycles, in order that these services, developed through the years, may be continued and expanded.

Whereas the Federal Communications Commission, in its sixth report and order of April 14, 1952, displayed great wisdom, foresight, and courage in the reservation of television channels for education; and

Whereas great strides have been made in the activation of these channels, so that there now are 18 noncommercial educational television stations on the air with a potential audience of over 30 million persons; and

Whereas the Federal Communications Commission is now considering several proposals for the future utilization of VHF and UHF channels: Therefore be it

Resolved, That the NAEB, assembled in Chicago for its annual convention, urge the FCC to retain the principle of reserved channels for noncommercial educational television stations in any future allocations plan which may be formulated, and further petitions that these educational reservations be continued under conditions no less favorable than those presently in effect.

Whereas under the order of the FCC, educational organizations, institutions, and agencies have been licensed to operate broadcasting stations of all types; and

Whereas the FCC is currently considering subscription television: Therefore be it

Resolved, That the NAEB, assembled in Chicago for its annual convention, urge the FCC, in the event that any form of subscription television is authorized on either a temporary or permanent basis, to extend to educational organizations, institutions, and agencies, the same opportunities to participate as may be extended to any others.

The Free World in 1957

EXTENSION OF REMARKS
OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. WIGGLESWORTH. Mr. Speaker, as food for thought, under leave to extend my remarks in the RECORD, I include the following article appearing in Intelligence Digest for January 1956, entitled "A Critical Year Opens":

A CRITICAL YEAR OPENS—A DIPLOMATIC CORRESPONDENT REPORTS

This observer thinks that 1956 will prove to be the most important year since 1933. That year saw the rise of Hitler and, in consequence, the virtual certainty of World War II.

War was not certain because of Hitler. It was certain because public opinion in the West was in such bad shape that any intelligent observer knew that the West would postpone rearmament until Hitler had gone too far to withdraw.

The danger in 1933 was that, misled by western disarmament, Hitler would quickly commit himself to a course from which retreat would be impossible.

The year 1933 was thus the critical year; 1939 was only the inevitable outcome.

WESTERN OPINION AWOKE TOO LATE

No responsible observer believed that western opinion would be aroused in time—and it was not. It awoke only when it was too late to avert war, and when it was possible to win a war only with the aid of forces which would create all the necessary factors for a third and much worse crisis—in the midst of which we now find ourselves.

Between 1933 and 1938, all those who pleaded for strong military forces and implored the British Government not to rely upon France were harried and hounded. The Socialist Party called them armament-mongers; the Conservative Party excluded them from its platforms for reasons of political expediency. Churchill was ostracised, and many lesser men likewise.

All that increased Hitler's ambitions. The very people who most feared war were its real encouragers. Many of them were good, decent people with a real love of peace. But their escapism and ignorance brought upon the world the very calamity which they sincerely desired to avert.

THIS YEAR MAY DECIDE THE ISSUE

Much the same is true now. This year will finally decide the issue, although the ultimate outcome of our actions in 1956 may not mature yet a while.

Russia now thinks that the West is disintegrating; that it cannot create an effective defense system; and that it will eventually collapse. Russian leaders make no secret of their opinions. You can read them almost any week in Russian newspapers.

THE BASIS OF RUSSIA'S ACTIONS

The West has tried to convince Russia that it has peaceful intentions. This is almost funny. Russia needs no persuasion on that point. She is more than convinced. It is the basis of all her actions. The Soviet Government uses the fear complex of the Russian masses to justify immense armament projects; but the Government itself knows full well that there is no danger of attack from the West.

What is needed to halt Russia's moves toward a policy which the West will one day be forced to resist (if it is not to be strangled) is the exact opposite.

Russia must be convinced that unless she makes reasonable concessions and gives up her aggressive policies, the West will resist. That, and that alone, would make Russia stop to think.

No mere words will convince Russia that the West means business. The only thing which would do that would be precise reports from her own agents that the West has the means to act. Then Russian policy would change.

COMPARABLE WITH 1933

Either events in 1956 will make Russia stop to think, or she will commit herself too deeply to withdraw. She is on the verge of commitments from which there can be no retreat, and which the West could not ignore and must eventually resist. The issue of war or peace will be decided in 1956, though the outcome may not be clear for some time afterward.

RUSSIA'S CONVICTIONS

Russia now believes that the West is helpless and divided. She thinks that no one could sound a real warning and survive politically. She thinks that any publication which did so would lose its circulation and disappear.

She is convinced that France can be reduced to complete political chaos; Germany to neutralism; Italy to leftism; Britain to strikes and economic confusion; and America to disgust.

This observer does not say that any of these things will happen: That is a separate question. The critical point is that Russia believes that all these things will happen. Unless she can be convinced that she is wrong she will commit herself to a position from which retreat will be difficult if not impossible.

A WIDE GAP

It is true that the gap is a wide one between the present political, ideological, and economic difficulties of the western nations, and the internal strength, unity, and powerful defences which are essential. But it is not so wide that it cannot be bridged.

It must be bridged in 1956, or the prospect will become very grave indeed. It will not be bridged unless public opinion is given adequate reasons why it must be.

RUSSIA COULD BE MADE TO THINK

Therein lies the whole problem. The West, united and powerful, could force Russia to think. That would be the beginning of a solution. It proved so after 1945, when Russia not only had to stop but actually withdrew from Persia.

Why? Because she knew that the West alone had the A-bomb and was consequently all-powerful. The position could have been exploited; but it was not. The West weakened and Russia also made the A-bomb.

ANOTHER CHANCE MISSED

Then, for a brief moment the West alone possessed the H-bomb—despite a near miss in that dreadful race. Russia at once paused and smiled. Instead of following a strong policy—as Dulles wished—the West again weakened, and now Russia has near relative parity in all nuclear weapons, and total superiority in all conventional ones.

In consequence of this, and with an eye on China, Russia is rapidly committing herself to projects which the West cannot tolerate. Unless she can be convinced that to go ahead means a disaster to her, she will not now withdraw.

THE ONLY WAY TO CONVINCE RUSSIA

The only way to convince her is by incontrovertible strength. This cannot be forged without public opinion. The public will never give support to such a policy unless it is convinced of the need; and it will not be convinced without the facts.

Russia is nervous about nuclear war. Who is not? This should be the starting point. She is nervous about China; that should be the followup. She is afraid of a united Western Europe and a powerful Anglo-American alliance; that should be the groundwork. She is appalled at the possibility that the West may develop the African Continent; that should become the ultimate check.

If all these policies were made evident by action, and clearly supported by an enthusiastic public opinion, even Khrushchev would pause. To tell Russia that she need not worry (as we did at Geneva) is, of course, madness. She should be encouraged to worry by every means.

Short of this, your observer, in common with all his colleagues (whose contacts are not inconsiderable), fears that Russia will commit herself in 1956 to actions and projects from which she will be unable to retreat. History warns us in plain language what that would mean.

This observer therefore urges responsible people to do the first thing needful—get to work on public opinion, without which our governments are helpless. Every escapist is a contributor to world war III. Everyone who helps to spread the facts is a real contributor to peace.

SOVIET MOVES IN 1956

Your observer thinks that the direction of Russian commitments in 1956 will be the Middle East, and north and east Africa as far down as Ethiopia. Great efforts will be made to isolate and subvert Turkey and Persia. The Indian and Afghan cards will be played to checkmate Pakistan.

In your observer's opinion, Israel will be a target of progressive Soviet dislike, accompanied by anti-Jewish measures within Russia.

If the West fails to consolidate in 1956, and fails to create a bastion in the Middle East fully supported by rapid development in central Africa, then—your observer thinks—Russia will go beyond the point of return and a clash will eventually occur.

Your observer does not subscribe to the opinion that Tito and Chou En-lai can or will be able to stop their Russian associates, although he does recognize certain rivalries within the tripartite Communist bloc. These might prove useful in a long pause, or in war; but they have no relevance now except as an incentive to Soviet policy.

Your observer does not think that Russia would win a war. But he thinks that, by reason of her belief in Western weakness and her desire to match China and keep Tito in his place, she may create one by an accident resulting from her projects.

THE VISIT TO LONDON

Whether a visit by Bulganin and Khrushchev, with all its attendant civilities and flatteries, would help to create an impression of Western strength is a matter of opinion. One is inclined to think that these two men, having insulted Britain by every possible means in India, may think that failure to cancel the invitation to London proves the weakness of the Western Powers.

They know perfectly well that British statesmen do not relish having the Katyn Wood murderers to dinner at Buckingham Palace. They think they would not be invited if the West were strong. A cancellation of the visit would, in itself, make them think.

WE SHOULD LEARN FROM HISTORY

Your observer ventures a final word on the approach to the Russian question. All

great nations have made big mistakes in policy. But there comes a time when a mistake having led to the same result several times, a nation should learn from history.

In Sir Evelyn Wrench's book on Geoffrey Dawson[1] (editor of the Times at the outbreak of World War II) Mr. Dawson is quoted as saying that he did everything in his power, night after night, to keep out any news which might hurt German feelings. That was the very attitude which Hitler interpreted as weakness and the signal for safe aggression.

The Times then plunged from that mistake into a convulsive reaction. Mr. Dawson's successor told this observer in 1941 that the allies should use communism up to the hilt, because a victorious Britain could easily control it afterward.

MISJUDGMENTS WHICH MUST BE REJECTED

Greater misjudgments than those two of Dawson and Barrington-Ward have seldom been made—although the Times is now slowly moving toward a wiser policy.

These mistakes must, at all costs, be avoided in this critical year of 1956. The Dawson approach to foreign policy, if repeated, will lead to war. If war should eventually come, the Barrington-Ward approach to its conduct must also be rejected.

It is never safe to tempt a powerful military nation by appeasement. It is never safe to use evil allies to win a war. Both mistakes lead to disaster.

NO EXCUSE FOR THE GENERATION

Earlier generations may perhaps be forgiven for having forgotten the lessons of history. This generation, however, has had its lessons twice within less than half a century. We have no possible excuse for repeating the mistakes of the first decades of the century, particularly since, for a brief hour, we proved the value of a wiser policy in the fourth decade—only, it is to be feared, to weaken in the fifth.

It is still within our power to correct this weakening. This observer is for peace; but he is convinced that peace cannot be had through weakness or appeasement. Least of all can it be had through means involving the decline of Britain, or through her abdication in areas which she alone has the experience and ability to administer.

Boy Scout Week

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. COLMER. Mr. Speaker, every Member of the Congress is conscious of the fact that this is Boy Scout Week. A week appropriately set aside to emphasize the importance of this great movement among the youth of America.

In the past few day a Boy Scout has visited each of our offices and personally presented each of us with a Boy Scout badge to be worn in our lapels during the week. I was much impressed by this occasion when I was thus honored, as I am sure every other Member was impressed. And like my colleagues in the Congress, it is a pleasure to thus lend my support to this great organization which has for its basic purpose the preparation of the youth of the country for good citizenship of tomorrow. Mr. Speaker, in my judgment there is no more effective agency in carrying out this great task than this splendid organization.

The splendid young Scout who presented me with my badge with Keith Bryan, from our neighboring State of Maryland. In presenting this badge he had the following to say:

I am Cub Scout Keith Bryan. During Boy Scout Week, February 6–12, the Boy Scouts of America are celebrating their 46th anniversary. As a representative of the Boy Scouts of America, we want you to join in our celebration by wearing this Scout badge during Boy Scout Week.

The Boy Scouts of America was chartered by Congress in 1916. This week our Nation will honor its 3 million Scouts and leaders. In 46 years, more than 20 million men and boys have been members of the Boy Scout organization. Many of these boys have grown to become outstanding leaders.

The National Capital Area Council, which I represent, has a membership of 33,484 boys and over 12,000 adult leaders. We want to invite you to say "Happy Birthday" to the Boy Scouts of America by wearing this Scout badge in your lapel during Boy Scout Week.

May I in turn say to Keith and through him to the thousands of other splendid boys making up this worthwhile organization: "To you also many happy returns of the day. May both you and your organization continue to grow and continue paying such splendid dividends to your country and your God."

The United States Has Lost a Friend

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. DOLLINGER. Mr. Speaker, the shocking and terrible incident of the stoning and persecution of Autherine Lucy when she attempted to attend classes at the University of Alabama is clear proof that the evils of discrimination still flourish in the United States, and that we cannot afford to lose any more time in ending the evils. This shameful exhibition of unfounded hatred against a defenseless girl has cost the United States loss of prestige, honor, and the confidence of the many nations we have been trying to win to the side of democracy; it is a powerful weapon in the hands of the Communists and will be spread by them throughout the world as proof that we do not practice what we preach. Our loss is incalculable; the expenditure of billions of dollars and many years of effort are for naught; our leadership in the cause of democracy has been dealt a serious blow from which we may never completely recover.

I am inserting in the RECORD an article by Mr. John Hughes which appeared in the Christian Science Monitor of February 9, which shows to some extent the damage which has been done:

CAPE TOWN.—This is to report that the United States has just lost a friend.

He is Joseph Ngubane, an African laborer. He is poor, ragged, and has only a couple years of schooling. As an individual, he doesn't count much up where great international issues are fought out.

But however insignificant an ally he might be, the United States has lost him—and nobody knows quite how many more nonwhites like him.

The reason is a simple one: It is the egg-pelting by white students, and the suspension of Autherine J. Lucy, first Negro student at the University of Alabama. The story of the white students' anti-Negro rioting was splashed across the front pages of South African newspapers of all shades of opinion on February 7, and probably also in most other parts of Africa.

ALL FACTS SEEN?

[Moscow Radio on February 8 reported the case of the exclusion of Miss Lucy from the University of Alabama stating that "the persecution of this Negro student has aroused public protests throughout the United States," Reuthers reported in London.]

Perhaps it isn't clear why the scuffle on the university's campus can lose friends and influence people in Africa.

But to Joseph Ngubane the issue is plain: "The United States isn't practicing what it preaches. I thought it stood for equality of races. The Alabama affair shows it doesn't. So I am through."

It doesn't do to dramatize Joseph's case too much. Maybe he is not seeing all the facts. Maybe he is overlooking the United States Supreme Court's desegregation ruling. Maybe not too many other Africans feel as he does. And maybe, too, he will soon change his mind about the United States.

What it does all serve to underline is the amazingly far-reaching impact of the slightest United States act on the Negro issue and southern desegregation upon the nonwhites of Asia and Africa, who number 200 million on the African Continent alone, and who are scrutinizing the United States.

UNITED STATES CONCERNED

The United States is vitally concerned with these nonwhites, for it greatly desires their loyalty to the West, as opposed to communism. And incidents like the Alabama one wield great influence among people highly sensitive to color prejudice.

The Alabama incident's effect is seen clearly in the reception of the incident by members of the prosegregation South African Government.

In the parliamentary lobby, Government members are jubilant at the anti-Negro American incident, on the eve of the historic sitting here to strip the colored (mixed race) people of the common vote.

One member said to this correspondent: "How can America ciriticize us? Alabama riots mean that Americans are just as much for segregation as we are. Yes, I know all about the Supreme Court's ruling; but in practice, there is educational segregation."

Maybe, like Joseph, this legislator is also overlooking the facts. But, nevertheless, that is the sort of comment which the Alabama affair is rousing in some important quarters.

INTERRACIAL CAMPUS

The unfavorable effect is twofold, too, in Cape Town, where, despite full South African pressures against educational integration, the liberal and intellectual stronghold of Cape Town University has stoutly defied all to maintain an interracial student body.

Purely economic factors put nonwhite students currently in the minority; but the story of the Alabama riots has gone down among South African students here who strongly resist racial discrimination, despite such odds.

Probably the weight of the whole issue is about this: Any such anti-Negro incident touches off suspicion among both whites and

nonwhites of this continent that the United States, which appears to stand as a champion of racial equality, has not in fact put things right in its own backyard.

NET EFFECT WEIGHED

There are a few good friends of the United States who regard such suspicions as grossly unjust and do their best to remove them. Nevertheless, among the millions of subject peoples who are just emerging and who are often uneducated, suspicious, and prejudiced, such doubts are capable of greatly diminishing the stature of the United States and the whole Western World.

If that is what the West wants avoided, that is why some western observers here would like these far-reaching foreign implications weighed carefully against any local gains which incidents such as the Alabama riots can conceivably achieve.

And, of course, everybody here is waiting to see what ultimately happens to the University of Alabama's first Negro student.

Remarks of Hon. Robert F. Wagner, Mayor of New York City, at the Dinner of Nationalities Division of the Democratic National Committee

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1956

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following remarks made by Hon. Robert F. Wagner, the mayor of New York City, at the dinner of the nationalities division of the Democratic National Committee, held on January 28, 1956, at the Mayflower Hotel, Washington, D. C.:

We cannot reiterate too often the basic concepts, upon which these, our United States, were founded. It is a story, which must be told over and over; for each succeeding generation must hear it as a child, live it as an adult, and cherish it in its maturity. This is not a nation, which is afraid of strangers; for we, all of us, were ourselves strangers, or are descended from strangers. This is not a nation, which persecutes those, whose customs and habits and thinking are different than our own. But rather, it is a nation, which, through its history, has offered a helping hand to all who seek to come. This much I know, for I too am a son of an immigrant—an American, who became a Senator of the United States, who fathered a concept of the dignity of labor, which, I know, will never depart from the thinking of America.

I could cite you the names of leaders of industry, of great teachers, of discoverers, of leaders of government, doctors, lawyers, and scientists—yes, even of presidents—and they would all be the children of immigrants of yesterday. And because of the principles of our Democratic Party, we have attracted them to our banner. For we, of this Nation, are not all of one race, nor all of one culture, nor of one belief. We are bound together by the mutual concept of the equality, and integrity, of men, and by our American way of life.

Our culture draws its strength and richness from the cultures of many people. New ideas and new arts have come to us from the Old World. We have not tried to make them over, but rather, we have selected what is best. Those, who come to us from foreign lands, have one great challenge. In their enthusiasm for our new Nation, they must not lose their pride in their heritage. they must not forget that they, in turn, are bringing this to us, so that, together we may build a stronger, richer, and a better Nation. This, in our democracy, is the hope for tomorrow. This is the strength on which we have built in the past, and on which we must continue to build.

Unfortunately, our present immigration laws are not fully consistent with these principles. If our present regulations had been in existence in 1885, my father might never have been able to come to the United States. I am referring, of course, to those phases of our law, which limit the seekers of peace and freedom who come to our shores, on the basis of their national origin. This is not the question which we have asked in the past; nor is it the principle, under which we gained our strength. Rather, it is tantamount to saying, that we will accept only a limited number of people, who need us most; while holding the door open for others, who do not even wish to come.

If we are to maintain our traditions, we must return to the spirit, so eloquently expressed by Emma Lazarus, in her poem on the tablet at the main entrance to the Statue of Liberty:

"Keep ancient lands your storied pomp!
Cries she with silent lips.
Give me your tired, your poor,
Your huddled masses, yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I life my lamp beside the golden door."

Upper Colorado River Project

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Liberty (N. Y.) Register on January 12, 1956. This editorial is in opposition to the upper Colorado River project.

The editorial follows:

CURE FOR SURPLUS LAND—MORE LAND

With nearly 21 million acres of excellent farmlands lying idle in 19 Eastern, Southern, and Midwestern States; with President Eisenhower, in his annual farm recommendations, asking for a soil bank plan which would take out of farm production thousands of other acres, there is yet before Congress presently legislation setting up the gigantic upper Colorado River project.

This scheme would bring into production more than half a million acres in high, barren, remote areas of Wyoming, Colorado, Utah, and New Mexico. The project is being sponsored in Congress by the Federal Bureau of Reclamation.

With millions of acres of the best farmland awaiting the plow in areas where rainfall is heavy and the growing season long, the Reclamation Bureau would force this great new burden on the American taxpayer.

This is an excellent example of the tendency of government, when it gets too big to become, quite frequently, silly and stupid. The President, on the one hand, asks Congress for heavy appropriations to take unneeded farmland out of production. On the other hand, one of his agencies asks Congress for heavy appropriations to change barren land into fertile, productive agricultural soil.

The overburdened taxpayer may well wonder if these governmental agencies ever really know what they are doing. The fault, dear taxpayers, is largely yours. So long as you are personally doing all right, you spare little time or trouble to let bureaucracies know that you bitterly oppose these inconsistent and contradictory wastages of your money.

Readjust Postal Classification of Educational and Cultural Materials

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. DAVIS of Georgia. Mr. Speaker, today I have introduced legislation to aid churches, libraries, and religious and educational organizations in the dissemination of educational and cultural materials by removing from the law an undue restriction on the mailing of these materials under the special rates provided for them by Congress for some time past. My bill also will correct inconsistencies in the postal classification of these materials and clarify its application.

The dissemination of educational and cultural materials through the postal system is a well-established national policy. Provision for nationwide mailing at equal rates is essential if all areas of the country are to have access to these materials. Nationwide mailing rates for reading matter in newspapers and magazines dates from 1879 and for books from 1938. Special rates on library books exchanged between libraries and between libraries and readers were established in 1928 and repeated in the Postal Rate Revision and Federal Employees Salary Act of 1948.

Under present law the special rates for books and similar educational and cultural materials, mailed to or from libraries, religious, and other nonprofit organizations, apply only to mailings addressed for local delivery or for delivery in the first, second, or third zones that apply to fourth-class mail matter. These materials, therefore, generally must be mailed at higher fourth-class rates when they go beyond these limits, which prevents equal access to educational and cultural materials in all parts of the country. The increased cost for mailings beyond the third zone is an unwarranted burden on the dissemination of these materials which will be removed by my bill.

This legislation also spells out in detail the types of materials that may be mailed under these special rates, such as books, music, academic thesis, other library materials, film, filmstrips, projected transparencies and slides, microfilms, sound recordings—on magnetic tapes, wire, or other mediums—and similar forms of educational, instructional, research, and cultural material. The rates will apply to mailings of such

matter to or from schools, colleges, universities, public libraries, and religious and other eleemosynary and nonprofit organizations.

This readjustment of the postal-rate structure for educational and cultural materials is necessary in the public interest, and I intend to request that it be scheduled for early action in this session.

Purchase of New Automobiles—Letter From L. J. Salter, of North Rose, N. Y.

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following letter which was forwarded to me on February 6, 1956, by Mr. L. J. Salter, president of the Salter Canning Co., of North Rose, N. Y.

The letter concerns Mr. Salter's experiences in purchasing a new automobile:

SALTER CANNING CO., INC.,
North Rose, N. Y., February 6, 1956.
Representative ABRAHAM J. MULTER,
Washington, D. C.

DEAR MR. MULTER: I have followed with interest the discussions in Congress on the plight of auto dealers, including your insertion in the RECORD of January 24. There is one aspect, however, that has not been presented: namely, to what extent has the public turned against buying new cars because of bad experiences with the ones they presently own? Here is an angle that the dealers in no way were responsible for but which is injuring them unmercifully. Here's how:

I now own my third Lincoln, bought in the spring of 1953. The first two were excellent, but this third one (cash paid on delivery) occasioned so much trouble that I often wished I had the old one back. On the day it was delivered I had difficulty in starting the motor and when it did start it galloped, rocking the body of the car. The following day I decided to take my wife for a ride in the new "buggy." We were not 10 miles from home before the motor began to halt, wheeze, and stumble, and I had to turn back for fear of being stranded. I complained to the dealer (45 miles away) and he sent down a mechanic who put in all new spark plugs. This did not help and over the next 2- or 3-month period I drove my car in to the dealer (in Rochester), several times, to try to cure the evil. On one occasion I had to stay overnight in Rochester, to complete the overhaul. Later I learned that many other Lincoln owners had similar troubles with this model.

I had also discovered that the car's rear-vision mirror was unusually low, blending with the front glass, and 2 or 3 times on approaching a curve or crossroad I narrowly escaped collision with approaching cars, hidden behind the mirror. I complained to the dealer; he replied that other owners had the same complaints but he could not provide mirrors with shorter stems. I thereupon wrote the Ford Motor Co., pointing out that my attorney informed me that if an accident could be proven due to faulty design, it—Ford—could be sued. I had a shorter-stemmed mirror in trigger time.

Now I wish to emphasize that I believe the dealer was doing his best under the circumstances. But I could not see how he could stand all these repairs and I assumed that he charged them back to Ford. Apparently not, from information now available. At one point in the attempts to "cure," a salesman told me that Ford put together a Mercury in 23 minutes. I replied that Ford put together this Lincoln in 10.

Lincoln was not the only "bad egg" that year. I heard of a man who bought a new Cadillac and started for Texas; he spent more time in garages than on the road with it. Back ends went out of Chryslers and a friend owning a new Nash had two new rears put into it. I assume all these expenses were absorbed by the dealers, not the manufacturers.

For the past year and a half my Lincoln has operated excellently. I would like to buy a new car, but I simply balk at going through such grief again. I have lost confidence in the new cars like, no doubt, thousands of others have. In fact, today, with dealers in the plight they find themselves, there is a greater risk of no service whatsoever. I just wonder if the makers, in futile attempt to overcome this negation, are not hoping the new crop of gaudy colors will rebait the hook. Not for me, and I doubt for the man on the street. Too many of the latter have, in my presence, commented upon the gruesome mess of design and colors. The interesting thing is that the body design of the cars is fundamentally good, but that the gingerbread on the sides, the chopping up of otherwise flowing lines, made more hideous by colors that do not complement, suggests a managerial floundering around with a double-barreled shotgun. The aim may be rotten, but scattered shot must hit something.

So the dealers, poor devils, are caught between the makers piling unwanted cars upon them and the public resistance to being mulcted again. The seriousness of the latter is that, while the makers are guilty of asking higher prices for poorer and poorer products, the public blames the dealer for the makers' sins.

It might be a very good thing if auto dealers in certain zones alternately agreed to shut up shop and boycott the makers over a period of time. This would have to be all dealers of all makes of cars, within a designated area. I have found that in dealing with big business the club or knobbed battleax is much more efficient than legislation or the bended knee.

Most sincerely,

L. J. SALTER.

Full-Fledged Partner of Defense

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mr. DORN of South Carolina. Mr. Speaker, on Tuesday morning, January 31, Gen. Thomas D. White, Vice Chief of Staff of the United States Air Force, addressed the board members of the National Society of the Daughters of the American Revolution on the occasion of their annual visit to the Pentagon. These ladies, who are the leaders of the DAR in all the States and Territories, are an outstanding group of citizens, vitally interested in the problems of national defense.

General White's address to these ladies is a clear statement of the Air Force mission and of the problems confronting the Air Force today. It is also a brief history of the reorganization of our Nation's defense from which the United States Air Force emerged in 1947 as a full-fledged partner.

The Air Force knows that the best way to provide defense is to prevent war and the best way to prevent a war is to be able to win one.

To achieve their ambitions, the Communists are building the largest war machine in the world. If we are to win a war that Communist aggression might start or, better still, to stop such a war before it is started, we must build the best Air Force in the world. The Air Force that we are building has proved effective so far. We must continue to give it the weapons that will allow it to perform its mission.

Fine as its weapons must be, however, they would be worthless without an even more priceless asset—men. But Americans, unlike the peoples of Communist countries, cannot be forced to a lifetime of military service. We must make military service desirable enough to attract and hold men of a superior quality.

Last year, Congress approved a pay raise for all servicemen. Under a completely reorganized recruiting effort, Air Force enlistments and reenlistments climbed. The pay raise was but a partial solution, however, to the problem of making the service sufficiently attractive. Outstanding among Air Force needs are more and better housing for Air Force personnel, medical care for their dependents, and adequate survivor benefits.

The National Society of the Daughters of the American Revolution afforded General White an excellent forum in which to present Air Force problems and Air Force needs. The DAR themselves can help to correct a lack of public understanding and to stimulate an interest in the problem of defense, which is the common problem of all American citizens.

Mr. Speaker, under the unanimous consent of my colleagues to extend my remarks, I insert in the CONGRESSIONAL RECORD the following address by Gen. Thomas D. White, Vice Chief of Staff, United States Air Force:

ADDRESS BY GEN. THOMAS D. WHITE, VICE CHIEF OF STAFF, UNITED STATES AIR FORCE, BEFORE THE BOARD, NATIONAL SOCIETY OF DAUGHTERS OF THE AMERICAN REVOLUTION, AT THE PENTAGON, WASHINGTON, D. C., JANUARY 31, 1956

President General Carraway and ladies, I am very happy to see you here again this morning. I say again because it was exactly a year ago today that I had this same pleasure.

In the military services, we consider it our duty to keep the leading national organizations apprised of the state of our defenses.

I am especially glad to see this group from our leading women's organization, and I'll tell you why. I have a favor to ask you, but first let me tell you a story that one of my young officers related to me.

He went to his parent's home in the Midwest for the Christmas holidays. While he was home his mother invited the members of her garden club in for tea to meet her son, of whom she was so understandably proud. To please his mother, he wore his uniform.

One of his mother's friends said, "Oh, I see you're a flyer. I just think the Air Corps is wonderful."

The lieutenant replied, "It's the Air Force ma'am."

The lady said, "Yes, I know; but which air corps, the Army Air Corps or the Navy Air Corps?"

The lieutenant answered, "Neither, ma'am. I'm in the Air Force, the United States Air Force."

His mother's friend then gave him a blank look and murmured, "Oh?"

It is always surprising to me to hear stories like this, and I know that to you who keep yourselves well informed, it sounds incredible. Actually, it makes little difference whether the Air Force is called by its right name. The point is that stories like this are indicative of a lack of the public understanding and interest that our Nation's defenses deserve. It is true that too many Americans are only vaguely aware of the major reorganization of our Nation's defense from which the United States Air Force emerged as a full-fledged partner of defense.

The favor I would like to ask is this: In your work across our Nation, you have many contacts with those whose knowledge of our defense is hazy. I believe you could perform a real public service by helping to keep others informed on matters concerning the defense and safety of our country.

Although you are familiar with our present defense setup, I think that in discribing the state of our defenses today a very good starting point would be August 1945.

You all remember the historic atomic bomb explosion that took place then. An atomic blast brought the war against Japan to a quick and merciful end. It saved tens of thousands of American lives that surely would have been lost in an invasion of Japan.

This atomic blast had other far-reaching effects. It forcibly brought home to the Nation a new idea. All of us who had been born and raised to understand traditional forms of military power suddenly realized that we had achieved a new and mighty power for defense. During World War II air power emerged as a dominant force, and the atomic bomb emphasized this fact.

Before this time you will remember the Nation's military services were organized under two separate and independent departments.

On the President's Cabinet sat a Secretary of War and a Secretary of the Navy. The Secretary of War directed the Army, which consisted of several branches. One of the branches was the Infantry, one was Artillery, and among the several others was the old Air Corps, which became known as the Army Air Forces.

After World War II the American people and the Army recognized that the Army Air Forces could no longer be considered as merely a supporting force. As a result, the Army Air Forces were reorganized into the United States Air Force, coequal with the United States Army and United States Navy.

However, instead of adding another independent service to our defense structure and another Secretary to the Cabinet, all the services were unified under a single Department of Defense. This has eliminated much duplication of effort and has saved time and money. Since then the Defense Department has been reorganized several times. The present organization is not perfect, but few deny that it is going in the right direction.

After the National Security Act of 1947 created this new organization our civilian and military leaders met in 1948 to work out what became known as the Key West agreement. This agreement simply emphasized that the Army's role was on land, the Navy's at sea, and the Air Force's role was in the air.

I would like to emphasize that this reorganization followed, as is characteristic, in our democracy, the desires of the American people. They saw in airpower the unparalleled opportunity to capitalize on American ingenuity, resourcefulness, and technology so as to have an effective defense when needed at far less cost of American lives.

This was borne out in Korea. Our allied air forces, even though operating under restrictions which prohibited efficient use of airpower, accounted for 187,000 Communist troops at the cost of less than 1,200 American airmen.

Of course, the main purpose of the Air Force is far more than using our military airmen efficiently—it is to provide protection to the United States.

Now the best way to provide protection is to prevent war. As I said last year, the best way yet found to prevent a war is to be able to win one. We face a potential enemy who respects none of the Christian ideals for which we stand. He is no respecter of human lives. He only respects one thing—force. He covets one prize—the world.

To achieve their ambitions, the Soviets are building a powerful war machine—the largest in the world. Even more important than size is the fact that the Soviets are equipping this force with modern, high-quality weapons.

We are concerned primarily with the Soviet Air Force because that is the only direct threat to our people, our churches, our schools, and our cities.

The Reds now have the means to hit these targets. For instance, they are now building a long-range jet bomber. It compares favorably with the best we have in the United States.

That bomber cannot reach all our cities because it does not have the ability to fly far enough. However, the Soviets are now building a turboprop bomber that can fly a long way. It is called the Bear—a very apt name, I think.

They could use their smaller bombers against targets in Europe, Africa, or Asia. Obviously they built these bigger bombers for only one reason—to be able to hit us here on this continent.

While they have been building these big bombers, they have also been building up their stockpile of nuclear weapons. Recently, as you all read, they exploded a thermonuclear bomb with the power of millions of tons of TNT. It is inconceivable to most of us even to imagine a million pounds of explosive, to say nothing of 1 million tons.

A third area of Soviet effort to build up striking power has been in the field of missiles. We know they are working hard on these, and if they get them, our defensive problem will become much greater.

Our defense problem is great enough now. We know from our own experience that a determined bomber attack has never been completely stopped, and you can be certain that if the Soviets ever decide to gamble everything on an attack, it will be a determined effort.

Air defense is then logically enough, one of the Air Force's main missions.

To detect the approach of hostile bombers, we will have several lines of radar stretched across the possible approach routes. If the enemy were detected at the northern radar line, at the top of Canada, we would have only 5 to 7 hours warning. If he slipped through to the warning line at the northern border of the United States, our warning time could run from a few minutes up to 3½ hours.

This does not give us much time to act.

If this warning were ever received two things would happen.

First, the interceptors of the Air Defense Command would be directed to take off to engage the enemy bombers.

We now have interceptors that can perform this mission during any conditions of weather or darkness.

I think you would be interested in seeing our best interceptors.

The fastest one we now have in service is the F-86D. It is an all-weather version of the famous destroyer of Communist Migs. Coming into our air defense is a new interceptor, the F-102. This is a supersonic, hard-hitting interceptor and it will add much to our defenses.

At the same time our interceptors are out to stop the enemy attack, our bombers will be on their way. They will be hitting enemy air bases and concentrations of airplanes. This would really be our best defense because it would prevent him from launching new attacks at us.

Here are the principal United States Air Force airplanes that would be involved in this counterattack.

There is the B-47. It is our medium jet bomber. It does not flay as far as the heavy jet bomber. However, by using our bases overseas, or by using aerial refueling, this bomber can strike anywhere.

Our largest bomber is the B-36. It was our first intercontinental bomber and it is still a good one. The B-36 may go down in history as an outstanding example of a powerful weapon that did its job without ever fighting. I believe that more than any other one factor, the B-36 has kept our potential enemies from attacking us. We are all grateful for the part this airplane has had in guarding the peace.

To replace the B-36, we are now getting the B-52. This is the first intercontinental jet bomber, and it is proving to be a fine airplane. We all hope that it will continue to keep aggressors at a respectful distance.

I have showed you a few pictures of the airplanes now in your United States Air Force. These are the weapons that allow us to perform the Air Force mission. They are the latest products of the finest technology in America.

Fine as they are, they would be worthless without an even more priceless asset, our men. Although the Air Force cannot be bound by tradition in devising new weapons and tactics, we follow the national tradition of valuing and caring for our men. Here in America, our most prized possession is people.

This is a contrast to Communist values. Peo|le are cheap commodities in Red China and in the Soviet Union; cheap commodities that have no control over their destinies.

In America, individuals do control their own lives, protected by certain rights. They cannot be forced to a lifetime of military service. We must make military service desirable enough to attract and hold our people.

Last year I reported to you that keeping good airmen in the service was our No. 1 problem, and one that threatened the ability of the Air Force to perform its mission.

I am happy to be able to tell you that this picture is somewhat brighter now.

There are several reasons for this.

After our meeting last year, our Congress approved a pay raise for all servicemen. This helped considerably.

Also, under a completely reorganized recruiting effort, Air Force enlistments and reenlistments climbed.

We knew that the pay raise and the intensified recruiting effort would cost money. However, we were convinced that the cost would be small compared to the possible savings in retraining costs.

Let me tell you what happened between July and October. During this period, there was an increase of 11,000 reenlistments over the number of reenlistments during the same period in 1954. This saved the Air Force over $100 million in retraining costs.

Although this is a big improvement we still have a long way to go. As our equipment becomes more complicated we have the need for more highly skilled men.

The pay raise last year was but a partial solution to the problem of making the service sufficiently attractive. Outstanding among our needs are more and better housing for our men, medical care for their dependents, and adequate survivor benefits.

Respected national organizations like yours are quite properly interested in the state of our defenses. Your opinions are listened to by our policy makers.

We, in the service, are convinced that one vital key to better defense is getting and keeping people of high quality. We, therefore, would welcome your support of measures designed to increase service attractiveness.

Personnel Management in the Federal Government

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. MILLER of California. Mr. Speaker, I am happy to insert in the CONGRESSIONAL RECORD an address delivered by Miss Jane Taylor before the Bay Area—California—Personnel Women.

Miss Taylor is personnel officer for region 9 of the General Services Administration, in which position she has distinguished herself.

She is a fine public servant and a credit to our civil-service system:

PERSONNEL MANAGEMENT IN THE FEDERAL GOVERNMENT

(Address by Jane Taylor)

I accepted the invitation to speak to this group of experts in personnel management with humility. I prefer to sit at your feet and learn, to being on my feet to talk, but what better assignment than to talk about a subject to which I am dedicated, to a group who is as interested as I.

It is my pleasure and my responsibility to report to you on the development of personnel management in the Federal service. Until you give this some thought you probably aren't aware of the fact that the Federal Government is our largest single employer, and as such its very complexity is a challenge for the development of effective personnel administration. We have more Federal employees in California than we have in any other State in the country, and more than are located in Washington, D. C.

You can appreciate, then, how much they contribute to the economy of this State. The importance they have as consumers of goods and services your companies produce. It is important that these be effective and representative employees.

There are some basic requirements in the field of personnel management that are common to all Federal agencies. These are required by law or civil-service regulations. Some of them are commonly referred to by you as redtape. For instance, we have to follow certain rigid requirements in hiring for our jobs. This may be tedious and cumbersome—but—in our business it's important that every single citizen of this country have equal rights to a job for which he is qualified, regardless of race or creed, and this is as it should be. If these requirements can help to make a strong merit system where you have a right to compete with everyone else, you should continue to insist on it, and I have learned to live with it. But we have handicaps in recruiting you couldn't begin to imagine. We cannot pay money to advertise our vacancies. You who place want ads regularly in the classified ad section of the papers can well wonder how we can hope to compete for available talent. So do I. I think it is wrong. We should be permitted to compete with all employers in the most effective way possible. We are handicapped in recruiting for the best available college gradnates. You can go into the colleges in the spring and make firm offers to potential graduates. We are never sure what our appropriations for personnel will be from one fiscal year to the next. This is an obstacle—maybe it will be changed eventually by enlightened congressional representatives.

Our jobs are established against standards that are applied from coast to coast. The customs inspector on the border of Canada draws the same pay as the customs inspector on the border of Mexico who is doing the same job. In my opinion this is wrong. There should be consideration of various cost of living variances for the white-collar worker as for the blue-collar worker. Maybe it will be changed. You can appreciate the need for it.

Our promotions are controlled by law to some extent. It is regrettable when controls are enforced as a result of some legislators attaching an amendment to an appropriation bill with no consideration of the effect it may have on sound personnel management. So, I have to alter my promotion program to conform overnight, literally. You have an interest in this.

And there are laws that control firing employees—but don't you believe it when you read in the well-known magazines that we can't fire a bum employee. We can. Sometimes it takes a personnel officer who is fearless and not concerned about criticism of pressure groups. But if the facts are established, and it is justified, an employee can be fired. Regulations prevent the discharge of employees by a capricious boss. I understand your union employees have the same safeguards, and any sound personnel program insures this.

Now within this framework of legislation and regulations, each agency devises its own personnel program. The General Services Administration exists to service other Federal agencies. GSA was established as a result of recommendations made by the first Hoover Commission and is charged with responsibility for effecting efficiency and economy in all our operations. For instance, we are the largest landlord in the world; we do a supply business larger than Sears, Roebuck and Montgomery Ward combined; we have in our National Archives the most precious documents pertaining to the history of our country; we direct a records program responsible for streamlining paperwork and eliminating files in other agencies; we stockpile strategic materials; and we now have responsibility for traffic management.

I think we, in GSA, are extremely fortunate in having what in my experience is the most effective personnel management in the Government service. Under the direction of Edmund F. Mansure, the Administrator, our Washington office provides all the leadership we could desire, but it decentralizes authority with responsibility. I work directly under the regional director, Bob Bradford, who gives strong support of management to the program. You can't do the job without this.

Now, I am sure there are many different concepts of good personnel management reflected in the thinking of this group, but I think I should make clear the basis against which all of our program is designed. I believe in the absolute importance of preserving the dignity of the individual. I believe that all we do must be directed toward strengthening the relationship between the supervisor and the employee. This pinpoints the need to develop the supervisors to handle this relationship effectively. I am becoming more and more convinced that there is a definite limitation to what can be accomplished through group meetings with supervisors, role playing, panels, workshops notwithstanding. I think the investment that pays the biggest dividends is contact on the individual basis—the person-to-person approach on a real case here and now. It's worth it.

We start the potential employee with the idea that the supervisor is actually offering the job. We do the screening and the recommending, but we let the man who is going to be his first-line supervisor make the offer of the job. This sets the stage for a good relationship with his boss. We recognize that there is a limit to the validity of tests and interviews, and we consider actual performance on the job the essence of the employment examination. This is measured through a close followup on placement. We send a checklist to the supervisor on each new employee. The first 30 days he is to cover all the essentials, chain of command, duties of the job, etc. The second 30 days there is close evaluation of performance and attitudes, and the form is returned to personnel within 60 days. Shortly thereafter, but no later than 90 days, there is a followup on the job by a personnel technician. We talk to the supervisor and the employee. We do not ask anything so obvious as "Are you happy on your job?" But, rather, "As a newcomer, you can probably see us more clearly than we can see ourselves. I'd be interested in your impression as to how we can do things better. Do you understand the importance of what you're doing?" By a series of such probing questions we can determine whether he is getting job satisfaction and is well placed in his own mind. From the supervisor we get his evaluation of the attitude and ability of the new employee.

When friends ask me, "What do you do in your job, hire and fire?" I tell them, "As a matter of fact, that's the least of my job. We are more interested in the people we have on the job, and in developing them to maximum capacity."

Through our classification office we have made a chart of all our jobs—those which are feeders for more responsible positions, and those which are deadends. We face the fact that most of us have a ceiling on our ability and capacity, and it is up to personnel to help recognize this and to not err in advancing employees beyond their depth, where they fail.

We consider our training program one of the most vital of all our programs. Our training officer does not have the easily recognized, stereotyped approach to training. He is so close to employees and supervisors on their jobs that he is as readily available as if he'd climbed into their hip pockets. The training given is pitched to meet the need. We used to try projecting a training schedule quarterly, but we found that we usually abandoned it after a few weeks. We want to be flexible enough to meet the need here and now.

At the same time we started training, our regional director gave a course in public speaking to top officials who may be called upon to speak before a group and who lead staff meetings. The men were attracted to this as if magnetized, and how more effective a way to demonstrate there is a time for training? If your top executive and his responsible supervisors can take time to attend a training meeting there will be no complaints that "there isn't time for the little people to be trained."

A while ago there was trouble on our packing table; things weren't moving as they should. We seemed to be stymied, and em-

ployees were disgruntled. So the training officer joined the packers on planned trips to various warehouses run by your industries to observe, ask questions, and get new ideas from men in the same line of work. And the men learned that some of their ideas were better than those they saw, but some of your techniques could be used by us. This took an afternoon a week for several weeks. They wound it up with a workshop, adopted each other's suggestions, and are now proud of the national record they are setting.

The personnel officer can be the sparkplug of the program, and the job can't be done sitting behind a desk. No matter what the workload is on your desk, believe me, if you will break away and spend about 5 hours a day out where the people are you will cut down the stream of people and problems and paperwork that flow into your office. Go through the offices, listen to the people, talk with the elevator operators, the mechanics in the boilerrooms, the telephone operators on their relief, and listen to what they have to say. You can't run a personnel program in a vacuum, and these employees are the reasons for the existence of a program. People are the most priceless and most productive commodities we have. They and their performance are your products. They are the best springboard for the strong points and the weak spots of your program.

If they know you as a person, they hear you talk, listen to you think through a problem, they will be secure in the knowledge that you are running a program that equates them as an individual. They won't be suspicious if Charles gets a promotion ahead of them, because on one of your visits you talked about the promotion program and answered their questions. You will have answered their questions over the plumber's bench as to how you let people go when the funds are cut. The executives won't plan a reorganization without talking with you in advance and getting your ideas as to what will be efficient, and how it will affect the people.

You can do these things away from your desk, not behind it. It takes energy, time, and enthusiasm, but it makes the difference between a personnel program that is dynamic and one that never gets off the ground. I have confidence that we are doing the job in GSA that you would want and hope we would be doing.

Just as I keep my ear to the ground on the job, so do I come to these luncheons to listen and learn. I realize that I can never leave with you this afternoon the inspiration that I get from you, but may I thank you for this opportunity given me to express some of my ideas.

The Fifth Amendment: Shield or Sword—Part I

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MULTER. Mr. Speaker, on November 16, 1955, Mr. Louis Waldman, of the New York bar, delivered an address on the fifth amendment before the Men's Club of Temple Beth Emeth, of Flatbush. I direct the attention of our colleagues to this address as republished in the official monthly publication of the Brooklyn bar. The first part of the address appears in the January 1956 issue and is as follows:

THE FIFTH AMENDMENT: SHIELD OR SWORD—PART I

(By Louis Waldman)

On the 27th day of June 1953 the New York State Bar Association at its semiannual meeting at Saranac Lake unanimously adopted a report of its Committee on Civil Rights embodying the following resolution:

"That the constitutional privilege against self-incrimination continues to be a vital safeguard of individual freedom and the bar should educate the public as to its importance and discourage both those who would restrict its application and those who would abuse it by asserting it improperly."

The New York State Bar Association took this extraordinary action because great confusion and misunderstanding concerning the constitutional privilege against self-incrimination had developed in the public mind to the point where it was felt that the fifth amendment was rapidly falling into popular disfavor. Some had even expressed doubts as to whether there was a continuing need for this privilege or of preserving it.

My purpose in speaking out on the subject, "The Fifth Amendment—Shield or Sword," is to further the objectives of the resolution of the State Bar Association of explaining to the public the importance and the meaning of the fifth amendment and of discouraging those who would minimize or restrict this vital constitutional privilege.

Confusion and uncertainty has come from two diametrically opposite sources:

On the one hand, there was the long procession of witnesses in the ever-growing investigations of subversion and crime by congressional and State bodies who repeated, as if by rote, "I stand on the fifth amendment" or "I decline to answer on the ground that it may incriminate me."

On the other hand, some men in high places and enjoying high public authority felt that in the hands of subversive elements and the criminal underworld the fifth amendment provided a sword held at the throat of law enforcement and national security. From these high sources came the familiar headlines in the daily press with deadly monotony: "Fifth Amendment Communists," "Fifth Amendment Lawyers," "Fifth Amendment Teachers," "Fifth Amendment Gamblers," and "Fifth Amendment Racketeers."

But I insist that our abhorrence of communism and our opposition to crime should not blind us to the important place of the fifth amendment in the struggle for human liberty. It is my contention that in our free society, neither in fact nor in law, are there such people as fifth-amendment Communists, fifth-amendment lawyers, fifth-amendment teachers, fifth-amendment gamblers, or fifth-amendment racketeers. The use of the fifth amendment as a means of convicting people in the public eye is disturbing and frightening and is doubly wrong. It does a great injustice to the person so described. And at the same time it degrades this constitutional privilege in the minds of the public.

Those who seek to justify the doctrine that persons who invoke the constitutional privilege of the fifth amendment can be condemned as guilty by implication have misread the history of this amendment and the legal thinking and philosophy upon which it is based. Included among those who have unfortunately misconstrued the meaning of the fifth amendment, unintentionally I am sure, are such persons in authority as senators, congressmen, prosecutors, administrative officials, and even some judges. They reason that a person who invokes the fifth amendment does so because, if he answered "Yes" to the question put to him he would admit the truth contained in the question; if he answered "No," he would commit perjury. Thus, they say, by invoking the fifth amendment the person has condemned himself.

Nothing could be further from the truth.

A person who instead of answering a question pleads the privilege against self-incrimination does not admit by that plea that he is guilty of any criminal activity implicit in the question. Again and again it has been held by our courts that when a person feels that his answer might supply a link in the chain for his prosecution he is entitled to plead the privilege. This meaning of the fifth amendment is not a new and startling doctrine enunciated by the present Supreme Court with its emphasis on civil liberties and civil rights. From earliest times the Supreme Court has consistently held to this view. The most celebrated case, which came on within 15 years after the Bill of Rights was adopted on December 15 1791, was the treason trial of Aaron Burr. This trial was presided over by the then Chief Justice of the Supreme Court, John Marshall. When Burr invoked the fifth amendment, Judge Marshall, in his ruling, said:

"It is the province of the court to judge whether any direct answer to the question which may be proposed will furnish evidence against the witness. If such answer may disclose a fact which forms a necessary and essential link in the chain of testimony, which would be sufficient to convict him of any crime, he is not bound to answer it so as to furnish matter for that conviction. In such a case, the witness must himself judge what his answer will be; and if he says on oath that he cannot answer without accusing himself, he cannot be compelled to answer."

One hundred years later, in 1915, the Supreme Court sustained the use of the privilege in these words:[1]

"It [the invocation of the privilege] supposed only a possibility of a charge of crime and interposed protection against the charge, and, reaching beyond it, against furnishing what might be urged or used as evidence to support it."

And so it is clear that it is not necessarily a sense of guilt that entitles a person properly to plead the privilege. Fear of prosecution is sufficient. Prosecution in and of itself, even if it later results in acquittal, is a menace to a person's peace, dignity, and well-being. For one thing, there is an implication in the public mind—however unjustified—"that where there is smoke there is fire"; then, there are the problems of great inconvenience and costs; and, finally, there are the hazards in a prosecution, particularly when the public mind is inflamed against a particular type of defendant, though innocent. In many cases the sole ground for pleading the privilege is one of these considerations and not a feeling of guilt.

This was well stated as recently as 1954 by the United States court of appeals for our own second circuit.[2] Judge Hincks, writing for a unanimous court, said:

"But whatever the underlying motivation, an invocation of the fifth amendment is no ground at all for an inference of guilt or of criminal proclivities. The privilege created by the amendment 'is for the innocent as well as the guilty and no inference can be drawn against the person claiming it that he fears that he is engaged in doing something forbidden by Federal law.' "

History and experience has taught us that innocent men plead the privilege as well as guilty ones. But the guilty ones are entitled to its protection as well as the innocent, because no one is guilty until so proved in accordance with due process and the law of

---

[2] *United States ex rel. Belfarge* v. *Shaughnessy* (212 F. (2) 128 (C. A. 2, 1954)).

the land. This principle must be enshrined in the hearts of all Americans if our Bill of Rights is to live.

The privilege against self-incrimination does not stand alone and is not an isolated right. The full text of the fifth amendment reads as follows:

"No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentemnt or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty or property, without due process of law; nor shall private property be taken for public use, without just compensation."

It is thus seen that the provision that no person shall be compelled to be a witness against himself is only one of the many civil rights incorporated in the fifth amendment. So strong do the American people feel about the right against self-accusation that 46 States have incorporated this safeguard into their constitutions; the 2 remaining States, New Jersey and Iowa, protect the privilege by judicial decision.

And the fifth amendment itself is a vital part of that catalog of rights enumerated in the first 10 amendments and known as the Bill of Rights. This Bill of Rights was not granted to the people by any government but came into our Constitution as a result of the people's demand to have their rights enumerated and made a limitation on government and public authority. The Bill of Rights was intended to be a denial to government of any power to interfere with these rights and liberties which inhere in a free people.

The rights thus secured, where they apply to the Federal Government, are beyond the reach of Congress, the President, or the other organs of the Federal establishment; and where by the 14th amendment action by the States is precluded, they are beyond the reach of legislatures, governors, or other State agencies.

The Fifth Amendment: Shield or Sword—Part II

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. MULTER. Mr. Speaker, I have previously directed the attention of our colleagues to the address of Mr. Louis Waldman on November 16, 1955, before the Men's Club of Temple Beth Emeth on the subject of the fifth amendment. The second part of the address, which appears in the February 1956 issue of the official monthly publication of the Brooklyn bar, is as follows:

THE FIFTH AMENDMENT: SHIELD OR SWORD—PART II

(By Louis Waldman)

The protection against self-incrimination provided for in the fifth amendment has roots going back to Magna Carta. It has an ancient history and its crystallization in England took place in the 17th century. In that country in 1637 the court of the star chamber condemned a man by the name of John Lilburne to be whipped and pilloried because he refused to take the oath and be a witness against himself on a charge that he had imported certain heretical and seditious books. In the year 1638 the sentence was carried out. Three years later, in 1641, the House of Commons, the champion of British liberties, voted that the Lilburne sentence was illegal and against the liberty of the subject. The House of Lords, concurring in the view of Commons, ordered an indemnity paid to Lilburne of 3,000 pounds, an enormous sum for those days.

Thus was born the principle in the English-speaking world that no man shall be compelled to be a witness against himself.

It has sometimes been said in criticism of the fifth amendment that it makes discovery of subversion and effective enforcement of the criminal law more difficult. Let me concede: that may be so. Yet, it does not justify condemnation of the fifth amendment and those who invoke that privilege.

The presumption of innocence to which our Nation is committed also makes it a little more difficult to convict criminals and to expose potential criminals. Yet we do not suggest that the presumption of innocence be scrapped.

The burden of establishing guilt beyond a reasonable doubt is still on the prosecution. Other basic human rights may handicap the police in their work and make prosecution of crime and subversion more difficult, but under our humane and civilized system of justice—and that is what it all comes down to—these and other safeguards which surround the individual are still regarded as among our most precious possessions. And just as we do not resort to torture, to the whip, to the pillory as a means of getting evidence, so we ought not use legal and moral compulsions to extract self-accusatory evidence from people.

This view has been stated time and again by our Supreme Court and by many of the high courts of the States. Thus the Supreme Court of Florida expressed the moral and ethical basis for the fifth amendment in an opinion rendered in 1954[1] in these words:

"* * * the privilege against self-incrimination is one of the great landmarks in man's struggle to make himself civilized. It is the handmaid of the abolition of torture and has its roots deep in 12th century legal thinking. Its fundamental thesis is that you cannot extract evidence from one charged with a crime on which to convict him. It is contrary to every principle of legal philosophy to coerce one to reveal his guilt."

And Lord Camden, in 1765, stated the philosophy behind that great right which we in this country later embodied in the fifth amendment in these words.[2]

"It is very certain that the law obligeth no man to accuse himself; because the necessary means of compelling self-accusation, falling upon the innocent as well as the guilty, would be both cruel and unjust."

Illustrative of current applications of the privilege against self-incrimination is the case of Harry Slochower, who, while an associate professor of literature and German at Brooklyn College was called as a witness in 1952 before a Senate Judiciary Committee. When asked whether he had been a member of the Communist Party in 1940 or 1941, Professor Slochower refused to answer on the grounds of self-incrimination. Since section 903 of the New York City charter provides that any officer or employee of the city who refuses to answer questions on the ground that the answers might tend to incriminate him must be dismissed, Professor Slochower was dismissed as a teacher.

Also in the news recently is the Sheiner case in Florida which involved a lawyer who pleaded the fifth amendment before a congressional committee and in open court in his own State. He was disbarred for such plea. On appeal to the Supreme Court of Florida Mr. Sheiner was reinstated to the bar.

Lawyers have disagreed on the Sheiner, the Slochower, and other cases as to whether the person described as a fifth-amendment teacher or a fifth-amendment lawyer should not be prevented from practicing his profession for invoking his constitutional privilege It is my view that the community is not well served when a person is so punished for standing on his constitutional rights. The far greater good is the preservation of our constitutional liberties.

I want to make it perfectly clear, however, that I have no sympathy for those champions of the Bill of Rights who apply a double standard for its users. An example of the application of such double standard is the views expressed in a letter by Paul Blanshard, commissioner of the department of investigations and accounts in the LaGuardia administration published in the New York Times of October 14, 1955, concerning the Slochower case and section 903 of the city charter. According to Mr. Blanshard the provision in the city charter to punish civil-service employees for invoking the fifth amendment by firing them was to prevent grafters from holding city jobs. Said Mr. Blanshard:

"I know that Mayor LaGuardia, in originally suggesting such a punitive section, had no thought that it would ever be used to punish men for past political opinions or to compel them to become informers against their associates in ideological matters. * * *

"Now, 20 years later, the instrument which Mayor LaGuardia conceived of as a weapon against grafters is being used to punish left-wing intellectuals."

Mr. Blanshard is not alone in using a double standard when judging the usefulness of the Bill of Rights. There are many such.

In 1938, when the city charter was adopted, I opposed LaGuardia's section 903 because it was an unnecessary limitation of the civil rights of municipal employees of whatever category. I am still opposed to that section.

I cannot help emphasizing the principle that there cannot be one Bill of Rights for left-wing intellectuals and another Bill of Rights for grafters. There is either a Bill of Rights for all or for none. This great lesson must be learned and its meaning understood by all who cherish liberty. A free society cannot and does not hand out its freedom as a gift to the good, denying it to the bad. That philosophy leads to tyranny. And liberty and tyranny are natural enemies. Tyranny is the exercise of power in the name of the state in an arbitrary and capricious manner. It is the exercise of authority in a manner that violates the morals, ethics, and aspirations of a given society, wherein all are equal before the law.

There is no fifth amendment in totalitarian Russia, and there was no fifth amendment in Hitler's Germany or Mussolini's Italy. The fifth amendment, like the rest of the Bill of Rights, is the symbol of our civilization, the democratic civilization.

There is a further vital question concerning the fifth amendment about which the public should know and to which students of government should address themselves.

On August 20, 1954, the Compulsory Testimony Act, sponsored by Attorney General Brownell, went into effect. Under this statute the Attorney General, or a congressional committee, or a United States district court may, after a witness has claimed the privilege against self-incrimination, order such witness to testify provided that the order grants him immunity from prosecution for any matter covered by his required

---

[1] *Boynton* v. *State* (75 So. 2d 211, 215–216 (1954)).

[2] *Entick* v. *Carrington* (19 Howell's St. Tr. 1029 (1765)). See also *Boyd* v. *United States* (116 U. S. 616 (1886)) for approval of Lord Camden's words by Supreme Court.

answers. This statute does not meet the human problems raised by the use of the fifth amendment though it may be sufficient in a legal and technical sense.

The law is that when the Government grants immunity to a witness for giving certain testimony, the privilege against self-incrimination is no longer available to the witness. Two important difficulties present themselves with granting immunity.

The first problem, and this is basic, is that we live under a Federal system where we have not only separate but dual jurisdictions, each operating in the same physical territory. An individual called upon to testify before a Federal body on a matter which may also incriminate him under State law does not get protection from the Compulsory Testimony Act as far as State prosecution goes. Federal statutes cannot give immunity to an individual subject to State jurisdiction and State laws do not give immunity from prosecution under Federal law.

This dilemma was pointed out clearly in a very recent case by the United States Court of Appeals for the Fifth Circuit,[1] which said:

"It appears as futile * * * to expect an individual to feel that his constitutional privilege has been safeguarded because the penitentiary into which his answer may land him is under the supervision of the State instead of the Federal Government."

The second difficulty of course is the moral one which requires a person by means of a statutory immunity to accuse himself under oath, so that, though he may not be sent to jail, he is required by law to destroy himself. This is precisely the protection against the cruelty and inhumanity for which the fifth amendment was set up. This is what Lord Camden meant when he said almost 200 years ago:

"That the law obligeth no man to accuse himself."

In other words, unless the immunity that is granted is as broad as the privilege, we provide no real protection to the individual.

Another thing to remember is that debate over the fifth amendment, its uses and abuses, cannot and should not be limited to lawyers and bar associations, but must be taken up by educational and civic bodies, trade unions, fraternal and religious circles, and other organizations. It must go on in the press, over the radio, and over television. The people must be apprized of all facets of the problem for in the final analysis lawyers and courts alone cannot settle the moral and ethical issues that develop from the exercise of this great legal privilege. The courts can only settle the legal and constitutional issues.

I am convinced that the constitutional protection against self-incrimination is a vital safeguard of freedom and is as useful and necessary today as it ever was. Perhaps even more so today because of the increase in the powers of Government which arise out of our progressive collectivism, a product of our complex industrial and machine age. With the great multiplicity of governmental agencies, Federal and State, armed with subpena powers to investigate all sorts of economic and social activities, no person and his family is safe from official snooping. The danger is the greater when it is realized that many little men in official positions, seeking headlines in the hope of advancing their political positions, do not hesitate to use the power of subpena even though it may tear to shreds the lives of innocent people. The tragic effects on the lives and fortunes of people—from banker to bricklayer—from this indirect unlawful search and seizure should be a grave warning to the American people not to let matters go much further.

I urge all thoughtful Americans to take a more hospitable view of the fifth amendment and those who properly invoke it. The fifth amendment privilege may yet be the broad shield to protect the American people in their fundamental rights to privacy and individual dignity.

Study Now, Pay Later—A Business Solution to College Finance by Dick Mestres

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. SIEMINSKI. Mr. Speaker, one wonders whether the below cited article entitled "Study Now, Pay Later," which appears in the February 3, 1956, issue of the Princeton Alumni Weekly contains an idea which could find wider application in the United States?

When one considers the phenomenal success of the techniques used to finance the sale of American automobiles, one wonders why similar techniques could not be used to finance, when needed, an education, with payment for it spread out over the expected span of a lifetime?

The question is, Do we approach education, its purchase and use, with the money techniques of our forefathers? In their time it was, for anything you bought, cash on the line, else go without. Not so today, not so except in education. Today we say, generally, if in need, "Buy now, pay later." Time payments have spurred production and helped make our economy hum. There are few, if any, time payments in study. Scholarships are insufficient to the demand for them.

The question is, How soon in America can one say, if need be, "Study now, pay later"?

Perhaps the article which follows, by Ricardo A. Mestres, gives us a clue:

"STUDY NOW, PAY LATER"—A BUSINESS SOLUTION TO COLLEGE FINANCE

(By Ricardo A. Mestres)

(With the same head-on approach he used as football captain in 1930, Dick Mestres, treasurer of the university, suggests higher tuition and an installment plan as the solution to the financial crisis of American universities. This was a provocative speech to fellow captains of finance, he hastens to add, and is not proposed for local adoption.)

I sail under false colors. These have been the traditional colors under which most of us treasurers sail—maybe we are financially wet and uncomfortable but they were good enough for our fathers and they seem good enough for us. We like our system—we don't depreciate buildings because they were given to us and how can you depreciate a zero cost? We don't set up reserves to replace those buildings because someone will give us a new one when the old place falls down. And it will fall down because we don't maintain it the way we should. We will sweat and strain and produce a fictitious balanced budget—we may be broke but our hearts are pure, our cause is just, and we will prevail—we always have.

We have prevailed but at what cost?—name me the institution that is paying its faculty, administration, and nonacademic personnel salaries commensurate with the importance of their contribution to society. Name me an institution that has a well-maintained and efficient plant. Name me an institution that could not use funds to improve its libraries, laboratories, and educational system.

We sit in dread of this so-called impending wave of students in the next few years. We wonder where the buildings are going to come from. Where are the teachers going to come from? Where are the administrators coming from? Why should any young man or woman place their families at such an economic disadvantage? The traditional answer will be because this has always been true and they are dedicated. President Lowell is supposed to have said that teachers should not be paid decent salaries to encourage only the dedicated ones to enter the profession. With all due deference to that learned gentleman, this proposition will not produce the number and type we want and need.

Now as I strike my false colors, let me say the Jolly Roger I hoist is not my personal flag. By that I mean the idea has been advanced in different form by different people. No institution could do it alone. Adjustments would have to be made.

In its simplest form, the proposition I submit is that each student should pay the full direct and indirect costs of his or her education. Now don't jump to conclusions—I am not advocating education only for the elite and wealthy. In suggesting that each student pay his or her total direct and indirect costs of education, I realize that this is contrary to the traditional American concept of education, both from the standpoint of the privately supported as well as the publicly supported institution. I think this traditional concept will bear analysis.

In the case of the private institutions, it is a well-known fact that the alumni or alumnae are on a perpetual mailing list of supplication to keep dear old X, Y, or Z solvent and strong. The American Alumni Council each year reports ever-expanding and increasing totals of alumni fund drives. The publicly supported institution not only has its alumni fund but also income from tax revenues and I am sure everyone will agree that you continue to pay taxes in one form or another until you die when many States really take it from you. It would seem therefore, that everyone probably pays something more than the tuition and fees levied while in college.

If we can assume for the moment that the principle of my proposition of paying the full cost is approved, we can turn to the question of how it is to be paid.

COLLEGE DEGREE WORTH $100,000

Dr. Pusey, of Harvard, in the September issue of Fortune, states that it is estimated that a college degree adds an average of over $100,000 to the lifetime earnings of the individual. I would like to interject Dr. Pusey's article does not deal with the material benefits of a college education. The sum quoted is merely a figure in the article. Let's assume this $100,000 average figure is correct—and I believe it is conservative. The average age at graduation is 22 and the average life expectancy is about 67, or 45 years of postgraduate life. Thus, we have an average increment of $2,222 per year for life. Doesn't it seem almost immoral for anyone to accept this bounty and pay on average about one-half the cost of the very thing that made it possible? The saying "You only get what you pay for" applies to everything except your education.

"HARVARD BLOCKING BACKS"

There have been several suggestions of how this cost might be charged. One suggested by Dr. Seymour Harris, professor of economics at Harvard—I hope you will ap-

preciate, as a Princetonian, my use of my friends at Harvard as blocking backs—Dr. Harris suggests that, in addition to tuition, each student at matriculation sign an agreement to pay 1 or 2 percent of his or her gross income each year to the college for life. At 1 percent, a very rough but conservative estimate would mean about $100 per year per alumnus. On my previous calculation of 45 years of postgraduate life, this means the graduate would pay only $4,500 extra for the $100,000 benefit gained from the college education. This does not seem an excessive charge and maybe 2 percent is the right figure.

INSTALLMENT BUYING

Another suggestion stems from our modern concept of installment buying. Fifty years ago, we saved up the money to buy the piano, the furniture or the new stove. You could get a mortgage on the house and the insurance companies had worked out actuarial tables whereby you paid now and they paid later; a nice business. The rapid growth and development of our economy has in large measure depended on the reversal of the concept that you had to have all cash before you could buy a single consumer's article. The only thing which remains back in the horse and buggy days is the system of paying for our education. Our expanded credit system is one of the contributing factors to inflation. This inflation is what is squeezing us and yet we hang on to the old traditional system. Now what's wrong with study now, with a downpayment, and pay later. Here's how it might work:

Let's take an average university from Ike French's compilation. We find this average of 60 institutions has an average income of $1,376,000 of which $782,000 is for educational and general purposes. Its expenses totaled $1,342,000 of which educational and general accounted for $766,000.

LET'S DOUBLE TUITION

Believe it or not, our theoretical institution balanced its budget. On examination, we find that the average instructional salary figure amounts to $295,000 and the total instructional expense amounts to 50.2 percent of the educational and general expenses. Now this average institution has about 700 students who paid about $700 in tuition and fees. Thus the $490,000 tuition income amounts to about 55 percent of the total expenses exclusive of auxiliary enterprises. Let us assume we double tuition and fees which will produce $490,000 more income. How would we use it?

Let's consider faculty salaries first. Bulletin No. 1 of the Fund for the Advancement of Education entitled "Teaching Salaries Then and Now," edited by Beardsley Ruml and Sidney G. Tickton, gives some interesting comparisons. The average 1904 salary of a full professor was $2,000, and in 1953 $7,000. The 1953 salary, deflated to real purchasing power, amounts to $1,956, or a 2-percent loss from 1904 on an absolute basis. To restore him to a relative economic position of 50 years ago, he would have to be paid $12,070 a year, or a 72-percent increase over his present average $7,000 salary. However, this restoration to his relative economic position of 50 years ago does not correct the inequity which existed then nor which exists to a greater degree today by reason of the relative advances that have been made in other professions such as law and medicine, not to mention workers in the automobile and other industries.

INCREASE SALARIES 72 PERCENT

I suggest we at least increase our faculty salaries by 72 percent. This will use up $222,000. I would increase administrative and nonacademic salaries by about 50 percent, which I must guess-estimate would cost about $150,000, leaving about $128,000 to improve the library, add to research funds and facilities, and step up plant maintenance and repairs.

The money has been spent—now let's collect it. Since we are practically on a cash basis now, I assume that our main problem is the extra $700 per year times the number of years the student is in college. For 4 years he owes $2,800. A 10-year note for a $2,800 loan at 4 percent interest would cost $28.35 a month, or $340.20 a year; $51.57 a month will pay off the debt at 4 percent in 5 years.

In order to simplify collections and reduce administration costs for all the institutions following this procedure, we will establish a general education acceptance corporation. This will be a nonprofit national corporation chartered to do business in all States. Its original capital will be solicited from major foundations, corporations, and individuals. Our college will discount its notes to this corporation at say 95 cents on the dollar. This would be a cheap price to pay to get those dollars in hand.

The General Education Acceptance Board would suffer some losses. It might consider group insurance which would be a nominal expense. After experience has been gained and proper reserves established, dividends might be declared to the participating institutions on the basis of their business with appropriate debits for losses incurred. Based on our own experience with educational loans and a report of the MIT loan fund; I am confident that in time the original discount of 5 percent could be abolished.

I realize that some problems would develop for those students who decide to continue into postgraduate work, enter the ministry, teaching, or social work, but I think these hurdles can be overcome. One possible way is postgraduate retroactive scholarships. Let me give you an example of how it might work. We have at Princeton a fund established to help students who elect the ministry, teaching or similar type of work. Instead of being a scholarship, this aid is offered in the form of a loan. We have the right, however, if the student does continue in these nonprofit endeavors, to cancel the loan retroactively. Any institution that has scholarship endowment might use some of its income for this purpose, or we could set up reserves out of current increased tuition income to provide for some relief in extreme cases. I might point out that if we could bring the teaching profession pay up to decent standards, then they might be able to pay off their own loans at more lenient amortization terms.

ATTRACT MORE TEACHERS

There are many ways of solving this problem if we want to. My premise is simple. We must attract a greater number of qualified people into the teaching profession. To do this, we must meet our competition for these people. Allowing some advantage for the desire to teach and pursue scholarly research, we must nevertheless narrow the financial gap between the teaching profession and other professional or lay employment.

A GREATER ROLE FOR TUITION

I apologize for appearing under false colors. The Changing Role of Endowments might better be called A Greater Role for Tuition or Study Now, Pay Later. I would like to add one thought to an obvious conclusion that may be drawn. If a person pays the full cost, will there be any urge to make contributions later on? I believe there may be some diminution in current support but, in the main, I believe bequests and other gifts will continue and can be cultivated. The average thoughtful donor does not measure what he gets from his college in exact dollars. You would be surprised how many alumni who paid full tuition think they did just that and still are generous contributors. Loyalty and appreciation will continue to exert their influence. If we can add "respect" to those two qualities, our futures are assured. The most effective way to gain that respect is to experiment constantly and improve on the job we are doing. If we can take some of the current pressure off our endowment, then its role will indeed be changed—it will provide the vital venture capital so necessary for our development and improvement.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Some of the Great Sayings and Writings of Abraham Lincoln

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present certain selected statements made orally or in writing by Abraham Lincoln in his lifetime. They came to me from the Library of Congress in response to my request that said Library furnish to me the text of statements made by Abraham Lincoln which were generally considered, in their experience, the most significant. I have made a few selections of the great statements and writings which to me have always been significant and inspiring and which I was reasonably sure all patriotic American citizens would be pleased to have to their attention for review and refreshment as to some of the great words and writings made by this great American, Abraham Lincoln. Lincoln has always been my ideal of American statesmanship and of great indelible service rendered to the cause and the dignity and the freedom of mankind.

Mr. Speaker, I believe it is a fact that on the occasion of each or most of the birthdays of Abraham Lincoln, to wit, February 12, the 9 years I have already served in this great legislative body, it has been my privilege and pleasure to either speak or write something of my admiration of what Abraham Lincoln's life has meant to me in my boyhood years and then in my years as a practicing lawyer in California at the bar of the California courts and at the Supreme Court of the United States and now later as a Member of this great legislative body, to wit, the House of Representatives, of which great legislative body Abraham Lincoln was also a Member.

The statements follow:

SELECTED STATEMENTS ABOUT THOMAS JEFFERSON BY ABRAHAM LINCOLN

LETTER TO H. L. PIERCE AND OTHERS

SPRINGFIELD, ILL., *April 6, 1859.*

But, soberly, it is now no child's play to save the principles of Jefferson from total overthrow in this Nation. One would state with great confidence that he could convince any sane child that the simpler propositions of Euclid are true; but nevertheless he would fail, utterly, with one who should deny the definitions and axioms. The principles of Jefferson are the definitions and axioms of free society. And yet they are denied and evaded, with no small show of success. One dashingly calls them "glittering generalities." Another bluntly calls them "self-evident lies." And others insidiously argue that they apply to "superior races." These expressions, differing in form, are identical in objects and effect—the supplanting the principles of free government, and restoring those of classification, caste, and legitimacy. They would delight a convocation of crowned heads plotting against the people. They are the vanguard, the miners, and sappers of returning despotism. We must repulse them, or they will subjugate us. This is a world of compensation; and he who would be no slave must consent to have no slave. Those who deny freedom to others deserve it not for themselves, and, under a just God, cannot long retain it. All honor to Jefferson—to the man, who in the concrete pressure of a struggle for national independence by a single people, had the coolness, forecast, and capacity to introduce into a merely revolutionary document an abstract truth, applicable to all men and all times, and so to embalm it there that today and in all coming days it shall be a rebuke and a stumbling-block to the very harbingers of reappearing tyranny and oppression.

Your obedient servant,

A. LINCOLN.

SPEECH AT COLUMBUS, OHIO, SEPTEMBER 16, 1859

This is an idea, I suppose, which has arisen in Judge Douglas' mind from his peculiar structure. I suppose the institution of slavery really looks small to him. He is so put up by nature that a lash upon his back would hurt him, but a lash upon anybody else's back does not hurt him. That is the build of the man, and consequently he looks upon the matter of slavery in this unimportant light.

Judge Douglas ought to remember, when he is endeavoring to force this policy upon the American people, that while he is put up in that way, a good many are not. He ought to remember that there was once in this country a man by the name of Thomas Jefferson, supposed to be a Democrat—a man whose principles and policy are not very prevalent amongst Democrats today, it is sure; but that man did not take exactly this view of the insignificance of the element of slavery which our friend Judge Douglas does. In contemplation of this thing, we all know he was led to exclaim, "I tremble for my country when I remember that God is just." We know how he looked upon it when he thus expressed himself. There was danger to this country, danger of the avenging justice of God, in that little unimportant popular-sovereignty question of Judge Douglas. He supposed there was a question of God's eternal justice wrapped up in the enslaving of any race of men, or any man, and that those who did so braved the arm of Jehovah—that when a nation thus dared the Almighty, every friend of that nation had cause to dread His wrath. Choose ye between Jefferson and Douglas as to what is the true view of this element among us.

(Source: Nicolay and Hay, Complete Works of Abraham Lincoln, vol. 5, pp. 158–160.)

LETTER TO J. H. REED

SPRINGFIELD, ILL., *October 1, 1860.*

MY DEAR SIR: Yours of September 21st was received some time ago, but I could not till now find time to answer it. I never was in McDonough County till 1858. I never said anything derogatory of Mr. Jefferson in McDonough County or elsewhere. About 3 weeks ago, for the first time in my life did I ever see or hear the language attributed to me as having been used toward Mr. Jefferson; and then it was sent to me, as you now send, in order that I might say whether it came from me. I never used any such language at any time. You may rely on the truth of this, although it is my wish that you do not publish it.

Yours truly,

A. LINCOLN.

(Source: Nicolay and Hay, Complete Works of Abraham Lincoln, vol. 6, p. 60.)

There are 13 other instances according to the index to Lincoln's Works where he quoted Jefferson or named him incidentally in connection with other early American statesmen. They could be considered statements about Jefferson only by implication.

LETTER WRITTEN BY PRESIDENT LINCOLN TO MRS. BIXBY

EXECUTIVE MANSION,
Washington, November 21, 1864.

MRS. BIXBY,
Boston, Mass.

DEAR MADAM: I have been shown in the files of the War Department a statement of the adjutant general of Massachusetts that you are the mother of five sons who have died gloriously on the field of battle. I feel how weak and fruitless must be any words of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I cannot refrain from tendering to you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement, and leave you only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom.

Yours very sincerely and respectfully,

ABRAHAM LINCOLN.

(Source: Abraham Lincoln: Complete Works. Edited by John G. Nicolay and John Hay, vol. 2, p. 600, 1894 ed.)

SELECTED STATEMENTS OF ABRAHAM LINCOLN ON CIVIL LIBERTIES AND RIGHTS

ADDRESS TO THE MAYOR AND CITIZENS OF CINCINNATI, OHIO, FEBRUARY 12, 1861

I am reminded by the address of your worthy mayor that this reception is given not by any one political party, and even if I had not been so reminded by his honor I could not have failed to know the fact by the extent of the multitude I see before me now. I could not look upon this vast assemblage without being made aware that all parties were united in this reception. * * * Allow me to say that I think what has occurred here today could not have occurred in any other country on the face of the globe, without the influence of the free institutions which we have unceasingly enjoyed for three quarters of a century.

There is no country where the people can turn out and enjoy this day precisely as they please, save under the benign influence of the free institutions of our land.

I hope that, although we have some threatening national difficulties now, I hope that while these free institutions shall continue to be in the enjoyment of millions of free people of the United States, we will see repeated every 4 years what we now witness.

(Nicolay, John G. and John Hay, editors. Abraham Lincoln: Complete Works. New York, the Century Co., 1894, 2 volumes, vol. I, p. 674–675. E457.9, 1894.)

RESPONSE TO EVANGELICAL LUTHERANS (MAY 6?), 1862

GENTLEMEN: I welcome here the representatives of the Evangelical Lutherans of the United States. I accept with gratitude their assurances of the sympathy and support of that enlightened, influential, and loyal class of my fellow citizens in an important crisis which involves, in my judgment, not only the civil and religious liberties of our own dear land, but in a large degree the civil and religious liberties of mankind in many countries and through many ages.

(Work cited, vol. II, p. 148.)

LETTER TO ERASTUS CORNING AND OTHERS, JUNE 12, 1863, IN ANSWER TO RESOLUTIONS CENSURING THE ADMINISTRATION FOR SUPPOSED UNCONSTITUTIONAL ACTION, SUCH AS THE MAKING OF MILITARY ARRESTS

Thoroughly imbued with a reverence for the guaranteed rights of individuals, I was slow to adopt the strong measures which by degrees I have been forced to regard as being within the exceptions of the Constitution, and as indispensable to the public safety. * * *

The provision of the Constitution that "the privilege of the writ of habeas corpus shall not be suspended unless when, in cases of rebellion or invasion, the public safety may require it" is the provision which specially applies to our present case. This provision plainly attests the understanding of those who made the Constitution that ordinary courts of justice are inadequate to cases of rebellion—attests their purpose that, in such cases, men may be held in custody whom the courts, acting on ordinary rules, would discharge. Habeas corpus does not discharge men who are proved to be guilty of defined crime; and its suspension is allowed by the Constitution on purpose that men may be arrested and held who cannot be proved to be guilty of defined crime, "when, in cases of rebellion or invasion, the public safety may require it."

(Work cited, vol. II, pp. 347–348.)

EXCERPTS FROM LINCOLN'S WORKS RELATING TO HARMONY, UNITY OF PURPOSE, ETC.

December 10, 1856—Fragment of speech at a Republican banquet in Chicago:

"All of us who did not vote for Mr. Buchanan, taken together, are a majority of 400,000. But in the late contest we were divided between Fremont and Fillmore. Can we not come together for the future? Let everyone who really believes, and is resolved, that free society is not and shall not be a failure, and who can conscientiously declare that in the past contest he has done only what he thought best—let every such one have charity to believe that everyone can say as much" (p. 226).

February 27, 1860—Address at Cooper Institute, New York:

"A few words now to Republicans. It is exceedingly desirable that all parts of this great Confederacy shall be at peace, and in harmony one with another. Let us Republicans do our part to have it so. Even though much provoked, let us do nothing through passion and ill temper. Even though the southern people will not so much as listen to us, let us calmly consider their demands, and yield to them if, in our deliberate view of our duty, we possibly can. Judging by all they say and do, and by the subject and nature of their controversy with us, let us determine, if we can, what will satisfy them" (p. 611).

March 5, 1860—Abstract of speech at Hartford, Conn.:

"All portions of this Confederacy should act in harmony and with careful deliberation" (p. 616).

March 6, 1860—Speech at New Haven, Conn.:

"It is exceedingly desirable that all parts of this great Confederacy shall be at peace and in harmony one with another. Let us Republicans do our part to have it so. Even though much provoked, let us do nothing through passion and ill temper. Even though the southern people will not so much as listen to us, let us calmly consider their demands, and yield to them if, in our deliberate view of our duty, we possibly can. Judging by all they say and do, and by the subject and nature of their controversy with us, let us determine, if we can, what will satisfy them" (p. 628).

(Abraham Lincoln, edited by John G. Nicolay and John Hay, vol. I (E457.91).)

July 4, 1861—Special session message:

"As a private citizen the executive could not have consented that these institutions shall perish; much less could be in betrayal of so vast and so sacred a trust as these free people had confided to him. He felt that he had no moral right to shrink, nor even to count the chances of his own life, in what might follow. In full view of his great responsibility he has so far done what he has deemed his duty. You will now, according to your own judgment, perform yours. He sincerely hopes that your views and your action may so accord with his as to assure all faithful citizens who have been disturbed in their rights of a certain and speedy restoration to them under the Constitution and the laws.

"And having thus chosen our course, without guile and with pure purpose, let us renew our trust in God and go forward without fear and with manly hearts" (p. 3232).

A proclamation:

"And I do further recommend to my fellow citizens aforesaid that on that occasion they do reverently humble themselves in the dust and from thence offer up penitent and fervent prayers and supplications to the great disposer of events for a return of the inestimable blessings of peace, union, and harmony throughout the land which it has pleased Him to assign as a dwelling place for ourselves and for our posterity throughout all generations" (p. 3430).

(Messages and Papers of the Presidents, vol. VII (J81.B97).)

LINCOLN'S STATEMENTS CONCERNING SECESSION

(Volume and page numbers which appear at the end of the following quotations refer to the Gettysburg edition of Lincoln's Complete Works, published by Francis D. Tandy Co., New York, 1905.)

Speech, Cincinnati, September 17, 1859:

"I want to know what you [men of the South] are going to do with your half of it [the Union]? Are you going to split the Ohio down through, and push your half off a piece? Or are you going to keep it right along side of us outrageous fellows? Or are you going to build up a wall some way between your country and ours, by which that movable property of yours can't come over here any more, to the danger of your losing it? Do you think you can better yourselves on that subject [slavery] by having us [of the North] bear no obligation whatever to return those specimens of your movable property that come hither?" (vol. V, p. 219).

"Will you [after the Union is dissolved] make war upon us [Northerners] and kill us all? Why, gentlemen, I think you are as gallant and as brave men as live; that you can fight as bravely in a good cause, man for man, as any other people living; that you have shown yourselves capable of this upon various occasions; but man for man you are not better than we are, and there are not so many of you as there are of us. You will never make much of a hand at whipping us. If we were fewer in numbers than you, I think you could whip us; if we were equal it would likely be a drawn battle; but inferior in numbers, you will make nothing by attempting to master us" (vol. V, p. 219).

"You [will] have divided the Union because we would not do right with you, as you think, upon that subject [slavery]; when we cease to be under obligations to do anything for you, how much better off do you think you will be?" (vol. V, p. 221).

Speech to Ohio Legislature, February 13, 1861:

"There is nothing going wrong. It is a consoling circumstances that when we look about there is nothing that really hurts anybody. We entertain different views upon political questions, but nobody is suffering anything" (vol. VI, p. 122).

Speech, Cleveland, February 15, 1861:

"What is happening to hurt them (men who seek to destroy the Union)? Have they not all their rights now as they ever have had? Do not they have their fugitive slaves returned now as ever? Have they not the same Constitution that they have lived under for seventy-odd years? Have they not a position as citizens of this common country, and have we any citizens of this common country, and have we any power to change that position? What then is the matter with them? Why all this excitement? Why all these complaints?" (vol. VI, p. 130).

First inaugural, March 4, 1861:

"All the vital rights of minorities and of individuals are so plainly assured to them (men of the South) by affirmations and negations, guaranties and prohibitions, in the Constitution, that controversies never arise concerning them (vol. VI, p. 177).

"If a minority * * * will secede rather than acquiesce (in the rule of the majority) they make a precedent which in turn will divide and ruin them, for a minority of their own will secede from them whenever a majority refuses to be controlled by such minority. For instance, why may not any portion of a new confederacy a year or two hense arbitrarily secede again, precisely as portions of the present Union now claim to secede? All who cherish disunion sentiments are now being educated to the exact temper of doing this. Is there such perfect identity of interests among the States to compose a new union as to produce harmony only and prevent renewed secession?" (vol. VI, p. 178).

"Plainly the central idea of secession is the essence of anarchy. A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it does of necessity fly to anarchy or to despotism. Unanimity is impossible. The rule of a minority, as a permanent arrangement, is wholly inadmissible; so that, rejecting the majority principle, anarchy or despotism in some form is all that is left (vol. VI, p. 179).

"Is it possible, then, to make that intercourse (between the sections) more advantageous or more satisfactory after separation than before? Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens than laws can among friends Suppose you go to war, you cannot fight always; and when, after much loss on both sides, and no gain on either, you cease fighting, the identical old terms of intercourse are again upon you" (vol. VI, p. 181).

Message to Congress, July 4, 1861:

"It might seem at first thought to be of little difference whether the present movement at the South be called secession or rebellion. The movers, however, well understand the difference. At the beginning they knew they could never raise their treason to any respectable magnitude by any name which implies violation of law. * * * Accordingly, they commenced by an insidious debauching of the public mind. They invented an ingenius sophism, which, if conceded, was followed by perfectly logical steps through all the incidents to the complete

destruction of the Union. The sophism itself is that any State of the Union may, consistently with the national Constitution, and therefore lawfully and peacefully, withdraw from the Union without the consent of the Union or of any other State. The little disguise that the supposed right is to be exercised only for just cause, themselves to be the sole judge of its justice, is too thin to merit any notice. With rebellion thus sugar-coated they have been drugging the public mind of their section for more than 30 years, and until at length they have brought many good men to a willingness to take up arms against the Government the day after some assemblage of men have enacted the farcical pretense of taking their State out of the Union who could have been brought to no such thing the day before" (vol. VI, p. 312).

"The Nation purchased with money the countries out of which several of these [seceding] States were formed. Is it just that they shall go off without leave and without refunding? The Nation paid very large sums—in the aggregate, I believe, nearly a hundred millions—to relieve Florida of the aboriginal tribes. Is it just that she shall now be off without consent or without making any return? The Nation is now in debt for money applied to the benefit of these so-called seceding States in common with the rest. Is it just either that creditors shall go unpaid or the remaining States pay the whole? * * * If one State may secede, so may another; and when all shall have seceded none is left to pay the debts. Is this quite just to creditors? Did we notify them of this sage view of ours when we borrowed their money?" (vol. VI, p. 317).

"A part of the present national debt was contracted to pay the old debts of Texas. Is it just that she shall leave [the Union] and pay no part of this herself?" (vol. VI, p. 217).

"If all the States save one should assert the power to drive that one out of the Union, it is presumed the whole class of seceder politicians would at once deny the power and denounce the act as the greatest outrage upon State rights. But suppose that precisely the same act, instead of being called 'driving the one out,' should be called 'the seceding of the others from that one,' it would be exactly what the seceders claim to do, unless, indeed, they make the point that the one, because it is a minority, may rightfully do what the others, because they are a majority, may not rightfully do. These politicians are subtle and profound on the rights of minorities" (vol. VI, p. 318).

"The principle [of secession] itself is one of disintegration ,and upon which no government can possibly endure" (vol. VI, p. 318).

"Whoever in any section proposes to abandon such a government [as that of the United States] would do well to consider in deference to what principle it is that he does it—what better is he likely to get in its stead—whether the substitute will give, or be intended to give, so much of good to the people?" (vol. VI, p. 320).

"No compromise by public servants could, in this case, be a cure" (vol. VI, p. 324).

SOME OF THE SAYINGS OF ABRAHAM LINCOLN

"If the good people, in their wisdom, shall see fit to keep me in the background, I have been too familiar with disappointments to be very much chagrined." (Address, New Salem, Ill., March 9, 1832.)

"I go for all sharing the privileges of the Government who assist in bearing its burdens." (Letter to editor of the Sangamon Journal, New Salem, Ill., June 13, 1836.)

"If destruction be our lot we must ourselves be its author and finisher. As a nation of freemen we must live through all time, or die by suicide." (Address, Young Men's Lyceum, Springfield, Ill., January 27, 1838.)

"I am not a Know-Nothing; that is certain. How could I be? How can any one who abhors the oppression of Negroes be in favor of degrading classes of white people? Our progress in degeneracy appears to me to be pretty rapid. As a nation we begin by declaring that 'all men are created equal.' We now practically read it 'all men are created equal, except Negroes.' When the Know-Nothings get control, it will read 'all men are created equal, except Negroes and foreigners and Catholics.' When it comes to this, I shall prefer emigrating to some country where they make no pretense of loving liberty—to Russia, for instance, where despotism can be taken pure and without the base alloy of hypocrisy." (Letter to Joshua F. Speed, August 24, 1855.)

"A house divided against itself cannot stand. I believe this Government cannot endure permanently half slave and half free. I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other. Either the opponents of slavery will arrest the further spread of it, and place it where the public mind shall rest in the belief that it is in the course of ultimate extinction; or its advocates will push it forward till it shall become alike lawful in all the States, old as well as new, North as well as South." (Speech, Republican State Convention, Springfield, Ill., June 16, 1858.)

"Nobody has ever expected me to be President. In my poor, lean, lank face nobody has ever seen that any cabbages were sprouting out." (Second campaign speech against Douglas, Springfield, Ill., July 17, 1858.)

"As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy." (Fragment (August 1, 1858?) in Roy P. Basler: The Collected Works of Abraham Lincoln (1953).)

"This is a world of compensation; and he who would be no slave must consent to have no slave. Those who deny freedom to others deserve it not for themselves, and, under a just God, cannot long retain it." (Letter to H. L. Pierce and others, April 6, 1859.)

"Let us have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it." (Address, Cooper Union, New York, February 27, 1860.)

"It is safe to assert that no government proper ever had a provision in its organic law for its own termination." (First inaugural address, March 4, 1861.)

"Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any other rights." (First annual message to Congress, December 3, 1861.)

"It is difficult to make a man miserable while he feels he is worthy of himself and claims kindred to the great God who made him." (Address on colonization to a Negro deputation at Washington, August 14, 1862.)

"I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views * * * and I intend no modification of my oft-expressed personal wish that all men everywhere could be free." (Letter to Horace Greely, August 22, 1862.)

"Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final restingplace for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

"But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people, shall not perish from the earth." (Address at Gettysburg, November 19, 1863.)

"It is no fault in others that the Methodist Church sends more soldiers to the field, more nurses to the hospital, and more prayers to Heaven than any. God bless the Methodist Church. Bless all the churches, and blessed be God, who, in this our great trial, giveth us the churches." (To a Methodist delegation, May 14, 1864.)

"It may seem strange that any men should dare to ask a just God's assistance in wringing their bread from the sweat of other men's faces; but let us judge not, that we be not judged." (Second inaugural address, March 4, 1865.)

Nomination of Hon. Walter F. George, of Georgia, for 1956 Nobel Peace Prize

---

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, February 10, 1956

Mr. BARKLEY. Mr. President, I have in my hand an article written by Col. Hubert Lee, sent to me from the Dixie Business Magazine, in regard to the nomination of the senior Senator from Georgia [Mr. GEORGE], by the organization of which Mr. Lee is the head and manager, to receive the Nobel peace prize. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WEEK

(By Col. Hubert Lee, editor, Dixie Business magazine)

Senator WALTER F. GEORGE is to be nominated for the 1956 Nobel peace prize.

Time for nominations for the 1955 award was February 1, 1955, or sooner.

Those nominated on or before February 1 are considered and the announcement made each December 10.

Through the courtesy of the Department of State, I have received the official announcement about how to go about entering a nomination. Here is the way:

"Det Norske Stortings Nobelkomite, Nobel Committee of the Norwegian Parliament. Nobel peace prize."

All proposals of candidates for the Nobel peace prize, which is to be distributed December 10, 1955, must, in order to be taken into consideration, be laid before the Nobel

Committee of the Norwegian Parliament by a duly qualified person before the 1st of February of the same year.

Any one of the following persons is held to be duly qualified: (a) Members and late members of the Nobel Committee of the Norwegian Parliament, as well as the advisors appointed at the Norwegian Nobel Institute; (b) Members of Parliament and members of the government of the different states, as well as members of the Interparliamentary Union; (c) members of the International Arbitration Court at the Hague; (d) members of the Council of the International Peace Bureau; (e) members and associates of the Institute of International Law; (f) university professors of political science and of law, of history, and of philosophy; and (g) persons who have received the Nobel peace prize.

The Nobel peace prize may also be accorded to institutions or associations.

According to the Code of Statutes, paragraph 8, the grounds upon which any proposal is made must be stated and handed in along with such papers and other documents as may herein be referred to.

According to paragraph 3, every written work, to qualify for a prize, must have appeared in print.

For particulars, qualified persons are requested to apply to the Office of the Nobel Committee of the Norwegian Parliament, Drammensvei 19, Oslo.

Enforcement of Antitrust Laws

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 10, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. George J. Burger, vice president, National Federation of Independent Business.

I have observed with considerable interest, as many of my colleagues must also have noted, the splendid action of this small business organization over the years to protect small business and the free-enterprise system by making as their principal objective all-out, vigorous enforcement of the antitrust laws.

The statement relates to a serious situation caused by the attempt of the big rubber manufacturers and the major oil companies to monopolize the distribution of tires, batteries, and accessories. It is an alarming situation, and arouses my interest in view of the fact that during my chairmanship of the Senate Small Business Committee, one of the first major actions of the committee in 1942 was to study the small business problems of the tire and rubber manufacturers and retailers. The complete report is embodied in Senate Committee Print No. 3, 77th Congress, 1st session, and I read from the report:

Despite the fact that the major petroleum marketers proclaim their stations are largely operated by independent businessmen it is not difficult to discover that so far as having the right to select a brand of tires is concerned, this independence is in reality nonexistent.

This was in 1942, Mr. President, and here some 14 years later the Federal Trade Commission issues a report which discloses, in substance, a $12 million override of $147 million in tire, battery, and accessory sales through 74,000 gasoline service stations, by Firestone with Shell, Texas, and Atlantic; by Goodyear with Shell and Atlantic; and by Goodrich with Texas. This all happened within a 2-year period, and I am just wondering what happened in the preceding years. In other words, it is self-evident that independence of free enterprise ceased to exist due to these combines.

There is pending before the Congres a bill I have repeatedly introduced, which would break once and for all time the hold by big rubber and oil interests established in an effort to monopolize that industry, and I am referring to my bill, S. 50. I shall urge the Senate Committee on Interstate and Foreign Commerce to start hearings at the earliest possible moment.

I have also been advised that the National Federation of Independent Business has recently polled its nationwide membership, comprising approximately 100,000 independent business and professional men—all individual voting members—and the poll discloses: 56 percent for S. 50, 37 percent against, 75 percent no vote.

It is because of the conditions I have related that I believe it is important for my colleagues and all readers of the CONGRESSIONAL RECORD to note that my remarks are confirmed by the nationwide small business organization whose statement I have asked to have printed in the RECORD.

The ACTING PRESIDENT pro tempore. Is there objection to the unanimous-consent request of the Senator from Montana?

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The action of the Federal Trade Commission, now headed by the Honorable John W. Gwynne, in its findings as to alleged violations of the antitrust laws by three rubber and three oil companies—Goodrich-Texas, Goodyear-Atlantic Refining, and Shell-Firestone—to attempt to monopolize retail tire distribution was hailed today by George J. Burger, vice president, National Federation of Independent Business, as the "removal of a major roadblock from the path of small business after a 15-year-old exposé made by the Senate Small Business Committee in its report to the 77th Congress, 1st session, 1941."

The committee at that time came to its conclusions after a national survey was made of the small business problems of the tire and rubber manufacturers and retailers which discloses there was no real free enterprise due to the ties existing between major oil and major rubber companies.

"The big question in the minds of independent business," Burger added, "was what was the contributing cause for the delaying action these past 15 years in coming to definite findings?" And, he further states that the recent actions of the Small Business Committees of the Congress in exploring the operations of the Federal Trade Commission in its enforcement of the antitrust laws were long overdue, and it is apparent that the present leadership recognizes this and now is taking more aggressive action in the inforcement of the laws.

Burger concluded: "Small business in all lines of industry will now watch with considerable interest that this case receives top priority over any and all other actions of the Federal Trade Commission to follow through."

The Late Governor Patterson, of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, February 10, 1956

Mr. NEUBERGER. Mr. President, the Pendleton East Oregonian, an independent newspaper published in the great eastern expanse of my State, has printed a most thoughtful and touching editorial about Oregon's late distinguished Governor, the Honorable Paul L. Patterson, who died in Portland on January 31, 1956. This editorial, written by Mr. J. W. Forrester, editor and publisher of the East Oregonian, appeared in that newspaper on February 2, 1956.

I ask unanimous consent that it may appear in the Appendix of the RECORD, as a tribute to the late Governor of my State.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAUL PATTERSON

The most appealing of Paul Patterson's many attributes was his humility. We shall never forget his modest version of how an accumulation of circumstances took him from the practice of law in Hillsboro to the Governor's office; the deep sense of humility that had come upon him when he, "a little country lawyer," was called upon to serve the citizens of Oregon in the State's highest office; his complete feeling of inadequacy when the wand of fate touched his shoulder.

Paul Patterson soon proved himself completely adequate in the Governor's office. Newspapermen of all shades of political thinking were almost unanimous in saying, after Mr. Patterson had had an opportunity to get a firm grip on the reins dropped by Douglas McKay, that he was one of the best governors in Oregon history. The people showed conclusively at the general election of 1954, when Mr. Patterson asked a 4-year term as Governor, that they agreed.

Because Paul Patterson had been years in a small community and because he had been very active in the affairs of that community—he had been president of the Hillsboro Chamber of Commerce—he had an understanding of and sympathy for community projects of all sizes and descriptions. When the proponents of those projects took them to the Governors office, Mr. Patterson listened will and counseled well. He fully understood the cases placed before him because he had lived and worked with many of an identical nature in his own community.

Governor Patterson had a sincere interest in the Pendleton Round-Up. Many will recall the memorable remarks he made to a roundup audience in 1953 about the meaning of the historic show to the State of Oregon. No finer words ever were spoken in behalf of the Pendleton Round-Up. When it became apparent the roundup and Happy Canyon would face a conflict of Saturday

night shows after the canyon moved into a new plant the Governor took time to write a lengthy letter to the boards of both organizations, suggesting ways to put the shows together on Saturday night.

Paul Patterson didn't avoid any of the problems that faced his State. He didn't, for political expediency, sweep them under the rug. His message to the 1955 legislature stated clearly the fiscal problems that had come upon the State and presented a definite approach to solution of those problems. He felt he had as much responsibility as the legislature to find a way out. He didn't consider for a moment crawling from under that responsibility, as his predecessor had.

Although he was a successful lawyer, Paul Patterson was not an eloquent speaker who could excite an audience. But he always got through to an audience and held its attention because of his obvious sincerity. What he had to say his listeners knew he sincerely believed.

No one could stampede Paul Patterson into making a decision. True to his training in the law, he demanded all the facts and then carefully weighed them. When he had done that he showed no fear of giving his decision and standing behind it.

Oregon was exceedingly fortunate that Paul Patterson stood at the head of the line of succession when Douglas McKay went off to Washington. He was far better than a substitute. Oregon will have few Governors who serve as well. The State has lost a valuable citizen, one who gave wisely, unselfishly, and always humbly in the best interests of all Oregonians, whose hopes and dreams a country lawyer understood.

No More Money for ILO

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Fulton Lewis, Jr., in which he raises the question as to whether or not Congress should appropriate any more money to support the International Labor Organization. Here, indeed, is an opportunity for Congress to save more than $1½ million. The article by Mr. Lewis follows:

WHY SHELL OUT FOR ILO?

WASHINGTON.—If Congress is really sincere in trying to reduce Government expenditures, it could start by cutting off the American contribution to operating expenses of the welfare-statist International Labor Organization.

The savings in itself would be small—only $1,650,000 this year, although the administration has asked Congress to increase from $1,750,000 to $3 million, the maximum authorized annual payment.

But small as it is, many Members of Congress feel the United States would profit by cutting off its payments to the upkeep of what they regard as a Communist-dominated organization engaged only in propagandizing socialist theories.

In the post-World War II era, the ILO has adopted conventions which would outlaw all privately operated employment agencies and put them under government control; give government power to negotiate labor-management collective-bargaining agreements; compel governments to provide maternity benefits for working mothers, and many other out-and-out socialistic programs.

A convention, of course, is not effective in any country unless and until that country ratifies it. Fortunately, the United States has ratified only seven innocuous conventions, but the others are pending and conceivably could be adopted by the Senate.

In any event, there can be no logical justification for this country to shell out one-fourth of the cost of operating an international setup which is actively campaigning against all that the United States stands for.

The International Labor Organization originally was established in 1919 as an offshoot of the League of Nations, with the eminently laudable objective of improving the lot of working men and women throughout the world.

The United States did not join it until the advent of the New Deal; in 1934, at the request of the late President Roosevelt and over the objections of critics who even then claimed the ILO was merely a promoter of state socialism, Congress voted United States affiliation.

After World War II, the ILO was taken over by the U. N. as a specialized agency, and its actual operations went from bad to worse, like those of so many other U. N. subsidiaries, such as the notorious UNESCO—another very apt spot for Congress to do a job of appropriation paring.

The Soviet Union did not move into the ILO until 1954, when, with two of its constituent "republics"—the Ukraine and Byelorussia—it suddenly assumed a full membership role. The result has been that, with the slavish following of four Red satellite members and various so-called neutral countries, the Communist bloc has been able to overrule the United States on almost every issue brought up during the last 18 months.

The ILO is supposed to be organized on a tripartite basis, with each member nation sending delegates representing the government, labor, and management, to its annual meeetings in its huge, ornate marble home in Geneva.

The United States employer delegate, W. L. McGrath, prominent Cincinnati industrialist, has been battling against acceptance of Soviet employer delegates on the very valid grounds that there can be no employer class under the Communist system, that any Red delegates in this category therefore are per se nothing more than agents of their government and of the Communist Party.

McGrath was named to his post at the recommendation of the United States Chamber of Commerce and the National Association of Manufacturers. Both organizations have been strangely loath to take up the cudgels in his behalf, but the chamber's board of directors now has finally adopted a resolution urging Congress to investigate the ILO's "activities and structure * * * (to) determine whether the United States should continue its support of and continuation in that organization."

A special NAM committee has made a similar recommendation, but neither organization is willing to support McGrath's proposal that the United States get out now.

Expensive Thanks

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. MOSS. Mr. Speaker, Congress is now being subjected to its annual program of plea and pressure from Postmaster General Arthur Summerfield for an increase in postal rates.

From now until sometime in the distant future we will be hearing of the great improvement in the postal service. The fact is that postal operation cost is more today than ever before and, in my opinion, the rate increases requested are not fair and avoid many basic important policy decisions. Much can be done to improve management of the Post Office Department. Much should be done to improve morale of the postal worker. This cannot be achieved through the programs of speed-up which have been inaugurated by the Postmaster General.

Mr. Summerfield is a man of very interesting and diverse facets. He seems to have an uncontrollable desire to experiment with gadgets of various types. Recently, the press carried an announcement that stamp-selling machines would thank each patron for the dimes, nickels, or pennies fed into it. My views as to the value of such a gadget are best contained in the following item from the Tulare Advance-Register in California:

EXPENSIVE THANKS

We can't say that we're much taken with the Postoffice Department's latest stunt to curry favor with its patrons.

Postmaster General Summerfield and his inventive aides have come up this time with a little gadget which says "thank you" when a customer pops coins into a stamp vending machine.

Well goodie, goodie for the Postoffice Department. Now even the machines around the postoffices of the United States are going to be real polite to us.

Courtesy is a nice thing, all right, but the catch to this latest postoffice gimmick is that the 7 machines built so far cost about $4,000 each. Others to be built will cost about $1,000 apiece, say the wizards of the Postoffice Department.

Well, fine and dandy, but for a Department that's constantly hollering to the high heavens about its deficit, the whole idea of talking stamp machines seems to us to be a pretty extravagant thing.

Sure, we suppose it will be real cute the first time we hear the stamp machine in the postoffice lobby tell us, "Thank you for buying stamps." It will be, that is, until we realize that this little bit of etiquette is costing us a big hunk of money that could be used to help get the Post Office Department into the black for a change.

Outstanding Bibliography on Estonian Publications of Dr. Salme Kuri

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

Mr. PATTERSON. Mr. Speaker, I know that every Member of this distinguished body at times has the occasion to perform certain research that is essential to the duties of our office.

Depending on which committee we serve upon, our ability to legislate more intelligently—thus to fulfill the responsibility for which we were summoned by

the people of America—is largely dependent upon our accessibility to facts about many matters and categories with which we must be well acquainted.

In this terrifying age—when more than 900 million innocent human beings are held in cruel Soviet bondage—there is compelling need for factual and up-to-date information about the various satellite and Baltic States that are bound by the heavy chains of Communist slavery.

Mr. Speaker, in connection with my duties on the House Armed Services Committee, I recently took upon myself the task of acquiring certain late and current information about the unfortunate Baltic States, particularly about that northernmost country that borders the Baltic Sea—Estonia.

Searching vainly through the gigantic catalog of our Library of Congress, I was unable to find a single bibliography on publications concerning the Baltic States that would provide me with a shortcut to the information that I sought and needed.

It was only good fortune, Mr. Speaker, that finally led me to the library of our Catholic University in Washington where I found a complete and up-to-date bibliography on Estonian publications that had recently been submitted as a dissertation for a master's degree by Dr. Salme Kuri—herself a naturalized American citizen from Estonia who is an employee at the Library of Congress.

This bibliography of Dr. Kuri is unique in many respects. The hundreds of publications contained therein are broken down in various fields of interest, and it contains an extensive index. This work of Dr. Kuri is indeed a masterpiece and without doubt the most outstanding product of extensive research on the Baltic area.

It is my understanding, Mr. Speaker, that the Library of Congress now contemplates publishing this outstanding work of Dr. Kuri; and if so, it will certainly be a useful and noteworthy contribution to the legislative branch of our Government. If published, I wholeheartedly recommend this bibliography to any of my distinguished colleagues who are desirous of obtaining a shortcut to information on all aspects of Estonia. It would be an asset to the Nation if a similar publication existed that covered the entire Baltic area.

Mr. Speaker, this outstanding contribution of Dr. Kuri only bears out a contention that I have held for many years: That is that the United States is fortunate to have among its citizenry so many of the good, progressive and industrious peoples from East Europe and elsewhere. It is my good fortune to represent a district in which a number of Connecticut's finest and most progressive citizens are of Polish descent. Also, we have in the fifth congressional district many excellent citizens that are of Czechoslovakian, Hungarian, and Italian descent. These good people are constantly striving, in their respective ways, to make America a greater nation and to maintain the flame of liberty that they knew they would find when they reached the shore of the United States.

Censorship

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, February 10, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the November 1955 issue of the Democratic Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CENSORSHIP IN WASHINGTON

Not long ago a reporter queried a Government agency to find out how much peanut butter our men in uniform consume in a year.

His request was turned down cold. "This information," snapped the Government press officer, "is classified top secret. A potential enemy might get valuable clues on our armed strength if we were to release these figures."

This, unfortunately, is a true story which Representative JOHN MOSS, Democrat, California, tells to illustrate to what absurd lengths secrecy and coverup in Government have gone. (As just about everyone knows, the armed services regularly publish up-to-date reports on the number of men in service, so spies don't need to estimate the per capita consumption of peanut butter.)

"Secrecy in Washington," Dr. Gerald Johnson, noted historian and commentator, wrote recently, "is more than an administration policy. It has become a disease." This is a view shared, incidentally, by the American Society of Newspaper Editors and the Association of Newspaper Publishers, both of whom have called for a halt to the spreading contagion.

Although the various department heads deny it, the record shows a definite trend toward coverup Government involving far more than the press. At this writing, the administration seems bent on erecting a paper curtain of censorship not only between itself and the public, but against the Congress as well.

The administration philosophy on blacking out information was clearly enunciated this summer by Boston banker Robert Cutler, former secretary of the President's National Security Council, who still serves as a part-time White House consultant.

Speaking to the Associated Harvard Clubs, Cutler declared the right to decide what information shall be made public—not just military information but all the vast paraphernalia which lies behind any policy decision—belongs to the President alone. In this complex, atom-dominated age, free speech, not secrecy, must justify itself, and the people need learn of decisions only after they have been implemented. So runs the Cutler thesis.

According to David Lawrence's magazine, U. S. News & World Report, Mr. Cutler's views were especially commended to White House aids by Mr. Eisenhower himself.

The press generally took a dim view of the speech. "Secrecy a la mode" and "Creeping Aunty-Knows-Bestism" the Washington Post called the Cutler philosophy. As Cutler sees it, the Post commented, information is no more than "a commodity to be manipulated to Government's advantage."

Wrote the Alsop brothers in their June 21, 1955, column: "the Cutler system, which is also the Eisenhower administration system, is not merely antidemocratic. Worse still, it is plain silly, unless its real purpose is to prevent those political embarrassments which officials have always wished to avoid."

Some of the concealment, like Topsy, "just growed," as officials found it more and more expedient to cover up errors of omission and commission.

But some of the coverup has certainly been deliberate from the outset—designed to mask unpopular proposals from the public or to distort the facts in a potentially flammable situation for political effect. The first consideration undoubtedly was behind the interagency conspiracy of silence and evasion which surrounded the Dixon-Yates and Hells Canyon deals. And one has only to read the newspapers now to see that no censorship could have been more self-serving than the administration's persistent refusal to submit its loyalty-security program to public analysis.

The businessmen now running the Government see nothing unusual about the secrecy they impose. After all, in the business world from which they came they were not used to sharing their affairs with the press or public. No one, certainly not President Eisenhower, has pointed out to Cabinet officers that as appointed representatives in a democratic government they now have responsibilities to the public which have no parallel in the business world.

The Washington press conference, a Chicago Tribune writer mourned recently, is a vanishing institution. In June, no Cabinet officer met the press more than once; in July, only 3 and in August 5 of the Cabinet held conferences.

The Defense Department's paper curtain has become almost as impenetrable as armor. Although 70 cents out of every tax dollar goes for defense, Secretary Wilson will release only information he feels "makes a constructive contribution to the mission" of his Department. His new press deputy has gone a step further and favors releasing only useful information. As Gerald Johnson commented, conceivably the public might find incompetence on the part of a Defense official useful information but certainly the Defense agency would not.

All last spring, Secretary Wilson argued for a reduction in ground forces by reason of our alleged air superiority over the Soviets. He had to make a quick about-face when Moscow staged a public demonstration of its new jet bombers on May Day but even when he upgraded his budget estimates, he refused to release any information whatever on Soviet air strength. Not until the foreign press and technical journals here had published eye-witness accounts of what they had seen was the Secretary persuaded to make a belated and inadequate public announcement explaining his position.

Then, of course, the Congress moved swiftly to vote increased appropriations for the Nation's defense.

Several times, Mr. Wilson has shown he believes only information helpful to the administration is good for the country. When Gen. Matthew Ridgway retired in July, he wrote the Defense Secretary protesting cuts in our Armed Forces. Wilson promptly classified the letter. Then 2 weeks later, the New York Times happened on a copy, and finding nothing secret, published it. This forced Wilson to dig his copy out of the safe and release it. He explained sheepishly he had suppressed the information so as not to complicate the work of President Eisenhower at Geneva.

Agriculture Secretary Benson is another administration official who on not 1 but 2 occasions has stated publicly that sometimes "information should be withheld which might do harm to the Government"—Government being synonymous with the administration.

When did Mr. Benson withhold information, for instance, which might harm the Government Notably in refusing to discuss

any of his now discredited security charges against Wolf Ladejinsky.

His philosophy may also explain why, when he raised interest rates on Commodity Credit Corporation price-support loans, and again last January when he upped the interest rate farmers pay for disaster-relief loans, he conveniently forgot to make any public announcement.

Consider the pattern of evasion and concealment which marked the administration's handling of Dixon-Yates:

For almost 2 years—until a Senate Judiciary Subcommittee under Senator KEFAUVER blasted out the facts—the administration concealed the role of Adolphe Wenzell, an ambidextrous gentleman who attended 25 separate meetings at the Budget Bureau as a consultant to the Government on Dixon-Yates. At the same time, he worked as vice president of the First Boston Corp., which, by happy coincidence, had agreed to finance Messrs. Dixon and Yates.

In releasing detailed chronologies in August 1954, the administration assured the public they contained the whole story on Dixon-Yates. But it was later revealed that Mr. Wenzell's name was conspicuously missing.

When Senate investigators sought the working papers from the Budget Bureau Director, they were refused the information.

Although Mr. Wenzell testified he himself had some doubts about the propriety of his dual role, there was no criticism of him within the administration.

This past August, the press was told that the Dixon-Yates records could not be dragged out with justice to the public—although it is hard to see how their publication could have hurt anyone except the administration and Dixon-Yates.

Although he admittedly ordered the Securities and Exchange Commission to recess a hearing on Dixon-Yates until after Congress cast a crucial vote on the matter, Assistant President Sherman Adams took a quick dive under the cloak of presidential immunity when asked to testify.

Time and again the administration has followed a pattern for refusing to give Congress information—notably when it declined to give the joint congressional committee investigating the Army-McCarthy copies of high-level memoranda within the executive agencies.

In recent month, administration officials have clammed up more and more in the face of congressional investigations.

Commerce Secretary Weeks, acting on White House advice, has refused to cooperate with a House Judiciary Subcommittee's probe of the Department's business advisory commission and the role of businessmen serving without compensation (WOC's they are called) at Commerce. Representative EMANUEL CELLER's subcommittee sent eight separate requests for the WOC files. The only material they have received is published speeches and press releases. In 1951 Commerce Secretary Sawyer supplied the same committee with all WOC files.

Secretary Weeks has stiff-armed three requests to testify. He has, however, angrily labeled the investigation "a massive attack on free enterprise" and concluded irrelevantly, "I don't think the American people want anyone to play politics with defense or prosperity."

(Mr. Weeks' penchant for playing it close to the chest got him in hot water once before. To a reporter for the Detroit News he hotly denied an exchange of letter with Senator ALEXANDER WILEY, Republican, of Wisconsin, on the St. Lawrence seaway. The Detroit News printed his denial side by side with the verbatim letters.)

Federal Power Commission Chairman Jerome Kuykendall was less than frank with Congress in his testimony on Dixon-Yates. Again this summer he assured a House committee that FPC had taken no action to license the private Idaho Power Co. to build dams at Hells Canyon. The FPC order junking plans for a big Government dam at Hells Canyon, was dated the day before Kuykendall testified. The Administration, it seems, wanted no announcement made until Congress got out of town.

Representative EARL CHUDOFF, Democrat, of Pennsylvania, chairman of a House Government Operations Subcommittee, has charged Interior Secretary McKay with deliberately withholding information on the Government's agreement with the Georgia Power Co. to ransmit Government power to rural electric co-ops in the State. CHUDOFF's committee is investigating whether preference users like REA co-ops are getting their fair share of Government power.

Agriculture Secretary Benson several times has refused to testify on the circumstances within his Department which enabled private operators to make windfall killings in cheese and butter last year.

Mr. Stassen, when head of FOA, steadfastly refused to turn over documents to a Senate operations subcommittee. The group was inquiring into an FOA contract with a Los Angeles firm—the highest of five bidders—to build grain storage facilities in Pakistan. Mr. Stassen never let loose the documents, but admitted error, cancelled the contracts, and asked for new bids.

A House Operations Subcommittee, headed by Representative JOHN MOSS, Democrat, of California, expects to open hearings in November on the spreading web of Government secrecy. With over 100 cases of withheld information now under study, he will probably spend sometime trying to pierce the silken curtain with which Mrs. Oveta Culp Hobby surrounded the Salk vaccine controversy, and also look at the all-important question of why the full story on the effects of radioactive H-bomb fallout has been withheld by the Atomic Energy Commission.

Carroll Binder, editor of the Minneapolis Tribune editorial page, was especially concerned over this latter aspect of Government secrecy when he addressed the Harvard clubs this summer. He took issue on the subject, incidentally, with Presidential consultant, Cutler.

Said Mr. Binder: "Under the policy of secrecy pursued by the AEC, our civil-defense authorities know less about the effects of H-bomb damage than the Russians know. The AEC waited almost a year before it released information about the fallout of the H-bomb explosion at Bikini Island on March 1, 1954, and then it released less information than physicians need to know to treat H-bomb injuries or civil-defense officials need to know to make wise plans for coping with a possible attack."

The full extent of Government coverups can only be imagined. They generally start small and get bigger. The pattern begins with censorship of information, then hush-hush treatment of small mistakes and inefficiencies. From there, it is only a matter of time and degree for some grave blunder or failure to be hidden from sight in the ordinary course of business.

For example, the absurd classifying of peanut-butter statistics probably grew out of the embarrassment suffered by the Navy last spring when Hoover Commission investigators uncovered what they claimed was a 60-year supply of canned hamburger lying in Navy warehouses. Coverups on peanut butter and hamburger are not necessarily important in and of themselves. But the deliberate concealment of lagging defense or failing to tell the public about radioactive fallout can be as important as survival itself.

The Dayton Daily News warns just how serious the coverup has become: "Censorship at the well can choke off the flow of information to the public as surely as censorship at the spigot." And, the News continues, "It's past time * * * to take forceful measures to reverse it."

Scientific and Technical Personnel

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. GUBSER. Mr. Speaker, the success or failure of our effort to keep ahead of the world in scientific and technological development may to a considerable part depend on our ability to retain the very best in trained scientific and technical personnel in the service of our Government. This applies to no small extent to the fields of activity engaged in by the United States Atomic Energy Commission.

I have, therefore, asked the Manager of the Atomic Energy Commission for a report on the effect which Federal pay has upon the recruitment of scientific personnel. He has answered my inquiry with the letter which I submit herewith:

UNITED STATES
ATOMIC ENERGY COMMISSION,
Washington, D. C., January 31, 1956.

Hon. CHARLES S. GUBSER,
House of Representatives.

DEAR MR. GUBSER: This has further reference to your letter of December 21, 1955, in which you inquire about our experience in hiring and retaining employees, particularly for scientific positions.

Although the number of employees we recruit for the lowest levels of scientific and technical positions is relatively small, those we need for such positions must be outstanding and possess unusual capacities for growth into more responsible positions. These, of course, are the very ones who are much sought after by private industry, with salary offers we frequently are unable to match. However, we are in a somewhat favorable position in that many high-caliber people are attracted to our agency because of the nature of the work and the opportunity to be associated with outstanding scientists and leaders in atomic energy.

With respect to your question about the retention of employees in the higher salary levels, our current cumulative separation rate (separations per 100 employees of the same grades) for employees at grade GS–14 and above (of which we have approximately 600) is 10 percent a year. Of this group, about three-fourths resign from the Federal service. These resignations are sometimes due to an offer of compensation much higher than we are able to pay. In the case of scientific and technical personnel, we have some measure of relief from this situation afforded by our authority to pay such personnel in excess of Classification Act rates. We have used this authority very sparingly, however, because we must try to keep salaries of such personnel properly alined with those of nonscientific and technical employees.

In competing with private industry for highly qualified personnel, we also find that Government is sometimes at a disadvantage with respect to special fringe benefits. One notable example, which is a continuing problem for us, is our inability to pay for travel and transportation of household effects for

newly hired key employees to their first duty station.

With rapidly increasing participation of private industry in civilian applications of atomic energy, its interest in AEC employees, particularly those with scarce specialized scientific and technical skills, is likely to increase in the future. In some cases, this will not be undesirable, since it will help in the promotion of increasing private participation contemplated in the Atomic Energy Act of 1954, but is likely, also, to increase the turnover rate for our key employees.

We appreciate your interest in this matter and hope our comments are helpful.

Sincerely yours,

K. E. FIELDS,
General Manager.

Mr. Speaker, this problem is too serious to trifle with. I have introduced legislation which will correct this problem, and I urge the House to consider it or any other legislation which will make it possible to immediately recruit sufficient and adequate scientific personnel and retain it for a satisfactory period.

Demagoguery

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, under date of February 7, 1956, the Democratic State central committee, controlled by the UAW-CIO, sent out a letter stating that it intends to defeat the six Michigan Republican Congressmen—and I am one of them—who voted for the gas bill.

The letter charges that those who voted against the bill "sold out the people back home," undoubtedly meaning those who purchase gas. It asks whether the six accepted or intended to accept campaign contributions from the oil and gas interests.

Those who voted for the bill did not directly or indirectly sell out anyone nor will their action in any way contribute to an increase in the price of gas as used by the consumer.

The transportation of gas from the well to the consumer is now regulated by the Federal Government. The price paid by the consumer is regulated in Michigan by the State Public Service Commission.

There is no more reason why the Federal Government should control the production of gas at the well than there is that it should control the making, sale, and transportation of automobiles.

Always I have voted against an extension of the power of the Federal Government, against measures designed to limit the rights of the people or of the States.

In answer to the CIO's Democratic State central committee's inquiry as to whether I accepted or intended to accept contributions from the oil and gas interests, my answer—as the CIO well knows—is that I never have and I never expect to get any.

No part of the $1,035,958 spent in 1954 by labor organizations in political activities came to me. Nor was a dollar of the $272,714 political fund of the UAW-CIO-PAC spent in my behalf.

The sworn statement of the CIO on file with the Clerk of the House shows that over the years the CIO has, as it did last year, made political contributions to my political opponent. Undoubtedly, the reason was that they expected he would be their "rubber stamp," their "yes man," vote for their legislative program here in Washington.

The current press carries the statement that the political bigwigs of the AFL-CIO, meeting at Miami Beach, are contemplating spending some $2 million to defeat Congressmen who do not bow to their will. Looks as though the labor bosses, with their campaign millions, have congressional candidates who will not kiss the collective labor "foot," over a barrel.

Apparently, the CIO intends to continue to use funds paid in by its members—even though they are Republicans—to support its hand-picked candidates running under a Democratic label. This money, according to the union announcement, comes "from two sources, voluntary contributions from union members and from union treasuries."

Campaign Expenditures

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. MADDEN. Mr. Speaker, I was indeed alarmed to read in this morning's paper an article by Drew Pearson wherein he enumerated the fabulous sums of money contributed by the Rockefeller, Pew, Mellon, du Pont, and other families toward the Republican 1952 campaign. He elaborated in this article how various members of the family circumvented the true intent of the Corrupt Practices Act by the parents and children, cousins, uncles, and aunts all contributing sums of money in order to break down the total amount to avoid the intent of the election law dealing with unreasonable contributions.

I think it is highly necessary for the House to establish a special committee in the 1956 campaign as a watch-dog committee to prevent evasion of the Corrupt Practices Act and avoid the repetition of the millions that were spent by the Republican Party in 1952 and other campaigns. The chairman of the senatorial Campaign Committee, Senator GOLDWATER, and several other leading Republican politicians have been cleverly sending out misleading propaganda alerting the American people against large expenditures from labor organizations.

Let us get the record straight regarding the relative contributions of labor organizations as compared with the Republican Party's financial sponsors. In 1954 the Republican Party received from 738 individuals and families, a sum equal to the total voluntary contributions from 18 million members of organized labor. This amount was $1,434,000. In other words, for every voluntary contribution from a labor-union member of $1, the Republican Party received $1,943 from each of 738 wealthy contributors.

In the 1950 campaign in Ohio, the Hennings investigating committee revealed that the Republican political groups, organizations, and clubs supporting Senator Taft, spent $1,800,000. It was also revealed in the Hennings committee report through the testimony of Ohio senatorial candidate Joe Ferguson and others, that groups made up of Republic Steel, Timken Roller Bearing, NAM, American Medical Association, and so forth, spent approximately $1,200,000 in cleverly written newspaper, magazine, billboard, television, and other forms of advertising for the Republican Party in Ohio. This sum, coupled with the above, placed the cost of the Ohio Republican campaign in 1950 at approximately $3 million. Compare this with the $220,000 voluntary contributions spent in Ohio by all branches of organized labor during the 1950 campaign.

From reports in the newspapers and over radio and television, the American voters have cause to fear as to what might happen in 1956, if the special interest groups follow the same policy of election expenditures as in 1950, 1952, and 1954. No greater cloud hovers over the American system of free elections and representative Government than the fact that money is beginning to play such an important part in the elections of Presidents, Congressmen, governors, and other State officials. I read where Chairman Hall, of the Republican National Committee, has already admitted that $2 million worth of television time has already been signed. Five million dollars in addition has been raised by the Salute to Eisenhower meetings. There has not been revealed the added millions that will be derived from sources which brought about the great Republican campaign expenditures of 1950 and 1952. As of now, the Democratic Party has been unable to even talk to broadcasting companies regarding television and radio time because of a barren campaign budget.

I know the farmers of Indiana and America are very anxious to get the true facts as to why the Republican campaign promises of 1952 were completely reversed and they received the rural bankruptcy plan of Benson in 1953 and 1954. Apparently in the fall campaign the only television and radio time the Democratic Party will have available to inform the farmers of the true facts involved will be during the 6 a. m. milking hour. On the other hand, the only factual information labor can receive over television and radio as to why the Eisenhower promises of 1952 were not carried out will be the broadcasts at the 4 a. m. change of shift in factories throughout America. National Democratic

Chairman Butler's plan to equally divide radio-television time would be a great step forward in enabling the American voter to decide this election on factual information in the true record of both parties. It is highly necessary that to preserve this free republic the Congress take steps to prevent buying of elections through tremendous campaign funds. The American people must know the true facts and issues in this coming campaign and unfortunately, it costs millions to bring this information to the people. The public is entitled to know what is going on in their Government and one of the unfortunate ways to prevent this information from going into the precincts are the fabulous campaign expenditures provided by special privilege groups to buy up radio, television, newspaper, magazine, and all other forms of advertising mediums.

Congress should take steps and take steps now to prevent money from being the deciding factor in the presidential and congressional elections of 1956.

Foreign Aid Report From the Philippines

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1956

Mr. UDALL. Mr. Speaker, the subject of foreign aid continues to be a much-discussed and much-misunderstood question. A recent editorial in the St. Louis Post-Dispatch, reprinted below, puts this program in sharp perspective.

The editorial follows:

AID REPORT FROM THE PHILIPPINES

One of the most frequent questions asked about American foreign aid, point IV, and so on is, "What good does it do?"

Item: Three hundred and fifteen farmers' cooperative credit and marketing associations organized with 139,000 members in the Philippines, where usury and tenancy were the rule. Item: Subdivision of public lands creating 170,000 new family-sized farms in the islands. Item: Thirty-eight agricultural, 33 trade, and 9 normal schools organized. Item: Malaria reduced 80 percent in 3 years; 59 hospitals rehabilitated since the war, 244 rural health units equipped. Item: An Industrial Development Center is advising Filipinos on diversification and modernization of industry. Item: New liberal labor legislation passed and a labor education center set up for union leaders. Item: Nine new coal districts surveyed and coal production increased 60 percent. Item: A new modern budget system established for the Philippine Government. Item: Two hundred and ninety-five miles of new roads ready, 1,000 miles being improved.

These are only some of the measures established or promoted by the United States International Cooperation Administration with the help of the Filipinos. To this program, America has contributed $110 million; the Filipinos $145 million.

What good is foreign aid? Ask our friends, the Filipinos.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

1847

Appendix

"Four Cents"

SPEECH

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 9064) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States, for the fiscal year ending June 30, 1957, and for other purposes.

Mr. GARY. Mr. Chairman, I yield the balance of our time to the gentleman from Missouri [Mr. CANNON], the distinguished chairman of the Committee on Appropriations.

Mr. CANNON. Mr. Chairman, we are discussing a subject here which more nearly touches and more nearly interests every man, woman, and child in the United States than any other of the appropriation bills or any other bill which could be introduced or considered in the House. The postman makes his appointed round 6 days a week to the remotest corner of the Nation and the smallest school child writes and receives letters and counts out the pennies for postage.

I regret that the bill is so liberal. Frankly, it is a surprise. We were promised retrenchment and decreased Federal expenditures, and for years we have listened to criticisms of profligacy on this floor every time an appropriation bill was reported. And yet the Budget Bureau sends up this bill with estimates and recommendations for the largest amount ever spent for the purpose in the history of the Nation. And no one over there on the other side of the aisle uses the old time-worn phrase we used to hear so often, that "it is ridiculous."

Speaking very seriously, Mr. Chairman—and it is a time for serious speaking—the bill is too large. It is swollen in every section—almost in every paragraph, and the aggregate is the largest ever before estimated or spent for this purpose by any administration. Surely if there ever was a time when the assurances that have been given us so often of reducing expenditures in the Department should have been carried into effect, this is the time.

The bill is too large. Many items instead of being increased should have been reduced below those of the current year. But I want to correct an impression which seems to be abroad to the effect that the increase in the bill is due to increases in the pay of the employees of the Department.

The bill itself disproves any such idea. The increase in this bill over last year is in excess of $317 million. But the total budget estimate for statutory pay increase is only $170 million—and even at that it should not have been more than $150 million as the Department in a bill of that size should have absorbed $20 million or more.

So it is evident on the face of the bill that the increase is not chargeable to warranted adjustment of postal salaries already too long delayed. But that is one of the stock arguments always advanced when they want to raise the rate of postage on any class of mail.

And they also want to hold the postal employees responsible for the recent order requiring a complete name and address on circular mail which they want us to believe is junk mail. There is no such thing as junk mail. That is merely a smear word used as a term of opprobrium in an effort to create prejudice. It is propaganda, pure, and simple. And again they try to hide behind the mailman.

Postmaster General Summerfield is a practical businessman and saw the absurdity of requiring individual addresses on this class of mail, and directed its discontinuance. The results obtained justified his good judgment. Without knowing very much about it here in the House we suggested its resumption last year and now it is costing the businessmen of the country an aggregate of millions of dollars a year without any compensating advantage to anybody and rendering vastly reduced service.

Let us drag this thing out into the open and take a look at it. If a street address is not required—if it is addressed to Boxholder, Occupant, or to any other impersonal addressee, the carrier does not have to sort it before leaving the office. All he has to do is put in one copy for each patron. And when he reaches the point of delivery he does not have to scrutinize it to be certain it is the proper address. He merely drops one copy—any copy—in the slot. And when he finds the patron has moved or died or the address is imperfect he does not have to follow up and redirect or redeliver. Such mail requires less time and attention than any other class of mail.

And what about the service rendered the sender? Let us not overlook the fact that the Post Office Department is a service department and is intended to render the most efficient service at the lowest possible legitimate cost. When mail must be individually addressed the cost of securing lists and of addressing each piece is heavy and then the sender misses anywhere from 10 to 25 percent of the patrons along the line. He is subjected to a heavy expense and then gets less service. And the mailman works harder and with less efficiency. Everybody concerned is penalized and nobody is benefited. And the Department does a 10 percent to 25 percent poorer job.

But they claim the recipient is burdened with a plethora of unwanted mail. "The patron doesn't want it." That statement belongs under the classification of "interesting if true." This mail is welcome everywhere except in the Congressman's office and requiring an address would not protect the Congressman. His wastebasket is always full anyway. Out on the delivery line—and especially on rural delivery—many patrons receive less than a letter a week. They like to have the mailman stop—even with a circular—rather than pass them by. I can say positively that in the rural mailbox the circular is welcome. And the proof of that is the fact that even when an address is required this class of mail is heavier this year than last. The Wall Street Journal this week called attention to the increasing use of this class of mail. And the senders of such mail find that the patrons read it and answer it and both find it profitable or it would not be on the increase. So the last argument against "junk" mail goes glimmering.

If the Congressman does not like it, a push of his elbows drops it into the wastebasket. And if it costs too much to deliver it, just add the cost of service. But the patron wants it and answers it and will pay cost of delivery. Permit me to say again that the Post Office Department is a service department and both the sender and the patron want this service and are willing and glad to pay for it.

But Mr. Chairman, when it comes to this pious tongue-in-cheek sob story about first-class mail not paying its way, and an attempt to add another cent to the cost of delivery, that is another matter. Charging 4 cents for delivering a 3-cent letter would be an outrageous imposition on every family in the country. Never before has it been claimed that first-class mail did not pay its way and I do not believe it now. If any such claim is seriously made it is due either to inefficiency in administration or to faulty bookkeeping.

During the war it was decided—merely as a war revenue meaure—to increase the cost of letter postage from 2 cents to 3 cents. And we were promised that as soon as the war was over the cost of postage would go from 3 cents back to 2 cents. That promise has never been kept. And now they propose to further mulct the public by charging 4 cents.

Somewhere between 3 cents and 4 cents the law of diminishing returns will clamp down. And you will get less profitable revenue at 4 cents than you would get if

you went back to 2 cents. And the Post Office Department is no longer a service department.

I am opposed to it. My constituents are opposed to it. The American people are opposed to it.

Mr. Chairman, the Post Office Department is the one department of government in which a deficit is not an unmixed misfortune.

When the Constitution of the United States was adopted in 1789 there were many, including Patrick Henry, who seriously doubted its success. And the criticism most frequently made was that the average citizen was not sufficiently informed to vote intelligently on issues with many of which he naturally lacked familiarity. The Founding Fathers, appreciating the logic of this objection, early adopted two measures to meet it. They organized a public school system with a little red schoolhouse on every hill. And they provided free postage at Government expense of newspapers in local and adjacent counties in order that news, information, and official opinion might be disseminated as widely and as cheaply as possible. So successful have these two measures justified the expectations of the founders, that they are continued to this day. And in addition congressional speeches are mailed free of postage in order that the voters may know what the issues are and may understand the position of their representative on the questions of the day and have opportunity to judge whether he represents their views.

No money spent by the Federal Government is so well and so wisely spent as that expended by the Post Office Department for the diffusion of knowledge for these purposes.

And when any one proposes to lay profane and impious hands on the delivery of first-class mail under a 3-cent stamp, let us again remember that the Post Office Department is a service department. Let us not lose sight of the high ideal of service envisioned by Woodrow Wilson when he indited the inscription for the facade of the post-office building here in Washington:

"Messenger of sympathy and love,
Servant of parted friends,
Consoler of the lonely,
Bond of the scattered family,
Enlarger of the common life."

"Carrier of news and knowledge,
Instrument of trade and industry,
Promoter of mutual acquaintance,
Of peace and of good will,
Among men and nations."

Tribute to Senator Hill

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial which was published in the Washington Post of February 13. The editorial is entitled "Mr. Health"; and it justly compliments our associate and colleague in the Senate, the distinguished senior Senator from Alabama [Mr. HILL]. The Senator from Alabama received the first annual award of the National Mental Health Committee.

Mr. President, I think all of us are deeply indebted to the distinguished senior Senator from Alabama for his very able leadership in the field of health legislation. He has become known throughout the Nation as one of the proponents of constructive, progressive, health proposals, such as the Hill-Burton Act; and of course he also outstanding for his very splendid work and leadership in the field of the National Health Institutes and the research programs under those institutes. We are very grateful for the leadership of the Senator from Alabama; and I desire to compliment him, and to join the editor of the Washington Post in saluting the Senator from Alabama for work well done.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"MR. HEALTH"

Dr. Joseph Lister was one of England's great surgeons of the last century. In the 1890's an Alabama doctor named his son for him. Senator LISTER HILL, who Friday night received the first annual award of the National Mental Health Committee, has a record of crusading for health legislation that reaches far into American life.

The award, given for outstanding contribution by a public official during 1955 in the fight against mental illness, is a reminder of how much the Nation owes "Mr. Health," as Senator HILL is known on Capitol Hill. From the Hill-Burton Act of 1946, which made possible some 100,000 more hospital beds and 500 community health clinics, to the Mental Health Study Act of 1955, Senator HILL has worked constantly to expand health resources. Ten years ago he sponsored legislation creating the National Institute of Mental Health, and each year as ranking member of the Senate Appropriations Committee he has sought to make expansion of its activities possible. Appropriately the award given him is in the form of a key, symbolizing the liberation of the mentally ill from former bondage.

Vote First—Investigate Later

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Bipartisan Giveaway," which was published in the Chattanooga Times of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BIPARTISAN GIVEAWAY

Memories of the day when railroad and electric power lobbies controlled legislatures and had the support of even the most respectable statesmen were evoked by the passage of the natural-gas bill by the United States Senate. Senators JOHNSON of Texas, MONRONEY, of Oklahoma, and FULBRIGHT, of Arkansas are highly respected men, but when it came to fighting for special interests of their home States against the welfare of natural-gas consumers in the rest of the country they stood four square for the gas producers, including the 100 big oil companies which produce 80 percent of the natural gas.

When the President signs the bill, the producers, having a captive market tied in with pipelines, will decide whether to be discreetly patient before making the consumers pay higher prices or whether to proceed with the gouge at the earliest possible moment.

Enough Democrats joined with Republicans to pass the bill by 53 to 38. The difference might well have been the amiable prodding of Senators by the Democratic leader, JOHNSON; and other Democratic Senators from the gas-producing States, as in the House the popularity of Speaker SAM RAYBURN, of Texas, was a determining factor.

The alarming possibility that cash from the gas lobby might have influenced the vote will not be dismissed by the public, however lightly it was treated by the Southwestern Senators. An oil company lobbyist sent $2,500 to Senator CASE of South Dakota, and approached at least 2 other Senators on behalf of the bill, though not offering them money. That might have been naughty, the Southwestern Senators admitted, but they took the oblique position that it did not have any bearing on the prearranged time limit for the Senate showdown. They would pass the bill and investigate later. Again the old days are recalled for pressure-passing of legislation was a familiar technique in the era before regulation was imposed.

And thus the Democrats, who planned to stress the giveaway issue and the alleged devotion of this administration to special privilege, have blunted that issue insofar as this campaign is concerned. It is just barely possible that the highly respectable Democratic Senators from the Southwest may have cost the Democratic Party victory in the Presidential race. But peace and prosperity is assured the gas producers and the Southwestern States, which are oil and gas rich.

Senator KEFAUVER flew back from California to vote against the bill, which was commendable. Senator FRANCIS CASE, conservative Republican of South Dakota, struck a blow for decency in a cynical age when decency certainly needs supporters. Many Senators, however, turned away and went by on the other side.

The power of righteous indignation, once so strong in Congress, has gone into eclipse and the people lack protection in the one place where they cannot afford to lose it.

Water Resources Policy

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. CURTIS. Mr. President, one of the able and outstanding men who have been called to public service by the Eisenhower administration is the Honorable Clarence A. Davis, Under Secretary of the Interior. Many difficult problems have been handled by him. His every public action has been marked by thorough consideration, fairness to all the parties, and absolute integrity. He has made a record of which all friends of good government can be proud.

One of his special assignments consisted of carrying the principal responsibility on the Presidential Advisory Committee on Water Resources Policy. The report of this Committee will have a far-reaching effect upon the public, upon the Government of the United States, and upon State and local governments. I desire to have printed in the RECORD an address delivered by Mr. Davis before the United States Chamber of Commerce at St. Louis on January 24, 1956, wherein he spoke on the report of this Presidential Committee.

I have been informed by the Public Printer that the address is estimated to make 4⅔ pages of the RECORD, at a cost of $374, but because of the valuable material contained in the address, I ask unanimous consent that, notwithstanding its length, it may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNDER SECRETARY OF THE INTERIOR CLARENCE A. DAVIS BEFORE THE CHAMBER OF COMMERCE OF THE UNITED STATES, NATIONAL CONFERENCE ON WATER RESOURCES POLICY, CHASE-PARK PLAZA HOTEL, ST. LOUIS, MO., JANUARY 24, 1956

I feel signally honored by being permitted to address you with the distinguished list of authoritative speakers which comprises your program. I am doubly honored by the privilege of being the first to discuss this report of the Presidential Advisory Committee on Water Resources Policy after its submission to the Congress.

There is also another reason why it is appropriate for someone from the Interior Department to discuss this very controversial subject of water. That is because Interior lives in a constant conflict not only over water but over all other natural resources.

There are inherent conflicts in the development and preservation of natural resources. No matter what you do, you will be wrong in some people's eyes.

We are charged with the development of hydroelectric power on many of our streams, but we are also charged with the protection of fish and wildlife, the creation and protection of national parks and monuments, of mineral resources, and of recreational areas.

You can't flood a canyon to get hydroelectric power without affecting scenic values—sometimes for the better. You can't take water for irrigation purposes and at the same time have that water available at all times for the fish and wildlife and for domestic uses.

You can't maintain wildlife refuges in many cases without having adjacent landowners drain the oil out from under your refuge.

You can't maintain an elk herd of 12,000 elk in a park where there is not sufficient grass raised in the region to feed them in the winter, but if you undertake to thin down the herd, you are guilty of atrocious inroads on the Nation's wildlife.

You are the protector of the ducks, but when they settle by the thousands over the lands of farmers you have to make decisions on whether you will ruin the farmers or permit a moderate amount of shooting.

And lately, I have even understood that you can't have mining claims without interference with the forests, and you can't totally protect the forests without denying the miners' claims.

So, whatever you may do, I have learned, is a necessary disappointment to some organized and vocal group. Whatever you may do, you may prepare to read in the press that you are doing something wrong about the natural resources of the country, and you will find echoes in the political, partisan press and their kept or fed columns.

With that introduction, let me talk about the conflicts in water resoures.

The importance of water resources to the economy of the United States can hardly be overstated, and if I may be permitted before entering upon the details of the report itself, I should like to convey some notion of the widespread variety of the problems that are involved and of the implications of their solution upon our economy and upon the Government.

When we are dealing with water, we are dealing with one of the fundamental human wants. Along with land and air and food it is one of the necessities of life. Here in the United States, blessed with a continent of virgin soil, we lived more than 200 years before the water problem became generally acute, but we must remember that many ancient civilizations disappeared because of the absence or mismanagement of land and water.

The increase of our population, the raising of our living standards, the coming of our industrial era, and the increased application of water to land have now highlighted the problem until, in much of the Nation, there is a grave and increasing concern over water resources.

I should like to impress four things in the beginning: First, there is not a water problem, but there are many water problems; second, while these problems are nationwide, they are not necessarily national; third, that there is no magic formula which can be applied nationwide as a solution of these problems. Lastly, the policies we adopt go to the heart of our national economy and ultimately to our very form of government.

The water problems confronting us have three aspects: physical, financial, and organizational.

Physically, we have the problem of water shortages, irrigation, floods, pollution, and navigation. In the Southwest, New Mexico, Utah, Arizona, and Texas, we have the problem of inadequate supplies to maintain agriculture and grazing and in many cases to even provide domestic supplies. The great metropolitan region of southern California, with its recent influx of millions of people, despite large transfers of water from the lower Colorado, still anticipates the most serious problem for even domestic water supplies.

The entire east slope of the Rockies, including the cities of Denver and Colorado Springs and their environs, are in an area where the natural water supply of the region, except as water may be diverted from the west slope of the mountains, threatens to become inadequate for domestic uses and is a serious handicap to agricultural development. In New York but 5 years ago water supplies had decreased to the point where the whole metropolitan area was imperiled. We were trying to shave on a pint of water a day, and even drinking water was carefully hoarded. Additional sources and reservoirs have been constantly necessary.

We have vast supplies of underground water, the exact extent of which is unknown, but water uses in many areas are pulling down underground water tables faster than nature replenishes them. In some productive areas in California the underground water table is falling as much as 25 feet per year. Irrigation wells are now as much as 600 feet deep, and the water level is still declining. There is a constant but consistent decline in underground levels in many other parts of the country.

There are larger numbers of local areas throughout the United States in which the problem of a domestic supply is becoming acute.

At the same time, many areas are suffering from devastating floods. The New England and California floods are so recent that we are all familiar with them, but throughout our history the lower Mississippi has wrought millions of dollars of damage each year. The Missouri and its tributaries have frequently brought great devastation to the Middle West. Within 10 years the Columbia has devastated wide areas, and the whole Southeast region suffers from occasional floods.

At the same time, in our congested areas we are rendering much water useless by reason of industrial and municipal pollution. The Potomac is one example, but there are serious pollution problems along the Ohio below Pittsburgh, in New York, New Jersey, Pennsylvania. The Missouri below Omaha is affecting Kansas City, St. Louis, and the lower river. Chicago and the other cities adjacent to the Great Lakes have serious pollution problems, and there are innumerable individual communities throughout the country whose domestic water supplies will require pollution abatement in the foreseeable future.

Meantime, our needs and uses of water climb to astronomical figures. It is estimated that the average urban dweller uses more than 145 gallons of water per day, and if you include the water uses that go into the manufacture of the things that he eats and wears and uses, his individual needs climb to some 1,200 gallons per day. New industrial uses, air conditioning, and kindred uses, bid fair to double that requirement in the next 20 years.

Industrial uses have grown to even greater proportions and the concentration of population in the cities has magnified the problem of providing a concentrated supply of water as against a supply that was adequate when population was more widely dispersed. These are some of the physical aspects of the problem.

The financial problems are of equal magnitude. No one has been able to estimate the total financial requirements necessary to meet the various water problems in the years ahead. It will suffice to say that it involves billions of dollars between the various levels of Government. It may perhaps be best illustrated by the estimate of HEW that keeping abreast of only the relatively small problem of pollution will require some $750 million a year of somebody's money.

To give you a further glimpse, it is estimated that it will require $3 billion just to keep abreast of the hydroelectric requirements of the Columbia Basin alone during the next 10 years. The Tennessee Valley Authority indicates a need for at least $150 million a year for an indefinite length of time to keep abreast of the growing electric needs of that area. How many hundreds of millions may be necessary for flood-control structures in New England or for similar structures in California, the Missouri Basin, and elsewhere, it is impossible to say, but I should like to impress you at this point with the fact that the dollar requirements are so great that a Federal assumption of responsibility for all of them will have a definite effect upon the Federal budget, even in these days of budgets and debts of billions.

The problems are further complicated organizationwise. In addition to private persons and cities and local public agencies, there are three great Federal agencies, the Corps of Engineers, the Bureau of Reclamation, and the Department of Agriculture actively engaged in various phases of water resources development. Each of these agencies deals with a particular phase of the problem, and between them there has been inadequate cooperation and in many cases intense rivalries and jealousies throughout the years.

It is less than 20 years ago that any general Federal responsibility in this field of water resources was assumed. There has never been and is not now any general Federal assumption of responsibility for the

supplying of water for domestic and industrial water uses. Water supplies for domestic uses have always been an assumption of individual or local responsibility. Industrial supplies have been the responsibility of communities or of industry.

Even in the field of irrigation it is interesting to note that while there are approximately 28 million acres of irrigated land in the United States, only about 7 million acres of that have been irrigated under Federal sponsorship, and that prior to very recent years the hydroelectric potentialities of our rivers have been entirely developed by industry. Despite widespread Federal activity in recent years, this activity still constitutes only a very minor percentage of water resources development.

Much of this Federal participation has been on a hit-and-miss basis; much of it is represented by what has always been known as pork-barrel legislation; a great deal of it has been done under political pressures with small regard to national needs.

The Corps of Engineers, beginning 120 years ago when inland navigation was a more vital form of transportation than it is today, was charged with the responsibility of the development of rivers and harbors for navigation, but today, under the theory of the protection of navigation, has assumed the functions of flood control and so has extended its activities upstream until in many cases it is in direct conflict with the activities of both the Bureau of Reclamation and the Department of Agriculture.

The Bureau of Reclamation, originally designed to make productive the arid public lands of the West, has extended its activities until it is an active public power agency and is supplying supplemental water to thousands of acres of privately owned land that are far from arid.

The Department of Agriculture, on the theory that water should be conserved and stored on the land on which it falls, has envisaged for itself a great program of small dams and local water controls which supplement and in many cases conflict with the engineers' conception of flood control and the Reclamation Bureau's conception of irrigation.

And into the thinking of all three of these agencies is intruded the theory that by the generation and marketing of hydroelectric power, revenue may be produced which justifies the further extensions of their programs.

The effect of the water policy determined by the Federal Government goes to the heart of our national economy and even to our form of Government. What we do with reference to creating supplies of water determines the locations of great industries, to many of which a water supply is of more importance than either raw materials or freight rates. It determines the location of population which follow these industries. Our policies with relation to water may be a definite part of either the advancement or the liquidation of substantial areas of our country, especially if the Federal development contains elements of subsidy.

The control of water means the control of the land and people which depend upon the water. Hydroelectric power controls not only the location of industry, but through the rate schedules it establishes and the selection of its customers controls the economy of the region.

The concentration of the control of water in the Federal Government means ultimately the control of the land, the power, and consequently, the whole economy of the region. This of necessity, therefore, places large areas of the United States under the practical domination of Federal departments.

The President has been keenly aware of the vast importance of water in our economy. The establishment of a sound water policy stands well up the list of our numerous domestic problems.

In his letter appointing the Cabinet Committee, which consisted of the Secretary of the Interior, chairman, the Secretary of Defense, the Secretary of Agriculture, and as ad hoc members, the Secretaries of Commerce, Health, Education, and Welfare, and the Director of the Bureau of the Budget, the President outlined his view of the problem as follows:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens. If we are to continue to advance agriculturally and industrially we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans. It is my desire that this administration furnish effective and resourceful leadership in establishing national policies and improving the administrative organization needed to conserve and best utilize the full potential of our water resources.

"During the more than a century in which the Federal Government has played a vital part in the harnessing and development of water resources, our policies have been modified repeatedly to reflect changing needs and priorities. Unfortunately, we have often relied on piecemeal or stopgap measures. In other instances the policies covering different Federal agencies concerned with similar water resources have been inconsistent. Accordingly, it is both fitting and necessary for us to undertake a comprehensive review looking toward modernization of Federal policies and programs in the field of water resources. We must do this with a full realization that the States, communities, and private citizens are vitally concerned with the policies and actions of the Federal Government."

He then directed the committee to undertake an extensive review of all aspects of water-resources policy and to make its recommendations for the strengthening, clarification, and modernization of these policies.

The problems are so great and numerous that your organization, the American Farm Bureau Federation, the National Reclamation Association, the Joint Council of Engineers, the Materials Policy Commission, and the reports of both of the Hoover Commissions, and numerous recreation and wildlife organizations, have made recommendations for programs relating to the development and conservation of water resources.

The most interesting thing to me in the study of the recommendations of all of these great national organizations is not how much they differ but how much they agree.

The Government has not been idle in this field. We have dozens of reports of executive agencies and congressional committees on various phases of the problem of water, and we have within recent years the report of the Presidential Water Resources Policy Commission in 1950, representing three great volumes of a careful and detailed study.

There has been a period of years, now largely past, in which the big river-big dam conception has dominated our thinking, but no one now familiar with the field should minimize the great desirability of water conservation on the land, of small storage reservoirs, of soil conservation and erosion prevention that are within the conception of the Small Watershed Act of 1954 and which are quite in contrast with the big river-big dam concept of the preceding period. And, yet, any fair appraisal of the field must recognize merits in both of these conceptions, each in their proper place, as a part of a unified whole.

Everyone who has examined the field of Federal operations with reference to water has been impressed with the divergent programs of the various Federal departments and the widely differing concepts that have motivated them. This is the first time that a committee has been established which brought together around the council table the three great water-resources agencies of the Federal Government, that is, the Corps of Engineers, the Bureau of Reclamation, and the Department of Agriculture.

I have been greatly honored by presiding over the deliberations of that committee, which, also has been supplemented on an ad hoc basis by the Department of Commerce, the Department of Health, Education, and Welfare, the Bureau of the Budget, the International Joint Commission, dealing with Canadian relationships, the Department of Justice, and other agencies from time to time.

This is the first time that these agencies have been directed to sit down together and to evolve a rational and a practical policy, reasonably acceptable to all of the potentialities of all the agencies, wherever they were best suited to meet the practical conditions that arise.

I need hardly point out to this group that there is no single uniform water policy, no magic formula relating to water resources which can be applied to all parts of the country at all times and in all places. The problems involve particular needs and uses of water which vary from State to State and region to region. In one place the problem may be flood control; in another navigation; in another inadequate domestic supplies; in another inadequate agricultural supplies; and in still another stream pollution. Frequently water needs and uses are in conflict with each other. The changing pattern of the economy of the regions, and shifts and growth of population, require flexibility in policy, so that the plans may be adjusted to the realities of the economic requirements of an area.

The conception, therefore, of utilizing those tools at hand best fitted to meet the need of the region or the area or the locality is a conception which I believe to be sound.

I wish I could convey to you the thrill that comes from having the representatives of these great agencies sit about the council table, week after week, and month after month, discussing their mutual problems, the variations in their methods of appraising, constructing, and evaluating projects, and witness the steady progress of logic and reason against long-standing practices.

Many generalities become apparent in long-extended conferences of that nature.

First, the greatest single weakness in the Federal Government's activities in the field of water resources development is the lack of cooperation and coordination of the Federal agencies with each other and with the States and local interests. This has been occasioned by the fact that the Federal interest in water resources development has been expressed in different laws empowering different agencies to pursue particular programs for different purposes. There has been inadequate coordination of the program of one agency with that of another, and inadequate consultation with and consideration of the interests of the States, local communities, and individuals most vitally affected.

Second, it is not practicable, and certainly not desirable, for the Federal Government alone to assume responsibility for the complete development of the Nation's water resources. This reasoning stems not only from the practical impossibility of assuming the financial burdens which such a policy would require, but also from the fact that such complete Federal assumption of responsibility would tend to create local and regional dependence upon Federal action, to destroy individual and local initiative, to destroy the effectiveness of the Government of the States, and to work a profound and undesirable change in our traditional plan of Government. Lack of funds and regional rivalries have delayed for years many meritorious projects in the expectation of Federal action which has not been forthcoming. Such a pattern may be expected in the future if

complete reliance is placed upon Federal action. In some instances also there have been serious delays in badly needed projects because Federal agencies were reluctant to agree with local efforts to proceed.

Third, it is believed that the principle of equal contribution for equal benefits received should be applied to the beneficiaries of all Federal water-resources developments, although it is recognized that historically the programs of the Federal agencies have differed widely as to the contribution required from the beneficiaries of such project.s

This is, indeed, a touchy subject, because historically we have spent hundreds of millions of dollars over the years in the development of some types of water-protection projects in which the contributions of people directly benefited from them have been rather meager, or have differed widely.

On the other hand, we have developed projects for the reclamation of land in the West in which the beneficiary of the project has been required to pay to the utmost extent of his ability, and we are now embarking under the program of the Small Watershed Act of agriculture upon a program which permits considerable flexibility by the Secretary of Agriculture in the amount of contributions received from the direct beneficiaries.

Distasteful though it may be to some of these groups, it is very difficult to see why the direct and identifiable beneficiaries of Federal activity in the development of water resources should not all pay equally in proportion to the benefits they receive, whether the land is irrigated, whether it is drained, whether the water is stored for summer use, or whether it is protected from annual floods. In any case, simple equality of treatment to those immediately benefited would seem to indicate that they should all pay on an equal basis.

Fourth, and last, we have a great controversy raging over those persons who feel that they have vested water rights—property rights—lawfully acquired under the laws of States, and those who believe that the Federal Government has a superior right to all of the water in all of the streams of the United States.

These constitute some of the fundamental observations that will necessarily occur to anyone who has the privilege of reviewing at close range the activities of the various Federal agencies. One problem of the committee, therefore, was to correct as far as possible the disagreements and discrepancies between their programs.

I should now point out to you that this is a Cabinet committee of an administration which is in control of the executive branch. It is a committee primarily charged with practicable and attainable solutions to these problems and recommendations which are as realistic as possible, and that, of course, includes the practical facts of life.

It is possible from an idealistic and theoretical standpoint to completely rearrange the Government of the United States to pick up bureaus here and functions there and redistribute them into a pattern which one believes to be more efficient. But being realistic, one cannot overlook the fact that such major changes represent long years of legislative struggle, with the outcome continuously in doubt.

Therefore, the feeling of the President's Advisory Committee has been that if the various Federal programs themselves could be brought to common understanding and could proceed upon a fixed and a uniform pattern, that achievement would be as great as it is reasonably possible to expect to achieve at the moment.

With this general idea in mind, therefore, the committee has approached the numerous problems in the field of water resources development. No one realizes better than I that the program laid out will be attacked from both the right and the left.

Because it is not exclusively a Federal program it will be condemned as an abnegation of what will be said to be "Federal responsibility." On the other hand, because it does advocate some continuous Federal activity in this field, where other agencies by reason of physical, financial or legal complications are not able to proceed, it will probably be condemned by those who would have the Federal Government cease many of its activities in water resources.

No program can be devised which will be satisfactory to the extreme views of many of our people.

The committee has only undertaken to do that which it believes is sound, is reasonable, and is presently practicable.

No approach to the problem is possible without being confronted immediately with the fact that in many cases the fundamental and basic physical facts have not been available or have been ignored.

We have cases in which the water supply available has been overestimated due to lack of adequate scientific information. We have a woeful lack of knowledge of our underground water supplies, with the result that in some cases we are pulling down underground water tables 20 times as fast as they are being replenished.

We have cases in which we have built water projects dedicated to a single purpose, only to find that within what should have been the foreseeable future other uses and demands for the available water have proven to be more important than the uses devised in the projects.

We have cases in which substantial interests in water resources have been largely neglected or ignored for the purpose of carrying out a political ideology.

Many of these arise from our lack of fundamental basic data regarding our streamflows, our rainfall, our soil conditions, our hydrology, our meteorology, and other elements which control the quantity, the usability and the desirability of water uses.

For that reason, the first section of the report elaborates substantially upon the absolute necessity of increasing the appropriations to the scientific agencies for the production, correlation, and evaluation of basic data.

We have apparently collected tremendous volumes of physical facts, but we have not studied and correlated these facts into usable form. For example, only about one-third of the area of the United States and Alaska has been covered with adequate topographic maps. We have had fat years when appropriations were adequate to carry forward this program. We have had lean years where, under the needs of economy, we have curtailed these scientific agencies and consequently have broken the continuity of our data collection, rendering much that has gone before unusable.

The committee has recommended not only increased appropriations for the basic data agencies, the Weather Bureau, the Geological Survey, and the data collection functions of other agencies, but it has recommended that whatever else Congress may do, that it adopt a program of consistency so that the program may be fitted to the cloth year after year and consistently maintained regardless of the magnitude of the program.

This is unspectacular. There are no votes in it, but it is a thing which appears of vital importance through the years ahead if we are to proceed intelligently. This is section 1 of the report.

It should next be made clear that there is no one national water problem; that there are dozens of problems; and that they differ from State to State and from area to area. That a uniform national blueprint for water resources development is neither practicable nor desirable; and that each area must be considered in the light of its own present and anticipated problems which can only be solved by utilizing the best collective judgment possible as to what is most needed for the river basin, the State, the region, and the Nation.

For that reason, much of the time of the committe was spent upon the evolution of some organizational plan which would be adequately localized to give full scope to local needs, local initiative, and local conceptions, while at the same time being certain that it conformed to the general national welfare.

Superficially, we have had some coordination of activities in the past. Reports of one agency have been submitted to other agencies, to States, and local interests for comment, which would appear to have given them a voice in the determination of the ultimate plan. But it is believed that because of the relatively short time permitted for comment by States and local groups (usually 90 days), the magnitude of the complex reports submitted, that too frequently the originating agency's plans, motivated by a single or at most a limited objective, have been approved without consideration of other factors and other water uses necessary to full utilization of the resources.

The committee felt that no plans can ultimately be the most efficient unless they have been participated in from the beginning by all of the various interested groups, and these include the groups interested in flood control, in irrigation, in fish and wildlife, in recreation, in pollution, in land well-being, and others; and that only by sitting around the conference table as the plans and projects develop can all of these sometimes divergent interests be utilized to the maximum.

For that reason, the committee recommends that at regional or river basin levels water resources committees should be established from time to time for such purposes and duration as required; that the President should appoint a permanent nonvoting chairman of each committee; that in so doing, he should give consideration to individuals proposed by the governors of the participating States; and that the membership of the committee should include representatives of each Federal department having water resources responsibilities and qualified representatives of each of the affected States appointed by the governors, all on an equal basis.

Advisory participation by the Federal Power Commission and the Department of Justice on specific problems is recommended. The total number of either Federal or State representatives is not regarded as material.

The conflicts should be resolved by cooperation and not by voting strength, and both the Federal departments and the States should recognize that permanent personnel is necessary to successful development of water projects. These water resources committees should be the principal and continuing medium through which the various departments, State and Federal, coordinate resources planning and development activities. The committee should serve as the mechanism through which the several agencies would prepare and publish joint plans for water resources development, and each committee should prepare and keep up to date a comprehensive plan which will best serve the region and the Nation in the development of water resources, giving effect to all of the various interests which may be concerned.

So much for the organization at the grass roots, which we feel greatly broadens the scope of our investigation of water resources and greatly broadens the plans which will be evolved. It should go far to prevent the extreme development of one aspect of water resources to the serious neglect of the others which has sometimes occurred.

The Chairman of these local resource committees should at all times be guided by the policies and procedures of the President and should be responsible in general to the Coordinator of Water Resources, to which I will come in a moment.

As an intermediate step we suggest that there be made more permanent the Inter-Agency Committee on Water Resources,

which consists of a representative of each and all of the affected departments having an interest in water, the representatives being of not less than assistant secretarial rank to whom local disagreements over the importance of water resources may be referred by the local committees in the event of disagreement.

I can tell you from experience that within the last 2 years there have been many serious disagreements regarding the relative importance of water users which have been successfully resolved by this Inter-Agency Committee. These conflicts have arisen quite normally and naturally. People interested in a single agency instinctively and quite properly see their agency and its purpose as the most important use for water, and yet divorced from the immediate problem, considered at a subcabinet level, many of these disagreements actually tend to solve themselves, decisions to be made and plans to proceed.

The next step in the planning procedure is the committee's suggestion that there should be established in the Executive Office of the President an office of Coordinator of Water Resources. The committee feels that the water problem is of sufficient importance to warrant definite presidential interest and guidance.

It is suggested that this official be the permanent chairman of the Inter-Agency Committee; that he cooperate with the Bureau of the Budget and the Council of Economic Advisers; and that he set forth the criteria by which these projects may be judged, as well as working on long-range programs of water development.

The appointment by the President of an officer specifically charged with responsibilities in the field of water resources development will give stature to a field that badly needs unification and guidance.

The next section of the report deals with a matter about which this Chamber and most of the large organizations which have studied the water problem have recommended, the appointment by the President of a Board of Review through whose hands the plans for these projects should pass.

It is recommended that this Board be chosen from leading engineers, economists and other experts in the resources field who have had no connection with the planning of the projects submitted to them and who can have no personal interest in the construction of the projects of what agency may be designated to build them.

It is felt that this Board should evaluate in the light of policy enacted by Congress and criteria established by the Coordinator of Water Resources all the water resources reports proposing Federal participation, whether as builder or contributor.

The resolutions of your organization and many others recommending the creation of such an impartial Board of Review have been based upon the same general thinking which I have discussed here, that is, to get the viewpoint of someone who is a little apart from the proposals of any particular agency.

The next section (4) deals with the problem of water rights. This is a subject on which, as many of you know, I can talk for an hour with little difficulty. I shall express it very briefly again tonight.

The legal problems that grow out of water resources development are numerous and complex, from the riparian rights theory of many of the Eastern States, now modified somewhat, to the appropriation theory of the Western States, on over to the theory of Federal control of waters. These create legal complications as yet unsolved.

The committee is much impressed with the belief of the landowners of the country that they have property rights in the waters adjacent or used on their lands, and in many cases those property rights are as valuable as the land itself, because without them the land is worthless. The report says, and I quote:

"The principles which recognize water rights as property rights should be accepted. Determinations as to the disposition of water should recognize such rights."

These are fundamental statements, but the committee goes further and recommends that there be a joint Federal-State study of this problem of water rights to determine the relationship between the establishment of property rights to water and the economic and social development of the Nation as it is projected into the future. It is believed that from such a study the rights of the respective parties may be clarified, and that as an outgrowth of it, legislation may be possible, regardless of the party in power, which will clarify this subject about which there is so much contention.

The committee recommends that the use of underground water is so closely related to surface land titles that regulations relating to it should remain a matter of State concern, but it points out definitely that the States in most cases have not taken any action with relation to underground waters; that there are excessive draw-downs in many places which will ultimately restrict agricultural and industrial growth; and that in other cases there are vast reservoirs of underground waters which might be put to better use if appropriate permission were given.

The committee also believes that every encouragement should be given to the formation of interstate compacts, and that matters so adjusted between the States and local people may be done more fairly than is possible by legislation, no matter how wise.

In the next section (5) the committee makes a recommendation against any Federal attempt on a nationwide basis to dictate priorities in water use, pointing out that the importance of the various needs differ so widely from area to area, and in some cases from State to State, that no uniform pattern can or should be evolved if we are to make the maximum beneficial use of available water supplies.

The next section (6) deals with the evaluation of water resources projects. The matter of the evaluation of these projects is largely a technical matter, and I doubt the advisability of discussing it in this type of an address, but let me say that the committee feels that there has been far too wide a discrepancy between the Federal agencies in their methods of evaluation; that quite naturally, in many cases they have adopted an optimistic view; and that projects evaluated by one agency would not meet adequate standards under the methods of another, and vice versa.

The committee recommends that all costs be set up in the evaluation procedure except those of general investigation, which should at least be pointed out; that in the relative comparison of the merits of projects built between agencies or States or private individuals, to achieve comparable figures of any value, interest and taxes must be taken into account.

It recommends that the evaluation period be the economic life of the project or not longer than 50 years. Whatever arguments may be made to the effect that the life of a project may be much more than 50 years, and that its benefits will extend far beyond that date, may appropriately be set forth in a supplement to the report but can hardly be considered as a basic justification of the project in view of what the committee believes to be the impossibility of prognostication of the value of any project more than 50 years from now. We need only to look at the tremendous advances in agricultural production or the advances in the field of atomic energy which have occurred within our lifetime to make us feel insecure in prophecies beyond a 50-year period.

The committe is reluctant to recommend the use of secondary benefits as a primary justification for projects. There is no question that tremendous secondary benefits flow from many water resources projects; that sizable towns and cities have arisen which enhance the natural welfare and which will contribute greatly in increased income taxes, and so on. On the other hand, in many cases similar secondary benefits would arise from the expenditure of equal sums of money in completely different Federal activities, and the committee feels, therefore, that while it is appropriate that estimated secondary benefits be shown in the report, they not be used as a primary benefit to enhance the payout of a project, recognizing fully, however, that in many cases they will do so and that individual projects must be considered on their merits.

The next section (7) goes to the authorization of projects, and much may be said on that point. The Corps of Engineers cannot even investigate a project without congressional authorization. The Interior Department has authority, under some circumstances, to authorize its own projects, a practice which the present administration has refused to do. Agriculture, under the Watershed Acts, has authority of self-authorization, subject to congressional disproval. The committee recommends that all of these be unified, and that none of the agencies proceed without congressional authorization.

This brings me to the last section on participation in costs. This, I realize as well as you, is a section about which there will be much disagreement. If water resources projects generated benefits that were all primarily of national significance, with only incidental direct benefits to particular individuals and communities, then perhaps the cooperative principle of cost sharing might not be appropriate, but this is not generally the case. Will any of us dispute the fact that the major share of the direct benefits of these projects accrue to particular individuals and particular communities and that a substantial portion of the indirect benefits accrue to particular areas? Many of them, of course, have a long-run benefit to the total economy of the Nation which provide justification for the Federal Government's bearing some share of the cost.

The principle of cost sharing ought not be limited to projects constructed by the Federal Government. It should also apply to projects constructed by non-Federal interests. The committee states its belief that when the States and their agencies construct projects contributing to Federal functions or which protect Federal interests, the Federal Government should pay those costs just the same as the reverse is true when the Federal Government constructs the project.

Here again is a field in which it is not possible to lay down mathematical formulae. The Committee states that identifiable beneficiaries should pay an appropriate share of the cost of the projects. In most cases it would facilitate the construction of the projects if they paid more than they now do. The Committee also suggests that substantial portions of the non-Federal share might be appropriately collected on the basis of equitable assessment, spread over the area in which these benefits occur, and that in any event responsibility for sharing the cost of maintenance and operation of Federal projects should be shared by the beneficiaries of the projects.

The Committee believes that the cost of providing vendible products in these resources developments should be repaid in full by the sale of the products or services, and that all of the Federal agencies should adopt a uniform approach to cost-sharing, so that the division of the costs between the Federal interests and non-Federal interests will be uniform and, therefore, not permit

project sponsors to go "shopping around" between Federal agencies. The Committee deals specifically with particular problems in the field of cost-sharing, which I will not take time to discuss.

There are numerous special problems which simply do not fit into a uniform pattern. One of these is the use of electric revenues from Federal hydroelectric projects to pay a part of the cost of reclamation of adjacent land. This theory is well recognized by numerous precedents over a long period of years.

Admittedly, the reclamation and utilization of land—providing homes, a means of livelihood and a stable type of living—is a highly desirable national objective. Admittedly also, the use of power revenues for the reclamation of land offers possibility of its extension to an undue point. It should be pointed out that the utilization of excess revenues from hydroelectric projects for the development of other projects which are in no way related to the project from which the revenues come, boils down to being merely the operation of a business by the Government to make a profit, to have some money with which to do something else.

Thus stated, there are probably few people who would endorse the principle. Stated the other way, however, the land and the power generated by falling water in a river valley are closely related. We are merely giving the water a double duty, that of irrigating the land and, in the course of its flowing to the land, of getting revenues which help pay the over-all cost. Stated that way, few people will object.

The Committee has in substance pointed this out and contents itself merely with calling attention to the point to which we could be led by the unwarranted extension of the theory.

For the same reason and because of the vast national benefits which accrue to the economic life of the Nation, the Committee has recommended that the provision of interest-free money for irrigation be continued, limiting it, of course, to the family-sized farm, but suggesting that we need a new definition of that elusive term.

The Committee closes its report by recommending Federal participation in non-Federal projects built by the States and their agencies. There are many cases in which a relatively small Federal payment, proportioned to the Federal benefits received, will enable the States and their agencies to construct equally meritorious projects. We must remember that throughout the country there are many State and local public agencies which through sound operation have established credit ratings that enable them to borrow money and finance projects substantially as cheaply, and in some cases fully as cheaply, as the Federal Government itself.

There seems little reason why all of the power and authority that go with the control of a great universal natural resource like water should be concentrated in the city of Washington. If it were so, the financial burden would become intolerable. The political power that goes with such centralization in itself is a fearful thing, and the lack of local control of local resources and situations is greatly to be regretted.

After all is said and done, the people who live in the region, who live close to these projects, are the ones primarily affected. It is their lives and their children and their future economic success which depend upon the wise management of this resource called water. The more plainly, therefore, their voice may be heard, so long as it is not inimical to the national interests, the more contented people, and the better government we will have.

President Eisenhower expressed it well in a campaign speech in which he said that these resources might much better be controlled by the people who live near them and depend on them than by any long-haired bureaucrat behind a desk in Washington.

This report is in keeping with that general philosophy.

I should repeat that no report can gain universal acceptance because of the greatly conflicting interests of various groups of our people, but we have made progress, at least, in bringing together on a somewhat uniform basis the Federal activities. We believe this is a great step forward. We believe it is the most presently practicable step. There are doubtless many more to be taken before we achieve our goal of the maximum utilization of all of our water resources.

Labor-Management Relations in the Minneapolis-Honeywell Co.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. HUMPHREY. Mr. President, one of the most remarkable labor-management relationships has been achieved by the Minneapolis-Honeywell Regulator Co. The labor-management relationship in this company has been so successful that it has attracted attention far beyond the boundaries of the State of Minnesota. Last week, a special series of articles appeared in the Chicago Daily News. I am proud to invite the attention of my colleagues to them. They relate, of course, to the great increase in the productivity of the Minneapolis-Honeywell Co. and its outstanding record of labor-management relationship. The headline of one of the articles is "Company and Union Team Up for Success." Mr. President, let me say this is a standard to which many others could well rally.

I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of February 8, 1956]

COMPANY AND UNION TEAM UP FOR SUCCESS—MINNEAPOLIS-HONEYWELL PLAN INCREASES OUTPUT, CUTS WASTE

(By Robert M. Lewin)

MINNEAPOLIS.—There's a company and a union up here that get along like friends. No strike in the 14 years the union has been in the plant.

High wages (from profits) average $1.85 to $1.90 an hour.

Fifteen months ago the company, Minneapolis-Honeywell Regulator Co., and the union agreed on a plan to increase production and decrease waste.

Gerry E. Morse, 47, Minneapolis-Honeywell vice president of employee relations, said Wednesday:

"The program definitely was a factor in our company winning new contracts.

"It also has contributed definitely to the success of the company because the success has stabilized employment and given us the power to raise wages."

Minneapolis-Honeywell is Minnesota's largest industrial employer, with 12,000 employees in three major plants and 20 other manufacturing and warehousing units here.

Robert I. Wishart, 42, Minneapolis, secretary-treasurer of Honeywell Local 1145, representing 7,271 production-maintenance employees here (50 percent of them women), says:

"The union-company cooperative program, called POP—Plan Our Progress—has been a very significant factor in providing jobs, raising wages, increasing productivity, and improving working conditions."

Wishart emphasizes that "no union is worth its salt that loses jobs for its members by a stupid position on quality and quantity of production."

In one department, when the program went into effect October 3, 1954, productivity of the workers was 40 percent of the company standard.

Wishart called the workers together, lectured them, ordered union stewards and committeemen to get after laggards.

He declared:

"Pegging [limiting] production is loafing. We are unalterably opposed to pegging production. The union will not stand behind anybody guilty of it."

The company said that production today has risen to 86 percent. The rate in that department is $2.29 an hour.

In another department productivity was 72 percent of standard in 1953, when the company and union saw the need to tackle the problem.

The company said that production in the department was pushed to 88.1 percent when the cooperative program began.

Today, the company added, productivity is 93.7 percent.

The hourly wage in that department is $2.06.

Wishart emphasizes that the program has contributed substantially to—

Reemployment of 518 (out of 662) union members who were on layoff when the program was "kicked off."

A general 7-cent-an-hour pay raise February 1, 1955, and another 7 cents December 15, 1955, plus fringe benefits.

In addition, both increases were accompanied by adjustments of wage inequities ranging up to 26 cents an hour for certain workers.

The second 7-cent increase was effective December 15, 1955, though the contract did not expire until February 1 this year.

H. Skidmore Olsen, 36, company director of industrial relations, and Stanley J. Nelson, 41, factory manager, agree that the program has been "a demonstration of union-management cooperation."

[From the Chicago Daily News of February 9, 1956]

LABOR LEADER AGITATES—AND BOSS LIKES IT—NEW STYLE UNIONIST STIRS UP MEMBERS TO WORK HARDER

(By Robert M. Lewin)

MINNEAPOLIS.—A union chief here is stirring up his membership to work harder for the boss.

The labor leader told his union Thursday:

"No union ever negotiated a wage increase with a company that made no profit."

The labor leader, Robert I. Wishart, 42, emphasized that his union's cooperation with the employer has paid off in job protection, higher wages, and better working conditions.

That's why he's stirring up his membership, local 1145, at the Minneapolis-Honeywell Regulator Co.

Local 1145 is an affiliate of the industrial union section of the International Brotherhood of Teamsters.

Minneapolis-Honeywell is the largest industrial employer in Minnesota, with 7,271 local 1145 members on the payroll.

Wishart wants the whole community to know how beneficial labor-management cooperation can be for all.

Gerry E. Morse, 47, Minneapolis-Honeywell vice president in charge of employee relations, calls the union's cooperation one of the most valuable things we have.

The cooperative program—called POP, Plan Our Progress—has operated effectively for Minneapolis-Honeywell and local 1145 since it began October 3, 1954.

Though the company and union get along like friends under the program, friends sometimes disagree.

Between October 1, 1954, and October 1, 1955, virtually the first year's operation of the plan, the union filed 222 written grievances against the company.

Minneapolis-Honeywell records show that all except 48 were settled at the various company-union stages of conferences.

The 48 had to be submitted for decision by the arbitrator, Prof. Nathan P. Feinsinger, of the University of Wisconsin Law School.

In the year before the program, October 1, 1953, to October 1, 1954, there were 293 written grievances.

Forty of them went the whole route, to arbitration and Feinsinger.

"No one at Honeywell is expected, nor does local 1145 advocate or support a policy where people are going to be driven beyond a fair day's work,' says Wishart.

Wishart has asked the company for meetings to expand and intensify the cooperative program.

He says:

"It should be borne in mind that the fundamentals of the program are based upon team play * * * teamwork between the officers of the union and the company * * * teamwork to eliminate misunderstandings, grievances, and log jams in production * * * teamwork to eliminate scrap and evils that cut down on production, profits, wage increases, and jobs."

What kind of man is this rare type of labor leader?

He's the second of the four Minneapolis-born Wishart brothers.

His older brother, Arthur W., 44, has a doctor of philosophy degree from the University of Minnesota and is president of the Knox Glass Co., with headquarters in Knox, Pa., and 3,000 employees.

Brother William, 40, is a surveyor for Hennepin County, Minn., and brother Edward, 28, is a Minneapolis policeman.

"I didn't go to the university," explains Bob. "I got married instead."

He is a medium to thickly built man with wavy light-brown hair and a wisp of mustache.

His office in a downtown Minneapolis union building is cramped.

When he talks he goes through a routine of speaking, puffing on a fat cigar, and then sipping coffee from a plastic cup.

The union pays Wishart $165 a week and reimburses him for expenses actually incurred in work for local 1145.

"Guys in the shop earn more than I do, with their overtime," he adds.

But Wishart cares more about his membership than about himself.

Gas Probe Too Late

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Probe is a Bit Late on Gas Bill Charges," which was published in the Atlanta Constitution of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROBE IS A BIT LATE ON GAS BILL CHARGES

The United States Senate voted yesterday to investigate an "alleged improper attempt" to influence the vote of Senator FRANCIS CASE, Republican of South Dakota, on the natural gas bill. The attempt involved an offer of $2,500 to the Senator's campaign fund. How many other Senators were influenced the same way?

The probe comes a little late. The Senate already had passed by a vote of 53–38 the measure to remove Federal price regulation from natural gas producers. Spearheaded by Senator LYNDON JOHNSON, Democrat of Texas, the bill went through on schedule even after Senator CASE had made his accusations.

By all means the charges should be investigated. Few times, if ever in history, has a lobby so blanketed the country. The big oil companies, who stand to profit most from this bill, have been quite frank about it. They want gas production unregulated and have waged a persistent battle dating back for years. One such bill was vetoed by President Truman.

The ultimate cost to consumers has been estimated at hundreds of millions of dollars. Opponents call it a bigger giveaway than tidelands oil.

Georgians are grateful to Senator RUSSELL, who voted against the bill, and to Senator GEORGE, who paired against it.

Meanwhile, another Presidential veto is in order, although doubtful.

Address by Mr. Alexander Purdon, Executive Director, the Committee of American Steamship Lines

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding speech made by Mr. Alexander Purdon, executive director, the Committee of American Steamship Lines, before the Minneapolis-St. Paul Propeller Club on January 11, 1956.

In particular, I call the attention of all Members of the Senate to the section of Mr. Purdon's remarks dealing with the effect of the cargo preference law upon the disposal of surplus agricultural commodities. To my way of thinking, Mr. Purdon has clearly, fairly, and objectively discussed this very important problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ALEXANDER PURDON, EXECUTIVE DIRECTOR, THE COMMITTEE OF AMERICAN STEAMSHIP LINES, BEFORE THE MINNEAPOLIS-ST. PAUL PROPELLER CLUB, JANUARY 11, 1956

Gentlemen, I am grateful for the opportunity to meet with you this afternoon. I work in Washington, D. C., where the competition to be heard is exceeded on occasion only by the difficulty of being understood. Therefore, I particularly appreciate the chance to lay down my weapons, loosen my armor, and relax in a totally friendly camp.

On the other hand, a challenge still remains—and that is to arrest the attention of an audience as well informed on my subject as this one is. Nevertheless, you may be interested in some personal views regarding recent shipping developments, something of its future, and a singularly important legislative problem that it will soon face.

Several factors directly or indirectly affecting shipping have combined in the past year to justify a favorable outlook for the industry. Some of these factors include increased world trade; new developments in propulsion; improved public relations; better acceptance in Congress; new and improved ship design; the emergence on a long range ship replacement program; and rising population and consumer demand.

These factors offer encouraging indications that our merchant marine may be entering a new era. It may very well be that just as the United States has achieved a position of world leadership, so may its merchant marine recapture within a reasonable period of time its former title as the world's ranking merchant fleet.

Certainly the most significant element influencing shipping during the last year was the continuing surge in foreign trade. Prosperity at home and abroad pushed our commercial exports over the $14 billion mark—a jump of more than 10 percent over their 1954 value. These totals exclude military aid.

American imports, meanwhile, totaled $11.5 billion last year, or 9 percent more than the year before. Prospects are that this upward trend will continue during 1956, although perhaps not at the same rate. This, of course, depends on a continuation of the current domestic business activity—but that, according to most business indexes and most economists, shows no signs of flagging.

Foreign trade will get another boost this year from the administration's request that we continue our huge overseas aid program.

But our merchant marine is still carrying far less United States trade than was envisioned by the Merchant Marine Act that is 20 years old this year. American-flag ships carry but 25 percent of our total foreign trade; half that intended by the act.

The other side of the coin, of course, is the room for growth in shipping, shipbuilding, and allied industries. This is a particularly exciting opportunity when you consider the seemingly limitless capacity of this country to produce more and more. Our dynamic, expanding economy must continue to seek fresh and growing markets for accelerating industrial and agricultural production. Shipping will benefit from this search—as will our manufacturers and farmers profit from shipping's continuing trade development programs.

Naturally enough, any discussion of foreign trade in this part of the country invites speculation on the St. Lawrence seaway and what the impact may be of adding 8,300 miles of deep-water coastline to the United States. Members of the Committee of American Steamship Lines that will be affected by the seaway are actively studying its traffic potential, the most suitable type ships for the route, and whether or not the great things anticipated so soon from the seaway may have been exaggerated.

While there is considerable opinion that it may be 1970 before the full benefits of the seaway are realized, there is no doubt but that they will be substantial ones even though they will probably bring about economic dislocations in other areas of the country.

The seaway has already stirred activity in many communities along its route. They have undertaken studies and financing arrangements leading to harbor improvements

and the expansion of dock and warehouse facilities.

Chicago, for istance, has issued $24 million worth of bonds to help develop a first-class port. And in Duluth, according to a recent Associated Press report, the original uneasiness about the seaway has given way to general enthusiasm. Some have even called the city a natural gateway to the entire West.

One Great Lakes shipping operator is already inquiring after an operating subsidy into the lakes. At the same time, the Maritime Administration is studying whether an essential trade route can be established through the seaway into the lakes.

Heartening progress can be seen, too, in new designs to keep shipping abreast of the growing need for more efficient forms of transportation and distribution. The roll-on, roll-off ship-construction program, for instance, could potentially revitalize our depressed coastwise and intercoastal trade by reducing cargo-handling costs.

You have undoubtedly heard of the projected group of ore-oil ships for year-round use. They would carry ore during the ice-free season and, after freezeup, take to the open sea as tankers. This development will be of particular interest to the Senate Interstate and Foreign Commerce Committee if, as expected, it discusses during this session our ability to meet our ore import requirements. It is thought by some that too large a proportion of United States bound ore is being carried on foreign ships.

Encouraging technical advances are being made in other areas, too; most notably in efforts to increase the effectiveness of our Reserve Fleet. Gas turbines have been developed for use in Liberty ships; geared diesels have been installed in another Liberty; and a controllable pitch propeller will be provided still another. These and other experiments on the workhorses of World War II promise not only to increase the value of the Government's investment in these ships but, as with all research, to produce supplementary developments for the benefit of the entire shipping industry. It may be that they will enable America to capture the lead in the field of marine propulsion, as we did when the *United States* won the blue ribbon on the Atlantic.

Joint efforts of industry and Government have resulted in an improved congressional understanding of the need for a modern, effective merchant marine. Continuing evaluation of the industry's public relations efforts also indicate increased public recognition of our merchant fleet's contributions. But there is certainly no indication that this is the time to reduce our efforts to explain to Congress and the public the vital commercial and defense aspects of merchant shipping.

Presently, for example, confusion and misunderstanding surround the Cargo Preference Act—also called the 50–50 law. There is little doubt but that this law will come under severe attack early in this session of Congress. There is an urgent need for energetic missionary work in explaining the true facts of this law to the American people. I am confident that when the facts about 50–50 are known and when its provisions can be examined unbefogged by distortion, misunderstanding and misstatement, the merits of 50–50 will become self-evident and its critics will be converted or silenced.

I would hope that each of you here will contribute in whatever way you can to the defense of this law. Because of its importance to our industry, I would like to discuss it in some detail.

As you know, the Cargo Preference Act, or 50–50, provides that when our country sends aid or other Government financed cargoes overseas, 50 percent of those cargoes must go in American ships—if they are available at reasonable rates.

Greatest opposition to this bill has centered on its applicability to Public Law 480, also known as the Agricultural Trade Development and Assistance Act. Under Public Law 480, the Government was authorized in 1954 to dispose of $700 million worth of farm surpluses over a 3-year period—providing that these goods are above normal commercial requirements.

On nine separate occasions since 1948, Congress wrote the 50–50 provision into similar programs. The Cargo Preference Act of 1954 simply made it unnecessary to repeat this procedure each time a similar program was authorized.

Why, then, the sudden hostility to 50–50? And what was its source?

As might be expected by those familiar with the competitive shipping industry, opposition to 50–50 is encouraged by foreign shipowners. Their objective in attacking 50–50 remains clear and unvarnished. They would like to carry every pound of cargo they can get into their holds. You cannot blame them for that. Understandably enough, they were most unhappy when the 50–50 provision was made, as it should have always been, a permanent feature of our national maritime policy.

I can understand the motives and ambitions of the foreign shipowners, even if I don't agree with them. I admire many things they do and acknowledge their splendid contributions to the security and commerce of the free world. Moreover, I can appreciate their governments' dependence on their maritime industries. I just wish they would acknowledge our Nation's dependence on our merchant marine.

Our oversas competitors have practiced international politics far too long to risk a bold, frontal assault on one of our country's laws. They chose, rather, to divide, confuse and conquer. By threatening to refuse to purchase surplus commodities shipped under Public Law 480 unless they were granted the right to use their own vessels, they deliberately encouraged the fear that the 50–50 law was impeding the disposal of farm surpluses. This, they planned, would turn the American farmer and the surplus-conscious public against the American merchant marine and the 50–50 principle.

Actually, of course, our foreign friends are playing for far bigger stakes than merely the right to carry the United States surpluses they import themselves. Those cargoes are insignificant compared to United States surplus shipments to other countries that do not have merchant fleets. It is this enormous third country trade that foreign shipowners covet—despite the United States merchant marine's willingness to share it with them 50–50.

Here are some of the arguments our foreign competitors have encouraged in seeking the defeat of 50–50. Here, too, are the facts.

It is charged, for instance, that 50–50 has impeded the disposal of farm surpluses under title I of Public Law 480.

The facts are that two-thirds of the $700 million authorized for surplus disposal during the 3 year program was exhausted in the first year and the authorization was more than doubled to $1.5 billion. We supported that increase.

Opponents of 50–50 have also charged that it should not apply to surplus commodities because transactions under these programs are normal commercial movements to which 50–50 was not intended to apply.

The facts are that 50–50 does not apply to normal commercial transactions. As you well know, foreign shipowners compete freely for our commercial foreign trade. But they can scarcely call movements under Public Law 480 "normal" transactions. By definition, a surplus commodity under Public Law 480 is one "in excess of anticipated exports for dollars." In other words, to be eligible under the program, transactions must be beyond those that would normally take place in day-to-day commercial trade.

In addition, these transactions are between governments, although commercial channels may be used. Uncle Sam as the seller is not interested in making a profit. As a matter of fact, the sales are made, almost without exception, at losses that must be borne by the American taxpayer.

Moreover, prices are supposed to be set, not by commercial standards, but at levels that will not disturb prevailing world market rates.

Finally, transactions under this program cannot be called normal because the United States not only accepts payment in nonconvertible currencies, but has been either giving back or loaning back from 60 to 70 percent of the foreign currencies received.

These are terms that would be completely unacceptable in any truly normal commercial transaction.

Opponents have also attacked 50–50 by charging that it increases the cost of farm surpluses to purchasing countries.

The facts are that when cargo is carried in United States-flag ships, the dollar cost of ocean transportation is financed by the Commodity Credit Corporation. The importing country pays, in local currency, only the freight rate prevailing in the world market. Its cost for ocean transportation, therefore, is the same whether its own ships or United States ships are used.

Fifty-fifty opponents also charge that this law reduces the amount of total surplus sales that can be made under appropriated funds.

The facts are that the freight rate differential attributable to 50–50 is just slightly over $2 million out of a total program authorization to date of more than $468 million.

This added cost is small when compared with the total losses absorbed by the American taxpayer when the commodities themselves are sold below their acquisition cost.

This is basically a tramp rate differential and will be correspondingly reduced as the program advances because a higher proportion of commodities scheduled under future programs will be carried by liners than before. The differential will drop because of the little recognized fact that American berth-line operators almost invariably ship at the same rate as foreign berth lines as a result of the international freight rate conference system. In a number of instances, in fact, American liner rates have been not only less than American tramp rates, but also less than foreign tramp rates.

There have also been claims that 50-50 requires the American farmer to bear the burden of supporting the American merchant marine so far as Public Law 480 sales are concerned.

The facts are that the American farmer is benefiting 100 percent from Public Law 480 sales—as are farm equipment manufacturers, railroads, truckers, warehouse operators, and others. But the merchant marine asks only that it be permitted to participate 50 percent from these Government-generated sales.

Essentially, then, those are the arguments that have been raised against 50–50—and there, too, are the facts that destroy them.

Any dispassionate consideration of the shipping business, it seems to me, would clearly reveal the basic mutual interests of American shipping and American farming.

With farm products 20 percent of our total exports, it is clear that the ship operator needs the farmer.

The farmer's reliance on an adequate American merchant marine should be equally apparent. Only such a fleet can guarantee him access to world markets and sources of supply. Neither could be assured if foreign maritime powers were to dominate our trade.

Farmers perhaps forget that the merchant marine lives on foreign trade. Its worldwide network of agents and representatives are constantly at work for both American industry and agriculture seeking new outlets for

our exports and new sources of vital raw materials.

Conscious of the need to accelerate the disposal of surpluses, the maritime industry recently formed a special farm export committee to work with farm groups in redoubling the efforts of the shipping industry in its constant search for new and bigger markets for American farm products.

Let me remind you that foreign flags carry 75 percent of our total foreign trade. So it is somewhat difficult to sympathize with, even if we understand, their spirited efforts to increase this percentage.

Nor are we impressed by arguments that permitting foreign powers to carry more of our trade would increase their dollar earning capacity, enabling them to purchase more of our goods. Even staff studies presented as background for the so-called Randall Report stated, "It is fair to conclude that major concessions on our merchant shipping objectives would be required to produce relatively small increases in net receipts of dollars on shipping account by all foreign nations." Since our maritime objectives are modest, to begin with, major concessions would be impossible, and so another anti-50–50 argument is dropped in its tracks.

All in all, then, the 50–50 law is a fair and reasonable one. It is particularly fair to the American taxpayer. Subsidies for our merchant marine, inevitable because of our higher standard of living and higher operating costs, have limited value if our fleet is idle. The more business it does, the less subsidy it requires.

Though the retention of 50–50 is uppermost in the list of shipping-industry problems, it faces others almost as important.

One, ever with us, is how to replace our older ships with new ones that currently cost four times as much, yet have little greater earning capacity.

Another continuing industry objective is how to increase the use that American businessmen make of their own merchant marine.

Adequate appropriations and stable Government and congressional maritime policies are always an important consideration.

Despite these admitted problems, the American merchant marine is, on balance, a healthy industry and certainly what the Wall Street crowd would call a "growth situation," despite statistics which indicate a shrinkage in the number of vessels in our active fleet.

As America's dynamic economy continues to expand, breaking production records and acreage yields year after year, its reliance on foreign trade to absorb these excess products will increase proportionately. As foreign trade becomes of increasing concern to our national economy the merchant marine will inevitably profit not only through increased cargoes but through greater recognition and support by both Government and industry.

Our American merchant marine may be entering a new Golden Age. It can, and it will, if the reasonable objectives of our maritime policy are understood and supported by the public and our Government.

As the President said in his state of the Union message—"The vista before us is bright."

Gas Bonanza Now in Sight

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Gas Bonanza Now in Sight," published in the Detroit News of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GAS BONANZA NOW IN SIGHT

It is the conviction of this newspaper that the purpose and effect of the Harris-Fulbright bill now passed by the Senate is to place natural gas consumers at the mercy of an unregulated monopoly.

By monopoly we do not mean a conspiracy actionable under the antitrust laws. We mean simply a situation denying to consumers of a bulk commodity the price protection normally afforded by competition.

The production of gas in the oil fields is as inevitably a monopoly as is its distribution to the consumer, and equally a proper subject of public regulation. If the bill now becomes law, that statement will have its testing. So will the bill's provision by which the Federal Power Commission may require pipeline companies to pay a "reasonable market value" for gas.

It is our conviction that in an application denying the regulatory body the usual criteria of reasonableness the phrase quoted is meaningless. The market price will go up. It may not go up spectacularly, because the producers will know that at the outset the public will be watching. But in time it will creep upward toward the multi-million-dollar addition to consumer costs forecast by opponents of the legislation.

Does anyone believe the oil and gas industry's investment in promoting this bill was made for any other purpose? The investment was not confined to the $100 bills offered by one naive servant of the industry's interests, nor to the reputed outlay of a million or so for lobbying incidentals. The extent of the investment is to be measured in years of patient nursing of political ambitions, of timely assistance to political causes in cash or kind. It was thus that, when the chips were down, a bipartisan majority of Congress could be delivered for this bill offensive to millions of consumer-voters. The ability to deliver these majorities is as disillusioning as any aspect of the whole episode.

Farm Legislation

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. BUTLER. Mr. President, in advance of consideration by the Senate of the farm bill, I think it is of interest to Members of the Senate to review the editorial comment from newspapers throughout the country on the various phases of the proposed legislation.

In the Baltimore Sun of February 12, an editorial was published entitled "Repeating the Crazy Vote for High-Level Price Supports." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REPEATING THE CRAZY VOTE FOR HIGH-LEVEL PRICE SUPPORTS

The crazy vote putting high-level rigid price supports back into the farm bill has now been repeated by the Senate Agriculture Committee. Tacked onto the administration's soil-bank measure, the effect is like launching a battleship without any bottom. The battleship would sink at once, and so will a soil-bank scheme tied onto a high-level support program. The reason is that the soil-bank scheme aims to end present surpluses, while the high-level, fixed-price support program is what piled up the surpluses to begin with, and it would pile up more surpluses in the future.

But there is still a good deal of fight and of hope in the congressional defenders of the flexible-support plan with which the administration has managed to replace the old high-level scheme. For one thing, the high-level supports were beaten down in 1954 after the same Senate Agriculture Committee had voted for them 9 to 6. The vote this time is 8 to 7.

For another thing, backers of flexibility have a formidable argument in the behavior of dairy prices since April 1, 1954. That was when Secretary Benson junked high-level support prices in the dairy business as the one way to keep from getting buried alive in a surplus of butter, cheese, and powdered milk overwhelmingly beyond the market demand and the storage capacities of the Government warehouses.

In 1955, for instance, dairy farmers took in around $4 a hundredweight on milk, which was just about what they did in 1954. But they sold considerably more milk in 1955 and their overall cash receipts were above those of 1954. Prospects now are for even better income in 1956. And, most important of all, the surplus is melting away. In butter, cheddar cheese, and nonfat dry milk the on-hand supply in Government keeping is the smallest in over 2 years.

Logic, in other words, simple common-sense logic, indicates that when the price-support scheme is keyed flexibly to the market, supply will adjust more sensitively to demand, present surplus will ebb and new surplus will not appear. The flexible price support thus aids and abets the soil-bank scheme for reducing production by reducing acreage. On the other hand, a surplus-reducing program tied to a surplus-producing program is as crazy as the battleship without a bottom. That view will be heard on the floor of both Houses and it should in the end prevail.

Efforts of Woodrow Wilson in Behalf of World Peace

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. ROBERTSON. Mr. President, as a member of the Woodrow Wilson Centennial Celebration Commission, which was established by the Congress, I have been highly gratified by the success of our efforts to make the world more conscious in these critical times of the ideals and philosophy of our great former President.

Wilson's efforts on behalf of world peace have been recalled and commended by many prominent persons who have made public statements in connection with the opening of the centennial year.

I ask unanimous consent to have printed in the Appendix of the RECORD three of these statements.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

CHINA ENVOY DESCRIBES LEAGUE AS U. N. MODEL

Ambassador Wellington Koo, of China, delegate to the Paris Peace Conference of 1919 and a member of the Commissoin which drafted the league covenant, remembered President Wilson's contribution to the league:

"In Paris it was my privilege to be a member of the League of Nations Commission of the Peace Conference in 1919, which drafted the league covenant. Mr. Wilson's contribution to this work was prodigious. He personally presented the first basic text and put forward with a surprising readiness many specific suggestions and solutions for difficulties; he also kept the debates on the highest level and efficiency. The resultant document has well been called the first constitution of the world's nations.

"It was given life and great extension during the league's 20 active years between world wars, and it truly became the direct precursor and model for the charter of the United Nations. Its phrasing was much simpler and embodied only 26 articles in comparison with the 111 in the charter, but the basic principles remain very much those which President Wilson presented to the Paris Peace Conference 36 years ago. As he has been deservedly inscribed in Geneva as 'founder' of the League of Nations so he has a direct lineal share in the birth of the United Nations.

"In the discussions of the Shantung question at the conference at which I participated, President Wilson's sympathies were evidently with China. He wanted to do what was just and right. The settlement which he finally urged China to accept was not what he himself liked but was a compromise reached with the Prime Ministers of Great Britain, France, and Italy, who sat with him and leaned on the side of Japan. He believed it was the best that China could get at the conference, but he felt confident that the League of Nations, after its establishment, would, if appealed to by China, give careful consideration to her case and make adjustments for whatever injustices there might be. His faith in the projected world organization was unbounded and he looked to its impending emergence as an achievement of primary importance for the whole world.

"I wish that the Peace Conference had seen fit to respond fully to Chinese pleas for international justice but I was deeply impressed by President Wilson's broad vision and high ideals in his outlook and in his desire to serve humanity and the interests of his own country.

"It is an honor indeed to salute him in his centennial year."

WILSON IDEALISM STILL INSPIRES EUROPE—EDEN

Prime Minister of Great Britain, Sir Anthony Eden, said:

"We remember Woodrow Wilson for his decisive contribution to victory in the First World War and for the mark which his idealism left on international society. He helped to shape world events in his time. His writings and his speeches still bring inspiration. His influence on his contemporaries both in Europe and in the United States spread far and wide; it still endures."

LEAGUE IS MONUMENT, SAYS LAST PRESIDENT

Dr. Carl J. Hambro, President of the Lower House of the Norwegian Parliament, a delegate to the Paris Peace Conference of World War I, and the last President of the League of Nations, said:

"The name of President Wilson will go down in history as one of the greatest names of the 20th century. It is a tragedy for all nations that his ideas for a peaceful reconstruction of the world did not meet with full support in his own country and so could not be politically realized. But the League of Nations and what the League accomplished—thereby making possible the organization of the United Nations—will be the permanent monument over his vision."

Oil and Gas Lobby Scores a Coup

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Oil Lobby Scores a Record Coup," which was published in the Denver Post of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIL LOBBY SCORES A RECORD COUP

The oil industry, which has grown fat on special tax concessions not granted to most businesses, has emerged as a dominant influence in American political life.

Passage by the United States Senate of the Harris-Fulbright bill, to permit the jacking up of wellhead prices for natural gas, is the crowning achievement of a group of companies and individuals which has learned to use its wealth to bend government to do its bidding.

Purpose of the bill is to make it impossible for the Government to regulate gas prices so they will yield ony "just and reasonable" returns to the gas producers, most of whom are oil companies.

A vote for the Harris-Fulbright bill was a vote against "just and reasonable" returns and in favor of returns limited only by the estimate of the gas producers of how much the market will bear.

Passage of the bill is more than a "give-away." It is the greatest victory special interest lobbyists ever won in Washington, where the voice of the people is heard but faintly these days.

The significance of this accomplishment must not be underestimated. It is, in effect, a counterrevolution against the principle, established many years ago, that public utilities should be regulated in the public interest.

The railroads would like to be free for regulation by the Interstate Commerce Commission but, with all their wealth and influence, they continue to be under regulation.

The giant and rapidly growing trucking industry frets under Government regulation but has been unable to extricate itself. Electric and telephone companies, with assets running into the billions of dollars, cannot hope to influence enough votes to get themselves exempted from regulation.

Gas pipeline companies and gas distributing companies cannot charge rates which give them more than "just and reasonable" profits.

Only the gas producers, among all the industries which have been subject to regulation, have been able to persuade a legislative body to give them immunity from "just and reasonable" charges.

No other special interest group could have hoped to win such a valuable concession.

Of course, the oil industry has been in training for this victory for a long time. In oil- and gas-producing States, the industry has been up to its ears in politics for years. It has supported political candidates who are themselves in the oil and gas business.

It has cultivated other candidates. It has obligated some public officials by making contributions to their campaigns. In States such as Texas, Oklahoma, Wyoming, and New Mexico the industry has promoted the idea that its prosperity is synonymous with State prosperity .

The result has been a feeling among many Senators and Representatives that they would be committing political suicide if they failed to vote for special privileges for oil and gas—"to keep the industry strong."

The dominant position the industry has attained in States where it is most active has given it the margin of votes it needed to free itself of Federal regulation on the basis of "just and reasonable" returns.

* * * * *

The phenomenal power of the oil lobby cuts across party lines. It also cuts across State lines as evidenced by the effort of a Nebraska oil attorney to contribute $2,500 to the campaign fund of a South Dakota Senator.

Some Members of Cogress are deeply disturbed by the power of the oil lobby to dictate legislation. Senator HENNINGS, Democrat, of Missouri, would like to investigate the lobby's use of funds and influence but he is not likely to get far.

Senate leaders, both Republican and Democratic, want to limit any inquiry to the case of the Nebraska attorney. HENNINGS could find himself the most unpopular man among his colleagues if he began digging actively into all oil industry connections with Members of Congress.

Effects of the Harris-Fulbright bill will be immediate.

Among the first to feel its results will be consumers of the Detroit area. Those consumers recently won a decision in the United States circuit court of appeals that a multimillion-dollar rate increase which the Panhandle Eastern Pipeline Co. wanted to make was illegal because the increase did not take into account the question of whether the higher rate would give the pipeline more than a just and reasonable profit.

Passage of the Harris-Fulbright bill cuts the ground out from under the protest of the consumers, because, under the bill, the yardstick of just and reasonable profits no longer has to be applied.

Similarly, the passage of the bill dooms any hope Denver and Colorado consumers may have had of using the just and reasonable yardstick to trim down a multi-million-dollar rate increase which Colorado Interstate Gas Co. put into effect a year ago, subject to possible refunds if the rate were later found to be exorbitant.

Since the rate increase went into effect, Colorado Interstate has admitted that its revenues have exceeded expectations and there may be a relatively small refund for that reason. But most of the increase was based on the company's contention that it was entitled to a market price for its gas regardless of whether the market price might give it more than a just and reasonable return. Passage of the bill automatically confirms most of the increase Colorado Interstate has made. It has added billions of dollars in the twinkling of an eye to the value of the gas reserves owned by oil and gas companies. Those billions will be paid by consumers on their monthly bills over the next 20 years or more.

No other bill ever passed by Congress has involved such a windfall for a single industry. The oil lobby has scored the record coup of all time.

Results of Questionnaire Mailed to Iowa

EXTENSION OF REMARKS
OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tabulation of the votes I have received from the State of Iowa in response to my annual questionnaire.

On January 14, I mailed 41,886 questionnaires to the people of Iowa. I distributed similar questionnaires in the First Congressional District of Iowa for 5 years and this is my second statewide distribution.

The only statement accompanying the questionnaire was a letter printed thereon as follows:

JANUARY 14, 1956.

DEAR FRIEND: The following questions are based primarily on President Eisenhower's message to the 2d session of the 84th Congress on the state of the Union, and his special message to Congress on agriculture. I am sending this questionnaire to every 20th householder of Iowa—both town and country. (I have used rural directories for each county, and all city directories. For towns without householder directories, I have used every telephone directory obtainable.)

In order to help us tabulate the returns, please check your answers but do not add any comments on this side. Use the back of this sheet for your comments if you wish. Your individual opinions will be kept strictly confidential.

I am also distributing yellow sample copies to other persons for their information regarding the poll we are taking. These yellow copies will not be tabulated but replies to them will be highly valued by me.

This questionnaire gives Iowa householders the opportunity to join together without regard to party affiliation in stating their views on the issues covered in the questionnaire. I plan to summarize and present to Congress the returns received during the next 4 weeks. Undoubtedly Congress will consider this summary as the prevailing view of Iowa on these issues. Later on I will send a copy of my report to each person to whom questionnaires and sample copies have been mailed. I hope my report will be of interest.

We have received a total of 6,393 replies which are included in the tabulation. This return of 15.26 percent is unusually high for this type of poll. When I first started these polls, Dr. George Gallup predicted returns of 8 to 10 percent.

The occupations listed by those replying were as follows:

Farmer	2,812
Labor	1,085
Business	623
Professional	588
White collar	650
Miscellaneous	635

Yellow sample copies were distributed freely and we received 5,588 sample-copy replies which are not included in our tabulation.

This year brought the largest number of good discussions I have ever received in response to my questionnaire. These special discussions are always of utmost value.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Questionnaire—Tabulation of total vote

	Total vote	Yes	No	Percentage Yes	Percentage No
1. Do you approve President Eisenhower's general foreign policy?	5,808	4,543	1,265	78.22	21.78
2. Do you favor continuing foreign military aid?	5,874	4,011	1,863	68.28	31.72
3. Do you favor continuing foreign economic aid for another year?	5,864	4,071	1,793	69.42	30.58
4. Do you favor putting foreign economic aid on a new long-term footing?	5,763	1,586	4,177	27.52	72.48
5. [Funds spent to date on atomic and hydrogen bombs have been primarily for their military use.] Do you approve additional expenditures by our Federal Government to develop and apply atomic and hydrogen energy to peaceful purposes?	6,131	5,462	669	89.09	10.91
6. Do you approve the transfer of unused immigration quotas to countries whose quotas are in short supply?	5,706	2,427	3,279	42.53	57.47
7. Do you favor basing immigration quotas on the percentage of the various national groups in the United States according to the 1950 census instead of the 1920 census, which is used now?	5,611	3,308	2,303	58.96	41.04
8. [The Organization for Trade Cooperation is proposed to administer the General Agreement on Tariffs and Trade to which the United States is a party.] Do you favor United States membership in the Organization for Trade Cooperation provided it is strictly an administrative agency without power to control United States tariff policies?	5,403	4,630	773	85.69	14.31
9. Do you favor the following amendment to the United States Constitution: "No treaty or other international agreement shall of itself be law within the United States, nor shall it enlarge the power of the Congress to enact law?"	5,420	3,755	1,665	69.28	30.72
10. Do you approve the "soil bank" plan which will give farmers negotiable certificates for surplus commodities in exchange for taking already allotted acres out of crop production; and which will share costs of establishing and continuing conservation uses on lands most needing them?	5,936	3,942	1,994	66.41	33.59
11. Do you approve acreage allotments to qualify corn producers for the benefits available under the soil-bank acreage reserve program?	5,812	4,032	1,780	69.37	30.63
12. Do you approve price supports for corn to all producers on a basis comparable with other feed grains in lieu of acreage allotments?	5,590	2,927	2,663	52.36	47.64
13. Do you approve selling surplus farm commodities to "unfriendly" nations?	6,030	2,803	3,227	46.48	53.52
14. Do you approve sales of surplus farm commodities in domestic markets at prices lower than presently required, namely, 105 percent of the support price plus carrying charges?	5,745	3,541	2,204	61.64	38.36
15. Do you approve permitting farmers to raise and feed wheat outside their quotas?	5,892	2,072	3,820	35.17	64.83
16. Do you approve supports at the highest levels that will not encourage the accumulation of new surpluses, for farm commodities on which price supports are discretionary with the Secretary of Agriculture?	5,701	3,960	1,741	69.46	30.54
17. Do you approve limiting the amount of price support loans to any one individual or farming unit?	6,094	5,083	1,011	83.41	16.59
18. Do you approve a rural development program to help low-income farm communities by attracting new industries to these areas?	6,108	5,589	519	91.50	8.50
19. Do you favor exemption from Federal gasoline tax, the gasoline used on farms?	6,219	4,078	2,141	65.57	34.43
20. Do you favor reduction of taxes before balancing the budget?	6,096	1,274	4,822	20.90	79.10
21. When the Federal budget is balanced do you favor reduction of the Federal debt before reducing taxes?	6,049	4,050	1,999	66.95	33.05
22. Do you favor an increase in postal rates to meet Postal Department deficit and to provide better post-office buildings and equipment where needed?	6,098	3,618	2,480	59.33	40.67
23. Do you approve a 40,000-mile interstate highway system over a period of 10 years at an estimated Federal cost of $25 billion, if it requires an increase in Federal highway-user taxes?	6,090	3,260	2,830	53.53	46.47
24. Do you approve direct Federal grants to States to help build schools?	6,020	4,012	2,008	66.64	33.36
25. Do you favor requiring registration of union pension and welfare funds and disclosure of financial transactions involving them?	5,859	5,168	691	88.21	11.79
26. Do you favor extending minimum wage law coverage to retail, chain-store, hotel, and service employees?	5,875	4,061	1,814	69.12	30.88
27. Do you favor private insurance for losses due to natural disasters such as floods, tidal waves, hurricanes, earthquakes, etc., with the Federal Government subsidizing private companies for excessive losses on insurance issued by them?	5,875	2,990	2,885	50.89	49.11
28. Do you favor direct Federal insurance covering losses caused by natural disasters, provided such insurance is sold on a commission basis by private individuals or firms?	5,645	2,545	3,100	45.08	54.92
29. Do you approve extending social security old-age insurance to all groups of workers not presently covered by social security insurance or some equivalent plan?	6,077	5,081	996	83.61	16.39
30. Do you approve making women eligible for old-age insurance benefits at 62 years of age instead of 65 years, and disabled persons at 50 years of age instead of 65 years, if such changes require increased OASI assessments?	6,065	4,058	2,007	66.91	33.09
31. Do you favor the use of a food-stamp plan or some equivalent plan to enable needy people to eat more meat when meat is in excess supply?	6,133	5,202	931	84.82	15.18
32. Do you favor the Federal Government's reinsuring privately run voluntary hospitalization and surgical insurance plans?	5,717	1,835	3,882	32.10	67.90
33. Do you favor Federal expenditures for research activities of the National Institutes of Health, and for research and teaching facilities of non-Federal institutions?	5,690	3,816	1,874	67.07	32.93
34. Do you favor continuation of the Federal Government's low-rent public-housing program?	5,791	4,005	1,786	69.16	30.84
35. Do you favor free Government treatment of a veteran for non-service-connected disability when there is doubt of his ability to pay for needed treatment?	6,080	3,608	2,472	59.34	40.66

MY DUTY AS A MEMBER OF CONGRESS

Mr. MARTIN of Iowa. Mr. President, each year I have received several inquiries regarding the purpose and use

made of my questionnaire. The source and substance of the questionnaire grew out of my analysis of the President's reports and messages to Congress, and I developed my method of distribution of it after consultation with Dr. George Gallup. The purpose of the questionnaire is best described in the words of Edmund Burke, 18th-century British statesman, as follows:

Certainly, gentlemen, it ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinions high respect; their business unremitting attention. It is his duty to sacrifice his repose, his pleasure, his satisfactions, to theirs—and above all, ever, and in all cases, to prefer their interest to his own.

But a representative's unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to any man, or to any set of men living. These he does not derive from your pleasure—no, nor from the law and the Constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion.

	Farmer		Labor		Business		Professional		White collar		Miscellaneous	
	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
1. Do you approve President Eisenhower's general foreign policy?	1,854	628	738	264	503	84	473	78	537	89	438	122
2. Do you favor continuing foreign military aid?	1,584	971	717	301	427	161	431	118	492	115	360	197
3. Do you favor continuing foreign economic aid for another year?	1,686	853	673	349	427	157	436	116	466	145	383	173
4. Do you favor putting foreign economic aid on a new long-term footing?	640	1,862	243	763	167	403	215	326	171	432	150	391
5. [Funds spent to date on atomic and hydrogen bombs have been primarily for their military use.] Do you approve additional expenditures by our Federal Government to develop and apply atomic and hydrogen energy to peaceful purposes?	2,340	354	955	99	541	53	516	56	580	53	530	54
6. Do you approve the transfer of unused immigration quotas to countries whose quotas are in short supply?	1,097	1,410	289	628	246	321	265	285	270	346	260	289
7. Do you favor basing immigration quotas on the percentage of the various national groups in the United States according to the 1950 census instead of the 1920 census, which is used now?	1,435	974	563	431	321	232	321	210	348	239	320	217
8. [The Organization for Trade Cooperation is proposed to administer the General Agreement on Tariffs and Trade to which the United States is a party.] Do you favor United States membership in the Organization for Trade Cooperation provided it is strictly an administrative agency without power to control United States tariff policies?	1,950	363	807	162	488	52	468	45	522	67	395	84
9. Do you favor the following amendment to the United States Constitution: "No treaty or other international agreement shall of itself be law within the United States, nor shall it enlarge the power of the Congress to enact law"?	1,590	716	676	297	383	154	351	174	424	157	331	167
10. Do you approve the "soil bank" plan which will give farmers negotiable certificates for surplus commodities in exchange for taking already allotted acres out of crop production; and which will share costs of establishing and continuing conservation uses on lands most needing them?	1,758	889	637	377	400	178	390	155	396	211	361	184
11. Do you approve acreage allotments to qualify corn producers for the benefits available under the soil-bank acreage reserve program?	1,913	722	609	367	405	163	366	156	388	208	351	164
12. Do you approve price supports for corn to all producers on a basis comparable with other feed grains in lieu of acreage allotments?	1,387	1,114	509	444	270	291	219	278	260	317	282	219
13. Do you approve selling surplus farm commodities to "unfriendly" nations?	1,419	1,247	320	720	288	306	272	276	288	330	216	348
14. Do you approve sales of surplus farm commodities in domestic markets at prices lower than presently required, namely, 105 percent of the support price plus carrying charges?	1,718	885	488	490	339	218	326	187	349	233	321	191
15. Do you approve permitting farmers to raise and feed wheat outside their quotas?	770	1,871	424	567	200	380	224	297	217	389	237	316
16. Do you approve supports at the highest levels, that will not encourage the accumulation of new surpluses, for farm commodities on which price supports are discretionary with the Secretary of Agriculture?	1,954	598	597	367	386	183	322	192	351	231	350	170
17. Do you approve limiting the amount of price support loans to any one individual or farming unit?	2,311	431	833	188	508	88	462	85	507	115	462	104
18. Do you approve a rural development program to help low-income farm communities by attracting new industries to these areas?	2,472	229	953	86	554	47	508	56	574	49	528	52
19. Do you favor exemption from Federal gasoline tax, the gasoline used on farms?	2,563	209	433	623	253	355	244	329	232	395	353	230
20. Do you favor reduction of taxes before balancing the budget?	547	2,135	279	763	111	496	84	477	114	522	139	429
21. When the Federal budget is balanced do you favor reduction of the Federal debt before reducing taxes?	1,797	863	607	420	432	178	415	143	417	214	382	181
22. Do you favor an increase in postal rates to meet postal Department deficit and to provide better post-office buildings and equipment where needed?	1,341	1,336	729	321	404	198	389	168	440	187	315	270
23. Do you approve a 40,000-mile interstate highway system over a period of 10 years at an estimated Federal cost of $25 billion, if it requires an increase in Federal highway-user taxes?	1,150	1,536	610	441	392	208	415	146	424	201	269	298
24. Do you approve direct Federal grants to States to help build schools?	1,688	963	788	251	354	239	362	193	434	188	386	174
25. Do you favor requiring registration of union pension and welfare funds and disclosure of financial transactions involving them?	2,204	301	849	183	561	40	513	40	580	48	461	79
26. Do you favor extending minimum-wage-law coverage to retail, chain-store, hotel, and service employees?	1,470	1,036	930	121	824	271	421	135	507	120	409	131
27. Do you favor private insurance for losses due to natural disasters such as floods, tidal waves, hurricanes, earthquakes, etc., with the Federal Government subsidizing private companies for excessive losses on insurance issued by them?	1,147	1,440	538	471	814	266	315	228	367	250	309	230
28. Do you favor direct Federal insurance covering losses caused by natural disasters, provided such insurance is sold on a commission basis by private individuals or firms?	1,145	1,327	509	474	235	329	179	345	240	355	237	270
29. Do you approve extending social security old-age insurance to all groups of workers not presently covered by social security insurance or some equivalent plan?	2,129	521	933	123	508	91	468	95	543	92	500	74
30. Do you approve making women eligible for old age insurance benefits at 62 years of age instead of 65 years, and disabled persons at 50 years of age instead of 65 years, if such changes require increased OASI assessments?	1,629	1,045	875	176	361	233	328	231	449	181	416	141
31. Do you favor the use of a food-stamp plan or some equivalent plan to enable needy people to eat more meat when meat is in excess supply?	2,443	296	864	177	454	147	437	115	510	118	494	78
32. Do you favor the Federal Government's reinsuring privately run voluntary hospitalization and surgical insurance plans?	746	1,739	429	567	155	426	145	397	159	449	201	304
33. Do you favor Federal expenditures for research activities of the National Institutes of Health, and for research and teaching facilities of non-Federal institutions?	1,610	840	636	309	361	203	377	170	413	189	359	163
34. Do you favor continuation of the Federal Government's low-rent public-housing programs?	1,769	771	729	268	342	235	368	180	422	191	375	141
35. Do you favor free Government treatment of a veteran for non-service-connected disability when there is doubt of his ability to pay for needed treatment?	1,553	1,115	725	319	336	268	280	276	381	253	333	241

Veto the Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, since the debate on the Harris-Fulbright bill began, and since its passage by the Senate, there has been an increasing tide of editorial opinion from responsible papers in many parts of the country, first urging the defeat and now the veto of this bill.

For the information of Members of Congress and of leaders of other branches of our Government, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Washington Post for February 8, 1956, entitled "Veto the Gas Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VETO THE GAS BILL

When the Senate heard the alarm it closed its eyes and ran recklessly into the danger zone. This seems to be the best explanation that can be made of the 53–38 vote for the natural-gas bill while the use of campaign contributions to influence senatorial opinion in regard to the bill was awaiting investigation. We can understand the reluctance of Majority Leader JOHNSON and other sponsors of the bill to allow Senator CASE's disclosures to upset a vote that had previously been scheduled. But their adherence to routine in the face of a grave challenge to the Senate's integrity does them no credit. If either the investigation launched yesterday by Senator HENNINGS' Privileges and Elections Subcommittee or that to be undertaken by the select committee approved by the Senate shows that gas companies have undertaken to finance the campaigns of Senators favoring the bill, the Senate will be in a sorry predicament, indeed.

Already the evidence is very unfavorable. John M. Neff, Nebraska lawyer, who last year registered as a lobbyist for the Superior Oil Co., has admitted contributing 25 $100 bills to Senator CASE's campaign fund. Mr. Neff also admits his interest in the gas bill, and he has lobbied with the Senators from Nebraska in behalf of the bill. The generous Mr. Neff makes much of the fact that no strings were attached to his contribution to Senator CASE's campaign, but every lobbyist worth his salt knows that special favors connected with a campaign, even if they are not very subtle, are more likely to be effective than outright bribes.

Certainly the facts as now known justified Senator CASE in refusing the contribution and in reporting the incident to the Senate. If it is true that enactment of the bill will increase the natural gas companies' take from consumers by $600 million a year and enhance the estimated value of gas reserves by $12 billion, even the most extravagant campaign contributions would be mere chicken feed. The public will not be satisfied until the flow of gas money into senatorial campaign funds, if any, has been fully exposed. Because of the limitations laid upon the select committee, the Hennings subcommittee is in much the best position to conduct this inquiry, and we hope that it will have full cooperation from everyone who has information bearing on the subject. In order to do justice to the inquiry, the subcommittee should be authorized to hire eminent counsel who would have a free hand in digging out the facts. The situation calls for an investigator of the integrity and skill of the late Justice Owen J. Roberts who made his reputation by probing into the Teapot Dome scandal.

Meanwhile, the President ought to veto the bill. It is not the President's business to save the Senate from the embarrassment that may result from its vote on this bill. But there is ample ground for a veto in the provisions of the bill itself. Though it is a very complicated measure, the overriding fact is that it would mean less regulation over the price of natural gas and therefore less protection for the public.

Supporters of the bill may be expected to urge White House approval on the ground that it would ease governmental restraints on private industry. But in the case of natural monopolies, such as the gas industry, the need for regulation is undisputably clear. The question here is whether that regulation should be complete and effective or incomplete and ineffective. It is no time to be retreating from tight controls over monopolies supplying essential public service. In any circumstances, a Presidential veto would protect the interests of consumers, and if it is shown that passage of the bill was tainted by the use of gas-lobby money, a veto would become imperative.

American Aid in Asia

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Burma Hanging on Communist Abyss—Will United States Help?" written by John Cowles, president of the Minneapolis Star and Tribune, who has just returned from a month in Asia. It is a thought-provoking article, and should be read by all.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURMA HANGING ON COMMUNIST ABYSS—WILL UNITED STATES HELP?

(By John Cowles)

In Rangoon, Burma, a few weeks ago, I had the feeling that tragedy impended, that unless the United States rapidly finds means of getting American dollars and American technicians into Burma, then rubles and Russian technicians might soon take over one more important Southeast Asian country.

Burma is a weak, neutral, politically adolescent, geographically exposed, but strategically important nation of nearly 20 million people to which the United States is currently giving no financial support.

An expenditure of perhaps $15 million a year for 4 or 5 years by the United States for economic aid might prevent the Bamboo Curtain of Asian communism from enclosing it and sealing it off from a continued exchange with the free world of people, products, and ideas.

Burma has hundreds of miles of common frontier with Red China, and Burma wants both from philosophical conviction and from expediency, to keep neutral as between the United States and Red China.

BURMA WANTS TO KEEP INDEPENDENCE

Burma does not want to go Communist. She wants to retain her independence. She fears, however, that if she should sign any kind of military pact with the United States, which she has no intention of doing, China might use that as a pretext for invasion and occupation.

Burma does not want even to accept dollar gifts from the United States for fear that that might jeopardize her position of neutrality. Burma wants to sell rice, her prinpal article of export, to get the foreign exchange she needs to develop her economy.

But the United States, which has huge surpluses of wheat and rice of its own, not only is uninterested in buying Burmese rice but has actually been depriving Burma of its normal markets by selling, or dumping, American rice and wheat in Japan, India, South Korea, Indochina, etc.

Burma wants American technicians. She wants to improve the docks at Rangoon; she wants new locomotives and freight cars for the railroad that runs to Mandalay; she wants more diesel engines, a cement plant, a small tire factory to use the rubber she grows, and a small paper mill in which she can convert her bamboo pulp.

But Burma does not want to accept charity from America, or aline herself with Western capitalism. She wants to keep independent and scrupulously neutral in the cold war.

SOVIET OFFERS TO BUY BURMESE RICE

Russia has now offered to buy all of Burma's rice surplus at world market prices and supply the industrial machinery that Burma wants. Of course, the Russians add, that would involve their sending Russian technicians to Burma to maintain the equipment and train Burmese workers.

Currently the only important American assistance to Burma stems from the Ford Foundation. It finances, among other things, a technological school near Rangoon where young Burmese are trained in carpentry and mechanics and engineering and electronics. It is operated by a handful of Americans, selected by the Dunwoody Institute of Minneapolis, who inconspicuously guide Burmese teachers in the training of the students.

The Russians are now offering to build a much larger technological school in Rangoon.

One member of the Burmese Cabinet told me he deeply feared that this would really be a training school for Communists and a center for revolutionary subversion.

"If we could only sell the United States some rice," he said passionately, "we wouldn't need to sell Russia our rice and take Russian industrial equipment and Russian technicians in payment."

Burma's situation illustrates the bankruptcy of the political philosophy of those Americans who take the position that "those who are not with us are against us; therefore we should help only those nations that are our military allies."

WE MUST KEEP NEUTRALS OUT OF RED CAMP

The important thing for us to do in Asia is not to press solely for more military pacts, or to make threats against the Russian and the Chinese, but to try to prevent presently neutralist nations from being surreptitiously taken over by the Communists.

Burma has many problems. The central government is not yet in firm control of the whole nation. Rebels and bandits hide in the jungles and hills and periodically emerge to pillage villagers and disrupt economic life.

Half a dozen separate bands of armed groups, numbering in the thousands, still defy the central government. They are so-called White Flag or Stalinist Communists; Red Flag or Trotskyite Communists; Karen Christians, who dislike Buddhist rule and want their part of Burma made a separate nation; two different hill tribes, the Shans and the Kachins, who want their independence, or use it as an excuse for robbery and lawlessness; and lastly some remnants of Chiang Kai-shek's Nationalist Chinese forces which fled to Burma when Chiang left the

mainland, who have refused offers to be transported to Formosa, and who live largely by pillage.

The situation is, however, much better than a year ago. The rebels, including Communists, are surrendering in increasing numbers.

I saw many inmates of a "rebahilitation camp" doing construction work. After they have been taught a trade they are released.

As an illustration of Burma's neutrality between the Communist and free worlds, consider this:

At the ceremonial parade, which I was fortunate enough to witness, marking the eighth anniversary of Burma's independence from Great Britain, one of the honored guests, who received a high Government decoration, was Sir Hubert Rance, the last British governor who ruled Burma as a colony.

(Incidentally, can any American imagine the United States giving the representative of King George III an American decoration of honor just 8 years after we won our independence from England?)

WIDOW OF REVOLUTION LEADER WAS HONORED

Also in the reviewing stand as an honored guest was Mme. Sun Yat-sen, widow of the Chinese revolutionary leader and herself now a member of an important government committee in Red China.

The President of Burma in his speech made it crystal clear that Burma was neutral between the two great power blocs whose representatives were seated near him.

That evening, I attended a dinner of the faculty of Rangoon university, where U Nu, the able, idealistic, and democratic Prime Minister of Burma spoke.

A small, hard core of disciplined Communists in the student body at the university is urging other students not to study, telling them that a general strike will be called at the time the spring examinations are given, and every student will be promoted without examination.

Although U Nu did not mention the word "Communist," he exhorted the faculty not to promote students who refused to take their examinations and not to submit to what he called mobocracy.

Afterward, two faculty members who had received part of their education in America and who are pro-Western, told me they feared this impending student strike would be tied to a general strike-planned for the time of the Burmese election, which will presumably be held in late March or April. They expressed apprehension that despite U Nu, Rangoon university might be taken over by the Communists just as has happened in Singapore, where the Communists now control both the faculty and the student body.

CAN'T AMERICA TRY TO SAVE BURMA?

When one sees at first hand a country like Burma, a country of gay, friendly people, politically naive and pitifully unprepared for self-government but equally determined to have it, teetering on the abyss of communism, one wonders can't America try to save it?

It is true that we already have more wheat and rice than Agricultural Secretary Benson knows what to do with.

But would it not be wise for us to buy $10 million dollars worth of Burmese rice, or even teakwood, so that Burma could get American technicians and American machinery instead of Russian?

It is true that Burma sold supplies to Red China while the fighting was going on in Southeast Asia. That technically makes Burma ineligible for American aid. (The Burmese viewed the Indochina war simply as anticolonial uprising against the French. Their opinion on the Korean war is less clear.)

Perhaps Burma will slide under Communist rule whatever we do.

But, at least, if we gave Burma aid we would have the satisfaction of knowing that we were giving to a relatively honest government. Informed people, Americans, British and Asians alike, say there is much less governmental corruption in Burma than in almost any country in the Far East, and our dollars would not go for the enrichment of a few dishonest officials. So, regardless of legal technicalities, regardless of mathematical odds, can America afford not to see that Burma gets some economic aid?

Our doing it might save 20 million more people from becoming Communist serfs.

Producer's Gas Bill Means Consumer Price Increase

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Senate and Your Gas Bill," which was published in the Kansas City Star of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SENATE AND YOUR GAS BILL

The United States Senate has voted to lift price regulation of natural gas at the point of production. This is bad news for the consuming public and good news for the producers — especially the big producers. Here was a conflict of interests in which elements of principle could be argued on both sides. And the Senate has lined up on the side of the producers.

But now—barring a Presidential veto—we shall see who was right and who was wrong. Basically, the Fulbright-Harris bill removes Federal control from the price of natural gas at the wellhead. But from this issue that appears deceptively simple have come diametrically opposed claims and predictions of doom. Proponents declared that without the bill development would be discouraged and prices would skyrocket; that gas would be limited to use in the producing States. Opponents argued that the bill would remove effective controls in interstate commerce and bring enormous cost increases to the domestic customer and industrial user alike.

The Kansas City area may learn who was right sooner than we would wish. The Cities Service rate case before the Federal Power Commission in Washington has been delayed pending the outcome of the Senate action. If the bill becomes law, much of the city's argument against current increases will be wiped out.

Despite protestations that they had the long-range interests of the consumers at heart, there can be little doubt that this was a producers' bill. Aside from the principle of Federal control, it embodies several lucrative gimmicks that could cost the consumer dearly. Not least among these is the reasonable-market-price clause which would become mandatory. That formula allows a company which produces cheap gas as a by-product of oil operations to base rates on the market price instead of costs. The same applies to reserves bought years ago when gas was cheap.

The matter now stands as a continuing problem for the future. The possible increase in the price of gas over the next few years is tremendous. If the consumer must measure the cost in billions of dollars, then the consumer may rebel. In that event producers may find themselves under far more stringent controls than were removed by the Fulbright measure.

Freedom: A Two-Way Street

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the February 8, 1956, edition of the International Woodworker entitled "Freedom: A Two-Way Street."

The International Woodworker is the official publication of the International Woodworkers of America, a large and extensive trade union of the hard-working men who log and saw the timber which furnishes the material for much of our industrial progress in America. The editorial deals with the basic importance, particularly to members of the labor movement, of protecting such basic freedoms as freedom of the press. The author of the editorial, I understand, is Mr. Bruce A. Bishop, editor of the International Woodworker. Although Mr. Bishop probably does not agree with the editorial policies of many of the daily newspapers of America, he correctly believes it vital to America that their freedom of expression be vigilantly preserved.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM: A TWO-WAY STREET

The recent investigation of the New York Times by the Senate Committee headed by Senator JAMES EASTLAND, Democrat, of Mississippi, is a profoundly disturbing thing.

We have not always agreed with the Times—nor do we expect to. We are of the opinion that the Times often presents the big-business, antilabor view on certain questions of the day, and expect that they will continue to render this point of view in the future.

However, the basic question is not whether we agree or disagree with this newspaper.

The inside kernel of this issue is: Was the investigation of the Times by a Senate committee a proper thing for a branch of our Government to do?

We definitely think not.

Freedom of the press—and that includes the freedom to criticize, to disagree, and as Senators LEHMAN and NEUBERGER said on the Senate floor on January 12, "to criticize even when it is wrongful," should never be tampered with. As Thomas Jefferson said—"no government ought to be without censors; and where the press is free, no one ever will."

The Eastland committee went after the New York Times during an alleged hunt for Communists. The fact that Senator EASTLAND'S investigators chose the Times was indicative of their intent to embarrass that newspaper. If this is not so, then why, in

the words of Senator NEUBERGER, did that committee "look for Communists or ex-Communists specifically among newspaper employees at all, any more than specifically among lawyers or farmers or nurses or musicians?"

Actually, Senator EASTLAND was interested in an attack on the New York Times because of the solid position it has taken on the Supreme Court decision and the antics of race baiters like himself—and certainly not because he—or anyone else—thought that the Times was Communist dominated or influenced.

DICK NEUBERGER pretty well summed it up when he said in a letter to your editor—"When one paper can be singled out for investigation, a dangerous precedent has been created. Perhaps some future Senate committee will promote its own bias by investigating certain papers for private-utility influence, or trade-union influence or banking domination—or any other alleged influences."

Both Senator NEUBERGER and Senator LEHMAN pointed out that they have suffered plenty from partisan attack and partial reporting on the part of the Nation's newspapers, but both strongly supported the right of the newspapers to do this.

As Senator NEUBERGER pointed out, "If support for the rights and liberties of our free press were to be granted only on a basis of reciprocity, no Senator would have less reason than I to make the speech I am making today."

Thus, by citing the record that saw only 3 out of 21 daily newspapers backing him in Oregon during the 1954 election, NEUBERGER demonstrated that he did not have any ax to grind and clearly established himself as a worthy supporter of a free and untrammeled press.

We, of the labor movement, can do no less. We must exert ourselves just as much to protect the freedom of our enemies as we do our friends.

Our big problem is to carry on a continuing, high-level campaign to provide the people with our point of view, and the fact that we have been behind the 8-ball financially, in our fight to do this, must not be allowed to take victory from our grasp.

Public Should Complain of Brazen Tactics To Influence Gas Bill Vote

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Case of Gas," which was published in the Pittsburgh Post-Gazette of Wednesday, February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CASE OF GAS

Politicians and gas and oil producers in the great Southwest must feel quite pleased with themselves. This week, with the Senate's approval of the Harris-Fulbright gas bill, they won another victory strengthening their area's position as the most favored part of the Nation.

The Harris-Fulbright bill, which had passed the House last year and now awaits only the President's signature to become law, frees natural gas of Federal price regulation at the wellhead. This law permits the Southwest's gas producers to determine the prices to be paid by millions of captive customers in Pittsburgh and other northern consuming areas—except for the dubious indirect control which the Federal Power Commission may exercise by regulating pipeline prices.

Thus for the second time since the Eisenhower administration assumed office, the Southwest has grabbed off a nice prize. Back in 1953, it will be recalled, that area obtained legislation giving States control over offshore oil.

When the gas and oil legislation of the last 3 years is added to the depletion allowance law which lets oil and gas producers deduct 27.5 percent of their gross income for tax purposes, then it becomes clear that the Southwest is indeed the Nation's happy hunting ground.

It is difficult to explain this in political terms, except to note that Texans and their close neighbors are not as devout in their adherence to the Democratic Party as, say, the Deep South, and thus their bargaining position, along with their votes, is something powerful to reckon with.

What's more, wealth has a way of breeding wealth and those tycoons in the most favored part of the Nation have plenty of money for this purpose and that, including high-pressure lobbying of blinding intensity and an ability to sweeten political campaign funds.

President Eisenhower has as much justification now as Harry Truman had in 1950 to veto the gas bill. But he probably won't. So the public can only hope that Congress will watch closely to see what happens to gas prices, with a view to reversing its decision if prices run wild, as opponents of the gas bill have predicted.

The Senate, meanwhile, should proceed determinedly to get at the bottom of a $2,500 campaign contribution which Senator CASE refused because it was offered by a Nebraska attorney interested in passage of the gas bill. The public has no choice but to swallow the legislation, but it should complain bitterly about some of the brazen tactics used to influence it. There should be a full exposure of what went on behind the gas bill.

The Rights of States

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the February 9, 1956, issue of the Orangeburg (S. C.) Times and Democrat, entitled "The Rights of States." The Times and Democrat is one of our finest newspapers, and it is ably edited by Mr. Edward Sims, who also operates a Washington news bureau for many of our South Carolina newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RIGHTS OF STATES

Every State in the Union, regardless of its history, has a large stake in the question of preserving States rights. States rights is not to be, and should not be, confused with any one issue or with hidebound clichés or emotions connected with the past.

States rights is something our Constitution's framers had very much in mind. There is no question but that States rights have been usurped since the Founding Fathers drew up the Constitution. States rights is not, and should not be, a sectional issue.

We should keep in mind that this country was not established as a pure democracy. It was actually set up as a republic, with the States retaining many sovereign rights and privileges. Electors were originally selected by State legislators, so that qualified men would choose the President.

In time, our system of Government has changed, and we now have something close to a popular election for President, although under our system a President can still be elected and receive fewer votes than his opponent.

Proposals are now before Congress to change this, and eventually, one of them will be adopted. It will require a constitutional amendment, with two-thirds of both Houses of Congress approving, and then three-fourths of all the States.

Other changes in our way of life and in our system of Government should be effected the same way. There have been too many cases, in recent years, of the Supreme Court assuming jurisdiction it was not given under the Constitution. Several times in very recent years, Congress has had to correct Supreme Court interpretations which actually changed our system of Government.

One of the weaknesses of our system, as Thomas Jefferson himself recognized, was that there is actually no check on the Supreme Court. Justices are appointed for life, and neither the Executive nor Congress has been able to exercise the function of a check on the highest court of the land.

It is, therefore, up to justices of that high body to remain above politics and to restrain themselves. It is, likewise, the duty of every American to protect the system of Government which has made this the greatest country in the world, and one of the ways he can accomplish this goal is to do his part to safeguard the rights of each of the 48 States.

Nineteen Hundred and Fifty-five Program for Timber Conservation Committee of the Railroad Tie Association

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. HILL. Mr. President, of vital importance to the future strength and well-being of our country are the conservation and protection of our natural resources through the utilization of wise conservation practices and programs.

One of the most important of our needs is the conservation and protection of the Nation's forest resources. I have been pleased and gratified to have presented to me a copy of the forest conservation program adopted by the timber conservation committee of the Railway Tie Association.

The program recognizes the essential role which vocational agriculture is today playing in forest conservation through the teaching of sound forest conservation practices, and recommends

that our vocational agriculture program be greatly expanded.

The program recognizes that the future well-being and prosperity of so many of our American business enterprises is dependent upon the vital service being rendered by those engaged in vocational agriculture and other forest conservation and management activities.

The timber conservation committee program embraces three essential steps: First, intensification of conservation at the grassroots level through education and active work with teachers of agricultural education throughout the Nation; second, achievement of better product utilization through cooperation with other wood-using industries and government agencies interested in forestry; and third, promotion of safety in the woods.

I congratulate the timber conservation committee, and hope that its worthwhile program will be read by every Member of the Senate.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the program, together with a letter from Mr. Robert N. Hoskins, chairman of the timber conservation committee. Mr. Hoskins is industrial forester for the Seaboard Air Line Railroad Co.

There being no objection, the letter and program were ordered to be printed in the RECORD, as follows:

SEABOARD AIR LINE RAILROAD CO.,
INDUSTRIAL DEPARTMENT,
Norfolk, Va., February 7, 1956.

The Honorable LISTER HILL,
Member of Congress, United States Senate, Senate Office Building, Washington, D. C.

DEAR SENATOR HILL: Every American has a tremendous stake in the conservation of our natural resources. To remain strong definite programs must be carried on by all organizations so that proper utilization will come as an end result.

We, of the Railway Tie Association, recognize the outstanding leadership and support you have given forestry and particularly, your efforts in behalf of vocational education as coauthor of the Vocational Education Act of 1946. This has meant much toward developing a real program at the grassroots level. We, too, recognize that one of the real problems we are faced with today is assistance to the small farm woodland owner and the real solution to getting at the grassroots level would best be accomplished by working through teachers of agricultural education throughout the Nation.

As former national chairman of the conservation committee of the United States Junior Chamber of Commerce, and having served on other national and regional committees plus the work of our own organization, the Seaboard Air Line Railroad Co., we are continually placing greater emphasis on work with farm boys by working through the State supervisors and teachers of vocational agriculture.

I am attaching herewith a copy of the program approved at the recent national meeting of the Railway Tie Association which further emphasizes steps that must be taken which will not only develop leadership but will help protect the welfare of the entire Nation.

Sincerely yours,

ROBERT N. HOSKINS,
Industrial Forester.

NINETEEN HUNDRED FIFTY-FIVE PROGRAM FOR TIMBER CONSERVATION COMMITTEE OF THE RAILWAY TIE ASSOCIATION

The Railway Tie Association and its members must take an active part in forest conservation if it is to be assured of those products so necessary for its operations and for the welfare of the Nation. Recognizing that objectives in sound forest management can only be accomplished through active leadership, the chairman of this committee recommends for approval and adoption the following three-point program:

I. INTENSIFY CONSERVATION AT GRASSROOTS LEVEL THROUGH EDUCATION AND ACTIVE PARTICIPATION

1. What is agricultural education? Agricultural education is a part of the public-school program. In 1917 the Smith-Hughes Act was passed. This program was the first development of the Federal-State cooperative program of vocational education for less than college graduate in the United States. The purpose of this act is to provide for cooperation between the Federal Government and the States in the promotion of vocational education in agriculture. Vocational agriculture reaches the all-day student in high school and is usually taught for 4 consecutive years. Enrollment in this program is open only to farm boys. Each farm boy receives instruction from technically trained teachers of vocational agriculture and initiate project work. These projects are supervised throughout the year by his teacher of vocational agriculture and consist of enterprises and supplementary farm jobs. He must keep accurate records and accounts of all project work similarly as is done in any business operation.

The program of agricultural education is well organized and ably administered. As such, it offers a challenge and an opportunity to business and industry that they might work directly with farm boys in getting a job done on the respective farm woodlands. It is an accepted fact that our greatest problem today in forest conservation lies in the ownerships of small farm woodland areas. Representatives of business and industry may work through individual chapters (Future Farmers of America) found in these areas where they are doing business or have operations. These companies may provide incentives to increase production by working through all levels of vocational agriculture—State, district, and local. Some companies may have prepared materials such as bulletins, leaflets, posters, etc., which could be distributed to the local teacher of vocational agriculture that might enable him to do a better job of teaching the all-day students.

Each State program of vocational agriculture is administered by a State supervisor. He has on his staff men well qualified to direct operations in the broad field of agriculture, that is, soil conservation, water conservation, forest conservation, etc.

The program of agricultural education is the largest and strongest strictly farm-boy program in the Nation.

2. What is needed to do the complete job in agriculture education? In 1953, 429,381 farm boys were enrolled in all-day classes. Administering this all-day program were approximately 10,000 teachers of agricultural education employed in the public schools of this Nation.

To meet the farm replacement needs in this country, our best estimates point out the fact that we will need enrolled at least 1 million or more in vocational education in agriculture. This means that with the present appropriation only about one-half of the job is being done. There are also between 1,000 and 1,500 schools that have programs where additional teachers are needed. At least 5,000 high schools serving rural youth need a program of vocational education in agriculture.

Supplementary legislation enacted since the passage of the Smith-Hughes Act in 1917 had the same general purpose as the original act. Under the provisions of the Smith-Hughes and George-Barden Acts, Congress is authorized to appropriate a total of $13,296,273.13 (for vocational agriculture). As of this date a total of only $11,724,730.44 has been appropriated for vocational education in agriculture. Under present laws, Congress could apropriate the remaining—$1,571,542.69. Summaries of recent studies indicate the need nationally for more than the full appropriation. It is believed that a total of approximately $20 million would be required to do the complete job in vocational agriculture. This would necessitate new legislation, increasing the present authorization.

From previous records it has been found that for every Federal dollar spent in the promotion of vocational education in agriculture, approximately $4.76 is spent from funds both State and local.

America must always remain strong. To do this she must have men trained in skills to do productive work. The surest way to develop a sound conservation program to meet today's and tomorrow's needs may best be solved by working through and strengthening the program of vocational education in agriculture.

The timber conservation committee recommends:

A. That every member of the Railway Tie Association take steps to activate a program of conservation at the grassroots through local teachers of vocational agriculture by gaining approval through State Supervisors.

B. That every member of the Railway Tie Association should use every effort to strengthen the present program of vocational agriculture in the public schools as the strongest means of grassroots conservation. This could mean additional teachers and new departments in all States of the Nation.

C. A recent outgrowth of this program has been the establishment of a young farmer organization. This group, seeking to establish themselves in farming, continues to receive instruction and attend evening classes under the supervision of the teacher of vocational agriculture. Business and industry, having assisted the all-day student, may also wish to pursue this program of practical education through the same channels by working with young farmers. Such cooperation with this group will enable conservation to be practiced at the grassroots, too.

II. BETTER UTILIZATION THROUGH COOPERATION

The timber conservation committee recommends closer cooperation with farm foresters and consulting foresters. These two groups are consistently in touch with owners of small and large tracts of timber, all of which can provide the necessary materials needed by the Railway Tie Association's members.

The average holding of the small woodland owner in America is 62 acres. All together there are 261 million acres in 4¼ million such tracts. This represents approximately three-quarters of all the privately owned, commercial forest land and more than one-half of all forest land, public and private, in the Nation. Three and one-quarter million of these small owners are farmers.

The Cooperative Forest Management Act of 1950 established another pattern of cooperation between the Federal Government and the States, whereby technically trained foresters would assist owners of these small woodland areas. While some of this service is free, there are those States that charge for this service.

Both the farm forester and the consulting forester are in a better position to effect better utilization should members of the Railway Tie Association consult with them from time to time as to their needs for certain products. Such a program of closer working relationships would mean better forest management.

III. The timber conservation committee recognizes that there will always be problems in woods safety. There are many effective programs in operation today by such associations as the American Pulpwood As-

sociation and also safety programs by individual companies.

In cooperation with the United States Forest Service and particularly Milton M. Bryan, Chief Woodland Management Section, United States Forest Service; and Seth Jackson, who is in charge of the safety program for the United States Forest Service, we have prepared a safety poster which we feel will be most effective in helping curtail accidents in cross tie production.

This is our first step in our program accenting safety in the woods and other steps will be devised which we hope will continue to reduce accidents in all wood production.

Gas Investigation Scramble

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an editorial entitled "A Little Maneuvering on the Bribe Probe," which was published in the Hartford Courant of February 8, 1956. In fairness to the Senators involved, I wish to say that the editorial is in error in saying that the Senator from Georgia [Mr. GEORGE] and the Senator from Minnesota [Mr. THYE] voted for the gas bill. Apart from that, however, it represents what I believe are rather widely held views.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LITTLE MANEUVERING ON THE BRIBE PROBE

The Senate has acted with almost fanatic and unseemly haste in scrambling to investigate the natural-gas bribe case. It is well that the Senate should move to clear this blot from the main issue. But a jurisdictional dispute between two committees does not add dignity to the fracas. And it inspires some close political consideration of the points concerned.

A special committee was proposed by Democratic and Republican leaders to look into the complaint. The special committee would have been composed equally of Democratic and Republican Members. The resolution was blocked for 24 hours by Senator LANGER, one of the opponents of the Harris-Fulbright bill. Meanwhile Senator THOMAS HENNINGS announced his Elections Subcommittee would start its own probe "to look into the Case matter and every other damn matter in connection with it and get at the big boys if we can." Senator HENNINGS also turns up on the short end of the vote in the Harris-Fulbright measure. So does Senator GORE, who serves with him on the Elections Committee.

Before he could get started, however, the Senate reconsidered the resolution. It named a special committee by 90 to 0. That committee named as its chairman Senator GEORGE—who was with the majority in favoring the Harris-Fulbright bill. The other members are HAYDEN, of Arizona; BRIDGES, of New Hampshire; and THYE, of Minnesota—all of whom voted with the majority for the bill. The explanation that Senator HENNINGS would be unable to conduct the hearing because he is up for reelection this fall is rather limp—for so is Senator GEORGE.

Not only the Senate, but the entire Nation, has an interest in seeing that this charge is fully explored. Only President Eisenhower can now exercise a veto of the Harris-Fulbright bill, and prevent this on-balance unwise legislation from taking effect. But the Senate must act on a larger issue—the control and prevention of open and illegal pressures on legislators. It is already tacitly recognized that the regulation of lobbyists is inadequate by today's standards. The thoroughness with which the special Senate committee acts will be watched with interest.

Fault in School Bill Pointed Out

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, on February 6, 1956, there appeared in the Shreveport Times, Shreveport, La., an editorial entitled "COLMER Nails Down Fault in School Bill." This editorial points out the weaknesses of the present school bill which is now before the Rules Committee, of which my colleague, Representative WILLIAM M. COLMER, of Mississippi, is the ranking member.

The editorial is filled largely with quotations from our colleague, Mr. COLMER, of Mississippi, and I have found through the past years that BILL COLMER is a man who normally has his feet on the ground and realizes full well the fundamental problems of the Deep South. His judgment has gone through the test of time and has been fully supported by his own people. I have had occasion to visit Mr. COLMER's district recently and to see a lot of his people. I know of no one more beloved by those who know him in southern Mississippi than is Congressman BILL COLMER. He certainly has the complete confidence of those he represents in the Congress.

At some later date I expect to present my views fully regarding the school construction bill. At present it is before the Rules Committee of the House, and I will wait to do this until action is taken by the committee and I have had full opportunity to appraise the final bill which comes to the House.

In the meantime, Mr. Speaker, under leave to extend my remarks, I include the editorial mentioned above:

COLMER NAILS DOWN FAULT IN SCHOOL BILL

Representative COLMER, ranking Democrat on the House Rules Committee, has taken a position on the Federal aid for school construction bill which could mean the bill's defeat if it comes up for a vote in either House.

It is Mr. COLMER's contention that because of the Supreme Court decision forbidding segregation in public schools, any Federal aid offered under the bill would be denied to the South. He holds that the aid would be denied even if a proposed amendment banning funds for school districts practicing segregation is defeated.

Advocates of the bill do not agree. They say that segregation would not be outlawed in a State until Federal judges order its end, and that pending such action in the Federal courts the United States Commissioner of Education could not deny funds to a State practicing school segregation.

This is a flimsy reply, obviously worth no attention. Who can know now the position the United States Commissioner of Education will take in the future, in regard to this particular fund, or any other?

Mr. COLMER says flatly that southerners have made up their minds they will not have integration in their schools and that "it is difficult to see how those who believe in segregation can vote for this bill."

"There are two recognized privileges under the American system that the American people are most zealous of," he continues. "They are freedom of worship from Federal domination and freedom in the public-school system from Federal domination.

"Many thinking people interested in the public-school system are justified in their apprehension that this (the school aid bill) would be the beginning of Federal domination of our public schools. Federal control inevitably follows the Federal dollar. The next step would be requests for Federal assistance in payment of underpaid schoolteachers. Once the gate is down there is no end in sight.

"Who can say that eventually a Federal bureau would not be dictating the type of textbooks with resultant regimentation of thought among our children?"

Representative COLMER speaks with a respected voice in the House and there is some hope that his views will be heeded there. If not, and if the bill goes through as a special dispensation for all States outside the South, the last recourse will be strenuous opposition in the Senate, where there are ways to slow down a willful majority.

No doubt some of the supporters of the school aid bill look upon it as an adroit means of bringing about acceptance of the Supreme Court's integration decision in some Southern States. The expectation is fallacious, and adds to the reasons for rejecting the entire measure.

Gen. Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I wish to insert in the RECORD an address I delivered Sunday, February 12, at the Kosciuszko monument in Lafayette Park, Washington, in commemoration of the birth of the well-known and beloved patriot, Gen. Thaddeus Kosciuszko, an original American patriot:

GENERAL KOSCIUSZKO, AN ORIGINAL AMERICAN PATRIOT

I am very happy to join with all those who today are commemorating the anniversary of the birth of that great patriot, Gen. Thaddeus Kosciuszko. Those of us who know the timeless contribution made by General Kosciuszko to the cause of human freedom and individual liberty, look forward to this day each year as an occasion to rekindle the flame of human freedom by whatever means available to us.

You and I know full well that the cause of freedom will be kept alive only by those who are willing to sacrifice for it and who have come to learn that simple fundamental—that freedom is life itself and that there can be no life worth living without individual liberty.

Ih seems to me most fitting this year that we give some thought to General Kosciuszko and his great patriotism for the United

States and for his beloved country of birth—Poland. It will be recalled that General Kosciuszko journeyed to the United States to take part in the American Revolution which he so often said involved a cause and principles dear to all mankind. He was both a dedicated and inspired leader in the victorious campaign of the Continental Army—being blessed with both the genius of military leadership and an abundant knowledge of mankind's endless struggle for equality, independence, and dignity. During his entire life, General Kosciuszko expressed a warm patriotism for the United States, and fervent hopes for its prosperity. At the same time he expressed an equal patriotism for Poland which was then, as now, occupied by the Russians, and a fervent determination that Poland would soon be free of alien occupation and be sovereign among all the powers of the world.

General Kosciuszko did not consider it unusual that he would have such a strong patriotism for the noble cause of the United States and Poland. The leaders of the American Revolutionary War, the war by which we threw off colonial status and won our national independence, did not consider the dual patriotism of Kosciuszko as a bit unusual. In fact, the leaders of the 13 original colonies were ever mindful that the freedom-loving sons of many countries came to our shores all for the same purpose of supporting the insptiring cause set forth in the American Declaration of Independence.

It will be recalled that after the victory of the American Revolution, General Kosciuszko was offered a land grant in the hope that he would remain on the soil of the free America he helped to create. It is important in this connection to remember that when General Kosciuszko expressed his thanks for this offer and explained that he would have to decline because his native Poland was enslaved by the Russians, the leaders of the American Government understood immediately that the fire of freedom burned so brightly in his heart that he had no other choice but to return to Europe and there to carry on his struggle for the liberation of Poland.

It seems to me strange that today we here in the United States, entrusted as we are with the task of keeping bright the flame of human freedom, should have any question about the dual patriotism of men like General Kosciuszko. For some strange reason it has become the vogue since the Russians occupied Poland and many other once free and independent nations of Central and Eastern Europe, to frown upon or look with suspicion on anyone who would dare to express a concern for the enslavement of Poland or any of the other non-Russian nations. It is even more strange that one's patriotism to our beloved United States is likely to fall into question for advocating the liberation of Poland and the other enslaved nations from the ruthless colonial empire of the Russians. I cannot but wonder what the American patriots of 1776 who fought shoulder to shoulder with General Kosciuszko would think if they were to return to America today and would hear people raising questions on the subject of patriotism for the United States and patriotism for one's native land.

The very things that gave General Kosciuszko an equal patriotism for the cause of the American Revolution and the cause of liberating the Russian occupied Poland of his day, were the same moral and political principles spelled out in the American Declaration of Independence.

Those great principles made it possible for General Kosciuszko to have complete loyalty for the cause of both nations. These same moral and political principles bind the people of Poland and the people of the United States today.

History has the habit of repeating itself and sometimes the repeats in history are very happy ones. It is my fervent hope that American patriotism of our day will find a means of liberating Poland and restoring that once free and independent nation to her rightful place in the family of nations. I have no doubt that if we could inspire the world of today with our fundamental political beliefs as the signers of the American Declaration of Independence did in 1776, the liberation of Poland and the securing of a just and lasting peace for all the nations of the world would be a certainty.

It is a challenge to our traditions as well as to our moral responsibility, to awaken all the people of the world to the fact that human freedom and individual liberty will be secure only when all people of the world equally enjoy it.

General Kosciuszko stood for those same timeless moral and political principles and it is the clear duty of the people of the United States to stand up for those same principles. That is the great challenge of our time.

The Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, for the information of Members of Congress and of leaders of other branches of our Government, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the New York Times for February 8, 1956, entitled "The Natural Gas Bill."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATURAL GAS BILL

Senate passage of the natural gas bill throws the issue squarely into the lap of President Eisenhower. Approval of this measure taking independent producers of natural gas out from under effective Federal price regulation is, in our view, a severe defeat for the consumer. It is also a major victory for powerful interests in both parties that will profit from this overturning of a 1954 decision of the Supreme Court.

Aside from its economic implications, the interesting thing about this measure is that it cannot be laid unequivocally at the doorstep of either party, though its inspiration clearly comes from the Democratic representatives of the oil- and gas-rich central Southwest.

The bill passed the House last year by 209 to 203, with 86 Democrats for it and 136 against, and 123 Republicans for, 67 against. It passed the Senate this week by 53 votes to 38, with 22 Democrats for it to 24 against, and 31 Republicans for, 14 against. Leadership was provided last year by the Democratic Speaker of the House, SAM RAYBURN, and this year by the Democratic leader of the Senate, LYNDON JOHNSON—both from Texas. Now it goes before a Republican President, who we hope will be moved to veto it if he can be convinced as we are that it grossly favors the interests of specific local groups as against the interests of the Nation as a whole.

It is generally agreed that regulation at the hands of public bodies is a necessity in the case of the distribution of natural gas to the consumer, and also in the case of the interstate transportation of the same product through a pipeline to the distributor. We fail to see the logic in refusing to extend this regulation—as existing law, according to the Supreme Court, said it should be extended—to the producer at the wellhead, who is intimately tied to the transporter and ultimately to the distributor. Congress has now decreed otherwise, and in the absence of a Presidential veto only experience will prove whether the major oil and gas producing companies will have a field day at the consumers' expense. If they do, they can be sure that the demand will arise for congressional reversal of Monday's vote.

Judging from the furious lobbying campaign that has been waged on behalf of this bill, it is obvious that it involves enormous economic stakes. One Senator has already suggested that a proponent of the bill had attempted to bribe him to the tune of a $2,500 campaign contribution. We are all for the promised investigation.

No doubt most of the proponents of the bill sincerely believe it is in conformity with good government practice as well as with expanding production of natural gas. We disagree, but we are sure the Republic will still stand even if the bill becomes law. However, its passage under Democratic leadership should take much of the steam out of the Democratic war cry of giveaway, and its passage with Republican votes should make the Republicans rather uneasy when next they approach the urban consumer.

Addresses of Andrew Roscoe

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses by Andrew S. Roscoe, president of the Downtown Brooklyn Association and president of the Equitable Savings Loan Association. Both addresses were made at the annual meeting of the Downtown Brooklyn Association on January 30, 1956, at the Towers Hotel in Brooklyn. The first address was on the occasion of the presentation of a gold medal to Hon. Edward A. Richards, president of the East New York Savings Bank, and the second was on the occasion of the presentation of a scroll of honor to Col. Sidney H. Bingham:

PRESENTATION OF GOLD MEDAL TO HON. EDWARD A. RICHARDS

(Address by Andrew S. Roscoe)

It is our privilege today to welcome to Brooklyn's Legion of Honor a new member, the 26th.

The qualifications for membership in this illustrious group are many and exacting, but its most rigid demand is service to community and to neighbors, and fortunate is the group that finds such members.

The gold medal committee and the board of directors of the Downtown Brooklyn Association take pride in naming as the recipient of its annual gold medal, Judge Edward A. Richards.

Judge Richards is a native Brooklynite and graduate of our public schools. He

studied law at New York University and soon after was admitted to the bar of the State of New York. After practicing law in downtown Brooklyn he was elected a justice of the municipal court when only 28 years of age. Upon completion of his 10-year term, he was reelected to the second term, resigning 2 years later to accept the presidency of the East New York Savings Bank, a post he continues to occupy. While practicing law, he was a member of a prominent legal firm. One of his former partners is now chief judge of the New York State Court of Appeals; another partner will soon address this meeting.

Judge Richards must be a good banker, and indeed he is, for under his direction East New York Savings Bank has grown in resources and in service. He was an impelling force in efforts to have private enterprise assume a proper function in fulfilling the needs of returning veterans to the city's growing population. He assumed leadership in forming a corporation, consisting of his own and three other banks, that built Arlington Village for the accommodation of 210 families. With other bankers he was instrumental in developing the Concord Freeholders, Inc. and as president of the corporation, three 15-story apartment buildings were erected. In this endeavor and many others, he has indicated that private enterprise can and should serve community needs.

Judge Richards, we know, brings to his career a sense of duty and a sense of good will that probably came to him from deep religious convictions, for he is an active and lifelong member of the Episcopal faith and for many years has been the senior warden of Trinity Church in East New York and a member of the executive committee and a trustee of the estate belonging to the diocese of Long Island. He has devoted himself wholeheartedly to interfaith work and the range of his activity is indicated by the scroll presented to him in 1951 by the Brownsville Boys' Club for the outstanding work he did for the interfaith party, attended by 10,000 Brooklyn children. The list of his good services is indeed a long one and of great range. I could dwell at great length on his service to the Brooklyn Chapter of the American Red Cross, not only as a member of its board of directors, but in every working phase of this great organization. And, would time allow, I would like to tell you more about a great many of his other activities, including the Young Men's Christian Association, the East New York Young Men's and Young Women's Hebrew Association, Boy Scouts of America, the Greater New York Fund, Beth El Hospital, the Brooklyn War Memorial, and many other community organizations which have honored him for his service.

Judge Richards, we are proud to recognize the enormous amount of work that you have done and we extend to you today, with warm friendship and deep sincerity, this expression of our high regard and esteem, as well as our everlasting gratitude for your devotion to the well-being of your neighbors and your community. Proudly we present to you this gold medal of the Downtown Brooklyn Association for "most distinguished service for Brooklyn."

PRESENTATION OF SCROLL OF HONOR TO COL. SIDNEY H. BINGHAM

(Address by Andrew S. Roscoe)

The chief exceutive responsible for the continuous and safe operation of an oversized municipal transit system rarely hears a kindly word. So it is with the chairman of the Transit Commission and recent executive director and manager of the New York City Transit Authority, Col. Sidney H. Bingham.

A deecendant of William Hedley, who in 1812 built the first locomotive, the "Puffing Billy," it was natural that he should become a railroad man. And, he has been a railroad man all of his life, except when enlistment in the United States Army and service with the AEF interrupted his career for the duration of World War I, and in World War II, when Colonel Bingham served with distinction in the European theater of operations for 4 years. In 1946, he was appointed general superintendent of the transit system in charge of maintenance and operations, and in May 1947 was appointed a commissioner. He was designated chairman of the board of transportation on January 1, 1950; thus he became the first person appointed from the ranks to head our present system.

When the New York City Transit Authority was created in 1953, he became general manager and later was appointed executive director and general manager and served in this dual capacity until his retirement a few months ago.

Colonel Eingham is the recipient of many military decorations, the transit consultant of many cities throughout this country, Europe, Asia, and South America, and the designer and developer of many pieces of transit equipment that are now in use. We believe that after 40 years of service to the citizens of New York and the Nation, his achievements should be recognized with our gratitude.

It is therefore our great pleasure and honor to present to you, Col. Sidney H. Bingham, this scroll of honor, for the intelligent, faithful, honest, and diligent public service and leadership that have benefited the many millions who have lived, worked, and visited in this city during your long and distinguished career.

This scroll of honor says:

"The board of directors of the Downtown Brooklyn Association, Inc., award this certificate of honor to Sidney H. Bingham for his distinguished and eminent leadership as chariman of the New York City Board of Transportation, general manager and executive director of the New York City Transit Authority, and for his 40 years of devoted service in the field of public transportation in Greater New York and throughout the world."

Gas Bill Veto, the Public's Last Resort

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "Once Again Only the Veto Holds Hope For the Public," which was published in the Louisville Courier-Journal of February 8, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONCE AGAIN ONLY THE VETO HOLDS HOPE FOR THE PUBLIC

Six years ago Congress passed the Kerr bill which would exempt independent producers of natural gas from Federal rate regulation. President Truman vetoed it and so it died.

Mr. Truman took a position on grim principle in spite of the heaviest of personal pressures. The bill's author Senator KERR of Oklahoma, was as close and warm a friend as the President had. He was also the most eloquent and untiring defender of Truman administration policies on the Senate floor and in the 1948 campaign. But Mr. Truman pointed out in his veto message:

"Under the peculiar characteristics of the business * * * there is clear possibility that competition will not be effective, at least in some cases, in holding prices to reasonable levels. * * * To remove the authority to regulate, as this bill would do, does not seem to be wise public policy."

Once again Congress has passed a bill to the same purpose. It was sponsored by Senators FULBRIGHT, of Arkansas and MONRONEY, of Oklahoma, and in the House by Representative HARRIS, of Arkansas. Once again, although bearing the names of Democratic Members of Congress, the bill won more Republican votes than Democratic. Once again it squeaked through the House by the narrowest of margins (6 votes in 1956 to 2 votes in 1950), and slightly larger margins in the Senate. And once again it goes to a President who stands as the last resort of protection for gas consumers against uncontrolled prices at the very source of the gas supply.

The great question is, of course, whether Mr. Eisenhower will see as clearly as did Mr. Truman the public danger of nonregulation for a commodity used in some 25 million homes and many thousands of industries. The same arguments which Mr. Truman found convincing have lost none of their truth and power since April 1950.

We confess a kind of bewilderment at these actions of Congress in granting special privilege to interests which bear the seeds of monopoly and exploitation. It seems almost a routine operation, when the Supreme Court holds that there is danger in monopoly, for the interests concerned to move in upon Congress to seek exemption from the plain law. The Kerr bill and the Fulbright-Harris bill are cases in point. There have been in recent memory the Bulwinkle bill, to exempt railroads from antitrust prosecution for rate agreements among themselves; the Mason bill to circumvent the Supreme Court and grant exemption to news-gathering agencies; the drive of the southeastern underwriters to get around the court decision that agreements on insurance rates were illegal. There is notably the Tidelands Oil case. Even in cases where Congress does not accede to the demands and override the Court, the vote is as close as a hairline.

This happens although the larger volume of argument, as in the case of the natural gas exemption, is plainly in behalf of the public. The greater tone of conviction is against exemptions. President Truman heard it and was moved against his personal inclinations. This time, it is gratifying that both Kentucky Senators voted for the people.

In practically every case the argument which seems most to impress Congress is that free enterprise will be impaired unless the exemption is given. Frequently, as in the natural gas debate, there is no substantial evidence to support this. The champions of exemption cry out that the search for new supplies will be stopped and incentive withered if the exemption from price control is not granted. The majority in Congress seems unconcerned at the very special privilege and incentive that already exist in the 27½ percent depletion allowance on income taxes given to the natural gas prospector. The majority voting on most of these drives for exemption overlook the petitions that come from local representatives of millions of people, as opposed to precious few of the hopeful exemptees—some 8,000 in the gas case, and these boiling down, when the truth is told, to some 20 to 40 major operators, none of whom are hurting in the financial nerve.

Even though it was his party whose votes in Congress put the gas bill over, and even though a special isolation surrounds Mr. Eisenhower that his predecessor never knew, there is still the hope that another veto may interpose to stop untrammelled license. It is the only chance now.

Address of Andrew S. Roscoe

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Andrew S. Roscoe, president of the Equitable Savings & Loan Association and president of the Downtown Brooklyn Association, on the occasion of the dedication of the new building of the Institute of Design and Construction in Brooklyn, N. Y., on February 6, 1956:

ADDRESS OF ANDREW S. ROSCOE ON THE OCCASION OF THE DEDICATION OF THE NEW BUILDING OF THE INSTITUTE OF DESIGN AND CONSTRUCTION, BROOKLYN, FEBRUARY 6, 1956

Mr. Justice Giaccone, reverend sirs, Dr. Maurrillo, Director Vito Battista, Mr. Scervini, Chairman Cavallaro, distinguished guests, ladies and gentlemen, we are assembled here today cherishing a common purpose. We dedicate more than a building on this occasion. This will be a building of builders, builders working with material and builders building men.

As we dedicate the edifice of an Institute for Design and Construction, we may invoke thoughts based on three premises. First, the material values generated by this building in our greater community and in our own downtown area. Then we may place even greater emphasis on the impact of the Institute of Design and Construction upon the livelihood and progress of its students and their careers, and last but foremost, let us devote our third premise to the great ethical values generated by this institution—ethical values which must be the first and the final instruments of survival in this world of atomic tension.

Brooklyn, the city of homes and churches and one of the greatest industrial towns of America, is at a crossroad. The percentage of industrial employment even in a period of full employment is smaller than formerly, and we are attributing this condition to the outgoing movement of industry. A closer and comparative analysis of this condition calls our attention to another cause. Many years ago the movement from the farm to the industrial city provided employment to a larger percentage of our people in the industrial group. Today, however, we no longer treat with two production groups only. We no longer consider the primary production group as consisting of men producing raw materials, men engaged in agriculture, mining, forestry and related fields, and the second group of production as consisting of people working in industry as the only two production groups. A tertiary production group provides services in disrtibuting the goods produced, furnishing transportation, financing, insurance, in medical health services, in government services and in teaching. This tertiary production group enjoys the highest income level; therefore, it attracts people from the farm as well as from industry. This tertiary group provided a solution to what years ago we thought a problem in employment arising out of the advancement of our technology. This tertiary group, today, employs the greatest percentage of the working population in America, and education, particularly specialized education, is qualifying men and women for services in this group. Even though we are losing some of our industries and although our industrial payrolls are but $650 million out of a family income of almost 5 billion in Brooklyn, the earning of our families engaged in this tertiary production group are providing not only the livelihood for most of our people but also through their purchasing power a ready market for the goods produced by our industries.

The edifice which houses the Institute of Design and Construction, in Brooklyn, represents additional evidence that Brooklyn is one of the greatest educational centers in the world. I maintain that Brooklyn is the greatest college town in the world. We have the Polytechnic Institute of Brooklyn. We have Pratt Institute, St. John's University, Long Island University, Brooklyn Law School, State Medical College, the Community College, Brooklyn College of Pharmacy, St. Francis College, St. Joseph's College for Women, Brooklyn College, Packer Collegiate Institute, and now a State-chartered Institute of Design and Construction.

Our American pattern is a class by itself from an economic, political, and social point of view. There is no parallel pattern in the world.

Our great American heritage is integrity, and integrity means wholeness and completeness of honesty. In the educational field a very practicable example of American integrity can be best exemplified by the recognition of pragmatic equivalence. This doctrine has enabled many of our institutions to start in a modest way to fill a great need. Another example of the practical application of American integrity in the educational field is the broadness of our institutions in making available adult education to all people without regard to race, color, or creed. There are no limits to the plane or horizon of American education.

I mention only 2 of these examples because the Institute of Design and Construction was built on these 2 premises, which, in turn, emanate from integrity. The students of this fine institution come here with high-school diplomas, college degrees, or the equivalent in experience and recognizable, special aptitudes. Most of them are adults eager to acquire education to enable them to build a better future.

My third premise concerns ethical values. The history of all great educational institutions is the history of the dedication and inspiration by a few, sacrificing heroes who work long and sincerely for a great goal. They establish the ethical standards of the institution at the very outset. The maintain these ethical standards as long as they survive. For standards of absolute honor are the most important ingredient in education. Day in and day out you must teach honesty of purpose and a sense of service to your community as well as a deep and abiding sense of duty to those who come to you for training. You will become a part of the great body of educational institutions in our great community. They are justly proud and internationally famous. This institution today faces an immense future. Your spirit of service, your imagination and your integrity will make this institute, I am sure, a solid asset not only to Brooklyn but to the Nation itself.

Professor Battista, members of the board of trustees and members of the faculty of the Institute of Design and Construction, let me tell you that I consider this occasion one of the important days in our modern Brooklyn history. For you have created an institute built on high ideals and hard work. This community is greatly in your debt. We will be happy to join with you in watching its progress and its growth.

Congratulations and best wishes to the founder and director of this splendid institute, Vito P. Battista.

A Message to the President

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Message to the President," which was published in the Denver Post of February 9, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MESSAGE TO THE PRESIDENT

To the PRESIDENT:

In your press conference on Wednesday you gave hope to millions of consumers of natural gas that you might veto the Harris-Fulbright bill which intends to remove producers of natural gas from effective Federal regulation.

You said you do not go along with the propagandists who claim the gas business is no different than the coal business and that if it is right to regulate gas it is equally right to regulate coal.

You pointed out, Mr. President, that the consumer who is attached to a gas line and has invested in gas appliances is in no position to switch to some other fuel if the price of gas, without effective regulation, becomes unreasonable.

We know, Mr. President, that you intend to study the Harris-Fulbright bill carefully. You will find the principal difference between the present gas act and the Harris-Fulbright bill is that the existing law requires that rates must be set to give the producer a "just and reasonable" profit whereas the new proposal provides for rates based on the so-called "reasonable market price" for gas.

There is a vast difference.

Why do gas producers object to being limited to just and reasonable profits? They say, Mr. President, that just and reasonable as interpreted by the Federal Power Commission means a return of only 6 percent or so on their investment and that, because of the risks they take, they must have greater returns than that if they are to explore for new fields.

As you know, Mr. President, gas producers are already granted special tax concessions in recognition of their risks. If they need still more incentives, either the Federal Power Commission or Congress could provide that, whereas 6 percent is a just and reasonable return for an electric utility, a return somewhat greater than that—perhaps 10 or 12 percent—is necessary for gas producers.

Of course, they claim that the limitation in the Harris-Fulbright bill which requires the reasonable market price for gas is ample protection for the consumer. Actually it is no protection at all.

What is the reasonable market price? Obviously, Mr. President, it is not the price which has been set by the Federal Power Commission to yield a just and reasonable profit. Instead, it is the price at which gas has been selling when it was not regulated—the price agreed upon when one man wants to sell gas and another wants to buy.

Normally, Mr. President, we rely on supply and demand of that kind to set fair prices automatically, but the natural-gas business is not normal by a long way. Since the war pipelines have spread miraculously to all parts of the country, creating tremendous new demands for gas. The supply has not

kept pace, and there is no indication that it can keep pace, no matter how high the profits of gas producers might go.

Under these conditions, natural-gas prices, where they have not been regulated, have gone up, up, up. In fields where gas formerly sold for 3 cents a thousand cubic feet prices have gone (without regulation) to 10, 12, 15, and even 20 cents.

These, Mr. President, are the unregulated "reasonable market prices" which gas producers want to use as a criterion for regulation. Some gas companies say, as you well know, that natural gas even at 20 cents at the wellhead is too cheap, and that the price should go on up until it is comparable to the cost of coal.

So the Harris-Fulbright bill has built-in features which will assure that prices can go no place but up, if you sign this legislation.

For example, the bill would require the Federal Power Commission to grant a gas rate which might be higher than the existing market price, provided that in return for the higher rate the purchaser got a promise of a supply of gas which he did not have before.

Of course, every time a buyer makes a new contract with a seller he gets a promise of gas he did not have before. The bill plainly contemplates that if gas in a certain field has been selling at 15 cents the Power Commission should approve a price of 16, 17, or perhaps 18 cents to a new buyer.

There is another neat gimmick in the Harris-Fulbright bill, Mr. President. It provides that a gas producer may get a price higher than the "reasonable market price," provided he made a contract for a specific and higher price before the bill was enacted into law.

No one knows how many contracts of that kind have been made during the many months that the bill has been under discussion and consideration.

We are sure, Mr. President, that a careful study of the bill will convince you that regulation on the basis of the amount needed to give the gas business a "just and reasonable" return should not be abandoned for a system which would recognize as "reasonable" any price producers have been able to get without regulation under conditions of woefully short supply.

Ninety-second Anniversary of Lincoln's Gettysburg Address

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an address of Col. John J. Griffin, vice president of the First National Bank in St. Louis, at the annual meeting of the Union Veterans of the Civil War in commemoration of the Lincoln Gettysburg Address on November 16, 1955.

The address follows:

NINETY-SECOND ANNIVERSARY OF LINCOLN'S GETTYSBURG ADDRESS

(Address of Col. John J. Griffin, vice president, First National Bank in St. Louis, at annual meeting Union Veterans of the Civil War, in commemoration of the Lincoln Gettysburg Address, November 16, 1955)

We are within the octave of the 92d anniversary of a very notable historic address delivered by he who exemplified everything that America stands for, President, Abraham Lincoln, and in keeping with the character of the man, the address is simple, short and humble. For 92 years it has been an example to the American people of the love and devotion that should be theirs for this great and glorious country of ours, a country devoted to the ideals and the principles of the dignity of man and his right to freedom.

As Lincoln stood there 92 years ago, we can close our eyes and almost hear him: "Four score and seven years ago our fathers brought forth on this continent, a new Nation, conceived in liberty, and dedicated to the proposition that all men are created equal." Have any of you ever stopped long enough to take that little short paragraph, read it, study it, and become aware of what it means? A new Nation, a hope for the oppressed, a haven wherein those living under the pitiless iron fist of tyranny could find freedom and equality, and in this very first opening paragraph again we find evidence of the fact that the American people not only believed in God, but were willing to express that belief openly and publicly without fear, and then, even as today, there were those in the world seeking to destroy the right of man to worship his Creator. The right of man to live in equality. The right of man to enjoy the liberty that was his by inheritance, but in those days, they who would destroy it were not behind any Iron Curtain, they were in our own backyard, our own neighbors, our own people, divided and bent upon destroying each other. Today, there are those among us who would, if they could, divide and conquer, they who would use every method known not alone to man, but in many instances, methods, schemes and programs that seem to have had their very authorship in the depths of hell.

Ninety-two years ago we were engaged in a great Civil War testing whether a Nation conceived in liberty, dedicated to the proposition that all men are created equal, could live. Mr. Lincoln went on to the second paragraph of his speech:

"Now we are engaged in a great civil war, testing whether that Nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field, as a final resting place for those who here gave their lives that that Nation might live. It is altogether fitting and proper that we should do this."

How well we can see the same principles attacked today. While it is true they have not openly and violently declared war upon us in our own land, nevertheless they are slowly, but surely laying the plans, so that when the opportune time comes, in their opinion, they can make of this a great battlefield, and let us not be stupid enough to be deceived by the hypocritical smiles or the pseudo handshake of friendship. Let us not forget what is behind that smile. Let us not forget the hand extended to us in friendship has been recently dyed crimson with the blood of innocent people; people whose only offense was to insist upon the right to liberty, the right to worship God in accordance with the dictates of their conscience; the right to live as human beings, the right to the respect of the dignity of man, and today, millions and millions of them are lying in unmarked and unknown places, the victims of the ruthless, pitiless ruler with the iron fist of tyranny. They have felt the weight of it. And let us not forget that our indifference and neglect can bring to us the same destruction that the consecration to our principles brought to the innocent victims of the Communist rulers. They are not any different than they have been from the first day they took over. They live in violence, they rule by fear, they destroy that which opposes them. It is indeed unfortunate that too many of our people in this country cannot see this, cannot realize the end, cannot know the destiny that is theirs as they attempt to do the work of the Kremlin in the spreading of hates, unrest, and attempted destruction to this action to those who are active participants in bringing about the destruction of America, are the hundreds of thousands of our citizens who, through their indifference and neglect, bring great consolation to the leaders of the Kremlin because this indifference and neglect is an evidence to them of the fact that our system of government is decaying, so you can readily see and understand how you can do the work that would destroy us by being indifferent to or neglectful of the duties and obligations that you owe your government. Do not forget that the price of liberty is eternal vigilance.

Again, let me repeat: Now is the accepted time for all free people to read the second paragraph of the simple, but ever-enduring speech of Lincoln, so that we may know, understand, and realize what it means, and as we do so, let us realize how the cemeteries have grown in 92 years, the hundreds of thousands of freemen who have dyed crimson every battlefield in the world with the blood of freemen as they baptized that land and consecrated it to the principles of liberty and freedom as we know and understand and enjoy them.

The third paragraph of the Lincoln talk, I think, is one that should bring home forcibly to us today the obligation that we owe to those who have died in order that we might live. Let us again quote one of the greatest of the great Americans, and let us picture him as he stands there—gaunt, serious, humble, and prayerful, bowed in trouble and grief, but a tower of strength in his faith and devotion to God and country.

"But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work, which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth."

Would it not be well for our American people to take this home and read it and study it; and analyze it, because it unquestionably places upon us the great debt that we owe to the hundreds of thousands of American boys, who tonight rest under the sod and under the dew with the blue canopy of heaven extending its fathomless depths over their patriotic and last resting place. As the great President tells us, they who lie there have consecrated that ground far more than any words of ours could do. Yes, they have dedicated it, they have hallowed it, and they have consecrated it, bringing home to each and every one of us a message that it is a sacred and a holy thing for one to die for one's country. I am sure, if they could cross that great divide where time blends with eternity and bring to you and I, a message, that message to you and I tonight would be that it is a sacred and holy thing for one to die for one's country, but it is just as sacred and just as holy for one to live for one's country. Further, I am sure they would say to us: We have died in order that you might live. Now let not our deaths be in vain. Let not our sacrifices be a mockery. Live so that you will prove worthy of the sacrifices that we have made, even to the supreme one, for you. Yes, we died in order that you might live, and our message to you tonight: Live so that our deaths will not have been in vain. Live for God and country.

Remember that just so long as you keep that flag flying in the protective shadow of the cross, just so long will America live.

I can find no more fitting way to close this address tonight in these days of strife and trouble, in these days of a cold war with millions of human beings behind iron curtains, millions of human beings are still held in prison camps, still shackled and bound in the chains of slavery, still looked upon as mere chattels of the government. Men, who are indexed, as you would the cattle in the fields, are inventoried, not as human beings, but as to how much they are worth to the government in dollars and cents. That condition, on a much larger scale, is the same principle that brought the Civil War, the principle that Lincoln so clearly enunciated as he said: "No nation can live half free and half slave," and I think if he were living today, he would say this world cannot long endure half free and half slave, and therefore, again, we must eventually come to grasp with a situation that if we do not correct it, it will destroy us.

I think the President's last, shortest, and best speech was the one wherein two ladies from Tennessee came before him seeking the release of their husbands, who were prisoners of war on Johnson's Island. They were put off on several occasions, and in each instance one of them was very insistent in impressing upon the President her husband was a religious man. The President ordered the release of these men, and then to one of the ladies he gave this advice, which I think was most appropriate, and I quote:

"You say your husband is a religious man; tell him when you meet him, that I say I am not much of a judge of religion, but that, in my opinion, the religion that sets men to rebel and fight against their Government, because, as they think, that Government does not sufficiently help some men to eat their bread in the sweat of other men's faces, is not the sort of religion upon which people can get to Heaven."

In closing, let me say to you what I have said on so many other occasions, and I again repeat them tonight. That never in the history of this world was there more need for a united American people. Let us not forget, in this crisis through which our Government is passing, our political and religious differences. Let us not quarrel with each other, but let each and every one exercise the right that is his as a free citizen to go down his side of the road with his own conscience, vote as he will, worship as he will, but when he comes upon the great national highway, that highway upon which all streets converge, that highway that leads to the safety and security of this Nation, then let him lay aside all of his differences with his fellow citizens in order that we might join in a united front as Americans. Then there should be no quarrel among any of us as we follow the cross emblematic of man's spiritual redemption and the Stars and Stripes, emblematic of man's political and material redemption, as we go forward to victory with the battle cry not alone on our lips, but better still in our hearts for God and country.

Every Free Election Makes Democracy Stronger

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carmine De Sapio:

EVERY FREE ELECTION MAKES DEMOCRACY STRONGER

(By Carmine De Sapio)

It is not very easy these days to determine just why people become involved in the efforts and activities of one of the major political parties as against the other. I would guess that for the most part, the selection of a party, or dedication to its work, is the result of little more than pure chance. I have never researched the matter, but it is my feeling that most of us originally became Democrats because our parents were Democrats; or Republicans because our friends or neighbors were Republicans.

Certainly, there is no question that millions of people vote other than a straight party ticket, and other millions change their political allegiance from election to election. For as issues change—as platforms adjust themselves to the new problems of new eras, so do the votes of large groups of American citizens change. The farmer, more often than not, votes as a farmer, and supports the party which he feels represents his best interests as a farmer. The same is true of city workers, professionals, union leaders, businessmen, and most other segments of our population. And, I suppose, when you get down to basics, that is why both parties try to sell their programs to as large a cross-section of the American electorate as possible. And if it so happens that one of the parties, philosophically or even traditionally should happen to lean more sympathetically to one group in our population than to another, you may be sure that that party will make every effort to conceal the fact, at the same time that the opposing party makes every effort to proclaim it.

This, my friends, is where you—you who mold public opinion—have a unique and a rare opportunity. Your interests need not be partisan. Your efforts need not be aimed at the achievement of particular election results. Yours is the happy and constructive lot of being able to call the turns as you see them, without regard for political consequences.

Nor does this mean to suggest that politicians necessarily are completely selfish and biased. For although it is quite true that to the politician winning the election is paramount, it is equally true that, with very rare exception, the American politician is as patriotically devoted to his country as any good American would want to be.

But I would be the first to admit that politicians are perfectly fallible and that our political parties are nothing more or less than the men and women who constitute them, just as government is nothing more nor less than a reflection of the program and the attitude of the political parties in office.

And I suppose that so long as there is politics and so long as there are political parties there will be axes to grind and there will be biased views. There will be arguments and debate. There will be praise and vilification. There will be applause and derision. There will be accolade and insult. There will be confusion and contradiction.

But it also is true that so long as there are opposing political parties America will be great and strong.

We have witnessed a strange phenomenon in American politics in recent years—one which was brought into dramatic focus the other day by the President's state of the Union message. For in that message was defined what is at least an expressed acknowledgement on the part of the Republican Party of the need for social legislation and for recognition of the responsibility of Government to help those who are unable to help themselves.

I have heard many people in both parties characterize the President's state of the Union message as New Deal both in tone and in aim and as being in keeping with what has long been the Democratic philosophy of government. And in the absence of any evident rebellion from such Republican stalwarts as Senators WILLIAM E. JENNER, BARRY GOLDWATER, HOMER E. CAPEHART, and JOHN W. BRICKER, it is fair to conclude that the President set forth the new policy of the Grand Old Party. When you review this message in the light of statements of principles which have been made by the Republican legislative leaders in New York and by other Republican spokesmen throughout the country, you must come to the conclusion that if the Republicans haven't actually accepted a program of liberal government they at least believe that this is what the people want.

Now you and I know that our country can never be the long-term beneficiary of the kind of campaign strategy in which both parties seek to outpromise each other. And we know, too, that the two-party system loses much of its strength and meaning if both parties claim to seek the same thing, differing only on the question as to who could accomplish them quicker and better.

Our security as a Nation—indeed, the very safeguarding of our liberty—depends upon the acknowledgement and forthright declaration that there are fundamental differences between the two parties * * * differences in psychology, in philosophy, in tradition, in approach, in ideas and in objective.

Now I don't mean to suggest that the Democrats should claim a monopoly on social reform, any more than the Republicans have a right to claim a monopoly on sound economics. I don't believe that either party has an exclusive franchise on sincerity, on integrity, or on dedication.

But I do believe that the character of our governments—whether local, State, or Federal—should be appraised in terms of their achievements as well as in terms of the history, the backgrounds, and the philosophies of the men who administer these governments * * * to say nothing of the tradition of the particular party in office.

And just as honest debate and vocal difference of opinion is necessary to the preservation of our system of government, so is it extremely dangerous to take the myopic view, if you are a Democrat, that everything the Republicans do should be attacked * * * or if you are a Republican, that everything the Democrats do should be ridiculed.

Changing times bring changing challenges * * * and different needs. No party, no system, no government can survive the determination to stand still either in reflection on the glories of the past, or in fear of new experiments. We have no choice but to move forward, for it is impossible to stand still in today's moving world. Static thinking has no place in a dynamic era * * * and certainly in the age of the atom.

You are the last people in the world I need remind that we stand on the precipice of disaster. But, by the same token, we stand, too, on the threshold of new wonder, of new glory, of new advancement.

It is perfectly true—and has been true through the ages—that the people are possessed in infinite wisdom. They need only to be armed with the facts, to give expression to their inherent sense of humanity and to their natural instinct for being correct. This truism poses for you, my good friends—you who are gathered in this room today together with your counterparts throughout the country—a responsibility of incalculable magnitude.

The people read your writings and are influenced by what you say. They listen to your analyses and they accept your authority. They study our pictures and drawings and their judgments are formed. They look to you—as leaders in the arts—for objective guidance, for accurate portrayal and for honest leadership.

Whether or not the people obtain these is for your own consciences to decide. From politicians they get—as they expect—partisan propaganda. From the newspapers, from magazines, from radio, from television they expect—and should get—the unvarnished, the uncolored truth.

When the politician guesses incorrectly—when he fails to anticipate and understand the people's wishes—his mistake becomes graphically evident on election day. He is then faced with one or two alternatives. He can invite disaster for himself by seeking to impose his thinking on the people and hope to have better luck next time, or he can adjust his policies and his program to conform to the voter's wishes.

But he cannot lure public interest with a dramatic presentation which subtly conveys a particular viewpoint. He cannot attract an audience to his thinking through comic strips or entertaining columns or because he is a needed and necessary source of information on what is going on in the world. The politician cannot reach the voter every day with a cartoon that carries both interest and impact.

He is limited to the distribution of partisan literature or the delivery of partisan speeches. And he is almost always dependent upon you people to help get his message to the public. He can never hope to get into the homes and the minds and the hearts of the people every day as you do and even if he could, the chances are his message would be one-sided and slanted.

Now the question presents itself—are the editors and writers and commentators and artists to deny themselves the same right to human thought and emotion with which the politician should like everyone to believe he is possessed? Don't they have ideas and tastes and individuality of thought and opinion? The answer obviously is yes. But they have one other thing—they have an overbearingly profound responsibility as teachers of the people.

My friends, would you tolerate the partisan teaching of our children in the schools? And I ask aren't the people of letters, in fact the teachers of history in the classroom of the world?

Needless to say, it would be sheer folly to deny the right of editorial expression to any American, least of all to a person in the arts. But in your case, there is an added—an awesome—responsibility. It is for you to dispel confusion. It is for you to fulfill the right of the American people to know all of the facts, to know where they have been, where they are, and where they are going.

There is a distinction between exposition and explanation, as against interpretation and opinion. There is a world of difference between stating the facts and then expressing a judgment, and misstating or misemphasizing the facts in order to prove a judgment.

President Eisenhower, Governor Harriman, Mayor Wagner and other public officials everywhere will tell you how difficult it is to attract outstanding men and women to public service. The salaries are low; the hours are long; the work is hard. And instead of honor and respect and appreciation for their sacrifices, they live in constant fear of attack and vilification. Leonard Hall and Paul Butler and party leaders throughout the country know how difficult it is to attract men and women to political activity because the politician is depicted as a sinister, evil disciple of corruption and greed.

And yet, where would America be, where would the world be, without politics, without men and women who recognize that it is not enough for a citizen merely to cast his ballot, but rather that it is the duty of every citizen to be a part of and an influence upon his party and its decisions.

And just as our bad public officials, and bad politicians, and bad businessmen, and bad labor leaders and bad newspapermen should be exposed and turned out of positions of trust, so, too, should no group be maligned; no segment of our society be forced to carry the cross of the minority of mad-doers in its particular field.

I would strip the halo from the hypocrites and I would strip the mask from the phonies. But to condemn a politician or a party, either because of the wrongdoings of a few, or by the application of ancient history, is to condemn our American system of government.

I hope you will pardon the probable presumptuousness of what I say, and understand that when I suggest that some of those who have the responsibility for disseminating public knowledge may not be doing so with complete fairness, I allude to a small minority, the kind of minority which exists in my profession as well as in yours, and in all others.

But I feel as you must, that there is no place for politics-as-usual in these perilous times. Our children, their children and their descendants for generations to come will never forgive the mistake we make today, assuming that those mistakes do not foreclose the existence of future generations.

It is as unsound as it is precarious for our teachers—for you—to take the view in January of 1956 that whoever the Republicans nominate should be defeated, or that whoever the Democrats nominate will be no good. It is rather for all of us—Republicans and Democrats alike—to agree on one simple principle, and that is that the most vital responsibility which both parties owe to America and to the world, is to nominate the best possible candidates for the overwhelmingly important office of President.

My friends, if both parties put forward the best possible candidates, the people will win the election.

The election campaign which we approach will be unprecedented in many ways, not the least of which will be in enthusiasm on the one hand, and in bitterness on the other. I am sure that none of us need fear the consequences of the campaign in terms of the future of our world position, because history has proved that every free election makes every democracy so much the stronger, at the same time that it brings to the world a new lesson in the meaning of freedom.

But we can dramatize this lesson at the same time that we render great public service by assuring that people will hear all sides of all questions in free and frank discussion.

In modern times, the complexion and character of election campaigns have changed to the point where both parties are very largely dependent upon radio and television for reaching the voters with their messages.

You people know better than I, how expensive this is. I read recently where the Republican Party has budgeted more than $8 million for radio and television alone, and this naturally places a similar onus on the Democratic Party, for it, too, must seek to reach the same number of people the same number of times.

Where do these vast sums of money come from? Obviously from the contributions of party supporters. And, needless to say, many of those who make substantial contributions to the party of their choice, expect to benefit in some manner. This benefit may be in the nature of an appointment to the cabinet or in some other form of favor and recognition.

The extent to which a political party is beholden to large contributors is the very extent of the weakness of our governmental structure. And that is why it may be well for us to consider the advisability of consolidating a large part of the public service time, which our radio and television networks so generously apportion throughout the year, to the period of an important campaign.

The less money the party feels compelled to spend, the less it will depend on large contributions and the more it can appeal to the general public for support. No person has the right to buy, and no group has the right to own a political party. No political leader should be beholden to a contributor, because our political parties belong only to the people and not to any individual or group of individuals.

And assuring this, too, my friends, becomes your responsibility, as well as the responsibility of our political leaders.

Gen. Alfred M. Gruenther

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. TEAGUE of Texas. Mr. Speaker, on Tuesday, February 7, the Veterans of Foreign Wars held their annual congressional banquet. One of the highlights of this occasion is the presentation of the Omar N. Bradley medal given each year to some deserving individual. This year, the presentation was made to Gen. Alfred M. Gruenther, and under leave to extend my remarks in the RECORD I wish to include his acceptance speech:

NATO—OUR GREATEST INSTRUMENT FOR PEACE

(Address by Gen. Alfred M. Gruenther, Supreme Allied Commander, Europe, at the annual congressional dinner, Veterans of Foreign Wars, Washington, D. C.)

Commander Murphy, honored Members of Congress, distinguished guests, ladies, and gentlemen, gratefully, I accept the Omar N. Bradley medal. I should like to be able to say that it is because of some distinguished service or conspicuous merit that this award has been made, but, unfortunately, that is not true. I have been the beneficiary of the inspirational leadership furnished first by General Eisenhower and then by General Ridgway, which left Allied Command Europe in a very viable state when I assumed its command. Next, I have had the assistance of millions of men and women of the armed services of the NATO nations. Also, the member governments have supported this alliance in magnificent fashion. The Members of the Congress of the United States, of whom a great number are present here, have given time and interest and support of a high order. I extend my deep appreciation to them. And, finally, Commander Murphy, the members of the Veterans of Foreign Wars, have given us tremendous help.

You may not realize it but the pilgrimage of your organization to Europe in October-November of last year was a great contribution to our cause. I remember very well the ceremony at the Arc de Triumphe in Paris on November 11 where you made a splendid impact on the French people.

Incidentally, I had dinner last evening in Los Angeles with Gen. Omar Bradley, who asked me to extend his best wishes to the Veterans of Foreign Wars assembled here this evening. I am glad to report that he is in excellent health. He had a slight mishap the day before yesterday—he scored only an 83 in his golf game—an unusually high score for him.

I think on this almost-the-fifth anniversary of the date when General Eisenhower arrived in Europe to set up a headquarters for defense of the free world there, it is appropriate to review some elements of our progress, some of the problems which still face us, and some of the solutions.

When General Eisenhower came to Europe, the defenses of the free world were in a distressingly low condition. Prior to his ar-

rival, there had been a series of incidents: The Czechoslovakian coup, the Berlin blockade, and, finally, on the very day of his arrival, January 8, 1951, there was a depressing report from Korea. It seemed that it would only be a matter of weeks until the United Nations forces would be ejected from that peninsula. The atmosphere of Europe, and of the entire free world, was one of danger—almost despair.

When General Eisenhower surveyed his resources, he found that they were very, very low. But what was even worse, the resources he did have could not be used to implement a common strategy, because there was no such strategy.

I am pleased to be able to report now, 5 years later, that there is such a strategy, that there is an organization in being, and that if an attack should suddenly develop at this very moment, all of our commands know exactly what to do.

The resources themselves are approximately four times what they were at that time, but that, of course, does not give an answer to the question, "Is that good enough? Would we be able to repel successfully an all-out act of aggression tonight?" The answer, unfortunately, is "Probably not."

The Soviet might is increasing steadily, and when you consider the status of our defenses when we started, it would have required almost a miracle to be able to give an entirely favorable answer tonight. Our progress has been great, but it is not yet great enough.

We are facing today the largest aggregation of military power in the peacetime history of the world: Some 175 Soviet land divisions, nearly all of them good; some 20,000 operational aircraft. That is about the number of aircraft in 1951, but at that time 80 percent of them were piston-driven planes. Now, 80 percent of them are jets. Moreover, the Soviets are engaged in an all-out production program of the latest type of jets.

In the naval field, they have given high priority to submarines. There are now approximately 400 submarines in the Soviet Navy. That figure does not mean much until we recall that when the Germans started World War II on the 1st of September 1939, they had less than 75 submarines.

This, then, represents a very powerful force in being. In addition, the Soviets have made substantial progress in the nuclear field. It is also clear that they are giving great emphasis to their guided missile program.

Just 2 weeks ago, the Soviets published their sixth 5-year plan in which there is a heavy concentration once again in the war industries.

In 1946, Stalin announced a program for 1960 which he said would be enough to protect the country against what he called "all possible accidents." There are three items in that program which deserve a moment's attention. At that time, he said, "We will need 500 million tons of coal a year." In 1955, they reached the figure of 390 million tons, but they have increased the objective for 1960 to 593 million tons.

"In steel," Stalin said, "we need 60 million tons." Last year they produced 45 million tons, and they have upped their objective to 68 million tons for 1960. In case that does not impress us, we should bear in mind that in 1929 the Soviets had a steel production of only 5 million tons.

In oil, which was the third major element of his program, he said, "We need for 1960 a production of 60 million tons." Last year they already exceeded that with 70 million tons and they have upped their program now to 135 million tons.

Those are very formidable figures.

I do not want to leave the impression that everything the Soviets have tried to do has turned to success. That is not so. In the agricultural field, they have had great difficulty, and the indications are that these problems will continue. For example, last year, they had 8 million fewer head of cattle than they had in 1928, which was the year before the collective-farm system started. That is a very definite failure, which the Soviet leadership is trying to correct. They have also had major failures in connection with their grain programs.

All of these increases in Soviet industrial potential, all of this emphasis upon Soviet military might, is at the expense of the Soviet citizen. Today, in the Soviet Union a suit of clothes costs between 1,300 and 1,600 rubles. When one realizes that a painter or carpenter gets a salary of 700 rubles a month, you recognize the austerity of his living standards.

In case this might cause us to think that a revolution is likely in the Soviet Union—that we could look forward to a time when the populace would revolt—I feel that would be misguided, wishful thinking. The people are well disciplined, and they know no better way of life. The chances of a revolution are very slight. I feel that the Soviet Union is going to continue to make progress in its production goals.

Of course, they are having difficulties with the satellites. There again, though, they are making considerable progress in the armed forces. The satellite countries have 75 divisions, not all good ones by any means, and some 2,500 planes. They have a public relations problem with the satellite people, but they know that, and they are working on it. They are concentrating on the children through indoctrination and education on a long-term basis.

The Soviets feel that time is on their side and if they wait it out, they will have the strength for their system to prevail. Within the past year, there have been new indications that they have absolute confidence that their system will win in the end. With their ability to marshal scientific, technical, and economic resources under centralized direction—without regard to the wishes of the people—they constitute a very strong opponent. They have a leadership group of 6½ million Communists who are dedicated to their materialistic philosophy. They believe in it with all of their hearts and souls, and they are able to control easily the remaining 210 million people of the Soviet Union.

That tremendous strength is the reason why I say, as of now, we are probably not strong enough in Europe. I want to emphasize here, however, that I am talking about only one part of the problem; namely, Europe. That does not mean that we would lose a global war if it took place, because, as of today, we still have a very substantial advantage in long-range airpower. At the present stage of technological development, the offense in airpower has a very big advantage over the defense. To summarize, as of today, we have this situation: In Europe, we are not strong enough yet, but on a global basis we still have an advantage. How long we are going to retain that advantage is, of course, a speculative matter.

As for our defense in Europe, we expect to be able to give a positive answer to the question that I have posed after the German contribution is effective. We will have by the middle of 1959 some 12 German divisions, some 1,300 aircraft, and naval craft largely for use in the Baltic. When we reach that level, and if we can use atomic weapons, which we feel are an essential part of our armament, we then will be able to give reasonable assurance that we can defend Europe successfully against an all-out attack.

I do not want to give the impression that I am depressed over this situation, because I am not. We are actually further ahead than we thought we would be when we made our forecasts in those dark, dreary days in the early part of 1951.

I also want to make clear that I think that the next 5 years are probably going to be more difficult than the first 5 years. I say this because we are moving into an era where the battle for men's minds has become increasingly important, where the necessity for having unity among our own people, where the importance of their understanding of the issues, is absolutely vital. Basically, this gets down to a question of convincing the 450 million people in NATO to have confidence that this alliance can—and is the best way to—meet this threat.

We think—and that is the principle on which NATO was organized—that collective security is the only answer. Generally speaking, most people agree to that thesis. However, the great progress we have made has generated a confidence, which in turn has caused a certain relaxation of tension. These elements, coupled with certain changes in the immediate tactics of the Soviets, are creating difficulties for the free world. We are faced with the task of seeing to it that our people do not relax, but continue their support for this alliance so that it can continue effectively to prevent a war from taking place.

In that endeavor, the partnership of the United States is of supreme importance. Whether we like it or not, the mantle of world leadership has fallen upon our shoulders. This alliance will succeed, in large measure, in the degree to which we are able to exercise that leadership. Please know that the competition is tougher than ever before.

Take the most recent Soviet maneuver, which happened just a few days ago: Bulganin's response to President Eisenhower's letter is being circulated and broadcast all over the world now. The Soviets are working on the uncommitted billion among the 2½ billion people of the world. They are not concentrating on trying to win the 165 million people in the United States, or even the rest of the 450 million people of NATO. In this psychological struggle, we face very severe difficulties. As propaganda experts, they are masters. We are far behind them in getting our story told. Our effort is very small; theirs is a massive one, cleverly put over and it does produce results.

I am certain we can meet this challenge, but it will require a determination and a dedication on the part of the free world, and particularly on the part of the United States.

The Soviets get their unity by the gun-in-the-back method. We have to get ours through the more laborious processes of democracy. There are 15 nations in this alliance, all of them sovereign—and we want them that way—but it is time consuming and sometimes difficult to reach common programs.

Some Americans have the impression that the United States support of NATO—and I have actually heard this occasionally—is a type of charity. That is simply not true. We must be unmistakably clear that we need Europe just as much as it needs us. Our participation in this enterprise is a matter of our own survival. It is most important that we act in such a way that our allies know that their interests and ours are mutual.

I feel that if we are able to furnish encouragement to some of these countries which are having trouble, I am certain they are going to remain firm in spite of the tremendous pressures that the Soviets are applying to them.

Take one illustration, East Germany. This is Tuesday, the 7th. A week ago Saturday in Prague the Warsaw Pact powers met, and once again, Mr. Molotov, as he has done many times in the last year, issued a strong denunciation of NATO, charging that it is an aggressive organization. However, the Soviets introduced a new factor into this particular meeting—they admitted East Germany to the Warsaw Pact military command.

The East German forces, consisting of some 7 divisions and more than 100,000 men, have now been raised to the status of armed forces and operate under Marshal Koniev, whom I knew in Vienna in 1945. At this meeting, which ended last Saturday, they made a very shrewd maneuver. They said, "We feel that no German forces, be they East German or West German, should ever have atomic bombs." That is a clever play directed toward the West Germans to get them, who feel very exposed if a nuclear war should take place, gradually to assume a neutral attitude. If they should be successful in that endeavor, it would be very disadvantageous for our cause and for the West Germans. I do not think this maneuver will be successful. However, it demonstrates clearly the cleverness of their tactics, and the need of alertness on our part in the battle for men's minds. This is only one of a series of thrusts that the Soviets are making, all of great ingenuity.

If our people understand the issues; if they remain stout of heart I am certain we can succeed.

You may say that I am an optimist. I plead guilty to that charge, but I feel that I am more than an optimist. I feel that I have faith in our civilization, in our concept of religion, with their dedication to the dignity of the human individual.

I feel that we have the ability to approach these problems with an understanding and with a point of view which will definitely match the Soviet materialistic ideology.

I am confident that if we can preserve the unity which we have already developed, no power, however menacing, will be able to prevail against us.

It has been a great pleasure for me to be here this evening. In addition to the great honor of having received the Omar N. Bradley Medal, it gives me the opportunity to tell the members of Congress here and the Veterans of Foreign Wars how grateful we at SHAPE are for the visits they have made to Europe during the last year. These visits are tremendously helpful in assessing the problem that exists there, and in reassuring the people of Europe of our constancy in this alliance.

I want you to know that basically we feel this is your problem. We agree with Clemenceau, who said, "War is much too important to be entrusted to the generals." We are entrusting it to the Congressmen and the Veterans of Foreign Wars. We turn the problem over to you and we shall be your willing servants, I assure you.

I extend an invitation to all of you, when you are in the European area, to visit our headquarters. We do not think we know all the answers to these problems. We are willing to take advice, criticism, be it constructive or destructive. The one thing we cannot stand is indifference. With your participation, I am absolutely certain that we are going to be successful in achieving a lasting and durable peace.

I thank you very much.

Stiffer Dope Penalties

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Picayune of February 7, 1956:

STIFFER DOPE PENALTIES

While there is no indication the President's Cabinet committee on illegal narcotics traffic is willing to go as far as a Senate Judiciary Subcommittee in recommending the death penalty for smugglers and peddlers of dope in extreme cases, the five-department group did urge stiffer prison terms, more enforcement agents, and closer Federal-State coordination to combat dope addiction and supplying.

The group's recommendations particularly called for more severe maximum sentences for the commercial dope vendor. At the same time, the group proposed that addicts, whose crime is to obtain drugs for their own use, be considered as primarily a problem for treatment and rehabilitation.

Since the Federal Omnibus Narcotics Control Act of 1951 (the Boggs Act) was passed by Congress with emphasis on mandatory sentences against violators for repeated offenses, there is some evidence that peddlers are using young people with no conviction records. This development, with increased use of narcotics by teen-agers since the war, has raised requests for revision of the 1951 act. Congressman BOGGS has urged that first offenders be given mandatory sentences of at least 5 years. Present Federal law permits offenders to be put on probation or given suspended sentences. Some State laws permit judges to assess fines rather than prison sentences for first offenses. In the case of one State this penalty is fixed at not more than $100 or jail not exceeding 6 months, or both.

Present Federal laws call for the following maximum penalties: First offense, $2,000 and not less than 2 or more than 5 years; second offense, $2,000 and not less than 5 or more than 10 years; third or subsequent offense, $2,000 and not less than 10 or more than 20 years. In a bill introduced but not passed at the last session of Congress the penalties were greatly stiffened. The President's intergovernmental committee has made no specific proposals along this line. But it has agreed punishment needs to be stiffened to meet the illegal narcotics threat.

Good Man for a Rugged Project

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. OSTERTAG. Mr. Speaker, the President has reached into the city of Rochester for another big man to do another big job. He initially tapped Marion B. Folsom to serve, first as Under Secretary of the Treasury, and currently as Secretary of Health, Education, and Welfare. This week he has named Mr. Edward Peck Curtis, vice president of the Eastman Kodak Co., as a special assistant for aviation facilities planning. Mr. Curtis' vitally important task is to develop a plan to meet the Nation's requirement for aviation facilities in the light of the rapidly increasing use of our airways. The necessity for such a study is evident, and the choice of Mr. Curtis to direct it insures a cogent and comprehensive report.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an editorial from the Rochester Democrat and Chronicle of Sunday, February 12, with respect to this important appointment:

PRESIDENT TAPS GOOD MAN FOR TOUGH JOB

Appointment by President Eisenhower of a second Eastman Kodak executive to high position in the Government reflects high honor, of course, on the caliber of these Rochesterians. However, the task to which Edward Pack Curtis has been appointed is no mere position of honor. It is a tough job.

Just as he did when he tapped Marion Folsom for Government office, the President is reaching out for the best men he can find to accomplish the work. In this case the job entails getting American airports of all kinds ready for the jet age.

That is a simple way to state one of the most complex and important operations a man could take on. It includes everything from longer runways and new and better landing systems to the myriad human problems that are cropping up in aviation. Coincidentally, it was the subject of an editorial on this page not long ago.

There are now so many different kinds of planes, operating at speeds varying by hundreds of miles per hour, that this alone presents dozens of problems. Planes are being operated in great numbers by the military, by airlines, scheduled and unscheduled, by businessmen and by sport pilots. And all the different categories are disputing over their rights, real and alleged.

Military planes have long since gone to sonic speeds and faster, and within 2 or 3 years, airlines plan to do the same. Our airports, largely brought up to snuff for the old propeller planes by the beginning of the decade, are beginning to look outdated as they did 15 years ago.

This is a mere glimpse into what will confront Curtis when he gets to Washington. He has a brand new job, that of coordinating and speeding along the efforts to smooth out American aviation. From his days as one of the first American aces in World War I, through his service as executive assistant to the head of the Strategic Air Force, Gen. Tooey Spaatz, Curtis has been familiar with aviation. With the same courage he took into the air in his younger days, he has agreed to plunge up to his neck in today's aviation problems.

The importance to the Nation of this job is obvious. For the sake of us all, as well as his own, we wish Edward Curtis all possible luck in his latest assignment. The qualities aside from luck that he will need, he has. President Eisenhower has chosen a good man for a rugged project.

Dr. Harold R. Kurth

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent eulogy that appeared in the Lawrence Sunday Sun, of Lawrence, Mass., on Sunday, February 12, 1956, concerning the late Dr. Harold R. Kurth. He was president of the Massachusetts Medical Association, and a leader of many other medical societies throughout the country and one who was a personal and intimate friend of mine for a great number of years. In fact, on my last two confinements at the Lawrence General Hospital, Dr. Kurth, was my personal physician and was most instrumental in restoring my good health

for which I will always be thankful for his careful, conscientious, and highly professional service.

In Greater Lawrence, Mass., Dr. Kurth will be a great loss, since he has rendered valuable medical service to people in all walks of life as a highly successful physician and surgeon. He has restored to many, many thousands their health and was of immense help to those who were invalids and others confined with incurable diseases.

Rich and poor alike had great respect for him as a lovable physician of the old school, active in the community life of Greater Lawrence, a willing worker with all the various charitable groups, contributing financially and otherwise to all worthwhile civic and religious endeavors.

He will be a great loss to his immediate family, and his friends, associates, and the people of our community for his excellent qualifications and untiring efforts in behalf of all of us.

The article follows:

A GREAT HEART STILLED

The funeral of a great surgeon was held yesterday. Local men and women representing diverse walks of life, and many from miles afar, came to bid farewell to Dr. Harold R. Kurth, who, at the age of 60 and in the prime of his life and career, succumbed on Tuesday to a coronary thrombosis.

Others of our neighbors passed away in the same week from the same cause. We cite the expiration of the life of Dr. Kurth with specific intent, not only because his departure was a great loss to our community, but, additionally, because it serves to illustrate the fact that no one among us is immune to heart disease—even persons who as medical men have been so closely associated with it for years.

Heart disease in its various forms is the greatest killer of them all. It is brought on in many instances by physical drive and mental pressures. All of us know this. Yet we continue to extend ourselves to the limit until that day comes when an overworked heart falters or stops completely.

Some survive such attacks. Provided they can adjust themselves to a slower tempo, they can be reasonably sure of a long and useful life. But there is no guarantee that we can come through it.

The only means by which medical science can one day proclaim that it has beaten heart disease is through an unrelenting crusade of study and research in our great university medical schools, in clinics, and in the laboratories where dedicated men and women strive to find the answers.

Few of us realize what study and research means. There are few persons in medicine who can afford to drop everything and just plain devote their lives and fortunes to attacking the causes of ailments of the heart. There are few who, from their own fortunes, can afford the vastly expensive laboratories and equipment and personnel necessary to a pursuance of this noble work.

Thus, the financial part of the crusade must come in good measure from the people. It is within their province to provide the funds essential—vital—to the perpetuation of this study and research. The medical scientists give of their stock-in-trade, time, and skill. The financial wherewithal must come from each of us.

We are now in the midst of February, the 12th part of a year set aside for the concentration of effort on the accumulation of these funds.

You have many avenues for giving. Find one and contribute to the continuation of this great work, the perhaps uncolorful but urgent campaign which is moving slowly but surely to its objective.

Progress is slow, but we are encouraged by the fact that, over the years, one after another of maladies which, in another time, were considered real threats to life, have been conquered or minimized. And there is every reason for the hope that in a generation ahead of us, the lifespan of mankind will be extended by years of expectancy by the minimizing of, or the eventual defeat of, diseases of the heart.

Genesee County's Outstanding Young Farmer

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. OSTERTAG. Mr. Speaker, the Junior Chamber of Commerce of Batavia, N. Y., has recently bestowed on Carl Yunker, a 32-year-old farm operator, the title of Genesee County's outstanding young farmer of 1955.

Mr. Yunker's record for industry, diligence and acumen as a farm operator is matched only by his notable contributions as a leader in his church and his community. His selection reflects credit on the junior chamber as well as on Mr. Yunker.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD, an editorial from the Batavia Daily News about this outstanding resident of the 39th Congressional District.

YOUNG FARMER SHOWS THE WAY

Carl Yunker, 32-year-old farm operator, holds the title of Genesee County's outstanding young farmer of 1955.

It is an honor bestowed by the junior chamber of commerce through a selection by a special committee of agricultural leaders. As Genesee County's representative, the Elban is a prospect for State and national recognition.

A résumé of Mr. Yunker's activities is edifying. His skill and success at farming are portrayed in the fact that he has seen his investment increase from a net worth of $911 in 1948 to $22,560 today.

That, in itself, would seem to be an operation that would consume all of his time. Over and above this he is credited with being a spearhead in the new farm bureau organization. He is president of the Western New York Holstein Club, a director of the Conesus Milk Producers Cooperative, director of the Dairy Council of the Niagara Frontier, a county committeeman for the Agricultural Stabilization and Conservation Service.

Mr. Yunker has likewise served as elder of the Elba Presbyterian Church, vice president of a Sunday school class and adviser, with his wife, of the Youth Fellowship.

This is a distinguished record, a tribute to his interest not only in agriculture but also to his community and his friends.

It is not often enough that there is pause to reflect on how dependent the rest of us are on people engaged in agriculture.

The junior chamber of commerce has wisely taken this shortcoming in hand. Such undertakings as this serve to make better neighbors of the so-called city folks and those who till the soil, a most desired goal.

What the Gas Bill Will Cost New Yorkers

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. DOUGLAS. Mr. President, for the information of Members of Congress and of leaders of other branches of our Government, I also ask unanimous consent that there be printed in the Appendix of the RECORD an article from the New York Post for February 8, 1956, entitled "What the Natural Gas Bill Will Cost New Yorkers."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT THE NATURAL GAS BILL WILL COST NEW YORKERS

(By William H. Rudy)

Only President Eisenhower's signature on the Harris-Fulbright natural-gas bill is needed to open the door to a $1-million-a-month increase in the metropolitan area's gas bill.

The utilities concede a price increase is on the way.

"It's our belief that the cost of gas is bound to inch up," a spokesman for the Consolidated Edison Co. told the Post.

It will be a Big Inch, according to all indications, for when the bill becomes law there will be no regulatory body to keep the price of natural gas from going as high as the traffic will bear.

The magniture of the forthcoming price increase can be predicted from these figures:

In 1952, the price of natural gas at the wellhead ran from 7 to 10 cents per thousand cubic feet. As late as 1954 it was 10 to 12 cents. The current figure runs from 17 to 21 cents.

Even under the regulation of the Federal Power Commission the producing industry was talking about 25 cents per thousand cubic feet, and one leading producer has gone on record as thinking of 40 cents within a few years.

Every cent of these prospective increases will be passed on to the consumer. There is nothing to stop passing them on and indeed, there is little alternative to passing them on.

The three big units of the booming natural-gas industry are the producing, the transporting, and the distributing.

The FPC still regulates the interstate transporters—the pipelines.

The Public Service Commission here still regulates the distributors—Con Edison, Brooklyn Union, Long Island Lighting, Brooklyn Borough, and Kings County Lighting.

But without price control at the wellhead, the FPC and PSC powers are all but useless.

Here's the way a price increase at the source reaches the New York consumer, flowing along as swiftly as the gas itself.

Most of the metropolitan area's natural gas arrives in pipelines of the Transcontinental Gas Pipe Line Co. Transcon buys it in Texas or Louisiana, with the price in Louisiana somewhat higher on the average than in Texas.

Once the protection of the FPC is removed by the signing of the Harris-Fulbright bill, there is nothing to prevent the producer in Texas or Louisiana or Mississippi from raising his price to the figure he thinks he can get.

If the pipelines have to pay 2 or 5 or 10 cents more per 1,000 cubic feet they need

only apply to the FPC to charge 2 or 5 or 10 cents more to Con Edison or the other distributing companies. The FPC has little choice but to approve it.

Once Con Edison, for example, gets its gas at 2 or 5 or 10 cents more per 1,000 cubic feet it can, under a purchased gas adjustment agreement reached with the PSC 2 years ago, pass along the increase to the consumer.

The PSC, in turn, has little choice but to approve.

These is, in the Harris-Fulbright bill, one sop thrown to the consumer. The FPC is allowed to limit the pipeline corporations from paying more than a reasonable market price for the gas at the wellhead.

In the opinion of State regulatory bodies, this provision is worthless.

If most producers in an oilfield are charging 12 cents, for example, an independent attempting to charge 17 cents might be considered unreasonable. But if all the producers raise to 17, then that is the going rate and therefore reasonable.

Another factor operating toward higher and higher costs is the escalation or favored-party clause in virtually all producer-pipeline contracts. Says the PSC:

"Under these clauses the price paid at every wellhead skyrockets automatically whenever an additional source of supply is tapped at a higher price. Thus, one purchase of an infinitesimal amount of gas can and often does establish a uniform so-called market price for an entire area and under these bootstrap clauses the fluctuation can only be upward, never downward."

Inclusion of the reasonable market price in the Harris-Fulbright bill only gives administrative sanction to charging all the market will bear, says the PSC.

The PSC, which has been a party to all recent rate increase applications before the FPC which would affect this area, says flatly of rate increases:

"The end does not appear to be in sight."

There is a gloomy prospect for the nearly 175,000 homeowners who use gas for heating in the city, Long Island and Westchester, and the 2,250,000 other consumers who use gas for other purposes.

Because of the many variables such as the intensity of the winter cold, the size of the house, the efficiency of the insulation, no exact figure can be reached on the amount of gas needed to heat a house. But an average figure for a one-family house is about 15,000 cubic feet.

A 5-cent price boost—a conservative figure under present expectation—would increase each residential bill 75 cents a month.

Home heating alone, a small part of overall gas consumption, will cost New Yorkers $125,000 a month more once prices increase.

In still another way, higher gas prices at the well can make snowballing prices here.

Con Edison, for example, is able to buy its natural gas from Transcon for a relatively low price, paying presently about 34 cents per 1,000 cubic feet while some upstate utilities pay as much as 51 cents. Con Edison is able to do this because it takes a steady flow of gas 365 days a year, and what it does not use in warm periods for heating, it uses for manufacturing electricity.

"A rise of only a matter of pennies will make it uneconomical to use this extra gas," an industry spokesman says, "and a utility may not be able to take a steady flow day in and day out. This, of course, would mean a higher price, for the transporter can't regulate the size of his pipeline. It's cheaper for him to operate at full capacity."

The producers made much during argument for the Harris-Fulbright bill for the need of freedom to drill exploratory wells.

"That's a phony," say the experts. "Wells are drilled for oil, not gas. Up until the last war they flared the gas at the wells, just burned it off."

So the natural gas customer will pay for the drilling of more oil wells.

World Statesmen Join in Woodrow Wilson Centennial Observance

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an extract from a recent issue of the Newsletter of the Woodrow Wilson Centennial Celebration Commission containing the statements of several European statesmen who were associated with Mr. Wilson in his great work for world peace.

The extract follows:

BONCOUR SAYS WILSON POINTED ONLY SURE WAY

The Honorable J. Paul-Boncour, who represented France at the League, said:

"For myself, and I think for all the veterans of the 1914 war, the name of Woodrow Wilson is associated with the unforgettable date of November 11, 1918, when the bugles of all the armies sounded the 'cease fire' along the length of a battlefront which had stood almost intact for 4 long years of suffering and death.

"We had fought so that this should be the war to end all wars and, thanks to the voice of Wilson coming to us from across the Atlantic, that great hope spread around the world. The League of Nations, composed of free and equal sovereign countries, committing themselves to combat the aggressor, whoever it might be, was the surest guaranty of a collective security, the only valid way, the only way capable of preventing war.

"Alas, his noble candor was scorned at the diplomatic tables. His dream was mutilated. He returned to his own country only to see his proposals rejected by his own countrymen. He died like a King Lear, persecuted by his own daughters.

"Vincent Auriol, who was himself a great president of the Republic, went during his visit to America in 1925, to meditate at Mr. Wilson's tomb in the Cathedral at St. Albans, Washington. Knowing my fondness for this great man, he sent me a postcard of the tomb, saying that he had placed a wreath in my behalf.

"I look upon this card and recall this memory while in my turn I pay homage to the 100th anniversary of Wilson's birth."

SWISS VIEW CENTENNIAL AS WORLDWIDE EVENT

William E. Rappard, Swiss educator and Statesman who was director of the Mandates Section, had frequent interviews with Wilson regarding the actual setting up of the League in Geneva. He stated:

"The centennial of the late Woodrow Wilson, which is to be celebrated in 1956, is primarily, but not only, an American event. The statesmanlike qualities which President Wilson displayed, particularly during and after the First World War, make of him a figure to whom grateful reverence is due by lovers of peace the world over.

"We in Switzerland have many reasons for looking upon him as a benefactor of our country. In the first place, it was doubtless due in no small measure to his personal intervention that we were spared the famine which threatened us in 1917. Secondly, it was clearly due to his insistence that Geneva was chosen and, against the opposition of several of his allies, maintained as the seat of the League of Nations. Thirdly, and I should say principally, we in the small Alpine republic in the heart of Europe look upon him as the main champion of the democratic and liberal ideals of peace which the world owes to the political philosophy he consistently and courageously expounded and defended.

EX-CENTRAL EUROPEANS CALL WILSON LIBERATOR

Dr. Bogumil Vosnjak, chairman of the Central-Eastern European Woodrow Wilson Committee, released the following statement concerning the centennial:

"The historical role of Woodrow Wilson in the liberation of nations which lived until 1918 under the rule of the Hapsburgs is often neglected.

"The committee was founded October 15, 1955, in Washington, D. C. Its members are representatives of Czechoslovakia, Poland, Rumania, and Yugoslavia now in exile.

"The committee will not only participate in the centenary of Woodrow Wilson but has also the task to destroy the Communist legend that the liberation of these countries in 1918 was a consequence of the Russian October revolution in 1917 and not of the efforts of these nations themselves as also of the political and diplomatical assistance of the United States of America."

Chauncey W. Reed: Soldier, Patriot, Statesman

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I join with my colleagues in expressing my deep regret over the passing of our former colleague, CHAUNCEY W. REED. To his widow and children I extend my profound sympathy.

It was my privilege to know CHAUNCEY REED quite intimately and I have always been proud to claim him as a summer constituent. He and his famly spent the summer vacation months at Powers Lake in Kenosha County, which is within my congressional district. I know from information that has come to me that CHAUNCEY did considerable electioneering in my behalf with the residents in that area, all of whom were greatly attached to him because of his kindly manner and sincerity.

Mr. Speaker, CHAUNCEY W. REED was indeed a soldier, patriot and statesman. He, like many of us, lost no time in enlisting for service in World War I with the high objective of making the world safe for democracy. He served with distinction in that war as a member of that famous 86th Division. Upon his return to civilian life he helped to organize and was the first commander of the

Naperville Post, No. 43, of the American Legion. On the national level he continued to serve with the Forty and Eight. Thus he helped to firmly establish the American Legion in his own community. While so engaged he was elected State's attorney in DuPage County as a Republican. He served the Illinois State Republican Committee for 8 years and was elected to the 74th Congress and each succeeding Congress since that time.

Mr. Speaker, those of us who served with CHAUNCEY W. REED know how consecrated he was to the responsibilities of that great committee, House Judiciary. We shall miss him from our ranks but we know that he has left his imprint upon this body.

Mr. Speaker, I have lost a personal friend who on many occasions has upon my request given me sound counsel and advice.

Distribution of Surplus Government Property for Educational and Public Health Purposes

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a press release and report of the Department of Health, Education, and Welfare concerning the education and health benefits derived during 1955 under Public Law 61 which I had the honor to introduce and subject to detailed hearings.

The report shows that real property in the amount of $17,924,167 and personal property amounting to $165,464,872 was transferred to needy educational and health institutions during the year. It is gratifying to note that good, usable surplus property which would have brought but a few cents on the dollar, if sold, is going to our institutions in such volume at the time of real need:

Surplus Federal property for which the Government had paid $183,389,039 was made available to the States for educational and public-health purposes during 1955 by the United States Department of Health, Education, and Welfare.

Real property accounted for $17,924,167, and personal property $165,464,872.

Secretary Marion B. Folsom announced the year-end totals simultaneously with his quarterly report to Congress on the Department's surplus-property program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies of State and local governments, and to eligible nonprofit health and educational institutions exempt from Federal taxes. Regional offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Total acquisition costs of surplus property made available during the fourth quarter of 1955 (October 1 through December 30) amounted to $49,176,777. Real property had cost the Federal Government $3,519,994 and personal property $45,656,783.

During the 5-year period 1951–55, personal property that had cost the Federal Government $469,939,218 has been distributed to the States. Included were such items as motor vehicles, furniture, tools, motion picture projectors, laboratory equipment, and school and office supplies.

Real property (buildings and land) distributed to the States during the same period originally cost the Government $49,087,479. Property transferred to the States includes school and hospital building sites, buildings suitable for college dormitory or faculty housing, motor vehicles, hospital, school and office furniture, hand and machine tools, motion picture projectors, laboratory equipment, and school and office supplies.

Department of Health, Education, and Welfare—Personal property made available for distribution to and real property disposed of to educational and public health institutions Oct. 1 through Dec. 30, 1955 (acquisition cost)

(In accordance with sec. 5, Public Law 61, 84th Cong. (H. R. 3322), McCormack bill)

States	Personal property	Real property	Total
Total	$45,656,783	$3,519,994	$49,176,777

Laudable Step

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. OSTERTAG. Mr. Speaker, the Eastman Kodak Co., of Rochester, N. Y., has recently designated Good Friday as a paid holiday for its employees, and St. Augustine Memorial Post, Catholic War Veterans, has presented a scroll to the company in recognition of this enlightened and laudable step. Under leave to extend my remarks, I include in the RECORD, the wording of the scroll:

St. Augustine's Memorial Post 1122 Catholic War Veterans of America commends the Eastman Kodak Co., of Rochester, N. Y., for designating Good Friday as an annual paid holiday for its employees. A deserved world renown for distinguished service to the community, to the Nation, and to the world, in time of peace and in time of strife, in the fields of industry, education, recreation, and social welfare, is, thus enhanced by this positive and powerful encouragement to increased reverence and respect for spiritual truths, upon which human welfare and a stable society must ultimately rest. "Not by bread alone can man live" was uttered by the Saviour of men, as one of many truths to which He bore witness and lent deathless vigor by his deed of imperishable memory on that day which Christian men have come to love and reverence as Good Friday.

Problems of Our Family Farmers

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HULL. Mr. Speaker, I will not now consume the time of the House but, with leave to revise and extend my remarks, I am inserting in the RECORD a letter I recently received from one of the good farm women in my district. I earnestly request my colleagues, particularly those of you from large city districts who may have no personal familiarity with the problems of our family farmers, to read it in the quiet of your offices. I assure you that this eloquent story is not the isolated portrayal of the troubles of a single family, but that it graphically describes a constantly increasing and spreading condition.

I do not know whether the Secretary of Agriculture will read this or not, but I want to most emphatically remind him and you that March 1 is a critical date in the farm communities of my State, and while we debate here and in the Senate as to the best method to help our farmers, large numbers of them are being ruined while we talk. Time is short and I appeal to the Secretary to immediately use his present authority to prevent further unnecessary suffering. Here is the letter to which I refer:

SAVANNAH, MO., *February 6, 1956.*
Congressman WILLIAM HULL,
Washington, D. C.

DEAR SIR: I saw a program on television one night last week that I'd like to tell you about. Maybe you saw it. I hope so. It was about the closing out farm sale of Dale Peterson, Corning, Iowa. I didn't know what it was about and started to shut it off when I discovered it was a farm sale. We have attended several sales so I was curious more than anything else.

Also I was waiting for my husband to come home. He drives a Fillmore school bus. Had taken the basketball team to a neighboring town to play. I thought if he

could only see this. Then I started taking notes to tell him about it.

They sold a scoop shovel for $3.50 that had cost $6.25, milk cows cost about $235 and sold for $100. Hogs sold for about one-half of what it had cost him to raise them. I cried while it was going on, because he was taking such a loss. He came home from Korea and started farming in 1946.

They talked over the fence to three men who live near Corning in Iowa. They disagreed about whose fault it was and on what should be done to help farmers, etc. Visited a wheat farmer in Washington State. Talked to bankers in Iowa who said they couldn't loan farmers any more money because some couldn't even pay interest this last fall. Saw Wisconsin dairy men. Several different ones. All had the same story, were operating and continuing to lose money. Just skipped around over the country.

After a station break Mr. E. T. Benson came on to tell what he thought of what he had just seen. I was so glad to have a chance to see him and hear him speak. Have heard a lot about him and thought I'd have a chance to make up my own mind as to whether I thought he was the kind of man to have as Secretary of Agriculture.

The very first thing he did was laugh about the closing out sale he had just seen. Said, "I hope you folks won't take that little scene serious. Actually there's very few closing out sales or foreclosures as they're called. When they do quit its mostly the little inefficient farmer who doesn't know how to farm or only has 160 acres of land.

Now I know the difference between a closing out sale and a foreclosing sale. But I wonder if he does. Sometimes a farmer has a closing out sale to quit of his own accord, such as ill health. Sometimes it may be because he has to sell out and try to pay what he owes instead of having someone sell him out. There's a lot of difference to my way of thinking.

I couldn't tell you the rest of his speech because I was so mad to think he had the nerve to get up and talk like that. I knew then and there he couldn't possibly understand our problems. My husband came home then and I told him about the program. I wanted to write Benson right then, but Forest talked me out of it. It was late and I was too upset to write anyhow. Didn't think it would do any good if he didn't already know what was going on here on the farm.

We met you several years ago at the tobacco warehouse in Weston, Mo. Was with Mr. and Mrs. Parker Horseman who I know to be friends of yours. We met you again later when you made your campaign speech at Fillmore. We were with Mr. and Mrs. Harold Ramsey that time. Also know J. C. and Ruth McClain are friends of yours. So that is why I feel like I know you. Would like to tell you our own personal problem. I saw two other names in the Savannah Reporter, our local paper. They are Senators SYMINGTON and HENNINGS. Will also write Secretary Benson when I write them.

Now here is what I would like to tell you. We rent 160 acres. Have lived here 8 years. Since 1948. In the spring of 1950 our house burned with all our personal belongings. We were away from home at the time and didn't save a thing. We had a little insurance. Friends and relatives helped us all they could. We are very thankful for all they did and always will be. We bought what we had to have to start housekeeping again. We had borrowed money to get our farm seeds, alfalfa, red clover, and seed corn. They were in a storeroom and burned in the fire. We went in debt again for more seed. After we paid part of our bills that fall we couldn't pay our rent. Our landladies were very good. We promised to pay the rent and some on a note in 1951. That year we lost most all our spring pigs and still needed things for the house. Paid only part of what we had promised to. In 1953 we had dry weather and a few grasshoppers. Same in 1954 only more grasshoppers. Even worse last fall, 1955. We have hauled water since last May for household use and every summer for 6 years. Used a neighbors water wagon and tank. Four others used it, too. We own 1 now and 3 others are using it. We are now hauling water for stock and everything.

We thought of quitting last fall a year ago. Decided it was too much of a loss to quit. Besides we've never done any other work. Have farmed all our lives and like living on the farm. We decided to go on 1 more year. Last fall, 1955, we were worse off than ever. Owe for gasoline, oil, repairs on machinery, our doctor and last year's seed. Just about everything you can think of as well as back rent. Up until the time the house burned we were able to manage as well as anyone else.

On the surface it looks as if we are doing all right. But we we keep getting bills. Some threatening us if we don't pay immediately. Others are very patient. Keep reminding us how much we owe though. We would like to pay everyone every cent we do owe. My husband has worried himself sick. Has stomach ulcers and is never well. You know after so long a time it is easy to think what is the use of working all day and late hours and not get ahead.

We talked to a lawyer and he advised us to try one more year and pray for a better crop season. We can't sell out and pay everyone. We can't and don't want our landladies to foreclose and not get all we owe them. So what are we going to do? We've signed a contract for 1956 and made a lot more promises that we truly hope to keep. We can't go on and we can't quit. I know there're lots more like us and some who owe more than we do. Just little inefficient farmers on 160 acres. Last week our Savannah Reporter had a notice in the wants ads saying write to Secretary Benson if you were thinking of having a foreclosure sale. Well, what is he going to do about it? If we quit and work elsewhere we'll be taking someone else's job.

That's why Dale Peterson's closing out sale hit me so hard. And why it hurt so to have Benson laugh it off and try to say it wasn't happening.

Now I'm not complaining about the low prices altogether. It's prices, grasshoppers, and the drought combined that have me down.

I'm not in favor of high prices like we have had in the past accompanied by war. My brother served in Korea. We spent many anxious hours while he was away. God answered our prayers and sent him home. We have friends though near and far who lost someone close. They paid a far greater price for the high prices we received for our farm goods than we did. I don't ever want to see that repeated.

I'm not blaming Benson and the Republican administration for the low prices, although I believe anyone can do as good a job as Benson is doing. I don't think anyone should blame the Democrats who were in before either. Oh, yes, I can hear you Democrats saying, "She doesn't remember when Hoover was in and the other depression. Well, I most certainly do! I very well remember that! I can also hear Republicans saying the Democrats caused the last war. Well, I think Roosevelt was one of the greatest Presidents we'll ever have. Not because of his politics but because he was a great man and could see ahead. The low prices following war are a normal trend but why can't there be a middle price that we can expect the year round?

My parents are very good Republicans as were all my grandparents. I heard the Democrats cussed and discussed very much when I was a kid. In fact, I used to wonder what they were until I was old enough to know they were one side of a political argument. My husband and his family are most all Democrats. So I've heard their side 20 years. I made up my mind to vote for the man best fitted for his job not because of his political status, but because of his ability.

I don't know what you can do or are doing to help us all, but I do know its a very serious matter and not something to be joked about as Mr. Benson seemed to be doing.

Thank you for reading this. I'd like very much to hear from you.

Sincerely,

MRS. FOREST ELIFRITS.

The Moral Strength of Woodrow Wilson

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the Richmond News Leader on February 3, 1956.

The editorial follows:

THE MORAL STRENGTH OF WOODROW WILSON

This is the centennial year of Woodrow Wilson's birth. The State of Virginia, in whose city of Staunton he was born, and the people of the United States are now turning again to this 28th President and 8th and last Virginia-born occupant of the White House, to see what kind of a man he was.

The passing years have blurred the world that Woodrow Wilson knew until it is almost beyond recognition. Historians, looking back at the Wilson era, have pointed to serious errors he made. What seemed right in 1917 and 1919 has sometimes been found not to have been so right after all.

Yet this much is true: This Virginian was a man who profoundly influenced the course of American and world history. And this is true, too: He was a good and great man.

Much has been done already to honor him. The Presbyterian manse in which he was born in Staunton has become a national shrine. A commemorative stamp bearing his portrait has been issued. Churches throughout the Commonwealth have observed his memory. A Town Meeting of the Air broadcast has been staged at Mary Baldwin College, in Staunton.

Much more is planned by the various memorial commissions—the Memorial Foundation and the National Centennial Commission headed by Maj. Gen. E. Walton Opie, of Staunton, and the very active Virginia Centennial Commission headed by Delegate George Cochran. On February 21 former United States Senator Tom Connally will address a joint session of the General Assembly. The week of April 21–29 will feature a host of events. In July a Woodrow Wilson pageant will be staged. On Armistice Day next November his life and personality will be the theme, and on December 28, his birthday, other memorial observances will be held.

Elsewhere in the Nation, Wilson's memory will likewise be honored. The Library of Congress has published an impressive number of its Journal of Acquisitions devoted to Wilson's papers. Most of the States of the Union plan memorial observances, too.

In these times of much public and private confusion and international wrangling, the memory of Woodrow Wilson is particular-

ly green. For here was a man of irreproachable character, a thoughtful statesman and a magnetic political figure who gave the Nation lofty leadership in peace and in war. The achievement of Woodrow Wilson during his first term of office, the bold correction of abuses and farseeing implementation of needed political and social reform, represents a presidential record of high accomplishment.

His wartime leadership, his willingness to guide his country into full acceptance of its responsibilities, placed him in the foremost ranks of America's great Chief Executives. If he guessed unwisely and figured wrongly in his plans for the peace that followed, still he acted with high intentions and gave the free world a picture it still honors, of an America possessed of humanitarian zeal and deep democratic faith. Our foreign policy is still drawing upon the moral capital given it by Woodrow Wilson.

Those Silent Workers for Peace

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BECKER. Mr. Speaker, to those of us who work, hope, and pray for peace, it comes as a heartening lift and we are filled with admiration for that splendid group of unheralded women who, in their silent, steadfast way, are earning for you and for me that peace for which we yearn.

I commend to the attention of all, an article appearing in the Kernel, a newspaper in my district, entitled "America's Strength." Truly this is America's strength, and her hope, this powerhouse of prayer generated by these women who are working for the one membership that really counts, God. Unless that long-standing application for membership in the U. N. is approved, we cannot expect peace. We are finding out that we cannot go it alone.

The article follows:

AMERICA'S STRENGTH

Last Saturday taught us that the strength of America is not in her factories, her jets, her armaments, her Yankee ingenuity, her way with machinery.

Her strength lies in the soft determination of women like Dorothea Terwilliger, Mrs. William White, and Margaret O'Regan, three Freeport housewives.

A cruel wind whistled down Pine Street last Saturday, an early morning wind that drove through wool to ache its way into the bone; to set in that bone and defy normal heat and scalding cups of coffee to oust it. It was that kind of a winter's morning.

The children, like all children, didn't know it was cold. The three ladies looked frozen too, but they bustled around, making sure that all preparations for transportation to the U. N. were attended to, every last child loaded, 110 of them, plus chaperons. After the heated buses left, they joined the blue Kernel photographer and reporter for a quick, thawing cup of coffee before getting into their own cars and following the procession.

We wondered at the energy of these typical Long Island housewives, and asked just what there was about the united prayer for the United Nations movement that caused them to give so much of their time to the cause. Dorothy Terwilliger, an attractive mother, spoke for the group.

"We are going to the meditation room of the United Nations and, with the children, we will pray that God will guide the minds and actions of the delegates. We believe that unless God is brought into the U. N.—and we don't feel that he has been invited so far—the workings of that body will come to naught."

Sincerity shone in the faces of the three as they told about their work, sending thousands of letters to delegations, receiving assurances from other American and European countries that they, too, were glad to join the United States in the request for invocation at the beginning of each session; a prayer aloud for divine guidance instead of the minute of silence that precedes each session.

Said Mrs. White: "The present 'minute of silence' is a minute of mockery. As quasi-hosts (and this means that we pick up the biggest part of the tab) we certainly ought to be accorded the courtesy of an opening prayer at the beginning of each session."

The reason the Kernel is solidly behind the "United Prayer for the United Nations" movement is that it has no paid staff, no headquarters, and it does not accept cash donations. The thousands of letters sent out so far have been typed and mimeographed by the ladies and friends all over the country. Right now the crying need is for stationery, either printed or plain, stamps, typewriter ribbons and mimeograph supplies and machines. These supplies, plus the energy of these Freeport housewives, will be used to help the work of God, used to insure the world against the flaming holocaust of the hydrogen bomb.

The insurance won't be in the form of man-made pacts or the rumblings of statesmen who have grown away from the needs of the people. It won't be in faster jets, more powerful explosives, larger armies, bigger factories.

It will be insurance written by the Great Underwriter in the head office, upstairs. The actual forms are being filled in down here by his agents, the Mesdames Terwilliger, White, and O'Regan. Good policies, always paid promptly and in full, written with love for their fellow man in every line.

If you want to help this work, call this paper and we'll tell you what you can do to help this good cause along.

To make the delegations to the U. N. aware of the "grassroots" movement to admit God to the U. N., the U. P. for U. N. movement in Freeport has mailed 50 copies of last week's issue of the Kernel to 50 foreign delegations. The Freeporters fear that the delegations, living and staying in Manhattan, are not aware that the backbone of America is in her villages, towns, and suburbs—and that the thinking in the city of New York is not always the thinking of the rest—the real—America.

Invitation to a Heart Attack

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, in a facetious mood, I am inserting at this point an invitation to all Members to join the Coronary Club. The membership requirements follow:

THE CORONARY CLUB—MEMBERSHIP REQUIREMENTS

1. Your job comes first; personal considerations are secondary.
2. Go to the office evenings, Saturdays, Sundays, and holidays.
3. Take the briefcase home on the evenings when you do not go to the office. This provides an opportunity to review completely all the troubles and worries of the day.
4. Never say "No" to a request—always say "Yes."
5. Accept all invitations to meetings, banquets, committees, etc.
6. Do not eat a restful, relaxing meal—always plan a conference for the meal hour.
7. It's a poor policy to take all the vacation time which is provided for you.
8. Fishing, hunting, golf, bowling, pool, billiards, cards, gardening, etc. are a waste of time.
9. Never delegate responsibility to others—carry the entire load at all times.
10. If your work calls for traveling—work all day and drive all night to make your appointment for the next morning.

Another Smear Answered

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was published in the Washington Post and Times Herald, February 13, 1956:

MCKAY ANSWERS PEARSON

Mr. Drew Pearson asserted in a column published February 9 in the Washington Post and Times Herald that Lloyd Bohlke of Prosser, Wash., was fired from the Kennewick Irrigation District by Bureau of Reclamation officials and replaced by Van E. Nutley at $10,000 annually.

Please be informed that Mr. Bohlke is not, and never has been, an employee of the Bureau of Reclamation.

Mr. Nutley has been a career employee of the Bureau of Reclamation for 20 years. He is chief of the Field of Engineering Office of the Bureau for the Kennewick Division.

The Kennewick Irrigation District is an independent organization of water users who contract with the Federal Government for repayment of the cost of a share of the Kennewick Division of the Yakima project. The Bureau of Reclamation has no jurisdiction over the Kennewick Irrigation District nor are District employees on the payroll of the Bureau of Reclamation.

Recently the director of the Kennewick Irrigation District approached the Bureau of Reclamation, requesting the services of Mr. Nutley. Because of his career status, Mr. Nutley was reluctant to leave the Federal service. However, because of his experience on construction of the Kennewick Division, it was recognized that he would be of particular value to the Kennewick Irrigation District in its operation.

Accordingly, he has been granted a 6 months' leave of absence without pay from the Federal payroll to enter the services of the Kennewick Irrigation District.

The Department of the Interior and the Bureau of Reclamation are not informed as to whom he replaced or why.

DOUGLAS MCKAY,
Secretary of Interior.

Genuine Cause for United States Alarm

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thought-provoking article by Dorothy Thompson which appeared in the Washington Evening Star, under date of January 30, 1956.

The future welfare of our Nation may well depend upon an adequate supply of trained engineers, mathematicians, and scientists, and surely we can ill afford to fall behind other nations in the training of our young men and young women in science and engineering.

The article follows:

GENUINE CAUSE FOR UNITED STATES ALARM—SOVIET FORGING WEAPONS OF BRAINS AS AMERICANS LAG IN SCIENCE STUDY

(By Dorothy Thompson)

What we call "cold war" and the Russians call "coexistence" is going to last for a long time. It is a struggle, waged from positions of military strength on both sides with the paradoxical understanding that military weapons will not be used. The weapons are, instead, a factor contributing to the political strength and influence of each of the rivals. The real conflict is the political, economic and ideological struggle of each to expand its global influence at the cost of the other.

One factor in this struggle is industrial and technological capacity. Here the West is in the lead, but the Soviets are catching up, with the firm intention to equal and surpass the United States within a decade or so.

In this competition conceivably the primary factor is education. And here there is genuine cause for American alarm.

Previously I have described Russian secondary education with its enormous disciplines.

Not long ago Adm. Lewis L. Strauss, Chairman of the Atomic Energy Commission, and others concerned with American technological progress again revealed the deficits of American education. We are seriously short of students trained in science and engineering. The reason lies in our high schools, where students do not even have the opportunity to discover whether scientific studies appeal to them "because courses are either not available, or are taught by instructors doubling in other subjects," and (the comment is mine) such courses are not compulsory.

In 1950 only 4 percent of American high school students were studying physics, 7 percent chemistry, 27 percent algebra, and 13 percent geometry.

In contrast, in 1900, the percentage of such students was from 2 to 6 percent higher.

In more startling contrast, these subjects, elementary to all further scientific-technological training, are compulory in the Soviet Union for 100 percent of students, and begin in the seventh grade.

Russian education is continuous through 10 grades. Anything but progressive, it is, apparently, modeled on the system that prevailed under the Tsars, and which within the limited population it reached—by no means confined to the aristocracy—produced superb intelligences. Now, available to everyone—with the exception of rural communities to which the 10 years course has not yet been wholly extended—it is an education for an elite of brains, developed by effort and ambition, which the student either encompasses or flunks out of, into schools for the retarded, or into the ranks of manual labor.

I am not recommending this system for America. But we must face up to the fact that the attempt to educate everybody is progressing to the point of educating nobody in the knowledges fundamental to work requiring strict, intellectual disciplines.

Sixty years ago a high-school diploma testified that its possessor had an elementary knowledge of algebra, geometry, physics, chemistry, one antique and one modern foreign language; could speak and write his own language grammatically; give a somewhat coherent account of at least American history; had read and competently reviewed at least a few of the outstanding English-language classics; and had passed extensive examinations—not of the quiz-kid variety—with a minimum mark of 75.

Today possession of a high-school diploma may not assure knowledge beyond that once transmitted before the sixth grade. The intellectually ambitious student is pulled down to the level of the stupid and lazy.

In any rivalry and in all fields of victory goes to the nations that produce the better brains. Brains are developed only by effort and intellectual disciplines. If education progressively abandons the studies that demand these, everybody may be able to read and write (after a fashion) and nobody be able to think. Then we shall be finished.

Revision of the McCarran-Walter Immigration Act

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following statement regarding revision of the McCarran-Walter Immigration Act:

STATEMENT FROM CONGRESSMAN ALVIN M. BENTLEY, REPUBLICAN, OF MICHIGAN

I have received a letter dated January 17, 1956, from Mr. Saul Grossman, executive secretary of the Michigan Committee for the Protection of Foreign Born and enclosing a resolution concerning the McCarran-Walter act. The resolution apparently supports Gov. G. Mennen Williams in his demand for the repeal of the act and calls on Michigan's congressional delegation to sign a discharge petition to force H. R. 501 (a bill for repeal) out of committee.

I have said before and wish to repeat that I do favor certain revisions (not repeal) of the McCarran-Walter Immigration Act. I have also attempted to caution those who sincerely desire to change this law to be careful of the company they keep. This warning is specifically designated against individuals such as Mr. Grossman.

According to the public records of the un-American Activities Committee, Grossman has been named by witnesses testifying under oath as having attended conferences of the Michigan Communist Party, Communist Party schools, and as having been an active member of the party itself. When called before the committee, he took the fifth amendment and was voted by the House of Representatives in contempt of Congress in 1952. In 1953 he was indicted for contempt by a Federal grand jury on 3 counts and, in December, was found guilty on 1 count by the United States district court for the District of Columbia. The United States Court of Appeals reversed this conviction only last month.

The Michigan Committee for Protection of Foreign Born has not been cited. It is understood, however, to have cooperated with the American Committee for Protection of Foreign Born which was cited by the Attorney General in 1948 as subversive and Communist. Following his indictment, Grossman was publicly supported by the Civil Rights Congress which was also cited as subversive in 1948.

In view of the foregoing, I am certain that those persons or organizations who wish to repeal or modify the McCarran-Walter act will give Mr. Grossman and the Michigan Committee for the Protection of Foreign Born the consideration which they deserve. The support of such persons and organizations can, in my opinion, only endanger the chance of amending or improving the legislation in question.

Joseph P. Kennedy, Jr.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting editorial that appeared in the Boston Pilot, February 11, 1956:

A HERO'S LEGACY

The test of real greatness is often measured in the use that we make of our misfortunes. Personal human tragedy and an experience of death are for some people crushing events which seem to bring men to the end of a road from which there is no escaping, to smother them in a sorrow beyond all human enduring. And yet for others even the most trying incidents serve as a renewal of faith and a rededication to cherished ideals. For these the darker the night the more they see the glory of the distant stars. Sorrow is a sure separator, setting the weak apart from the strong.

During World War II a young United States Navy flier, like American boys everywhere, went gallantly to war in the service of his country; he carried that combination of duty and daring ever characteristic of American fighting men so much admired by our allies and so much feared by our enemies. His name was Joseph P. Kennedy, Jr., a son of one of Boston's best-known families, and a name already conspicuous in patriotic service. From one flight he was destined not to return; in valor and courage he made the total sacrifice for his country.

In the years that have passed, the memory of this young hero has not in any measure been forgotten and in the days ahead it will shine brighter with each passing hour. His family has established in his name a foundation which, faithful to his own willing spirit, distributes in expanding largesse, financial aid to worthy causes. In the proper sense of true charity, it concerns itself notably with the handicapped and the infirm, with those who are, in fact, unable to do very much for themselves. It assists the young and the old, the troubled and the reclaimed, the school and the church. Some funds push back the research frontiers of science, others set the

hand of human compassion on the brow of the suffering. Every area of human life, it seems, feels in some manner the tender ministrations of a hero's memory.

Surely all of this is a tremendous tribute to a young man who in the full promise of his youth offered his life for his country. It is also, however, an immensely gracious gesture which reveals the character of a great Christian family. For members of this family, even in tragedy, the hand of Providence is the hand of God, and no power on earth can bring them to forget his loving sovereignty. From the blessings which he has bestowed upon them they are eager to pass on a benediction to others.

No one will fail to see some significance too, in the fact that the Kennedy Foundation has consistently channeled its benefactions through the organized charities and projects of the church. This in no manner limits its dispersal in the community, since any observer will see at once that the institutions assisted care for people of every religious and racial background. What it does, however, is to make plain that these are no mere philanthropies, scattered about as one might scatter an excess of abundance, but acts of kindness rooted in religious and spiritual motivations. There can surely be a world of difference even in the same act when the reasons that move to action are themselves widely separated. The Lord himself reminded us that our motives are of first importance, offering his divine reward to those "who give a cup of cold water in my name." When each charity, from faithful hearts, carries with it the sign and the seal of Christ's church, who can begin to estimate its heavenly reward?

In all of this we must see, too, an obvious enconomium for the zealous archbishop of Boston. No citizen of our city, indeed no citizen of our Nation, but knows that there is a heart on fire with the willingness to work for others, to wear himself out so literally in assisting the less fortunate. To give so generous an aid to the archbishop's many charities is to share in the blessings and prayers which each day are offered for his intentions. In joining the charity of a great Christian family with the zeal of a farseeing churchman, the entire community is enriched while the memory of a youthful hero is eternally enshrined.

Bryan Laymen's Prayer Meeting

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. TEAGUE of Texas. Mr. Speaker, each Friday morning, businessmen, bankers, merchants, and men from all walks of life gather for the purpose of conducting a spiritual gathering.

Mr. C. D. Yancy, principal of the Carver Elementary School, of Bryan, addressed such a group on Friday, December 2, and I had the pleasure of being in attendance. Under leave to extend my remarks in the RECORD, I wish to include his address:

SPEECH MADE AT THE BRYAN AND BRAZOS COUNTY LAYMEN PRAYER MEETING

(By C. D. Yancy)

"Let the words of my mouth and the meditation of my heart,
Be acceptable in Thy sight, Oh Lord my strength and redeemer."

To Judge Barron and members of this Brazos County laymen early morning prayer group, may I assure you that I accepted this invitation with a deep sense of humility and gratitude, humble because I feel unworthy of so great a task, grateful not because of the benefits you will receive from me but for the great source of inspiration and encouragement you give me.

I am going to ask you to think with me for a few minutes on this topic, Where do we live? I would like to use as my scripture a portion of the 10th verse of the 14th chapter of the Gospel recorded by St. Luke: "Friend, go up higher."

The house of life has three stories. There is also a basement, Freud tells us. A few still live on the first floor, most of us live on the second, and some have climbed to the third. But all of us run up and down the stairs. On the first floor we live by instinct, impulse, and force. On the second we live by obligation, moral law, and the beginning of reason. On the third floor we live by insight. Either we think as we live or live as we think.

Naturalists tell us that there is a certain kind of fish in central Africa which varies in size according to the size of the lake in which it lives. The same species being larger or smaller in proportion to the dimensions of their habitat. Men are larger or smaller in proportion to their scale of thought and this too determines the floor of life in which he lives.

On the first floor life is a struggle and the fittest survive. If a man is strong enough to take a business away from another man he does it, "Wherefore let him that thinketh he standeth take heed lest he fall." Brother if anyone is caught in the very act of doing wrong, you who are spiritual in the spirit of gentleness, must set him right; each of you continuing to think of yourself for you may be tempted too. For if a man think himself to be something when he is nothing, he deceiveth himself. (Gal. 6: 1-3.) Therefore we must attempt to manage our thoughts for someone has so wittily stated that: we are not what we think we are. But what we think, we are that.

On the first floor it is the law of the jungle, where the weakest go down and the swiftest win the race. Desire, not duty is the rule. Life is ruthless; no quarter is asked or given. Believe it or not, much of our life, more than we are willing to admit even in what we call civilization is lived on this level.

It is on this floor we forget that it was no accident that "Thou shalt love the Lord Thy God" is the first commandment. That when a person has a deep love for God he is constantly strengthened by it. It removes unnecessary fear. A missionary in Africa says that most of the people with whom he works are filled with fears. They are afraid of all kinds of spirits, of a world of magic and superstition. But, says the missionary, we teach them that behind all these seemingly dangerous objects is a great loving father who controls all and is always good. It is possible through belief to move upward. How do people learn to love? Not merely by having a lesson on it. Not by self-discipline; we do not tighten our belts stick out our chins and say, "Now I am going to love God if it kills me." We learn to love by first being loved and responding to it. Then we must let God love others through us. Only the love of God can make us go straight. If we refuse to allow that love to become the controlling force in our lives there is no hope to keep us from acting out wild impulses or living on the first floor or even in the basement. It is in the basement where selfishness is shown. For a man wrapped up in himself makes a very, very small package.

But on the second floor man begins to live by reason and moral law. There is a stop in the mind. As John Woolman would say; something which arrests him and compels him to pass moral judgment on his thought and acts. He sees dimly that selfishness is short thinking and defeats itself. At this level we live and let live if only to protect ourselves. At this level we admit our character defects—we learn to face ourselves and say—Thou ailest there, and there, and there. Too often we think of sin as an event, while actually it is always a personal act or decision. We need to ask ourselves why did I tell that lie—or fail in that habit or refuse that job I was asked to do? What is wrong with my character that I have failed in that respect? It takes courage to face our real defects and to ask God to change us. We know that in the very act of prayer we must accept responsibility for making decisions. There is no escaping conflict—in other words we cannot save our faces and save our souls (or grow spiritually) at the same time.

But there is a third floor in the house of life, to which the other two lead if we do not stop. We must climb up to it; there is no elevator nor escalators—there the outlook is wider and the light whiter—we can see more clearly. Here it is not enough to live and let live; we learn to live and help live. On this level of gracious living a man sees that human values are far more precious than money values. He will not use men to make money. He will use money to make men. At this level we learn to act in the present. My present obligation is to live today well. Sir William Osler, the great physician, used to talk about living in day-tight compartments. He said we need to undress our souls at night like we do our bodies. This is what Christians have always done. But he does so as to acknowledge at any given time that we are under God and must depend on His help. It is on this floor that we must be in the proper management of our lives one day at a time.

Just before Jesus went back to the Father, Peter pointed to John and said, "Master, what about this man? What do you want him to do?" Jesus was almost severe when He answered, in effect, "If it is My will that he stay on the earth until I come again, what is that to you? You follow Me for yourself" (John 21: 20-23). It is the old story of thinking of finding God's will in a long-range life program. What He says to us is that if we would find His will it must be in the proper management of our lives one day at a time.

The tragedy is that so many of us live part of our lives on one floor and part on another floor. Sir John Browning wrote the stately and beloved hymn, In the Cross of Christ I Glory—yet the same man forced opium on the Chinese people at the point of British guns. He wrote his hymn on one floor of the house but went downstairs to do his dirty work.

The man on the first floor of life is a wild man, untamed—like a shadow he cries out with the wind. Just when we think we have him downed, covered with a layer of reason, he breaks out in hatred and egoistic cruelty. We can never be sure when we will make some disruption and calamity. The question is, "Where do we live?" Downstairs or upstairs? In the basement where instinct gropes in the dark, or on the third floor, where at night we can see the great stars obey the will of God?

Can't you hear a sweet, still voice constantly saying to us, "Friend, go up higher." Leave the low-vaulted past, the dim twilight, and climb to the upper room, where are celebrated mysteries of the life that is life indeed.

"If I have wounded any heart today,
If I have walked in my own willful way,
If I have caused anyone to go astray,
Dear Lord forgive."

Al Sarena Mine Claims Case

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Based on Law, the Democrats Have Poor Issue in Al Sarena Mine Claims Case," published in the Eugene (Oreg.) Register-Guard, of February 8, 1956, together with a letter dated February 8, from Wendell Wyatt, chairman of the Republican State Central Committee of Oregon to the editor of the Oregonian, at Portland, Oreg.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

FEBRUARY 8, 1955.

EDITOR, THE OREGONIAN,
Portland, Oreg.

DEAR SIR: In his letter to the editor, Senator MURRAY accuses me of being unfair to Senator KEFAUVER and a certain Democrat leader because I wrote:

"To settle the issue, the committee should hear testimony from the owners of Al Sarena (most of whom are Democrats), former Interior Secretary Chapman, Senator KEFAUVER (who interceded for the applicants), and the Democrat leader who offered to handle the Al Sarena application for a $10,000 fee."

This is a strange accusation to come from a Senator whose subcommittee attempted to blacken the reputation of President Eisenhower, Secretary of the Interior Douglas McKay, Congressman Harris Ellsworth, of Oregon, and the owners of the Al Sarena mining claims.

Instead of calling any of the suggested witnesses, the committee Tuesday voted to end the Al Sarena inquiry after months of severe but unfounded accusations uttered by Democrat members of the committee.

One must conclude that the committee agreed with the testimony it received from Interior Under Secretary Clarence Davis. He pointed out that the patents were granted in accordance with law and the Department had no recourse but to obey the law.

Another conclusion would be that the hearings were ended to avoid embarrassing Democrats, such as Senator KEFAUVER, Congressman BOYKIN, of Alabama (who also interceded for the Al Sarena applicants), and the certain leader who offered to represent the claimant for a $10,000 fee.

Is it too much to ask that a first order of business for a Republican Congress in 1957 should be to complete the Al Sarena inquiry by calling witnesses to explain actions taken during the Truman regime.

It would be amusing, if not so tragic, that a Democrat Senator protests my suggestion that the Al Sarena inquiry include testimony from two Democrats involved in a transaction questioned by Democrats.

Apparently there is a double standard of political morality: "If we investigate you and intimate that your party is in the wrong, that is good politics, but it's unfair if you drag my fellow party members into the inquiry. Further, it is misrepretentation if you attempt to set the record straight."

Sincerely,

WENDALL WYATT,
Chairman, Republican State Central Committee of Oregon.

[From the Eugene (Oreg.) Register-Guard of February 8, 1956]

BASED ON LAW, THE DEMOCRATS HAVE POOR ISSUE IN AL SARENA MINE CLAIMS CASE

In a closed session of the joint Senate-House committee investigating the grant of mining patents on 15 claims to Al Sarena Mines, Inc., it was voted to discontinue the inquiry.

Senator SCOTT, Democrat, North Carolina, who was heading the investigation said the decision was made after the McDonald brothers, Herbert and Charles, who are principal officers in the firm which developed the claims in Jackson County, informed him they did not wish to testify.

It is unfortunate the McDonald brothers made this decision even though it is doubtful they could have added to the voluminous record in the case. However, they could have made clear their views and intentions in regard to the 23 claims which have been under attack of Democrats since the patents were granted by Undersecretary of Interior Clarence Davis on January 6, 1954. And, it could be added: If the Democrats were seriously interested in getting to the bottom of the Al Sarena case, why didn't they subpena the McDonald brothers?

It seems evident that the issue will still be a topic in the coming political campaigns, principally because the investigation arrived at no conclusion, a fate of many other congressional investigations.

Mr. Davis, then solicitor for interior, granted the patents on the basis of the 1872 mining laws, and in our opinion had no alternative if the laws were to be upheld.

A series of articles on the Al Sarena mines by reporter Dan Wyant of this newspaper prior to the 1954 elections proved to us that Al Sarena is a legitimate effort to develop a mining operation. That there is a great conflict of interest because of timber on the claims cannot be questioned. But the fact that there is timber valued in the neighborhood of $100,000 on the claims (the Forest Service estimated it at $77,000 on the 15 contested claims in 1950), unfortunately is not material to the issue.

And even under the revision of the mining laws adopted in July 1955, the miner who proves a patent gets title to any surface rights. Although the laws have been improved, they are not tight enough to preserve the timber on national forest lands, which in many cases may be more valuable than the minerals underground.

An important point in the Al Sarena case is evidence that the firm spent at least as much, and probably more in developing the mining claims than there is dollar value of timber on the claims. It is not reasonable to believe that the firm would have done this if its only objective was to get the timber, as some Democrats have charged.

If the Democrats wished to prove that the Interior Department was wrong in granting the patents on the 15 disputed claims, their case would have to rest on two main points:

1. That the A. W. Williams Co. of Mobile, Ala., which performed the crucial assays (with approval of the United States Bureau of Mines and the mining firm) was incompetent or was in collusion with the interested parties. This was not done.

2. Testimony by competent mining engineers, who have investigated the Al Sarena claims, that the claims are not worth trying to develop. This was not done.

The testimony of Mr. Davis before the investigating committee was the most lucid and the most damaging to Democrat contentions. Mr. Davis, in regard to the law governing approval of mining claims, said:

"It is to the effect that if the miner has filed on these claims, made improvements and discovered minerals in such quantities to justify him in further exploration and development, the claims should be patented.

"It is not required that the mine should be fully developed or should have established a history of profitable operation. Neither is the timber on mining claims material to the allowance of the claim."

Considered in evidence by Mr. Davis, before allowing patents, were letters from four competent mining engineers from different parts of the country who had viewed the Al Sarena claims. The letters were from Alan Kissock & Co. of New York, G. Cleveland Taylor of Sacramento, Calif., D. Ford McCormick of Eagle Point, Oreg., and Col. J. E. Morrison of the United States Army, a registered engineer in Oregon. All of them noted the widespread mineralization in that area. The comment of Mr. Taylor, a registered mineral surveyor, are representative.

"I surveyed the claims for patent spending some 2 to 3 months on the ground, covering the area quite thoroughly, both on the surface and underground. My conclusion was that a patent should be granted to the applicants. This has been for many years what might well be termed a legitimate mining operation. * * * The present owners, who acquired the rights of the original locators, have always regarded the mine as a broad-zone and have predicated their activities on that theory. * * * Of course, a great deal of sympathetic drilling or other additional development work is necessary to actually prove a large low-grade ore deposit, but there appears to be sufficient widespread mineralization to prompt a prudent man to carry out such development."

Although it is almost certain that the Democrats will continue to make this a campaign issue, it is our opinion they have a poor example to make their point. We don't like the idea that forest lands go with mining patents, but until Congress changes our laws it will be difficult to overcome.

Hon. John W. McCormack

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following well deserved editorial that appeared in the editorial column of the Lynn (Mass.) Telegram-News concerning our majority leader, the Honorable JOHN W. MCCORMACK.

This paper is one of the outstanding newspapers in the Commonwealth of Massachusetts, and is the largest democratic paper in Essex County, published by Frederick W. Enwright, a newspaperman of many years of active and constructive experience in this field.

The editorial follows:

MCCORMACK SAVES HOSPITAL

Congressman JOHN W. MCCORMACK added another milestone to his glittering public career this past week as he foiled a sneak attempt to close the Murphy Army hospital in Waltham.

Ever alert, the popular Congressman who is House majority leader succeeded in having the Senate knife an amendment to the deficiency appropriations bill which virtually would have turned the hospital over to the Air Force and Army engineers.

Congressman McCORMACK made one of his infrequent appearances before the Senate to state against the closing of the hospital and the elimination of the service available to thousands of Massachusetts veterans each year. That he commands the complete respect of the upper legislative body was apparent by the action taken in killing the amendment.

The newest chapter of McCORMACK's brilliant career is but a small item in a life of public service studded with such outstanding contributions to the people of his district and to his State. The House leader lived up to his reputation as one of the best informed men in the Nation's Capital by being ready to thwart the effort to close the hospital.

As a result of the McCormack victory, the Pentagon is barred from turning the hospital over to the Army engineers without the express consent of Congress.

Because Suffolk County is so close to Lynn, the people of this area have long admired the brilliant Hub representative in the National House. They admire him not only as a public official but as an outstanding family man and Catholic layman. Mrs. McCormack, wife of the Congressman, is also highly regarded by the people of this city. In his recent visit to Boston, former President Harry S. Truman paid a special tribute to the gracious wife of the Congressional leader.

The Blockaders

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. COON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the Oregon Journal, Portland, Oreg.

Some names of Members of the other body have been deleted, but otherwise the editorial is an exact reproduction.

A new and highly descriptive phrase is appearing in the nomenclature of the power industry in the Pacific Northwest. It's "the blockaders." And it is being applied, quite properly, not to the public power movement as a whole but to the small segment of the public power movement which either wants an all-Federal power program or nothing, or which advocates a regional power corporation in the image of TVA—or nothing.

This group is spearheaded by such men as Gus Norwood, executive secretary of the Northwest Public Power Association, principal advocate of the regional Federal power corporation scheme. And it includes a few diehards in the Grange, PUD, and labor movements who haven't caught up with the fact that crusading for public power for public power's sake went out of fashion years ago.

These men, in general terms, oppose partnership power development, whether it is initiated by public or private power agencies.

They simply won't accept the fact that the lush days of all-Federal development are gone, probably forever. They still cling to the unrealistic concept that Uncle Sam can and should supply us with all the money we need to keep abreast of our burgeoning power needs—probably to the tune of $300 million a year.

To them an all-Federal John Day Dam is terrific, but a partnership John Day Dam is no good. To them an all-Federal Priest Rapids project is preferable to a PUD partnership project. To them, a federally financed high Hells Canyon Dam is a battle cry, regardless of cost, and a privately financed series of Snake River Dams is a red flag.

They don't want Tacoma City Light to build two dams on the Cowlitz River; they want Federal power there. They don't like the seven-State interstate compact; it might interfere with their grandiose regional corporation or all-Federal plans. They are cool toward Eugene City Light's partnership program on the McKenzie; again they want Uncle to do the job. They don't want the private companies to build Pleasant Valley and Mountain Sheep on the middle Snake; it might interfere with their Federal Nez Perce dreams.

This noisy segment of the public-power movement is against anyone who dares suggest that there is another or more promising way to do the power development job in the Columbia Basin. Its members fight the private companies. They'll fight the municipal operators. They'll fight the PUD's, if they attempt to supply their own power needs. Hence the name "blockaders."

We are convinced that "the blockaders" do not truly represent the public power movement in the Pacific Northwest.

They certainly do not speak for the long-established and successful municipal systems in Seattle, Tocoma, Eugene, Forest Grove, and McMinnville. They do not speak for the well-established PUD systems of Washington.

The men who operate these publicly owned systems aren't interested in an all-Federal-or-nothing crusade. They're interested in obtaining an adequate power supply, good service, and reasonable rates. They've learned that a kilowatt of power is a kilowatt of power, whether it is produced from a Federal, a municipal, a PUD, or a private company plant.

They've learned the lesson of cooperation—by working with others in the Northwest power pool, the Pacific Northwest Governors' Power Policy Committee, the Columbia Basin Interagency Committee, and other groups representing all interests. They're not interested in an obstructive ideological battle. They know that the region's power needs are critical, that they must be met by cooperative action. They know Uncle can't do it all. They know that labels don't count anymore. Kilowatts do.

Apparently everyone but "the blockaders" has learned this lesson, albeit the hard way.

Speaking for ourselves, we've lost patience with "the blockaders." We believe the region, sorely pressed for power, has lost patience, too.

Views of the Ohio Farm Bureau Federation, Inc., on the Present Farm Program as Expressed by D. R. Stanfield, Its Executive Secretary

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. JENKINS. Mr. Speaker, while the great State of Ohio is recognized as one of the leading States of the Union in many ways, it must not be forgotten that it is one of the leading States in the Union in the production of all kinds of agricultural products. We in Ohio produce great crops of corn, wheat, oats, and barley, and also produce great flocks of sheep and great herds of cattle. We also produce a great number of hogs and a great number of cattle. Ohio has very strong farm organizations—the Grange has thousands of members in Ohio and the Farm Bureau Federation also is a very strong organization and has thousands of members in Ohio.

Mr. D. R. Stanfield has for many years been the executive secretary of the Ohio Farm Bureau Federation, and is one of the best posted men in the whole country on farm problems. A short time ago he made a very comprehensive statement to the Senate Committee on Agriculture and Forestry regarding revision of the present farm program. I am glad to present Mr. Stanfield's statement for printing in the RECORD.

The statement is as follows:

STATEMENT OF THE OHIO FARM BUREAU FEDERATION FOR THE SENATE COMMITTEE ON AGRICULTURE AND FORESTRY REGARDING REVISION OF THE PRESENT FARM PROGRAM

(By Douglas R. Stanfield, executive secretary)

Mr. Chairman and members of the committee, the Ohio Farm Bureau Federation appreciates this opportunity to present to this committee the thinking of its members regarding revisions of the present farm program.

Our organization is composed of 50,000 farm families and our objective is to increase farm income and improve rural standards of living. We are members of the American Farm Bureau Federation and cooperate with our national organization in the development of agricultural policy.

We must be concerned with bringing about improvements in the present program because agriculture is not sharing equitably in the general prosperity of the country.

In 1955, we held more than 3,500 policy development meetings throughout the State with our members to ascertain their thinking on what might be done by themselves and the Government to improve the farm income situation. We believe that our 1,500 Farm Bureau advisory councils give us a rather accurate picture of what Ohio farmers are thinking. Farm Bureau advisory councils are groups of 10 to 12 farm families who meet monthly in farm homes throughout the year studying farm problems and seeking sound solutions. One of their chief concerns the past year has been the drop in net farm income.

Farmers continue to be in a severe cost-price squeeze. Net farm income has declined seriously—28 percent since 1951. Products which farmers must purchase for production purposes continue to increase in price. National legislation could improve this inequitable situation.

We believe in the principle of variable price supports. Flexibility in meeting new conditions is just as important in agriculture as it is in any other business. Our present surpluses make it impossible for variable price supports to operate effectively. Too much land, labor and capital have been devoted to agriculture in recent years to permit adequate returns to be obtained per unit of resources. The 90 percent price support system worked to give us the results needed under wartime conditions but under present conditions has contributed materially to our surplus problem and has prevented agriculture from adjusting to a peace-time economy. We are living in a decade when our productive capacity has been increasing 3 percent a year and our consumptive capacity has been increasing only 2 percent a year. This requires that greater attention be given to reducing re-

sources devoted to agricultural production to bring supply in line with demand for agricultural products. Therefore, we recommend that the present farm program be continued and make the following suggestions which we believe would improve the present farm income situation.

1. SOIL BANK

We should add to the present farm program some means of adjusting production to bring supply of agricultural products in line with demand. In order to get this adjustment we recommend the development of a soil bank along the lines recommended by the President in his farm-program message of January 9, providing for an acreage reserve and a conservation reserve. We believe that such a program would definitely move to bring supplies in line with effective demand, improve the income situation of the farmer, and build up one of our greatest natural resources—the soil.

The extent of participation under the acreage reserve plan and under the conservation plan would depend upon the size of the payment made to the farmer. We believe that these payments should be large enough to get participation which in turn would make possible the other objectives previously mentioned. A voluntary plan would be more acceptable to Ohio farmers than a mandatory plan.

In addition to the payments that would be made for underplanting the acreage allotments which should compensate a man for normal returns, a fair rental on the productive value of the land plus out-of-pocket expenses for conservation practices necessary would encourage land being taken out of production including whole farms now being farmed by part-time farmers, absentee landlords, and others.

The level of payment for this land will determine the number of acres that will voluntarily be taken out of production. A large enough percentage of land must be taken out of production to bring current supply in line with demand plus an additional amount to reduce the surpluses. Certainly there should be no new land brought into production while surpluses exist, and the rental returns on Government lands now producing agricultural products should be high enough to make them self-liquidating.

2. LOW-INCOME FARMERS

There is a definite need for a program to assist and help adjust low-income farmers so that they might obtain higher income in or out of agriculture. Industrial decentralization in southern and southeastern Ohio is already playing an important role in this area.

3. RESEARCH

There is continued need for research with special emphasis on marketing problems and with increased attention given to reducing the margin between the producer and consumer and returning a fair share of the consumer's dollar to the farmer.

4. FAMILY FARM

The efficient family-type farm, which of necessity must be an economic unit, is the backbone of our Ohio agriculture, and we believe the proposed program of the President—especially the soil-bank features—plus the provision for some limitation on the size of loans would aid materially the family-type farm as it comes into competition with corporation farming. We have some of the latter in Ohio, and we certainly should do nothing in a Federal farm program to encourage corporation farming.

5. TRADE

There are two basic approaches to reducing the surpluses. One is that of increasing consumption, both at home and abroad, and an adjustment program. We believe the soil bank provides an effective adjustment program with definite conservation advantages. But, in the long pull, we must expand our markets and increase world trade in farm products—imports as well as exports.

We should attempt to increase the exporting of farm products through normal exchange channels by accepting local currency or needed supplies from foreign countries that need our supplies, by placing more emphasis on quality in export items, and by gradually lowering trade restrictions on all commodities.

Our first attention should always be directed toward increasing our normal trade with other nations but we should continue aid to friendly nations by technical assistance and by supplying them with our agricultural surpluses through voluntary agencies of the churches and other groups registered with our Government for this purpose when consistent with our foreign policy.

6. QUALITY PRODUCTS

It is important to all farmers in the area producing soft red winter wheat and to farmers in certain areas producing soft white wheat that the wheat portion of the Federal farm program be revised to reduce production of hard red winter wheat which has created the present surplus. This calls for recognition in the program that different types of wheat are used for different purposes and that within types of wheat there is a very great difference in the value of different varieties. Grain standards should be revised to recognize the different kinds and varieties of wheat as well as to improve the quality of wheat on the domestic market and to make our wheats competitive on the foreign market.

7. FARMER COOPERATIVES

Besides a Government program the farmer must be active in helping himself. Farmer cooperatives provide an important means whereby farmers can help themselves. Here in Ohio for example the Ohio Farm Bureau Cooperative Association saves its patrons 8 to 9 cents a bushel per year on grain stored in its terminals. Similar savings are made on production supplies. In this way farmer cooperatives help materially in the cost-price squeeze in which the farmer finds himself.

8. RAILROAD RATES

The railroads are proposing a 7 percent general increase in freight rates to become effective February 25, 1956. If permited to become effective, the cost-price squeeze confronting the Ohio farmer will be further aggravated.

The statement of the railroads before the Interstate Commerce Commission, in justification of the proposed increase, states that this country is enjoying the greatest wave of prosperity in its history. We submit that this does not correctly portray the condition of agriculture.

Here is a sobering example of the effect of the freight increase on an Ohio grain farmer. The grain farmer stands the transportation cost to the consuming market. Therefore, the day the freight increase becomes effective the price paid to the farmer will be dropped to reflect the 7 percent increase. At the same time materials purchased by the farmer will go up to compensate for the increased transportation cost. At the present time a farmer in Ohio must produce 50 bushels of corn to pay for one ton of fertilizer. If the increase becomes effective, he will then have to raise 52.1 bushels of corn to buy the same ton of fertilizer or the cost will be increased 4.2 percent.

In conclusion, I want to say again that Ohio farmers are not sharing fully in the general prosperity. For this reason we are in substantial agreement with the soil bank plan advanced by the administration and believe that it will work on a voluntary basis provided the payments, in cash or in kind, to the farmer are adequate to secure his participation. We also believe that it is of the utmost importance that early action be taken in order that as many as possible of the benefits of such a program will accrue to farmers in 1956.

Nailing a Falsehood

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. OSTERTAG. Mr. Speaker, the sorry spectacle of a former President of the United States making a false and reckless charge against Vice President NIXON has now ended, "not with a bang but with a whimper." It was not true that the Vice President leveled the charge of traitor at Mr. Truman. The record proves it. And, as Editor and Publisher points out in its issue of February 11:

Aside from indicating that Mr. Truman's memory might be a little faulty—he thought he "read it in the papers"—and then decided he didn't—it would seem that if the press is Republican controlled, as Mr. Truman charges, the newspapers never would have passed up such a statement by the Vice President, if it ever was made.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an excerpt from the column Shop Talk at Thirty, by Robert U. Brown, in the issue of Editor and Publisher of February 11:

Newspaper libraries were searched unsuccessfully last weekend for any reference indicating Vice President NIXON may have called Ex-President Truman and General Marshall "traitors," as Mr. Truman charged. The former President first made the charge in a New York speech Thursday night, February 2.

The next morning he elaborated to reporters and said he had in mind Mr. NIXON's statements during the 1954 congressional campaign. He said assertions made by the Vice President during a series of speeches constituted accusations of treason.

Having been challenged by the national Republican chairman to give chapter and verse, Mr. Truman said in Boston on Sunday that Leonard Hall should make himself familiar with the 1952 and 1954 campaigns for instances. When pressed for time and place that such remarks were made by Mr. NIXON, Mr. Truman said: "All over the West."

Arriving back in New York Monday morning, sticking by his guns, he said: "All I did was read the papers. * * * They wouldn't keep that kind of reference at Republican national headquarters anyway."

Later that day, a close associate explained that Mr. Truman's version was: During the 1954 campaign NIXON repeatedly made assertions amounting to an accusation of treason but was careful not to put them squarely on the record. Instead, it was said between formal appearances to the extent that prominent people soon reported it back to Mr. Truman.

Aside from indicating that Mr. Truman's memory might be a little faulty—he thought he read it in the papers, and then decided he didn't—it would seem that if the press is "Republican-controlled," as Mr. Truman charges, the newspapers never would have passed up such a statement by the Vice President, if it was ever made.

Petitions for H. R. 4627

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LONG. Mr. Speaker, under leave to extend my remarks and by request I include in the Appendix of the RECORD petitions sent to me from my congressional district in two separate instances:

PINEVILLE, LA., *February 9, 1956.*

DEAR REPRESENTATIVE LONG: I hope you will realize your Christian and civic duty to urge the House Interstate and Foreign Commerce Committee to report favorably on the Siler bill (H. R. 4627) and bills to quit having liquor allowed on planes.

Let's be considerate of citizens by not making them have to be bothered by drunken people who might hurt them.

When we can mostly only see KALB–TV, it is very disappointing to our children, when I can't let them watch every program, because some of them are sponsored by beer and wine. I let them watch baseball games sponsored by beer, but it is wrong. Let's get rid of such disgusting advertising that makes out that beer belongs at ball games. Let's let ball be a clean game again that people aren't ashamed to let their children see on television or hear on the radio.

Let's prevent advertising of beer, wine, and whisky in otherwise fine magazines. We can't have children and former alcoholics being tempted by beautiful pictures which make whisky seem so inviting, when it really takes away people's thinking power.

I certainly hope that bills get out of committee and even passed by the House that would improve the thinking of citizens in this country. Please do all that you can to follow God's will.

Yours,

MARY GODFREY.

P. S.—If I counted correctly, enclosed are 378 signatures on petitions for the Siler bill.

M. G.

We, the undersigned, urge you to attend the hearing and testify in favor of the Siler bill (H. R. 4627) to ban alcoholic beverage advertising in interstate commerce and over the air. The hearing will be held February 16 and 17. Please place these signatures in the CONGRESSIONAL RECORD.

Mrs. Mary C. Smith, Madge A. McMahon (Mrs. M. L.), Mrs. A. M. Jenkins, Mrs. Pearl J. Brookfield, Mrs. Hayes Huffman, Mrs. W. R. Price, Pineville, La.; Meshack McCall, Sophie Howard, L. J. Young, Bessie L. Johnson, Helen S. Lott, Tattie B. Lawson, William H. Byars, Fredric D. Lawson, A. M. Tison, Jr., Foster Iles, Annie J. Iles, Julius W. Iles, Alexandria, La.; Wm. Scott, Israel Thomas, John O. Williams, Willit R. Aberson, Evelyn O. William, Charlie Carson, Mary B. Williams, Fred Eldridge, Mrs. Sadie B. Dukes, Mrs. Amy J. Iles, Mrs. Julia Dorsey, Mary Brady, Inez Nash, Lionel Daves, Stephen Y. Brady, Leona Brady, Hattie Williams, Thelma McCall.

Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ZABLOCKI. Mr. Speaker, last Sunday, February 12, marked the birthdays of Abraham Lincoln and of Tadeusz Kosciuszko, the outstanding Revolutionary War hero.

The Americans, and the people of Poland both revere the memory of this great man who fought for freedom on two continents. The story of his life is an illustrious example of man's age-old quest for liberty.

Kosciuszko was born in Poland and educated there, graduating from the Warsaw Cadet School with highest honors. The King of Poland, impressed with his engineering ability, sent him to France where for several years Kosciuszko attended military schools. Upon his return, he was commissioned a captain in charge of Krakow's fortifications. There was little opportunity for the use of his talents in Poland, so the news of the outbreak of hostilities in America kindled his imagination and in the summer of 1776 Kosciuszko arrived in America on his own initiative and his own expense.

He joined the Northern Army in 1777 and his construction of fortifications and choice of battlegrounds contributed much to the success of the Continental Army.

American youth has paid tribute to Kosciuszko by erecting a monument to his memory at West Point—for it was Kosciuszko who first suggested the spot where West Point now stands, for a military school.

The story of the contributions made by Kosciuszko to the cause of freedom in the United States and in Poland is known to millions and has been repeated many times on this floor. As we pay tribute to his memory, may we recall the words of the famous poet, John Keats, who wrote:

Good Kosciuszko, thy great name alone
Is a full harvest whence to reap high feeling;
It comes upon us like the glorious pealing,
Of the wide spheres—an everlasting tone.

The Word Parity

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article entitled "The Parity Formula Defined," by Robert H. Moats, which appeared in the fall issue, December 1955, of Co-Op Grain Quarterly.

The article follows:

THE PARITY FORMULA DEFINED
(By Robert H. Moats)

Parity is a term that is widely used and discussed by farmers and nonfarmers alike yet it is a term that has only a vague meaning to many. Actually, parity is very simple in concept. Visualizing this concept, however, has been made difficult by the various modifications in the basic procedure that have been introduced from time to time to adjust for changes in farmers' buying and selling practices, and to modify relationships among commodities that were not considered fair or reasonable by the Congress.

The word parity means equality or equal value. Congress has defined parity prices for agricultural products as the price that will

give these products equal value of equal purchasing power in terms of goods and services bought by farmers that they had in the base period. In other words, the prices needed to put commodities sold by farmers on a par with commodities bought by farmers.

BASE PERIOD 1910–14

In reference to the base period, Congress has indicated that a fair or reasonable relationship existed between agricultural prices and nonfarm prices from 1910 to 1914 and has specified that this period should be used as the base for parity price computations.

Thus if, on the average, prices paid by farmers for machinery, fertilizer, feed, seed, fuel, building materials, food, and other commodities coupled with rates paid hired labor, prices paid for telephones and electricity, interest on real-estate mortgages, taxes, etc., are now 2.75 times the 1910-14 average, then prices of products sold by farmers would need to average 2.75 times the 1910-14 average, if they are to sell at parity.

Back in the 1920's following World War I, the idea of equality for agriculture was widely discussed and was given serious study by economists, by farmers, farm organizations, and by the Government. The various ideas gradually took shape in a definite pattern, and in the Agricultural Act of 1933 Congress defined the concept of parity.

Although the basic concept still holds, Congress has from time to time modified the formula and has stated more specifically just what parity means and has specified the part this idea should play in agricultural programs. The Agricultural Adjustment Act of 1938 as amended by the Agricultural Act of 1948, 1949, and 1954 spells out in detail the formula for computing parity prices.

OLD AND MODERNIZED PARITY

Prior to January 1950, which was the effective date of the amendments introduced by the Agricultural Acts of 1948 and 1949, parity prices were computed by what is now called the old formula. Basically, this formula provided that the August 1909–July 1914 average price for the commodity would be multiplied by the index of prices paid by farmers, including interest and taxes, to obtain the parity price. To illustrate, prices received by farmers for corn averaged 64.2 cents per bushel for the period August 1909–July 1914. In May 1955, the index of prices paid by farmers, including interest and taxes (as computed prior to January 1950) was 284 percent of its 1910–1914 average. The old formula parity price for corn was thus 0.642 times 284 percent or $1.82 per bushel.

For a number of commodities either no data were available for the 1910–1914 period or production was so small that prices during this period were not considered suitable. For such commodities a more recent base, such as 1919–1929, or some portion thereof, was specified in the legislation and the Index of Prices Paid by Farmers (excluding interests and taxes) adjusted to the appropriate base, was used to compute the parity price.

Beginning in January 1950, the "new" or "modernized" formula came into use. This formula maintained the overall relationship between parity prices and prices paid by farmers. It also established a method for reflecting recent price relationships among commodities; and it provided an improved procedure for computing parity prices for commodities that were virtually unknown or unimportant during the original base period.

This modernization was achieved by the use of average prices for the preceding 10-year period. Adjusted base prices are computed by dividing the most recent 10-year average price received by farmers for individual commodities by the average of the Index of Prices Received by Farmers for the same 10-year period. These adjusted base prices are multiplied by the Parity Index to compute the "new" formula parity prices.

To illustrate, prices received by farmers for corn averaged $1.49 per bushel for the 10 years 1945–54. During this same period, the Price Received Index averaged 261 percent of its 1910–14 average. Thus during 1955 the adjusted base price for corn is $1.49 divided by 261 percent, or $0.571 per bushel. Since the Parity Index in May 1955 was 282 percent of 1910–14, the new formula parity price for corn in May 1955 was 0.571 times 282 percent or $1.61 per bushel.

Since the index of prices received by farmers measures the average change from 1910–14 to date in prices farmers receive for this product, this procedure converts the individual commodity price to a 1910–14 level, but at the same time maintains the relationship among commodities that existed during the most recent 10-year period.

WAGE RATES ADDED

The legislation that established the new parity procedure also specified that wage rates, as well as interest and taxes, should be included in the parity index. When the index was revised to include wage rates, the Department developed a more up-to-date and a more comprehensive index of prices paid by farmers. The new parity index (prices paid by farmers, including interest, taxes, and wage rates) is based on approximately 350 price series instead of only about 175 series in the old index.

TRANSITIONAL PARITY

The new or modernized parity formula maintained the same general level of parity prices, but it raised the parity price for some commodities and lowered it for others. The Congress provided special procedures to avoid a sharp reduction in the level of parity prices for those commodities with a lower parity price under the new formula. One procedure was set up for nonbasic commodities and another for basic commodities.

For nonbasic commodities a gradual adjustment to the lower level was made by means of a transitional parity. The transitional parity price for a nonbasic commodity was the old formula parity reduced by 5 percent during 1950, by 10 percent during 1951, 15 percent in 1952, and 25 percent in 1954.

During 1955, the old-formula parity prices were reduced by 30 percent; and an additional 5 percent will be taken off each year until all nonbasic commodities have made the transition to the new-formula level. To illustrate, in May 1955 the old-formula parity price for buckwheat was $2.07 per bushel. Multiplying by 70 percent (100–30) gives $1.45 per bushel, the transitional parity price. Whenever the new-formula parity price exceeds the transitional, it becomes the effective parity price and the transitional is no longer computed for the commodity.

For the basic commodities, corn, wheat, cotton, rice, peanuts, and most types of tobacco, the acts of 1948 and 1949 and later legislation provided that the parity price would be either the new- or the old-formula price, whichever was higher, until 1956. Beginning in January 1956, the old-formula parity for basic commodities will be reduced by 5 percent each year until the transition is made to the new-formula basis.

Petitions for H. R. 4627

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. LONG. Mr. Speaker, under leave to extend my remarks and by request, I include in the Appendix of the RECORD petitions sent to me from my congressional district in two separate instances:

We, the undersigned, do hereby sign this petition because we favor the Siler bill, House of Representatives bill 4627, which would not allow advertising of beer or wine on radio or television and of beer, wine, or whiskey in magazines mailed as interstate commerce:

Robert A. Corley, Jr., Pineville, La.; Douglas Hause, R. T. DeMoss, Mr. and Mrs. M. T. Pippin, Mr. and Mrs. Ollie L. White, Mr. and Mrs. Charles F. Baker, Alexandria, La.; Nat Bridewell, A. V. Farr, Pineville, La.; Mrs. Alton Parish, Jesse M. Kees, Mrs. W. E. Magee, Jr., Norma F. Owens, J. C. Short, Mrs. Blanche F. Mailer, Leo Mailer, Alexandria, La.; Halma B. Benedict, Pineville, La.; C. H. Short, Mrs. C. H. Short, Mrs. Ola S. Vaenado, Alexandria, La.; Mrs. H. B. Benedict, J. N. Miller, Pineville, La.; Mrs. S. H. Gravel, W. E. Magee, Jr., Mrs. Earl B. Wolff, Sr., Geo. W. Smithson, Mrs. A. C. Clover, Mrs. J. Q. Middleton, Mrs. Beatrice Jefferson, Mrs. Lola Odom, Mrs. Edith Stephens, Mrs. W. L. Cloud, (Mrs.) Alice E. Geyer, Mrs. E. S. Aiken, W. L. Cloud, Mrs. Ira Gonter, Mrs. Nettie B. Pye, Mrs. M. B. Pearce, Mrs. R. H. Dunbar, Mrs. W. T. Owen, Mrs. Ruby Mizell, Nelle L. Avery (Mrs. W. J.), Bessie Footenot, Mrs. Daisy R. Morton, Earl B. Wolff, Jr., Alexandria, La.

J. T. Walworth, Sr., W. F. Naiswarthy, Mrs. W. A. Rabb, Mrs. Bentie Duville, Miss Martha Faught, Mrs. E. F. Faught, Mrs. M. Patton, E. F. Fauger, J. L. Pollard, W. J. Oneal, Mrs. Harvey McGraw, Donald S. Tuncage, Mrs. Loddie Rollins, Mrs. Nell C. Nichols, J. O. Barron, Mrs. Lou Gibson, Mrs. J. O. Barron, Harvey D. McGraw, Paul R. Godfrey, Mrs. Paul R. Godfrey, Mrs. M. Walworth, Mrs. Eva Jones, Miss Katie Benson, Charlie Owens, JoAnn Trahan, Nancy Jacob, Nora Bordelon, George J. Bordelon, Mrs. W. D. Darnall, Pineville, La.; Mrs. M. M. Rembert, Alexandria, La.; Marvin McDaniel, Rita Harris, Patsy Speir, Carol Moncla, Roynell De Villiess, Mr. and Mrs. Troy, Pineville, La.; Mrs. J. W. Darnell, Alexandria, La.; Julia Gray, James Hudson, Jr., Mrs. L. Kent, Mrs. Etta Hawthorne, Pineville, La.; J. O. Williams, Mrs. J. O. Williams, Shreveport, La.; Mrs. J. D. Bailey, J. D. Bailey, John Bailey, Jr., Pineville, La.; Mrs. F. E. Goff, F. E. Goff, Alexandria, La.; Jesse D. Bryan, Joe Cruse, Mrs. H. J. Barton, Mrs. J. N. Loflin, Mrs. Elmer Carter, R. A. Corley, Mrs. J. M. Hutton, Mrs. Rex Nichols, Rev. Rex Nichols, Elmer Carter, Jasper L. Malone, A. T. Rylind, Mrs. J. L. Malone, Mrs. Ella Vinson, Pineville, La.

Mrs. D. C. Boss, Pineville, La.; Mrs. R. C. Powell, Mrs. J. R. Tackett, Mrs. T. Chelette, T. C. Davis, Mrs. Nobia E. Davis, J. D. Boyett, Mrs. Louise Y. Dugger, Mrs. Joe Laughlin, J. W. Laughlin, R. S. Miller, A. T. Whittington, J. O. Allen, T. Garrett, J. B. Funduburk, W. Ray Frye, J. J. Clyde, Harvey Paige, M. C. Duke, J. C. Pharis, Mrs. Alice B. Rudisill, Mrs. Harry Ketone, Mrs. W. A. Guinn, Mrs. J. J. Yarborough, Mrs. Mary Horton, Mrs. D. C. Gaar, John Groves, Pineville, La.; L. O. Deville, Alexander, La.; C. R. Barron, Frank Aycock, Lorraine B. Hoffman, George Hoffman, Paul L. Peguer, W. R. Barron, Ruby W. Groves, Pineville, La.; Frances E. Wilson, Alexandria, La.; Frankie B. Skeek, H. Milton Wolf, Mrs. N. C. Alsup, Jr., Robert D. Ryder, Mrs. O. W. Griffiths, Pineville, La.; Mrs. Frank Aycock, Deville, La.; Clarice Lee Ellis, Mrs. F. A. Burnum, Alexandria, La.; Mrs. J. C. Barron, J. I. Barron, Doris Pegues, Pineville, La.; Mrs. L. O. De Ville, Alexandria, La.; Byron L. Hansford, Mrs. B. L. Hansford, W. T. Friday, Mrs. W. T. Fryday, Mrs. Gladys M. Walker, Pineville, La.; J. D. Gouney, Fred L. Palone, Robert M. VanZandt, D. W. King, W. Weiland, Amelia M. Byram, J. R. Gardner, Milton W. Simpers, Dorothy A. Simpson, Rev. John C. Nurile, Herman C. Cuicutz, M. D., Ralph Brewer, Alexandria, La.; R. B. Hellams, Clinton, S. C.; Louis B. Cape, Bill W. Cutter, Alexandria, La.

The Jefferson Memorial, Gateway to West Still Sags After 20-Year-Old Promise—St. Louis Globe-Democrat Says Time for Governmental Action Is Now

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, my unanimous consent request to insert in the Appendix of the RECORD a series of articles appearing in the St. Louis Globe-Democrat on the Jefferson National Expansion Memorial was intended to make sure that all Members of Congress interested in this great project can have the advantage of reading this excellent background series giving the history and all developments in connection with the Memorial.

All citizens of St. Louis, and our newspapers particularly, have been anxious to see this project become a reality. We have worked for it, dreamed of it, and—I might point out—we have paid for it, too, over a period of many years. We have voted local funds to pay our share of the project, we have removed property from the local tax rolls, and we have otherwise carried out our obligations in connection with this Memorial commemorating the Louisiana Purchase and the opening of the West.

GLOBE-DEMOCRAT SERIES IS EXCELLENT

The Globe-Democrat series on the Memorial is an excellent one. The articles have been written by Ted Schafers, Ray Noonan, and, from the Washington Bureau of the Globe-Democrat, Marsh Clark.

First, I submit an editorial from the Globe-Democrat, of Sunday, February 5, entitled "The Jefferson Memorial," outlining the series of articles which began in the paper that day and expressing the newspaper's support for the $5 million appropriation which I have asked be appropriated and which other St. Louis Members of Congress have similarly requested, in line with the authorization bill which was enacted in 1954. The editorial concludes:

St. Louis, with its wealth of history, should have this modest memorial, so long delayed and so past due. Now is the time to recognize our great past and our even greater future.

The full text of the editorial appearing in the St. Louis Globe-Democrat, Sunday, February 5, is as follows:

THE JEFFERSON MEMORIAL

The Globe-Democrat begings a short series of articles in this issue by Ted Schafers and Ray Noonan explaining the need for the Jefferson National Expansion Memorial.

After almost a quarter of a century of delay, there appears a fair chance, now that the budget has been balanced, that the Missouri and St. Louis congressional leaders will be able to get the relatively small appropriation of $5 million for building this important historic project.

The Memorial has stirred controversy in the past and unquestionably will not meet with universal favor now. Some people may question the wisdom of spending any money on historic sites, while others who would be forced to park their cars elsewhere when the project is started will have a narrow interest in its defeat.

The Memorial commends itself to this newspaper essentially for this one great reason—St. Louis began its growth on the banks of the Mississippi River, the alarming blight of the downtown business district began gnawing its way to the vitals of the business district from the river bank and, therefore, any rehabilitation of the downtown business district and any flourishing of this vital area must, of necessity, start from the river's edge.

This project will do just that. It will be a first step forward in clearing what formerly was a dismal morass of decaying buildings and more recently simply a parking lot.

With the erection of a national memorial, St. Louis and the Nation will beautify our river-edge area where the city began, and provide incentive for the demolition of the remaining decaying buildings in this area and their replacement by new and modern structures.

It will also shift focus back to the downtown business district, and away from the disastrous decentralization of the city with its resultant loss of tax values.

Finally, and not the least important by any means, it will provide a historic memorial which will attract hundreds of thousands and perhaps millions of visitors to St. Louis as the gateway to the West.

St. Louis has overlooked its own possibilities as a historic shrine. All the great explorations of the West and the reopening of more than half of America had their origins here. This wealth of historical material should have an appropriate home.

Though not included in the present plan, St. Louis should eventually have the spectacular "Saarinen arch" which will be at once a gateway and a rainbow of hope.

Those who say that the erection of such an arch is comparable to the old boondoggles of WPA days overlook the huge asset which similar giant attractions have been to their respective areas, such as the Statue of Liberty in New York, the Eiffel Tower in Paris, and the Rushmore Memorial in the Black Hills of South Dakota.

Neither a nation nor a city can be entirely functional in its planning. Each requires its great historic monuments, its shrines, as well as its parks, its museums, and its places of historic interest. It is a necessary part of America and of the world we live in.

St. Louis, with its wealth of history, should have this modest memorial, so long delayed and so past due. Now is the time to recognize our great past and our even greater future.

FIRST ARTICLE IN GLOBE-DEMOCRAT SERIES

Mr. Speaker, the first article in the series referred to in the above editorial was written jointly by Ted Schafers and Ray Noonan and gives in detail the current status of the Jefferson National Expansion Memorial and relates the legal technicalities and other factors which have previously stood in the way of this project. Not the least of the handicaps at the present time—I would say the greatest current handicap—is the failure of the Interior Department to request the $5 million needed to make the project a reality. Instead, in a multi-million-dollar supplemental budget request for the National Park Service, only a tiny amount of $150,000 was requested for the Jefferson National Expansion Memorial, and that merely for maintenance work on the existing old courthouse—nothing for relocation of the railroad tracks or the other work necessary to make the project a reality.

Following is the Ted Schafers-Ray Noonan article which was the first article in the series in the St. Louis Globe-Democrat on the Jefferson Memorial:

GATEWAY TO WEST STILL SAGS AFTER 20-YEAR-OLD PROMISE

(EDITOR'S NOTE.—The Globe-Democrat today begins a series of articles on the Government's unfulfilled pledge to build the Jefferson National Expansion Memorial on the downtown riverfront. The memorial would give a shing new "front door" to a St. Louis that is rebuilding for the future. This series will tell why a project, approved before the youngest generation of St. Louisans was born, may still be inexcusably stymied when they are aging—unless the Government can be persuaded to keep its promise.)

(By Ted Schafers and Ray Noonan)

(First of a series)

The shining "Gateway to the West" memorial on the downtown riverfront which St. Louisans voted for 20 years ago is still nothing but a sagging door to the city.

St. Louis taxpayers put up the money for their share in the Jefferson National Expansion Memorial, which the Federal Government had solemnly pledged to build.

After two decades, St. Louis still does not have a Jefferson National Expansion Memorial. All it has is the site. And, as one punster remarked: "The site must be a sight to first-time visitors coming across the Mississippi into St. Louis?

Acres of automobiles park in the area that was planned as a national shrine—marking the starting place of the pioneers who went out to open up the uncharted West and Southwest.

Congressmen from the St. Louis area again have renewed the fight to get this memorial off dead center, where it has lodged these many frustrating years.

The memorial was to have cost $30 million, with the Government to ante three-fourths of the sum. Prices have gone up during the years Uncle Sam fiddled around, so the final cost figure is not definite.

Legal delays have barred a start on the project at various times. But, one thing is certain: There is no excuse today for the Government to delay any longer in putting up at least $5 million to start building this important historic project.

Since there is no further legal excuse for the delay, how is the Government performing on its promise?

Instead of putting the $5 million in as a starter, the National Park Service wants to fluff off St. Louis with an outlay of $150,000. That sum would just fence in and landscape the Old Courthouse.

Probably no other project in the city's history has had so much publicity and so much effort expended with so little accomplished.

When President Eisenhower on January 16 submitted his budget, indicating a surplus of $435 million for the fiscal year beginning July 1, there was a ray of hope for the riverfront memorial.

A 1954 Federal law provided that $5 million could be authorized for the $30 million project as soon as the Federal budget was balanced. The law also specified this money was to be used to clear away the railroad tracks, fill in and beautify the grounds, but that none was to go toward the cost of the spectacular Saarinen Arch. This steel monument, which will be 590 feet high, and taller than the Washington Monument, has had its share of controversy.

The new budget last month removed the legal bar to the $5 million and Representative LEONOR K. SULLIVAN, Democrat, of St. Louis, aided by Representative THOMAS B. CURTIS, Republican, of Webster Groves, and FRANK M. KARSTEN, Democrat, of St. Louis, promptly called for the Government to start moving again in the direction of positive action.

The Jefferson National Expansion Memorial got its start in 1934 when Congress by joint resolution and the signature of President Franklin D. Roosevelt approved it. St. Louis taxpayers 2 years later voted $7,500,000 in bonds for their one-fourth share of the estimated cost. Except for an original $6,500,000 in Federal money to buy the 82.5 acres of riverfront property, to which St. Louis added $2,250,000, nothing has been done by the Federal Government in the last 20 years toward starting construction.

When the President announced his budget balance last month it seemed like the last of the obstacles had been overcome.

However, the National Park Service made no mention of the memorial in its original budget for next year. KARSTEN was told this agency had not planned to ask for any memorial funds because it had not been notified, at the time the budget was prepared, that the budgetary restrictions imposed by the 1954 law had been eliminated.

The three House Members pleaded their cause to the House Appropriations Subcommittee last week, and got a sympathetic ear.

However, Representative CLARENCE CANNON, of Missouri, who is chairman of the parent House Appropriations Committee, hinted what has to be done to get the project moving. He said the memorial had every chance of being approved "provided the Interior Department asks for the funds."

The National Park Service is part of the Department of the Interior. Proponents had hoped funds to start the project would be included in a supplemental budget of this Department. However, there was no such request last week, only $150,000 for the old court house fence and grounds.

The Park Service's original request for all its work everywhere was for $5,200,000. The new budget called for $8,300,000 more. All of this money was ticketed to remodel existing national parks. Nothing was asked for construction of the St. Louis project, which the Park Service considers a new undertaking.

Representative CANNON described the riverfront memorial worthwhile, adding, "St. Louis is certainly entitled to every consideration on this request."

Senator ALBEN BARKLEY, Democrat, of Kentucky, and former Vice President, is chairman of the United States Territorial Expansion Memorial Commission which selected the St. Louis project. He, too, announced his full support to get the memorial underway.

However, with very few exceptions, Congress only appropriates for projects requested by governmental agencies responsible for them. So support from the National Park Service is considered vital. The agency is more interested in improving and expanding present national park facilities, than it is in giving St. Louis its memorial.

Therefore, it remains for St. Louis representatives in the House and Senate to persuade this agency to help the Government keep its word—given so long ago and still unfulfilled.

The Jefferson National Expansion Memorial Association, an organization of civic leaders who had worked for the project these years also is expected to put up a strong fight.

Civic Progress, Inc., another city agency has made the memorial one of its major projects, and is expected to throw powerful support behind it.

Backers point out the project has withstood the test of the courts. The battle over relocation of the railroad tracks was settled in 1949. And, in reference to the 4,000 cars which now use the area as a parking lot, the National Park Service has notified the city it has no objection to underground parking facilities on the site. The only restriction is that the underground area does not interfere with the above-the-ground planning of the memorial.

The time for governmental action is now. St. Louis has waited patiently through two decades, which included World War II and the Korean conflict. Those who appreciate the historical and educational value of this memorial say it has been kicked around long enough.

They ask: "How much longer must we wait for the Government to keep its pledge made over 20 years ago?"

Why Reprisals?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1956

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the January 13, 1956, issue of Israel Speaks, is deserving of the attention of our colleagues. The article discusses Arab attacks against Israel:

WHY REPRISALS?

(By our diplomatic correspondent)

JERUSALEM.—There has been a good deal of criticism of Israel, especially by commentators abroad, for the retaliatory action she has taken from time to time against Arab attacks. These critics maintain, no doubt rightly, that this is not a normal way for a state to behave—but the whole point is that Israel does not find herself in a normal situation. So it is perhaps worthwhile to consider this whole problem of reprisals, and see on what it is based and whether there is any workable alternative.

Israel's fundamental position is to say to the Arabs: "You leave us alone, and we shall leave you alone. But if you keep attacking us, you must not be surprised if after a while we hit back." Every act of reprisal by Israel has followed on an attack, and usually on a whole series of attacks, by one or another of the Arab States. Almost always an effort has been made to hit back against the actual attackers, especially when it has been possible to establish who they were and where they came from.

It is not always realized abroad that the Arab States, without exception, have maintained their war against Israel by all possible means throughout the past 7 years despite the armistice agreements which they all signed. Not only have the Arab States done their utmost—and are still doing their utmost—to damage Israel politically, diplomatically and economically, but they have carried on almost uninterrupted guerrilla warfare against Israel's defense forces and against her civilian population, especially in the districts closest to the borders. For years now there has been scarcely a day or a night without an attack of some kind from one or another of the Arab States. When things quiet down a little in one part of the country, they flare up somewhere else, in keeping with the Arab policy of harrying Israel at all possible points and by all possible means.

POLICY OF MODERATION

Sometimes an Israeli patrol is exposed to a barrage of fire, sometimes mines are placed on the road. At one time an armed Arab gang will enter a village at night and blow up houses; at another, the Arabs will shoot at an aircraft or at fishing vessels. It all depends on the circumstances of time and place. Not always do people get killed, but very often they do; and then feelings in Israel are naturally inflamed, and there is an intense desire to avenge the dead and teach the killers a lesson once and for all. It is, in fact, a tribute to the Israeli Government's moderation that acts of reprisal are as few and far between as they are—though it is perhaps precisely because they are so relatively rare that they come as such a shock to people abroad.

Acts of reprisal occur quite often in quite a number of places in the world, and they are always a sign that the situation in those places is abnormal, and that the people there do not know of any better way of dealing with it. The British, for example, carry out punitive raids from the air against Arab villages near Aden in reprisal for acts of violence or marauding by the villagers, and they give as their reason that this is the only effective way of dealing with this particular situation. An abnormal situation is bound to lead to abnormal measures, and the real question one has to ask oneself is who is responsible for this situation.

ARAB PROVOCATION

In the case of the trouble along the borders between Israel and the Arab states, the answer is not in doubt. Even the

United Nations has acknowledged that there is constant Arab provocation and has, in fact, done something to try to put an end to it. It seems now evident that the Arab states, or at any rate most of them, signed the armistice agreements without any serious intention of carrying them out. They are constantly violating these agreements, and their violations have indeed become graver and more frequent as time has gone on.

The armistice agreements were drafted explicitly—the text of all of them says so—to provide for a transition to permanent peace. It is in conformity with this, both in the spirit and in the letter, that Israel has continuously throughout these 7 years offered to enter into negotiations for peace. But the Arabs have constantly refused to enter into negotiations of any kind, and if peace seems impossible, Israel makes one demand and one demand only—that the Arab states at least observe the armistice faithfully and put an end to their constant acts of violence along the frontiers.

Nobody in Israel likes the idea of reprisals. They have been regarded by the government only as a grim and painful necessity, and nobody would be happier than the Israeli Government if there were never any further need for them. The government's viewpoint deserves perhaps to be restated. If the Arabs do not attack Israel, Israel will not attack them; but if they insist on keeping up their attacks, they can have only themselves to blame if sooner or later Israel hits back. This would happen everywhere else in the world under similar circumstances, for it is the first duty of a government to defend its territory and the lives of its people.

Address by Hon. Leslie C. Arends at Lincoln Day Dinner, Hotel Utica, Utica, N. Y., on Saturday Evening, February 11, 1956

EXTENSION OF REMARKS

OF

HON. WILLIAM R. WILLIAMS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. WILLIAMS of New York. Mr. Speaker, under leave to extend my remarks, I would like to include a speech by the distinguished minority whip of the House of Representatives, Congressman LESLIE C. ARENDS, of Illinois, which he made February 11, 1956, at a Lincoln Day observance dinner, held at Hotel Utica, Utica, N. Y., under the auspices of the Oneida County Republican Committee.

Congressman AREND'S speech follows:

It is a great privilege and a real pleasure for me to be able to participate with you this evening in paying homage to Abraham Lincoln—our first Republican President and a great American whose name and whose deeds will live forever.

I would be less than honest not to confess to you that I was a bit hesitant about coming here for this occasion. It was not that I did not desire to come. I had heard from many what a fine annual affair this is. I now can see for myself why those who have participated on your annual program have been so enthusiastic.

You have had so many outstanding speakers on previous Lincoln Day dinners that I frankly wondered whether I could measure up to what you might expect of me. But I am here. And I am sure the others who have been here from Congress before me will agree with me when I say that your Congressman, WILLIAM WILLIAMS, is one of the most persuasive men in the Congress.

The Republican National Committee had suggested during this Lincoln Day recess period that I make a speaking tour in California. I had planned to make the trip. Then along came my friend and colleague, BILL WILLIAMS, with his usual quiet, persuasive way. And so, as George Gobel would say, "there you are, and here I am."

You certainly demonstrated that you know your politics as the science of good government when you sent to Congress to be your spokesman in national affairs a man of BILL WILLIAMS' fine character and outstanding ability.

As the Republican whip of the House it is part of my job to keep close check on the attendance and performance record of each and every Republican Member of Congress. By virtue of the very nature of my duties as the Republican whip, I have an intimate knowledge of the record of BILL WILLIAMS. You surely know—without my telling you—the truly high quality of representation he has given this district.

I never have had to seek him out to be present on the floor of the House for some particular vote. He was always there. I never have had to concern myself as to how he would vote on a matter involving a proven principle of government. BILL WILLIAMS has always stood firm for principle, when others might allow themselves to be swayed by the political expediencies of the moment.

I will say, speaking not only as a friend but in my official capacity as the Republican whip, that no Member of Congress has a finer record of performance, both in the work of the Committee on Agriculture and on the floor of the House, than your own BILL WILLIAMS. I know you are proud of him. You have a right to be. He is a real Republican and a fine American.

And tonight we are paying homage to another real Republican and fine American—one of the greatest of the great.

I look upon Abraham Lincoln—a plain, God-fearing man—as the very symbol of democracy and the very embodiment of the American way of life. He came from a humble log cabin in Kentucky to occupy the White House. His life expresses, as nothing else can, the individual freedom and opportunity that is America.

As Abe Lincoln himself expressed it in a speech at New Haven, Conn., in 1860: "I am not ashamed to confess that 25 years ago I was a hired laborer, hauling rails, at work on a flatboat—just what might happen to and poor man's son. I want every man to have a chance."

To insure these United States of America as a land of freedom and opportunity, that every man may have his chance, Abraham Lincoln devoted his life, founded our Republican Party and ultimately gave his life. Let us be no less devoted.

In 1864, when our country was torn with internal strife and Abe Lincoln was struggling with a heavy heart to restore peace and unity, he had occasion to make a few remarks to an infantry regiment. This is what he said, with his customary humility: "I happen temporarily to occupy this big White House. I am a living witness that any one of your children may look to come here, as my fathers' child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance—that the struggle should be maintained that we may not lose our birthright."

We in our day are likewise called upon in the circumstances of our day to maintain this struggle for freedom and opportunity that we may not lose this precious birthright.

As we reflect on the life and character of the immortal Abraham Lincoln, our hearts fill with renewed devotion to our cherished heritage of freedom and opportunity for which he so nobly gave "that last full measure of devotion." In his words and by his deeds he has left footprints on the sands of time to show us the way, to inspire us and give us courage in our darkest hours.

Of course, we in Illinois take special pride in this great American. He practiced law in the immediate vicinity of my congressional district and served four terms in the Illinois State Legislature, as well as one term as a Member of Congress from Illinois.

The important fact is that he lived in the days of the pioneers. In this environment he acquired those sterling qualities of honesty and humility, patience and charity, self-reliance and industry; and, above all else, faith in God and his fellowmen.

Abraham Lincoln does not really belong to any one State. He does not belong solely to Kentucky, where he was born; nor to Indiana, where he was raised as a boy; nor solely to my own State of Illinois, where he rose to national greatness.

Lincoln belongs to the ages—to all Americans—to all peoples.

But he uniquely belongs to the Republican Party. He was our first national leader. He shaped our formative years as a political party.

The basic principles of freedom under a constitutional Government that Abraham Lincoln advocated are the traditional principles of the Republican Party. With time, conditions and circumstances change. But proven principles for individual conduct and proven principles for good government will live forever.

Lincoln believed that the Government belonged to the people, should be conducted for the people, by the people. That continues to be the doctrine of the Republican Party.

Lincoln believed that a government that governs the least governs the best. That continues to be the doctrine of the Republican Party.

Lincoln believed in equal rights for all and special privileges for none. That continues to be the doctrine of the Republican Party.

Lincoln believed in frugality. He believed that debts and taxes can be chains of bondage as much as other forms of enslavement. That continues to be the doctrine of the Republican Party.

Lincoln believed in honesty and integrity. He looked upon public office as a public trust. That continues to be the doctrine of the Republican Party.

It has been such traditional principles as these that have made America strong and great. It is to such traditional principles that our country is being returned under the crusading dynamic leadership of President Eisenhower.

As the people looked to Lincoln for forthright leadership in a period of grave national crisis, the American people look today to President Eisenhower, and the Republican Party, for the same forthright leadership in this critical period, when our very existence as a free people is threatened.

Lincoln kept faith. With determination and with courage, he applied himself to the problems of his day. He saved this Nation from self-destruction.

We are keeping faith. With determination and with courage, we, too, are applying ourselves to the complex problems of our day. With the full cooperation of the Republican Members of Congress, President Eisenhower is again furnishing the country the forthright leadership so earnestly desired by all Americans and so sorely needed to preserve the American way of life.

We Republicans are engaged in the tremendous job of reconstruction: spiritually, economically, militarily and governmentally. We have the appointed task to repair the great damage wrought by 20 long years of New Deal-Fair Deal misrule. It will take time; it will take courage; and, it will take patience to repair completely the damage wrought by many years during which the socialistic planners of the Democrat Party distorted and circumvented our Constitution and shackled our economy.

In this work of reconstruction we are, as immortal Abraham Lincoln expressed it in memorable words at Gettysburg, "Dedicated to the great task remaining before us * * * that this Nation, under God, shall have a new birth of freedom."

As Lincoln kept faith, we are keeping faith. Truly remarkable progress has been made in just three short years. Much has been accomplished. But much remains to be done.

A great deal of which has been accomplished can be credited to the fact that we have in the White House another Republican who, like Lincoln, is a man of great spiritual and intellectual stature. He has but one ambition: that is to do that which is best for all of us that all of us, and our children to come after us, may as a free people ever enjoy peace, progress, and prosperity.

I venture the prediction that this period of our history will come to be known as the Republican era of stability and solid progress. It will stand in sharp contrast to the previous 20 years of debts, taxes, subversion, immorality, confusion, uncertainty, inflation and war.

As the very first step for meeting the great task before us, President Eisenhower determined it shall be the firm policy of his administration to adhere to the fundamental principles of our constitutional form of government. We now have in the White House a President who believes in the Constitution of the United States. To him it is not the straitjacket against which the New Dealers-Fair Dealers complain. To him the Constitution is a living document within the framework of which we can work together as a team to solve our problems and insure the people their rights and liberties.

During these past 20 years of misrule we have seen our Constitution distorted, circumvented, and even ignored. We experienced White House dictation, ridicule of the Congress and even an abortive attempt to pack the Supreme Court.

This shameful era has ended. With the Eisenhower administration we have returned to our constitutional form of government. Immediately upon taking office President Eisenhower inaugurated policies and procedures to restore Congress to its proper place in our system of government as the voice of the people, the doer of the people's will and the protector of their liberties.

This is precisely the same attitude taken by Abraham Lincoln. In a speech at Pittsburgh on February 15, 1861, Lincoln said: "By the Constitution, the Executive may recommend measures which he thinks proper, and he may veto those he thinks improper, and it is supposed that he may add to certain indirect influences to affect the action of Congress. My political education strongly inclines me against a very free use of any of these means by the Executive to control the legislation of the country."

That was the intent of our Founding Fathers, that was the principle of government followed by Abraham Lincoln, and it is the principle of government being followed by Dwight D. Eisenhower.

President Eisenhower regularly consults with the leaders of the people's representatives in Congress. We meet with him regularly each week for a discussion of pressing problems and possible solutions by legislative or Executive action. These White House conferences provide opportunity for a free exchange of views and ideas between the President and the Congress as the voice of the people.

President Eisenhower's immediate predecessors did not consult with the Congress and recommend. They arbitrarily demanded certain measures be passed, without changing a comma; and insisted that every dollar requested be appropriated, without question. When the Congress refused their demands there followed White House attempts at political purges. There followed ridicule and abuse of your Congress as an arm of the Government.

Recall, for example, President Roosevelt's "Rubberstamp Congresses" and his efforts to purge the recalcitrants of his own political party. Recall President Truman's abuse of the Republican 80th Congress, notwithstanding the fact it complied with the people's wishes by cutting the cost of government, reducing taxes and improving labor-management relations. Recall President Truman's free use of the veto power and his repeated refusals to give the Congress the information it sought in order to legislate for the people the Congress represented. Recall the secret agreements entered into by the Executive and foreign commitments made without any consultation at any time with the Congress.

Our steel mills were seized without regard to the constitutional prohibition against taking private property of any man or group of men. Our country was even plunged—practically overnight—into a stalemate war in far off Korea, without any prior consultation of any kind with the Congress.

With our Republican administration this shameful era ended. From a government by executive dictation, order, and decree that we experienced for 20 long years under the Democrats, we have changed to a government of law as expressed by the people through their own Representatives in Congress. We Republicans have brought an end to the era of government by men and have ushered in an Abraham Lincoln era of government of, for, and by the people.

Our constitutional form of government is being revitalized in other respects. For 20 long years we have seen the Federal Government assume more and more authority at the expense of the States and local communities. So extensive had the centralization of power in Washington become that our States were becoming little more than geographic boundaries on a map.

We Republicans have not only stopped this dangerous, destructive trend. We have reversed it. Not only do we Republicans emphasize local self-government, local rights, and local responsibilities, we emphasize individual rights and liberties. We emphasize freedom and opportunity. We emphasize individual initiative and ingenuity. That is the American way of life.

Since we Republicans took over our national leadership there has been a moral and spiritual reawakening.

For 20 long years under the New Dealers-Fair Dealers, who control the Democratic Party, we have witnessed immorality, graft, greed, corruption, and in general a moral degeneration of our people. They offered something material to induce the people to follow them. Theirs was a dollar a vote philosophy.

But they never offered anything spiritual. They never sought to point out to our people that man is a spiritual as well as a material being. "Man cannot live by bread alone," and for 20 long years our people were actually starving for spiritual leadership.

All this has been changed under the forthright leadership of our Republican administration. President Eisenhower has brought about a moral and spiritual reawakening in the country.

No nation, however strong in a material sense, can long endure if it is not strong morally and spiritually. It is a lesson of history. Just as Abraham Lincoln showed the way, President Eisenhower has shown the way to moral and spiritual strength. That, to me, is one of our foremost accomplishments.

In these 3 short years our Nation has also become economically strong. This period of peace, progress, and prosperity stands in sharp contrast to the previous period of war, ever-mounting debts, ever-increasing taxes, ever-expanding Government, and widespread uncertainty.

Just consider for a moment what we have accomplished. When we Republicans took office—only 3 years ago—we were at war. It was an undeclared war in far-off Korea, in which we had no voice. It cost billions upon billions of dollars. More important, it cost the lives of 33,237 American boys and 119,196 wounded; some of whom will never see or walk again.

We ended that unnecessary, costly war. We brought peace in the world. And today, thanks to our Republican President's capacity for world leadership, we are in a stronger international position than we have ever been. We have seized the diplomatic offensive.

To be sure, it is not a certain peace. Yet we are on the march, for the first time in more than a decade, toward international justice and stable international peace. We are on the march for permanent peace and security with a leader who knows best how to achieve it.

In our untiring efforts for permanent peace and security we are following two basic principles. One is that the American people themselves shall at all times have a voice in the course pursued. The era of secret agreements has ended. Ours is the policy of keeping the people fully advised at all times and of giving the people, through their representatives in Congress, a definite voice in the decisions made.

A second basic principle in our Republican foreign policy is that we shall be firm and strong. While we are determined to insure peace, we are not so foolish to think that concessions and appeasement insure peace. That was the naive theory of the previous Democrat administrations, but it is not the policy of our Republican administration.

The Democrats have made much ado over the so-called "brink of war" statement of Secretary of State Dulles. In this, as in all things, they are desperately searching for an issue and desperately trying to becloud the facts.

The fact is that "the brink of war" is nothing more or less than the administration's policy, endorsed by Congress itself in the Formosa resolution, of making certain our allies and our potential enemies know that we say what we mean and we mean what we say. It is this firm, definite policy that has served to deter anyone with thoughts of aggression.

Of this I am sure: Our people would rather that we use "brink of war" policy than be in war itself, and that's exactly what the policy has accomplished.

We are following a principle enunciated by Abraham Lincoln when he said: "With malice toward none, with charity for all, with firmness in the right." That's the essence of our foreign policy, "firmness in the right." Our friends and enemies know it. Because they know it, war has been avoided, and we are closer to permanent peace than we have ever been. We hold no malice. We seek nothing. We seek only to be free to live and to let others live in peace and freedom. That is what is conceived to be right—a God given right—and for that right we shall, under a Republican administration, be always courageous and firm.

Yes, we have achieved peace. We have done more than that. We have given our

people both peace and prosperity. We are proving to our Democrat friends you can have both.

The unemployment problem of the 30's was never solved in 20 long years. World War II temporarily solved it. The Korean war temporarily solved it. But no real solution is temporary.

No real prosperity is based on war. Real prosperity has but one real basis—and that is the reality of peace.

We can be proud of the comparative ease with which the country made the transition from the Democrat wartime economy to the Republican peacetime economy. Such a transition is always difficult. Maladjustments are more or less certain to occur. Some still exist but steps are being taken to correct them.

You may recall that in making this transition the Democrat prophets of doom and disaster began to beat the war drums. But their loud cries of an impending depression, of doom and great disaster, never materialized. Our Republican administration not only brought peace, not only made possible a transition from war production to peacetime production with a minimum of hardship—we have ushered in a period of prosperity never before achieved. Home, industrial, public, and other construction are setting new high records. Civilian employment has reached an all-time peak of 65 million. For the first time in history personal income is exceeding the $300 billion level.

The average weekly wage of manufacturing workers has risen to almost $80. That is almost $9 more per week than it was a year and a half ago.

But that's not the whole story. The important fact is that not only have wages in dollars increased but what those dollars will buy has become stable. We Republicans have stabilized the dollar so that what the wage earner receives is a real wage.

The halting of inflation and the creation of an economic prosperity based on peace instead of war is no mere accident. It is the result of the policies put into effect by your Republican administration under President Eisenhower.

It is the result of our continuing to adhere to the principles advocated by Abraham Lincoln. In a speech on the floor of the House, when he was a Member of Congress from Illinois, he said: "We hold the true Republican position. In leaving the people's business in their hands, we cannot be wrong." And that is exactly the policy being followed by your Republican administration.

We released the energies of our people and private enterprise by removing Government controls on prices, wages, rents, and materials. We reversed the trend toward an all-powerful Federal Government in Washington and have been steadily taking the Government out of competition with private enterprise. We cut Government spending and passed the savings on to the people. We provided incentives to industry and business to create jobs by reducing their tax burdens and other aids. In short, your Republican administration has placed our whole economy on a solid foundation that all the people may enjoy progress and prosperity.

To be sure, there are still certain areas where complete adjustment from wartime to peacetime production has not yet been made. There are still problems to be solved. And the farm problem is the most notable. Farm prices continue to decline. But it must be borne in mind we have not yet put into effect our entire Republican farm program. It must be borne in mind that from the previous administrations we have inherited huge surpluses which continue to depress farm prices.

Nonetheless, the decline in farm prices which started in the Truman administration has been slowed down. We are vigorously pursuing a program for the disposal, at home and abroad, of the huge surpluses. We are finding new markets and new uses for the products of the farm.

I am confident that we are on the way to a solution of the farm problem. It will take time. It will take patience. But we Republicans are determined we shall find the solution and not simply play politics at the expense of our farmers.

It seems to me that the stoppage of inflation and the general stabilization of our economy is one of our great accomplishments of your Republican administration. It means considerably more than the Democrat proposal of a $20 tax reduction, which would only have meant the average family would have to spend that much and more in the price rise it would have caused. But Democrats are interested in lure for votes that they get power. We Republicans are instead working for national strength that our country may have power.

Why does the average man now have more take-home pay? Why is it more? There are two reasons: one is that under the rise, careful, painstaking direction of your Republican administration the inflation has been halted. And, secondly, we have in this brief period of less than 3 years cut the cost of Government to the extent that we have given the taxpayers $7,400,000,000 to spend for themselves, rather than have the Government spend it for them. And believe me, we have every reason to believe that more tax reduction is on the way if Republicans are left in control of our fiscal affairs.

The Democrats are trying to make it appear that the tax reduction favored the rich. The 10-percent cut was made in personal income taxes of all in the middle and lower brackets, consisting of 85 percent of the taxpayers. Does that favor the rich? All excise taxes, such as on electrical appliances, movie theater tickets, railroad fares, toilet articles, and various items in the average family budget, were reduced from 25 to 10 percent. Does that favor the rich? It is the average working man and woman who constitute 85 percent of the consumers in America.

The fact is that two-thirds of the huge tax reduction brought about in just 2 years goes directly to the average wage earner and his family. We Republicans are interested in making certain the average man, the average American, is able to find steady employment, and able to progress. We are achieving that objective and we are now entering upon a period of progress and prosperity never equaled in our history.

I wish I had the time to outline all that has been accomplished in this brief period of less than 3 years. On all fronts, foreign and domestic, governmental and economic, military and moral, we have made an outstanding record for a freer and stronger America. After 20 years of New Deal-Fair Deal misrule, with programs to make us a socialistic state, we have been engaged in repairing the damage they have done. We are engaged in rebuilding our whole national economic and governmental house in accordance with proven American principles of sound economics and good government.

Yes, we Republicans have something of which we can be proud. We have a truly American program for peace, progress, and prosperity. We have a record to show we know how to put that program into effect, and our record shows the effectiveness of the program. In just less than 3 years the whole country is beginning to enjoy its fruits. We are in a Republican era of stability. We are in a period of peace, progress, and prosperity.

That's exactly what the American people want. It is your job and mine to see that they really get what they want. If we do our job as we should, a complete Republican victory in November is a certainty.

In 1859 Abraham Lincoln made this pledge: "I have enlisted for the permanent success of the Republican cause." We here tonight pledge we shall do no less.

Lincoln Was Strict as Segregationist

EXTENSION OF REMARKS
OF
HON. ARTHUR WINSTEAD
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. WINSTEAD. Mr. Speaker, there is much discussion in the northern press condemning the action of my State of Mississippi and other Southern States for interposing the rights of our State, rights reserved to them under the Constitution of the United States. I would point out such action is the only appeal from the unconstitutional action of the Supreme Court in the antisegregation decision. In view of such facts, I wish to insert the following editorial on the views of Abraham Lincoln on the race issue. I do this because in all the Lincoln Day Republican speeches, you will not find these truths about Lincoln:

[From the Jackson (Miss.) Clarion-Ledger and Daily News of February 12, 1956]

LINCOLN WAS STRICT AS SEGREGATIONIST—GREAT EMANCIPATOR SAW "NATURAL DISGUST" IN AMALGAMATION OF RACES; ABE NEVER INTENDED FOR NEGRO TO BE A UNITED STATES CITIZEN

Today is the birthday of Abraham Lincoln, emancipator of the Negro race, and it is timely that the Nation should know exactly what the great emancipator really thought on the race question.

It is a fact of history that Lincoln was a strict segregationist and did not believe in the "political and social equality of the black and white races."

Extracts from Lincoln's speeches, here quoted, may be found in almost any public library containing Lincolniana.

In a Springfield, Ill., speech on June 26, 1857, Lincoln said:

"There is a natural disgust in the minds of nearly all white people at the idea of an indiscriminate amalgamation of the white and black races * * *.

KEEP SEPARATION

"A separation of the races is the only perfect preventive of amalgamation; but as immediate separation is impossible the next best thing * * * is to keep them apart where they are not already together.

"If white and black people never get together in Kansas, they will never mix blood in Kansas. This is one self-evident truth.

"A few free colored persons may get into the free States in any event; but their number is too insignificant to amount to much in the way of mixing blood. * * *

"Such separation, if it is ever to be effected at all, must be effected by colonization. * * * The enterprise is a difficult one, but 'where there is a will there is a way,' and what colonization needs most is a hearty will. * * *

"Let us be brought to believe it is morally right, and at the same time favorable to, or at least not against, our interest to transfer the African to his native clime, and we shall find a way to do it, however great the task may be."

CHILDREN OF ISRAEL

"The children of Israel, to such numbers as to include 400,000 fighting men, went out of Egypt in a body."

At Ottawa, Ill., on August 21, 1859, in a famous debate with Lincoln, Judge Douglas, who defeated Lincoln for the senatorship, said:

"I hold that a Negro is not and never ought to be a citizen of the United States. I hold that this Government was made on the white basis, by white men for the benefit of white men and their posterity forever, and should be administered by white men and none others."

Lincoln replied: "I have no purpose to introduce political and social equality between the white and black races. There is a physical difference between the two, which, in my judgment, will forever forbid their living together upon the footing of perfect equality; and inasmuch as it becomes a necessity that there must be a difference, I am in favor of the race to which I belong having the superior position."

On September 16, 1859, at Columbus, Ohio, Lincoln spoke as follows:

ENTITLED TO RIGHTS

"There is no reason in the world why the Negro is not entitled to all the natural rights, enumerated in the Declaration of Independence, the right to life, liberty, and the pursuit of happiness. * * *

"I agree with Judge Douglas, he is not my equal in many respects—certainly not in color, perhaps not in moral or intellectual endowments. But in the right to eat the bread, without leave of anybody else, which his own hand earns, he is my equal, and the equal of Judge Douglas, and the equal of every living man. * * *

"I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races—I am not, nor ever have been, in favor of making voters or jurors of the Negroes, nor of qualifying them to hold office, nor to intermarry with white people.

"I am now in my 50th year; and I certainly never have had a black woman for either a slave or a wife. So it seems to me quite possible for us to get along without making either slaves or wives of the Negroes."

NO PERFECT EQUALITY

"I will add to this, that I have never seen to my knowledge a man, woman, or child, who was in favor of producing a perfect equality, social and political, between Negroes and White men. * * *

"I give him (Judge Douglas) my most solemn pledge that I will to the very last stand by the law of the State, which forbids the marrying of White people with Negroes."

There were about 500,000 free Negroes in the United States at the time of the Civil War (1860 census), over half of whom lived in the South. On August 14, 1862, President Lincoln, in recommending colonization to a "Deputation of (free) Negroes" in Washington, said:

"You and we are different races. We have between us a broader difference that exists between almost any other two races. Whether it be right or wrong I need not discuss; but this physical difference is a great disadvantage to us both, as I think."

BOTH RACES SUFFER

"Your race suffer very greatly, many of them by living among us, while ours suffer from your presence. In a word, we suffer on each side. If this is admitted, it affords a reason, at least, why we should be separated.

"Even when you cease to be slaves, you are yet far removed from being placed on an equality with white people * * *. On this broad continent not a single man of your race is made the equal of a single man of ours. Go where you are treated the best, and the ban is still upon you * * *. I cannot alter it if I would.

"I need not recount to you the effects upon white men, growing out of the institution of slavery * * * its evil effects upon the white race.

"See our present condition—the country engaged in war—our white men cutting one another's throats, and then consider what we know to be the truth.

"But for your race among us there would be no war, although many men engaged on either side do not care for you one way or the other. It is better for us both, therefore, to be separated."

He recommended Central America as an alternative to Africa, for colonization of American Negroes.

Our Inadequate Highway System

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. PELLY. Mr. Speaker, a single disaster if it took the lives of 105 people today would be reported by radio and television and would appear on the front page of every newspaper in the Nation. Yet about 100 separate tragedies which occurred every single day of last year and which resulted in an average of 105 people killed daily in the United States by automobiles have failed to shock legislators sufficiently to remedy this situation in the past. A highway system to take care of the 3 million additional automobiles being added each year is the remedy I have in mind to adequately handle our traffic problem. The death toll rose 8 percent in 1955 and yet Congress last year failed to act on President Eisenhower's highway construction program.

It is encouraging that Congress may soon consider a measure which provides for the Federal Government to assume a major role in accelerating highway construction, because I doubt if our constitutents next fall will register much sympathy if Members of Congress, as they did in the first session of the 84th Congress, set up partisan roadblocks—a rather appropriate expression—for authorizing such a program.

Last session, I could not support the committee bill that was reported out of committee—not, I assure you, on account of the measure's failure to conform to the administration's ideas; but rather because this Democratic bill taxed nonusers of interstate highways unfairly. Certainly, I have no objections to a pay-as-you-go program and I understand President Eisenhower has no objection to it as against his former suggestion of financing this highway program by issuing bonds.

There are details about this highway construction bill that are important. In my opinion, a provision such as the Davis-Bacon type of protection for local area wages and standards is fair and should be supported. I expect to have more to say on that score later. There will be difference of opinion, also, as to the apportioning formula as between States, and reimbursement factors to utilities.

Right now, I desire to address myself to the general need that exists as far as my own State of Washington is concerned. It happens that Washington State's needs recently have been carefully analyzed. Citing the highway study of this one State would indicate, I am sure, a good example of what exists in the other 47 States.

Our Washington State Highway Commission presented a long-range report at the 1955 session of our State legislature outlining the needs of the highway system over a 10-year period with anticipated State revenues. This comprehensive report was based on a 2-year study by our department of highways in evaluating every mile of the State highway system to determine needs of each section in respect to anticipated traffic growth.

The conclusion was that for a 10-year period $675 million should be spent while using the present tax base projected over the same period, allowing for expected revenue increases, only $331 million would be available to do the work.

These total needs, I am told by Washington State's Director of Highways, W. A. Bugge, are somewhat below the figures set forth in the section 13 study of the 1954 Federal Aid Act, this for the reason that in our State study, need was held to the bare essentials and it excluded improvements on 1,700 miles of State highways which while inadequate, yet could be tolerated. Also excluded was reconstruction of highway from Tacoma through Seattle to Everett which is proposed as a toll road to cost an estimated $194 million. Two other sections that cross the Cascade Mountains were omitted, part of the so-called Cascade Wagon Road from Marblemount to Twisp, and also part of the Naches Pass highway. These projects would cost $50 million additional.

In other words, without a revision of the tax base or additional assistance on the Federal level, the State of Washington will be faced with a very serious problem as it affects the improvement of the highway system. There is no doubt that if the highway transportation system of my State or the other 47 States, is not improved, consistent with the traffic demands, the effect will be of serious nature upon the economic and industrial growth of the State and likewise of the Nation, as well as upon the accident and mortality rate.

I agree with the conclusions reached by the Public Works Committee of the House of Representatives that the Federal Government should assume the major responsibility of reconstructing the interstate system, and if legislation is enacted to that effect, it would then make it possible for the State of Washington to re-evaluate its basic highway planning in such a manner as to more realistically meet the 10-year needs requirements with the funds that would be available. Other States, I am sure, will be in the same situation.

A Washington State factor of major importance is the relationship of the proposed Federal highway legislation to the Tacoma-Seattle-Everett toll road. It was the thinking of the 1955 Wash-

ington State Legislature that it was necessary to initiate such action so as to assure the early completion of this much needed highway section. The congestion that is developing in the metropolitan areas of Tacoma and Seattle make it imperative that highway improvements of freeway design be considered in the very near future. For that reason the 1955 State legislature directed the Washington Toll Bridge Authority to proceed with the construction of this highway as a toll road. This particular section of highway is part of the interstate system and if major Federal participation in the interstate system was effected by congressional action, it would then make it possible to reevaluate this particular project with respect to the possibility of building all or parts as a free road, which, of course, would represent a saving of millions of dollars to the highway users of the State, as would be reflected in interest charges on bonds issued and other costs incidental to toll projects.

I believe a thorough investigation of the Federal program will resolve itself into a situation wherein the Federal Government would assume the major cost of the reconstruction of the interstate system and if such legislation became a reality, the highway problems that are affecting the States not only today but in the future could be resolved consistent with the evident traffic demands and likewise the future growth of the State. I think other States would be affected in a similar way to Washington State.

And finally, Mr. Speaker, let me conclude by emphasizing that it takes years to construct highways. It will take years to carry out a Federal accelerated highway program. I strongly support action now to build a highway system adequate for present and future traffic requirements.

Heritage Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the Massachusetts Law Quarterly of December 1955, issued by the Massachusetts Bar Association, by Attorney Albert West, chairman of the special Commission of the 175th Anniversary of the Constitution of the Commonwealth:

THE MASSACHUSETTS HERITAGE PROGRAM OF 1955

(By Albert West, chairman)

The 1955 Massachusetts heritage program of the association was held in conjunction with the observance by the special commission of the 175th anniversary of the constitution of the Commonwealth. The commission was given an appropriation of $5,000 by the legislature for its work and voted to finance the association's history pamphlet on the background of the adoption of the Massachusetts constitution to be distributed in supply to the history departments of all high schools in the Commonwealth.

No effort was spared to make this pamphlet attractive and of lasting value to the schools. Many schools had complained that no adequate teaching guide was obtainable in order to comply with chapter 468 of the acts of 1949, which requires that the history of Massachusetts and its constitution be taught in the secondary schools. This pamphlet was written to help in supplying that need and to stimulate further efforts in this direction. It has been acclaimed by some and well received by all.

We used the Herter mural, the Drafting of the Massachusetts Constitution, in full natural color on the cover. This was the first time this great painting has been published in color and it has excited widespread interest. It is one of five murals painted by Albert Herter, the father of the present Governor, who presented them to the Commonwealth in his last year as speaker of the house in 1943. There is reason to believe that other organizations may follow our lead and reproduce some or all of the others in color. We reproduced, in facsimile, for the first time, the first page of the constitution and published this on the back page of the pamphlet.

Following last year's pattern we made a lawyer available to those high schools wanting a speaker during Massachusetts Heritage Month. Most of the high schools and a great many service clubs and organizations requested a speaker. The speech of His Excellency John Wright, bishop of Worcester in 1954, an address of Basil Brewer, the distinguished New Bedford publisher, which Mr. Brewer supplied, at his own expense, and the matter contained in the pamphlet were made avilable to all speakers. The results were more than gratifying and letters of high praise continue to come to us. The demand for the pamphlet from every conceivable source is evidence of the very great interest on the part of the general public.

The program was climaxed by a dinner on the 175th anniversary of the day when the government of Massachusetts commenced and John Hancock was inaugurated as the first Governor under the Constitution, October 25.

This was an impressive occasion. The main ballroom of the Hotel Statler was filled. The entire board of superintendents of the Boston school system attended and Rt. Rev. Timothy J. O'Leary represented the parochial schools of Massachusetts, among other distinguished educators and leading citizens. Hon. Edward J. Cronin, Secretary of the Commonwealth, paid the association the honor of bringing the original Constitution to the dinner to be viewed by those participating.

The principal speaker was Adm. Samuel Eliot Morison, the foremost authority on the formation of the Constitution, and his address is printed in full in this issue. Hon. Raymond Fellows, chief justice of Maine, represented His Excellency Edmund S. Muskie, Governor of Maine, which was part of Massachusetts under our Constitution until the separation in 1820 at the time of the Missouri compromise.[1]

Chief Justice Stanley E. Qua spoke entertainingly.

A telegram from President Eisenhower was read by President Schneider.

Hon. Paul C. Reardon, the recently appointed chief justice of the superior court was a special guest. Other guests presented were recently appointed probate court judges, Hon. Edmund V. Keville, of Suffolk County, and Hon. Beatrice Hancock Mullaney, of Bristol County, Gen. Otis H. Whitney, Chester C. Steadman, representing the Boston Bar Association, Deborah Greenberg, representing the Women's Lawyers Association, and Joseph Ford, chairman of the committee on public relations of the Massachusetts Bar Association.

Basil Brewer John Taylor, Erwin Canham, Rt. Rev. Francis J. Lally, represented the press and Paul F. Clark, president of the John Hancock Insurance Co. made available funds to distribute enlargements of the Herter mural in full color to the governors and chief justices of the several States. The members of the special commission were head table guests and were presented by the chairman to an appreciative audience.

As pictured below, the national commander of the Veterans of Foreign Wars, Timothy J. Murphy, a member of the association, presented on behalf of his organization a citation which was awarded by them to the Massachusetts Bar Association and the special commission for their efforts in citizenship education.

Judge Daniel J. Gillen, of the Boston Municipal Court, was presented, as the sponsor of the legislation which created the special commission. In addition to breaking records for attendance, the dinner set a high mark for performance and was a fitting climax to a great event. The county chairmen whose efforts helped to make this program a success were awarded a special citation; they are: Hon. Paul M. Swift, Barnstable; Walter E. Reilly, Berkshire; Gerald P. Walsh, Bristol; Andrew Linscott, Essex; Joseph T. Bartlett, Franklin; William F. Stapleton, Hampden; Edwin P. Dunphy, Hampshire; Thomas M. A. Higgins, Middlesex; Dennis F. Ryan, Norfolk; George C. P. Olsson, Plymouth; John E. Connelly, Suffolk; Paul G. Gearan, Worcester.

Special citations were presented by the association to Joseph Lee, present chairman of the Boston School Committee, Thomas J. Curtin, director of the citizenship program of the State Department of Education and Thomas C. Heffernan of the Boston School Department who is also a member of the association, for their help as consultants in the preparation and distribution of the pamphlet.

The members of the special commission on the 175th anniversary of the constitution are: Albert West, chairman, by the Governor; Silvio O. Conte, by the president of the senate; John W. Costello, and Harold Putnam, by the speaker of the house.

As an inspiring example of the far-reaching effect of this work the Massachusetts Teachers Association has invited the association to participate in a conference on citizenship training through public relations, at the Hotel Sheraton Plaza on February 4, 1956. We have been asked to participate because of our "important work in citizenship training directly through the schools or with school cooperation and approval." Thus like dropping a pebble in a pool our circle of influence ever widens. Or as Frank Grinnell says, the continuous radiation of this program is limitless.

[1] Chief Justice Fellows read an original letter of John Adams in 1819 (from the Maine archives) in answer to an inquiry as to the proposal of separation by a member of a Maine committee.

An Arab Kibbutz

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. MULTER. Mr. Speaker, permit me to call the attention of our colleagues to the following article on Arab refugees

which appeared in the January 1956 issue of the American Zionist. The article was written by Mr. Stanley Newman, a British student of Middle Eastern affairs, who has visited the Near East on several occasions.

THE STORY OF AN ARAB "KIBBUTZ"

(By Stanley Newman)

Of the many Middle East problems awaiting a solution, the position of the Arab refugees is possibly the most poignant. Caught up in the wider struggle between Israel and the Arab States, the refugees are forced to remain homeless until the Arab leaders decide it is politic to agree to a peace settlement.

The overwhelming majority of the refugees left Palestine during the Arab-Israel war at the urgings of their leaders, and the remainder fled as the battle drew close to their villages. It is now 7 years since the armistice agreements were signed, but the Arab refugees are, for the most part, still encamped on the squalid sites where they went in the expectation of only temporary shelter. They remain where they are as it suits the aims of the Arab leaders. Indifferent to their welfare, and eager to use them to bring about the hoped-for final destruction of the State of Israel, the Arab leaders have consistently obstructed attempts to settle the refugees in permanent quarters and in productive jobs. Although the American plan for a Jordan Valley authority will benefit Arabs as well as Israel, the Arab leaders have repeatedly stalled the scheme. The project, if carried out, would irrigate land in Jordan and so make it possible to settle many of the refugees. But this would eliminate the Arab refugee issue in the continuing propaganda campaign against Israel, and would largely remove the excuse constantly being offered to explain Arab incursions into Israel.

The director of the United Nations Relief and Works Agency for Palestine Refugees, Henry Labouisse, has repeatedly threatened to expose Arab opposition to resettlement plans, but so far he has failed to carry out his intention. Meanwhile the Arab refugees continue to live in their ramshackle quarters. Despite their protestations of sympathy for their refugee brethren, the Arab States benefit economically from the present situation. United Nations' dollar aid bolsters Jordan's precarious economy, and the shipment of refugee aid goods through Beirut harbor contributes significantly to the city's prosperity.

It is not only United Nation's aid or American development schemes that are treated in this fashion. Private attempts to ease the lot of the refugee have also met with considerable opposition. One such scheme is sponsored in Jordan by the Arab lawyer, Musa Bey Alami. At the outset Musa Alami encountered much hostility, but now that he has outwitted the opponents of his program his project is proudly displayed to visiting Americans as a model of progressive Arab farming methods. Alami himself is periodically brought to the United States on Arab propaganda tours to speak before civic groups on the tragedy of the Arab refugees.

The Musa Bey Alami project is a small experimental village huddled on the sandy plain near the ruins of ancient Jericho. If allowed to prosper, the project holds out fresh hope for the reconstruction of the Arab Middle East. The village, which I visited in 1953, bears many physical resemblances to an Israeli kibbutz, and is but part of a wider scheme for solving the Arab refugee problem, at least in part, and for helping to pioneer a modern Arab agriculture.

Musa Bey Alami, a tall, heavily-built man in his early fifties, with a determined-looking face, is the originator of the project and its driving force. A lawyer by training, Alami was in his younger days an agent for the Jewish National Fund, acting as intermediary with Arab landowners in Palestine. Later he became director of the Arab Offices, the Arab propaganda bureaus established in New York, Jerusalem and London to counteract Zionist political activity prior to the establishment of the State of Israel.

Although no friend of Israel, Musa Alami was inspired by the success of Jewish endeavor in converting the deserts and swamps of Palestine into fertile soil. Shortly after World War II he established the Arab Development Society as an Arab counterpart of the Jewish National Fund. The aim of the Society was to buy land in Palestine, and so keep it out of Jewish hands and at the same time develop it in the Arab interest. In furtherance of this aim, the society planned to grant interest-free loans to the Arab peasants of Palestine, thereby freeing them of the burdensome debts that hung like stones about their necks. The Society also hoped to encourage modern agricultural techniques in order to improve the productivity of the Arab farmer; to improve the health standards of the Arabs by providing clinics and hospitals, by disseminating a knowledge of modern hygiene and sanitation, and by building modern houses in place of the old, dilapidated ones; and finally, to raise the educational level of the Arab peasants by building and supporting schools. The Arab governments received this plan with lukewarm enthusiasm. Only the Iraqi Government thought these aims were sufficiently worthwhile to warrant financial support. With this money the Society bought some land in that part of Palestine that is now Israel territory.

The Arab defeat at the hands of the Israelis, and the Arab refugee problem that accompanied it, convinced the founder of the Arab Development Society that the need for his organization was even greater than before. Musa Alami wrote a short book. The Lesson of Palestine, in which he indicted the Arab leaders and people for their failures. The Arabs, he said in effect, wallowed in the memories of the past, allowing disease, disunity, and poverty to garnish indolence, while the Jews looked forward to a constructive future with hard work and imagination. If the Arabs really wished to regain Palestine—and Alami wants them to—then they must take a firm grip on themselves and organize their society on modern lines.

Not satisfied with a mere condemnation of Arab shortcomings, Alami and his associates drew up a plan of action. The Arab Development Society approached the Jordanian Government with a request for a land grant. They planned to establish a model village in which they would use the Arab refugees to found a new community. This would be a pilot project, one which would serve as an inspiration and an example that might be followed throughout the Arab world. Almost contemptuously, the Jordanian Government gave the society 5,000 acres of what was classified as "dead and waste" land. To the eye, the land was as arid as a block of salt. No water had ever, from biblical days until that time, been found on the site, and the British Mandatory had consequently written the land off as unsuitable for cultivation.

Disregarding all prophecies of failure, Musa Bey Alami and his associates went ahead with that determination possessed by dedicated men. True, no water had ever been found at that spot, but then nobody had ever drilled for any. With home-made tackle they drilled for water. To their own amazement, and to the consternation of their opponents, they discovered water at less than 100 feet below ground level. At the time I was there they had found 18 springs giving clear, sweet drinking water.

A short while after its establishment the village suffered a most severe blow, more cruel by far than the impersonal ravages of nature. Overnight, the 25 families of the village left their new homes and returned to the refugee camp whence they had come. The Jordanian Government had ordered them to leave.

From the outset of the scheme, there had been a deep cleavage between the approach of the Jordanian Government and the Arab Development Society over the problem of the Arab refugees. The Jordanian Government maintained, in common with the other members of the Arab League, that the Arab refugees must return to their former homes in Palestine. While Musa Alami and his associates yield to none in their support of Arab nationalist aims, they do believe that the Arab States must treat the Arab refugees as brothers and not as pariahs and the playthings of politics. Further, Alami sees in the refugee problem a unique opportunity for Arab revival. By training the refugees as modern farmers and to organize their society in keeping with the 20th century, he hopes by such an example to snowball reforms in the Arab world.

It was this wider objective which the Jordanian Government feared. If by proper medical care and welfare facilities Musa Alami could reduce infant mortality, then the peasants in the rest of Jordan would demand equal advantages. Clamor for such amenities would disrupt the present structure of Arab life. The Arab landlords would have to give in to demands for improved living conditions or go. Rather than face such a possibility, the Jordan Government decided to kill off the Musa Bey Alami scheme by forcing its inhabitants to leave.

Alami responded to this setback by adapting another Israeli institution to his needs. With the Youth Aliyah villages as his model, he established an Arab Boys' Town. When I was there he had 100 Palestinian orphans living in the village. They are fed, clothed and housed, and they also receive schooling. In addition to the basic and necesary book-learning, there is vocational training on the village farm, in the tailoring shops, and in the boot repair shops.

The boys' home is largely supported from the income the society gets from the sale of its agricultural produce. Eventually Alami hopes to be able to establish a complementary village for girls.

Unfortunately, there are few men of Musa Alami's caliber in the Arab world today. Let us hope that the boys he is training will be inspired to carry on his constructive work. For it is only when the Arab states devote their attentions to eliminating the basic ills of their society that we can expect peace in the Middle East.

Note on Federal Aid

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Washington Post under date of February 11, 1956. I commend its reading to the entire membership.

NOTE ON FEDERAL AID

If some Members of Congress still have doubts about the urgent need for the school construction bill, let them ponder these figures: In Montgomery County there are some 52,000 pupils now enrolled in the public elementary and secondary schools. It is con-

servatively estimated that within 4 years there will be 75,000. Some estimates put the figure even higher. Despite a large building program, some Montgomery County schools already are on a double shift, which is to say that students do not get the full training to which they are entitled. Nearly all the schools are crowded. This is not an isolated community but a fairly typical one. Similar figures could be cited for almost every growing urban or suburban area. The need for additional funds for the schools is so great that even the most ambitious programs fall far short of the ideal.

Law and Choice

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present the text of an editorial appearing in the Christian Science Monitor on Friday, February 10, 1956:

LAW AND CHOICE

A chapter of an old and respected college fraternity has voted to accept into membership two Negroes. After some hesitation, the national body consented. This is taking place in Williamstown, Mass., in a region, to be sure, where Negroes are only slightly less scarce than are Eskimos in Alabama.

The pertinent elements in this situation are: The college exists under private auspices. The fraternity is a wholly voluntary association. No law or court ruling dictates whether the fraternity shall or shall not bar any race or races from its ranks. The chapter has chosen to do as it is doing.

At the State University of Alabama, a State where 1 out of every 3 persons is a Negro, a young Negro woman was admitted under a Supreme Court ruling. The Court had not said that one or many Negroes must attend the university; it said that any Negro has the legal right to attend if he wishes. Miss Autherine Lucy, for whatever motives, chose to enroll. The university obeyed the law. A number of the students made known that they did not choose to welcome a Negro in their midst. This much is their right.

Here were two examples of the interplay of voluntaryism and law in two quite different situations. And could it remain at that point at Tuscaloosa (as it probably will at Williamstown) it would be valuable to see how matters work out. We cannot believe that, having won the equal legal right to attend or not to attend, any great number of Negroes of their own choice will flock where they are not welcome. People, regardless of race, flow with, not against, the currents of acceptance.

But at Tuscaloosa there have been those, not many of them students, who have sought to force the university to disobey the law and to frighten the Negro student into withdrawing. They by no means represent the whole of community sentiment. (It would be only realistice to say that neither does a faculty minority nor any others who appear to accept willingly a biracial student body.)

The most hopeful local sentiment yet evident might be summed up as: A condemnation of violence and of flouting the law, and a concomitant condemnation of the law and antipathy to desegregation.

The Tuscaloosa News condemned the university as having "knuckled under to the pressures and desires of the mob." The campus Crimson-White denounced the rioters as "forcing their actions and their beliefs on us." The student council called upon the authorities to protect the personal safety of students. But none expressed any disapproval of segregation.

Positions such as these may be far removed from abstract ideals of justice and equality. But to hold such positions in the atmosphere created in the Deep South by the segregation issue takes breadth of view and courage that must be appreciated.

Meanwhile, the duties of the university and the State are clear: To reinstate Miss Lucy as a student and to protect her from violence until some accommodation is reached within the framework of what is now the law of the land. There is a principle at stake here which transcends whether or not townspeople or students choose to like the law's immediate consequences.

Problems of Israel

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DINGELL. Mr. Speaker, to keep as much as possible the great need of the people of Israel before our country, I today insert into this CONGRESSIONAL RECORD an editorial which I have taken from the Detroit Jewish News published on January 27, 1956, by my good friend, Mr. Philip Slomovitz, its editor and publisher. I think the editorial sets forth an aspect of the problem the Israelis face which has not been treated before. I would preface it with a quote from Prof. Preston Slosson, of the University of Michigan, who is one of the great students of history and world affairs in the world today and in whose views I wholeheartedly concur:

The first basis of any Near Eastern settlement at the present time is the recognition of the right of Israel to exist. So long as this is denied or challenged by any of the Arab States, there will be the possibility of war.

Once Israel is fully recognized by her neighbors, other matters can be more easily adjusted. The United Nations (or, failing that, NATO) might well fix permanently the frontiers, resettle refugees, and maintain a token policy force to prevent border "incidents," since any attack on the United Nations force would involve the aggressor, on either side, with the whole United Nations.

I renew my urging on this Congress and upon the administration that positive action be taken at an early date to provide defensive arms to Israel for the protection both of herself and of world peace.

THE "CAN'T YOU DIE DECENTLY?" ATTITUDE

While Arab propagandists are shouting "war," "death to the Jews," "we'll drive the Israelis into the sea," Israel continues to plead for peace. It is a tragic contrast, in the light of impending dangers to world peace.

The developments in the Security Council, the Russian infiltrations into the Middle East, the sponsorship of anti-Israel resolutions by Soviet spokesmen, whose predecessors in the United Nations were among the chief supporters of the original proposals for the establishment of the Jewish State, point to a prolonged controversy. Latest occurrences represent serious challenges to world peace efforts.

In the course of the bitter debates over the Arab-Israel conflicts, irresponsible propagandists often resort to low tactics in their efforts to gain assistance in their chief aim of destroying Israel. We often hear the charge that only the New York press backs Israel. It is a shocking way of saying to an unsuspecting world that the Jews of New York are pressuring American public opinion. It is, of course, a falsehood.

In spite of the uncertainty of the British position, there are newspapers in England whose fairness helps to assure a fair evaluation of the Middle East's problem. One of them, the Manchester Guardian, is rendering especially valuable service in the struggle for peace. In a recent editorial, the Manchester Guardian reviewed the Arabs' about-face demand for adherence to the 1947 U. N. partition resolution, which they had opposed when it first was adopted by the world organization. That editorial stated:

"Since the 1947 resolutions have been brought to the fore, it is necessary to recall their history. The resolutions provided for a partition of Palestine between a Jewish and Arab State, which were to be in some form of economic union. The Jews accepted the resolutions; the Arabs denounced them, to the point that the Arab States attacked Israel at the moment of its birth. The Arab States lost the war with Israel, which had enlarged itself during the fighting to its present size. The Arabs desired to cancel out what had happened by reverting from war to diplomacy and going back to the resolutions which they had rejected. (It is an interesting example of "Heads I win, tails you lose.") It is not clear whether the Arab States, in saying now that they stand by the resolutions, mean that they would accept the Palestinian Arab State envisaged in the resolutions. Large parts of the territory which would have belonged to that state are now incorporated in Jordan and Egypt. Are they willing to disgorge? Israel itself includes no territory which belonged to any of the Arab States. It is also not clear whether the Arabs, in return for the 1947 boundaries, would recognize Israel as a permanency."

These are truths that challenge those who are unrealistically attempting to turn the clock back in the Middle East. The Manchester Guardian supplemented this statement with another vitally important one when it asserted in its editorial:

"Everybody outside the Communist countries wants peace in the Middle East. There is naturally a disposition to be pleased with any side which says that it will negotiate, and to blame any side which objects to terms, even if it should be clear that it would be death to that side to accept them. The Egyptians will exploit this for all they are worth. They believe themselves well placed, since they have learned how to play off the great powers against one another. They know how anxiously their friendship is desired by Britain. Having accepted one delivery of arms from Russia, they have already succeeded in getting the 1947 resolutions disinterred by the British Government and in getting new competitive tenders of aid from the West. It would be natural if they now told themselves that, by accepting a second installment, they could get the West to tilt itself further in their direction in their combat with Israel. Probably the western countries will not be as gullible as the Egyptians think and there will be no cynical surrender of Israel. Israel may be overanxious when it compares itself with Czechoslovakia just before it was sacrificed by the powers. Yet its fears are understandable. It is forgotten that Israel has made all the peace offers, has proposed a corridor

for the Arabs through the Negev, has invited Jordan to use the port of Haifa, has agreed to rationalize its frontier with Jordan, has accepted plans for border security, has agreed in principle to the Dulles plan, subject to the lifting of the blockade. There is surely too much disposition to feel that all would be well if only Israel would shrink and be less conspicuous. It recalls the sentiment of Frederick the Great toward a writhing soldier on one of his battlefields. 'Can't you die decently?' "

The Frederick the Great story must be directed at all those who close eyes and ears when arms shipments are flown to Egypt in vast quantities. A people that has suffered the miseries of purgatory reaffirms that its only intention is to live decently and to aspire for peace and similar equal treatment for its neighbors. To assure world peace, general endorsement must be given to such a policy.

Widespread Opposition to Upper Colorado River Project

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, under unanimous consent granted me so to do, I am submitting four editorials from newspapers in several sections of the country which illustrate the widespread opposition to the proposed multi-billion-dollar upper Colorado River project.

One of them is from Springfield, Ohio. This newspaper is owned by the illustrious James M. Cox, once a candidate for the Presidency. Mr. Cox is recognized by farmers as an authority on our agricultural problems.

The editorials follow:

[From the Springfield (Ohio) Sun of January 16, 1956]

COLORADO PROJECT SHOULD BE DROPPED

There is a time coming when Americans will consume almost everything United States farmers grow. As Secretary of Agriculture Benson said last week in New Orleans: "We will some day need much greater output of farm products than we have today." However, he did not hazard a guess when demand for food and fiber in the United States will eliminate surpluses and empty storehouses of unused farm commodities. It certainly will not happen tomorrow.

Representative CRAIG HOSMER, Republican, California, is preparing a report for congressional review in which he exposes the nonsensical reasoning behind a proposal of reclaiming half a million arid acres in Wyoming, Colorado, Utah, and New Mexico. He shows that, in the first place, the Nation has no possible use for more farmland at the moment. (In fact, it is the express purpose of the administration's latest farm program to reduce producing acreage this year as a means of slowing the heavy influx of excess food.) However, Representative HOSMER bases his opposition primarily on the exorbitant expense of the western reclamation proposal, known as the upper Colorado River project. He estimates that it would cost $4 billion to put the Colorado River area into farm production, or about $5,000 an acre.

He underlines the cost factor with additional information indicating that if, in the near future, the Nation should need more food, production could be easily—and inexpensively—boosted in established farming regions. A survey completed at his request shows that nearly 21 million acres of the "best farmland" in America is idle in 19 States from the Mississippi Valley east and south to Florida. "Moreover," Representative HOSMER observes, "there are millions of other unused acres in lower soil classes in other States in humid areas of the Nation. Much of this idle lower-class land could be improved with little cost and developed into pasture." He believes reclamation of eastern farmland could be accomplished for as little as $15 to $150 an acre.

The California Republican builds a good case. It should persuade fellow Congressmen to oppose strongly any effort to push through the upper Colorado River project. Men have often dreamed of making deserts bloom, of raising fields of golden grain where there is only unyielding ground. One can envision the day when the land in the shadow of the Rockies will be reclaimed, welcomed as a great and unexplored agricultural frontier. But at a time when the Nation stands in the shadow of huge piles of surplus farm commodities, it would be silly to create new reserves of fertile land.

[From the Haddonfield (N. J.) Gazette of January 26, 1956]

"ECONOMIC IDIOCY"

At a time when the administration is advocating a soil bank to take land out of production and the taxpayers are buying and storing surplus crops at a staggering cost, one would think that advocates of irrigation projects would ke keeping mum. But that is not the case.

The Nation has 21 million acres of rich, idle farmland in the Midwest, South, and Southeast available for crop production when more food and fiber are needed. But Congress is being asked to approve the upper Colorado River project to irrigate 523,000 acres of arid mountain land at a cost of $4 billion in added taxes. Conservative estimates show that it will cost $5,000 an acre to bring water to this land and grade it so that it can be properly irrigated and put into production.

Representative CRAIG HOSMER, of California, says "The whole thing is nothing short of economic idiocy." It so happens that the crazier the schemes are the more apt they are to be adopted by our economic planners. A letter to your New Jersey Senators and Congressmen may help to head this one off.

[From the Racine (Wis.) Journal Times of January 19, 1956]

RIGHT, LEFT HANDS AT CROSS PURPOSES

One of the devices of big government may be never to let the right hand know what the left hand is doing. But when the left hand and the right hand are both giving away the taxpayer's money for contradictory purposes, the taxpayer should be interested in seeing that at least one hand is stopped.

Before Congress are two contradictory proposals. One is to take 25 million acres of farmland out of production as a means of reducing surplus food production and raising the level of farm income. Another, in general terms, is to continue federally sponsored land-reclamation projects, most of them in the West, which would make millions of acres of land available for farming.

Oddly enough, many high-ranking officials of the Government, both in the executive departments and in Congress, seem to favor both of these contradictory proposals.

A case in point is the upper Colorado River Basin reclamation project. A year ago, this was a subject of controversy between those in favor of reclamation and conservationists who saw the project as a danger to the Dinosaur National Monument and the natural beauties of the Echo Park area.

But the fight over the Echo Park Dam and its 14 to 32 irrigation projects is now more than a parochial argument between Western States over water rights, or between the reclamationists and conservationists. Furthering this program today, whatever the arguments for and against it, would mean that the United States Government is spending from $1 billion to $1.6 billion to put huge areas of land under irrigation, while spending more than a billion dollars a year to take existing agricultural land out of cultivation.

Senator JOSEPH O'MAHONEY of Wyoming, a proponent of the Echo Dam project, estimates that it would irrigate 300,000 acres of land which now have no water, plus another 470,000 acres which now have inadequate water. Thus, if the Senator's figures are correct, the project would put 770,000 acres under cultivation, raising crops we do not need while we are paying to take another 25 million acres of land out of cultivation.

Despite this obvious contradiction in national policy, both the President and the Senate are on record in favor of the Echo Park Dam program. President Eisenhower endorsed it specifically in his 1955 state of the Union message, and the Senate adopted the program last April. This year, since announcing his soil-bank program, President Eisenhower has not mentioned the giant irrigation program.

Neither the President nor the Senate can have it both ways. Advocates of this program in the Southwest, are, of course, exercising the privilege of promoting their own interests. But the national administration and Congress are elected to take a larger view. A surplus of food and a surplus of land under cultivation are national problems, to be viewed from Washington with the best interests of the whole country in mind, and they cannot logically continue to support simultaneously programs which take land out of cultivation and put other land under cultivation—both at a tremendous cost to the taxpayer.

We suggest that Echo Park Dam, and all similar projects which are solely designed to irrigate more land, be put back in the filing cabinets until we have licked our farm problem and found a way to use profitably all the land which is now available for food production.

[From the South Milwaukee (Wis.) Voice-Journal of January 26, 1956]

CERTAINLY NO BARGAIN

What has been branded as the most expensive and unsound scheme yet devised continues to plague economy-minded legislators in Washington. We refer to the gigantic upper Colorado River project which would bring into production more than half a million acres in high, barren, remote areas in Wyoming, Colorado, Utah, and New Mexico.

Representative CRAIG HOSMER, of California, is presenting to the House of Representatives evidence to show that while the Federal Bureau of Reclamation is asking Congress to approve enormous, costly new irrigation projects, at least 20,937,153 acres of the best American cropland are unused for any purpose. Included is land in Wisconsin and 18 other States.

HOSMER asserts that the 4 States benefiting from the proposed scheme would pay less than 2 percent of the cost which would run into billions. The upper Colorado Basin project, he says, would "saddle a new $4 billion tax loss on the Nation's taxpayers."

By contrast, he declares, the cost of bringing the millions of acres of good farmland now idle into full production would run from only $15 to $150 an acre, compared with $5,000 per acre in the Colorado River Basin project.

After paying the billions, taxpayers would still have to pay for roads, schools, and other facilities and then subsidize the crops which would be grown.

On the basis of what we know of the project, we agree with HOSMER that it is "nothing short of economic idiocy."

Mental Health Legislation for Alaska

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. UTT. Mr. Speaker, a recent editorial in the Santa Ana Register, Santa Ana, Calif., regarding the mental health legislation for Alaska, has resulted in a number of protests from my constituency. The attached statement from the Secretary of the Interior on this subject is enlightening and, I believe, will do much toward erasing any misunderstanding. Since wide publicity has been given to this controversial matter, under unanimous consent, I include the statement in the Appendix of the RECORD so that people throughout the United States may have a knowledge of just what the legislation proposes:

STATEMENT CONCERNING ALASKA MENTAL HEALTH BILL

The editorial which appeared in the Santa Ana Register on January 24, 1956, purports to show that the Alaska mental health bill will establish a 1-million-acre "Siberian concentration camp" in Alaska. The editorial also states that, if the bill is enacted, anyone with a grudge against another person can have him railroaded into this concentration camp. Lastly, the editorial says that provisions for reciprocity in the bill will enable the governors of all the States to exile their mentally ill to Alaska. These statements are based upon a misunderstanding of the terms of the legislation.

The provisions of the bill now before the Congress can best be understood against the background of existing Federal statutes relating to the care and treatment of the Alaskan mentally ill. Under these laws which date from 1900, a person suspected of being insane is apprehended by the United States marshal, lodged in the nearest jail—because there is usually no other safe place in which to lodge him—and in due course tried before the United States Commissioner and a jury of laymen which determines whether the person is insane. If found to be insane, the patient is then transported by the United States marshal, often in the company of convicted criminals, to Morningside Hospital, the private institution in Portland, Oreg., which provides care and treatment under a contract with the Department of the Interior. Approximately 368 patients are now hospitalized at Morningside under this contract.

There are also in Morningside Hospital a number of mentally defective children, some of whom are less than 5 years old. One was admitted when only 18 days old. These unfortunate children had to be tried before a jury before they could be sent to Morningside for care and treatment.

The existing statutes relating to the Alaskan mentally ill were possibly justified when enacted in the early part of this century. Today the commitment proceedings are archaic and barbaric. The Territory of Alaska has also developed economically and politically until it is now in a position to assume responsibility for the commitment and care of its mentally ill. This selfsame responsibility is now exercised by each of the 48 States and the Territory of Hawaii.

Against this background, the Department of the Interior, the Department of Health, Education, and Welfare, and the Bureau of the Budget drafted legislation intended to modernize the outdated commitment procedures for the Alaska mentally ill and to transfer to the Territory, where it belongs, the responsibility for their care and treatment. This is the legislation which was considered by the House of Representatives Committee on Interior and Insular Affairs in public hearings in Washington, D. C., and Portland, Oreg., and which was favorably reported on July 25, 1955. Subsequently, during a series of hearings in Alaska in October 1955, the committee heard virtually unanimous endorsement of the Alaska mental-health bill.

Basically, there are two parts to the pending legislation. The first relates to the hospitalization of the mentally ill and the second to grants to the Territory to assist it in undertaking this new responsibility. In keeping with modern emphasis on facilitating access to needed medical care, the Alaska mental-health bill authorizes admissions to qualified hospitals either on the patient's voluntary application or on the basis of application by others supported by medical certification. Such admissions, however, do not authorize compulsory detention of the patient and there is further preserved, even to the patient who is certified as dangerous and hospitalized under emergency procedures, the right to a discharge unless judicial proceedings are promptly instituted. In addition to the right of discharge and the availability of habeas corpus to protect the right, a right of petition for a judicial determination of his mental condition is also provided and may be invoked either by the patient or by others.

Nowhere in the Alaska mental-health bill is there authority for a person to be hospitalized without a prompt review of his mental condition nor is there authority for a patient to be held against his will without a judicial proceeding.

Because the Federal Government has exercised exclusive jurisdiction with respect to the Alaskan mentally ill during a period when the States were building up their present hospital facilities and personnel, it was our belief that the Territory should be assisted in assuming its new responsibility. Accordingly, we recommended a $6 million grant over 10 years to aid the Territory in establishing and operating a mental-health program and a $6,500,000 grant to assist it in constructing hospital facilities. Additionally, a grant of land to the Territory was recommended. In this connection it should be pointed out that Alaska's potential tax base is considerably narrowed because the Federal Government now holds more than 98 percent of Alaska's 375 million acres.

The legislation now before the Senate authorizes the Territory to select up to 1 million acres of vacant, unreserved, and unappropriated public lands of the United States in Alaska. All such lands so selected and the income from them are to be administered as a public trust for the hospitalization and care of the mentally ill. The 1 million acres will not be set aside as a hospital site, but it is the purpose of the legislation that the revenues and income from the sale or lease of the lands will be used to help the Territory meet the costs of caring for its mentally ill.

The editorial mentions that a section of the original bill as submitted by the Department of the Interior had been deleted. This section provided penalties against any person who willfully causes, conspires with, or assists another person to cause unwarranted hospitalization or the denial to any individual of rights granted by the bill. The Department feels that this provision should be retained and has recommended to the Senate that it be restored.

The editorial specifically objects to section 119 (c) of the bill which authorizes the Governor to enter into a reciprocal agreement with any State for the care and treatment of Alaskans, or for care and treatment in Alaska of residents of such States. This provision was included so as to authorize treatment at Alaska's expense (or that of the State concerned) in instances where repatriation would not be in the best interest of the patient. This provision, as well as others in section 119, must be read in connection with subsection (d) which states that "due consideration shall be given to the relationship of the patient to his family, legal guardian, or friends, so as to maintain relationships and encourage visits beneficial to the patient."

The editorial also states that under the bill judicial proceedings for commitment will be held under the direction of a United States Commissioner who can omit notice to the patient, need not require the patient to be present, and who can exclude anyone from the hearing. Again, this is an instance of a complete misunderstanding of the provisions of the legislation. The bill provides specifically that notice of a hearing shall be given the proposed patient, his legal guardian, if any, and to one or more of the other interested parties, if any. On the other hand, the language provides that if the Commissioner has reason to believe that notice would likely be injurious to the proposed patient, such notice may be omitted. Obviously, there will be occasions in which a notice to appear before a court for a sanity hearing will have a severely injurious effect upon the mental condition of the patient. Similarly, it may not be in the best interest of the patient himself to be present at a hearing, or for the Commissioner to hold a hearing open to the public at large. However, the bill does not authorize star chamber proceedings. Notice is required to be given at least to the legal representatives, friends, and other interested parties and the patient, his guardian, and other interested parties are afforded an opportunity to appear, testify, and to present and cross-examine witnesses.

It is stated in the editorial that the Commissioner may make a commitment for an indeterminate period or for 6 months. Properly stated, the Commissioner may order the patient's hospitalization either for an indeterminate period or for a temporary observational period not exceeding 6 months if the patient is found to be mentally ill and, if because of his illness he is likely to injure himself or others if allowed at liberty, or if he is in need of custody, care or treatment in a hospital. While the bill also authorizes the head of the hospital to impose certain restrictions on correspondence and visitors, every patient specifically retains the right of habeas corpus upon petition by himself or a friend. Restrictions on correspondence and visitors may be imposed only if it is determined that they are necessary for the medical welfare of the patient.

Rather than provide the machinery for a police state, the bill is intended to correct outdated and barbaric practices and to provide enlightened treatment for the mentally ill of Alaska. As Congressman LEO W. O'BRIEN, chairman of the Territories Subcommittee, stated on the floor of the House of Representatives:

"This bill is designed to erase a blot from our national honor, to treat sick people as such and not as criminals."

A First Step

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shakopee

(Minn.) Argus-Tribune of February 2, 1956:

A FIRST STEP

A piece of legislation before the Senate which is receiving more than its share of attention is the Harris bill, which would exempt natural gas producers from regulation.

The bill edged through the House by a narrow 209 to 203 vote and it is certain there will be a long hard fight in the Senate before final action is taken on the measure.

Opponents of the bill feel that should gas producers be exempt from Federal regulation the price of gas at the wellhead would jump to an excessive rate, and since the people who have equipped their homes to use gas, could not very well switch to another form of heat, they would be hard hit.

Adding weight to those opposing the bill has been the support of mayors, governors, and other public officials who feel that the passage of the bill would mean higher gas prices for their constituents.

However it seems there are more logical arguments for passage of the bill. Up to 1954, gas production was not under Federal regulation and gas rates did not rise to excessive proportions.

Gas producers point out that they receive only 10 percent of the total amount the consumer actually pays for his gas. The bulk of the money goes to the firms transporting and delivering the gas to the consumer and these firms are under Federal regulation.

Gas producers say too, that there is a heavy financial risk involved in producing natural gas and that Federal price controls will reduce the incentive for exploration which eventually would lead to a shortage of natural gas, and normally, they point out, when supply gets low, prices rise.

Furthermore, supporters of the bill point to the fact there are 8,000 independent natural gas producers in the field, a factor which would tend to keep prices down without regulations.

Then as their crowning argument supporters of the bill feel that the Government, by regulating natural gas, a commodity which must compete with other fuels such as coal and oil which are not regulated, is changing a long-established Federal policy and they see a danger in the possibility that this practice might spread to other fields.

If gas prices are fixed, then why not iron, copper, livestock, and automobiles and other competitively priced commodities. The end result of such a first step might well be the death of private industry, many fell.

Russia Outproducing United States, Top Air Officer Says

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Baltimore Sun on Friday, February 10:

RUSSIA OUTPRODUCING UNITED STATES, AIR OFFICER SAYS—"BEATING US AT OUR OWN GAME," GENERAL WHITE, VICE STAFF CHIEF, TELLS STARTLED GROUP

(By Mark S. Watson)

CINCINNATI, February 9.—Gen. Thomas D. White, vice chief of staff of the United States Air Force, tonight declared that the Russians not only are "making scientific and technological advances at a faster rate than we," but that they are presently "beating us at our own game" of mass production.

The former declaration is familiar, but the latter startled White's hearers, a considerable assembly of scientists, technologists, and industrialists as well as military people.

The occasion was the General Electric Co.'s open house for its impressive new research and production center for supersonic aircraft and missiles at nearby Evendale.

CENTER NOT YET COMPLETE

The center, which is not yet complete, is described as the most important of industrial installations in the realm of supersonic propulsion. It includes a leading research department from which the first great rocket for next year's earth satellite will emerge on schedule and another mysterious department where development is still under way on the power plan for, presumably, the world's first atom-driven airplane.

In yet other departments of the big plant, new fuels, new metals, and new plastics are being developed for tomorrow's planes and missiles by techniques no less astonishing than their products. The entire plant will cost $100 million and its supersonic research center alone about $20 million.

A large part of General White's speech was in praise of American private industries' research with their own funds—and their own freedom from restraint—as distinguished from governmental research. But he added that the Nation's total of privately sponsored research is far from sufficient yet.

He, therefore, called on industrial leaders to roll up their sleeves and pitch in and thereby make up for the Government's apparent inability to provide enough funds for the research and development which national defense requires, and requires quickly in view of Russia's advances.

White, who is the second-ranking officer of the Air Force was distinctly not critical of the Defense Department's inadequate request for research funds in any such degree as was Trevor Gardner who has just resigned as the Air Force's civilian chief of research upon the issue. On the contrary, White sees large virtues in private industry's taking over a big share of the research work.

"Government projects are accountable to too many people," he said. "Research, especially basic research, is best accomplished by unfettered initiative working in an environment of complete freedom."

Nevertheless, General White showed that he is greatly concerned, as are many others inside and outside the Air Force, over America's reported lag in the international technological race.

MENTIONS BASES

"We believe we have a better Air Force," he said, "but that superiority now rests almost entirely upon our better system of worldwide bases and upon our better and more experienced crews.

"During the last few decades we Americans have always depended upon our mass production, but the Soviets are presently beating us at our own game. They have halved our lead-time on the heavy jet bomber and in developing and producing all other aircraft their lead-time is considerably less than ours. The fact is that they are outproducing us in all categories but medium jet bombers.

"The Communists are making scientific and technological advances at a faster rate than we. That they can put, not one, but several projects on a rush basis indicates a tremendous capacity for research and development.

"There are other reasons for their success. They build trucks instead of automobiles, submarines instead of commercial vessels, bombers at the cost of refrigerators. And radar instead of television sets."

EVERYBODY'S BUSINESS

"We must realize that the defense of this Nation is everybody's business, not just the Government's. Our great corporations must accept, along with their comparative freedom of action, their share of the national responsibility to provide our own defense.

"No one can expect private industry to seize the initiative in production of weapons. They can best volunteer increased efforts in research and development.

"This is a business in which failure is routine and success extraordinary. The taxpayer and the legislator understandably prefer to see national income spent on success. This makes the research and development dollar hard to get. This is one reason that private industries must devote increasing efforts to research."

Stevenson's Contributions to a Forceful and Effective Democracy

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. SIKES. Mr. Speaker, under extension of my own remarks I have obtained permission to have printed in the RECORD a number of important editorial comments to current thought. Each of them deals with the courageous contributions by Adlai Stevenson to a forceful and effective democracy.

[From the Tampa Tribune of February 9, 1956]

ADLAI SHAPES CAMPAIGN ISSUES

(By Roscoe Drummond)

WASHINGTON. — Two significant facts emerge from the preconvention campaign which Adlai Stevenson is waging in California.

This primary campaigning shows that the Democrats are making hay while the Republicans are marking time. Mr. Eisenhower's uncertainty is understandable and justifiable but it is evident that it gives the initiative to the Democratic candidates. Stevenson and Senator KEFAUVER are, thus far at least, wisely refraining from any attacks on each other. They are pleading their case by each showing how he can make a better attack on the Republican record than the other.

Secondly, we are seeing unfolded the kind of campaign which the Democrats will make after the conventions if Stevenson is nominated or if the nominee follows his lead. It is an approach to the voter which, I suspect, can be effective, especially effective if the President does not run or the Republicans fail to choose a nominee whose progressive leadership would be easily demonstrable.

Stevenson develops his theme in this way:

He agrees that, despite certain weak spots in the economy, the United States is experiencing notable prosperity. Stevenson's thesis is that the real challenge which faces the American people is not "loss or lack" but "wealth and plenty"—how to maintain our wealth and plenty and how to use them to improve our society and to safeguard the free world.

Stevenson, sometimes directly, sometimes by clear implication, asks his audiences questions like these:

"How can a divided Republican Party, which most of the time voted against most of the New Deal social-welfare measures but which has come tardily and reluctantly to in-

dorse them, be expected to serve these measures as reliably as the Democratic Party?"

"How can the Republican Party which has been complacent about the past, as shown by its delayed semiconversion to social reform, be expected to be anything but complacent about the future?"

Stevenson, of course, brings in a verdict of guilty at both points.

On the issue of future problems—and opportunities—he says: "We live in a time of danger and a time of great hope. Whoever offers us complacency blinds us to the one and denies us the other."

In the issue of past problems, after citing the measures—such as social security, minimum wage, Federal aid to education, farm income supports, public housing and others which the Republicans mostly opposed throughout the Roosevelt and Truman administrations—Stevenson says:

"That our Republican friends are now accepting all of these things make us happy. After all, imitation is the sincerest form of flattery. But the basic issue is: Who means what he says about these domestic issues and who doesn't? Who is going to do anything about putting these agreed principles into effect and who isn't?"

At times Stevenson seems to me to trip a little over his own logic. He criticizes the Republicans dealing "complacently" with the Nation's unresolved problems and then chides the Republicans for proposing so many "Democratic solutions for them."

But his central theme is fair and pertinent political debate. Unless world events take an unexpected turn, he is raising questions which will be on the minds of the independent voters this fall. Such questions as these:

Can the Republican Party, whose conservatism is not doubted by the country, be relied upon to maintain and prudently expand the welfare measures which the President calls "humanitarian?"

Can the Democratic Party, whose reformist record is not doubted by the country, be relied upon to maintain and prudently expand the climate and conditions which enable competitive enterprise to function best for everybody?

Which party under whose leadership is most likely to keep to the "middle road?" This is an essential question since Stevenson himself avows that the right answers "do not lie at the extremes."

Stevenson is asking valid questions. The response from the voters may come out differently than he expects, but it will, I think, take progressive Republican leadership to answer Stevenson effectively.

[From the Tampa Tribune of February 9, 1956]

STEVENSON'S SANE VIEWPOINT

Adlai Stevenson made sound and sane comment on the segregation issue in a talk to Negro leaders in California. Despite the insistence of some of these leaders that integration should be hastened, Mr. Stevenson boldly stated that the problem must be approached gradually. He recognized the fact that the tradition of generations cannot be upset overnight. His idea of how much time would be required to bring about the complete harmony of the races in the United States is that the 100th anniversary of the Emancipation Proclamation, January 1, 1963, could be the date of the full flowering of the spirit of equality.

This view, naturally, did not meet the approval of the more pronounced Negro leaders who heard him. One Negro clergyman asked if the might of the Federal Government should be employed to enforce desegregation in schools and in travel. He evidently meant the use of the Armed Forces.

"That would be a great mistake," said the party's 1952 nominee. "It would be a revival of the Civil War. It's the spirit of men that will change things for the better; it will not be troops or bayonets."

Mr. Stevenson denied trying to appease anyone for political reasons. "I'm not running for office for the honor of it," he said. "I'm running because I believe I can serve the Democratic Party, the party that serves all races and creeds and segments of our people."

Mr. Stevenson made a strong point when asked about the interposition proposal. He doubts that the interposition theory can ever work. "If schools are made private schools, as some Southern States are suggesting, and the Government gives them money, aren't they by their very nature then public?"

He believes education is the main instrument for improving race relations.

Mr. Stevenson's views will appeal not only to public sentiment in the South, but also to right-thinking people throughout the country. His statements, made to a rather hostile audience, will strengthen his candidacy for renomination. He has again shown that he has the courage of his convictions.

[From the Washington Post of February 10, 1956]

MR. STEVENSON'S COURAGE

When Adlai Stevenson rose to address his Negro audience in the Wilkens Hotel at Los Angeles last Tuesday, he was confronted with a clearcut choice between demagogy and statesmanlike candor. He chose the latter course, and it would be a sad reflection on the popular American intelligence to believe that because of this he imperiled his chances for the presidency.

What Mr. Stevenson's audience wanted to hear were Mr. Stevenson's views of the crisis that has arisen in the Southern States in consequence of the Supreme Court ruling which has outlawed the practice of race segregation in the public schools. Mr. Stevenson's rival in the California Democratic preferential primary election, Senator ESTES KEFAUVER, has been making a strong play for the support of the organized Negro vote, which might conceivably be decisive in that State. Just what pledges Mr. Kefauver has given the Negro leaders are still a matter of mystery. According to one report, he has promised to support the Powell amendment to the Federal school-aid bill which would deny any Federal funds to States in which segregation is still practiced. Senator KEFAUVER has now denied that he has committed himself to any position on the Powell amendment; but, whatever the reasons, many Negro leaders now seen persuaded that he is the warmer champion of their cause and are accordingly shifting their allegiance and support to him.

Thus with respect to the question of the southern schools Mr. Stevenson was placed clearly on the defensive. He met the challenge by a great show of intellectual honesty, refusing to pretend that political complexities admit of simple and drastic solutions. He is opposed to segregation and has always been in favor of full race equality; but as far as the Southern States are concerned he believes that this must come about through gradual enlightenment and acceptance rather than immediate coercion. Thus he flatly rejected any proposal to enforce the Supreme Court ruling by means of Federal troops or police. He pointed out the absurdity of supposing that prejudices, social usages, and traditions that are older than the Republic could be abruptly eradicated by such methods and said the effect of such an effort would simply be to Balkanize the South. Earlier Mr. Stevenson had refused to endorse the Powell amendment, on the very reasonable ground that it would only lead to a determined filibuster by the southern Senators that would defeat the Federal-aid bill in toto.

It took a great deal of courage for Mr. Stevenson to make openly, and under such circumstances, so fair a statement of the actualities. He opposed the counsel of commonsense to the sort of fanaticism that has been well defined as "redoubling your efforts when you have forgotten your aims." He may have lost a few potential votes, but he has also strengthened the impression of his qualities of statesmanship.

Communists Fight for Mind of Man

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. WILSON of California. Mr. Speaker, one of San Diego's most distinguished citizens, Mr. Hoyt E. Ray, who has served the city capably for a number of years as deputy city attorney, was recently commended by the city council for his authorship of an article outlining the development of the English-speaking civilization and the challenge presented to it today by communism. This article appeared in the December 1955 issue of National Republic, and I include it in the Appendix of the RECORD as a portion of my remarks:

COMMUNISTS FIGHT FOR MIND OF MAN

(By Hoyt E. Ray)

There is a river in the ocean. It is the Gulf Stream. There is, in all the world, no other such majestic flow of waters.

There is a counterpart in humanity. By strange association of the warm waters of the ocean river tempered the climate of that portion of the earth which became the birthplace of the stream flowing among peoples. That stream is the English speaking civilization.

It began in England when Rome was still the great military power in the world. This island people became a strange mixture. In assimilation they produced something the world had never seen before and envies today.

The idea that the citizen was an entity, independent of the state, took root. From this germ idea sprang a new civilization, which today contests for domination of the world. On the outcome depends whether the individual shall control his government or the state shall direct the life of the citizen.

This civilization has advanced through the centuries in all the fairest portions of the earth. Wherever the English-speaking civilization has gone, there it has ever asserted the right of man as the individual citizen to develop his capacities in endeavors of his own choosing and to worship God as his own conscience dictates.

This mongrel people was a seafaring, adventuresome lot. In their intercourse with different peoples they always took their language, customs and desire for peace, so trade could develop higher standards of living everywhere. They knew trade was the catalyst of social groups.

At home they fiercely resented government ment interference with their conduct. Magna Carta was written to define rights of state and citizen. They elected their own representatives to their legislative halls and they took charge of the purse strings of government, asserting that elected officials were responsible to the people from whom they took their office.

They adopted something else new in government by selecting a committee from among themselves to hear and decide the guilt or innocence of those charged with

crime. This jury system characterizes the English-speaking peoples today.

After centuries of struggle they established the right of the individual to speak out his opinions, orally and written. Meantime this people following their new way of life adopted beneficent principles of Christianity, and today amaze the world by practical demonstrations of a cardinal precept of that faith—charity. In adopting principles of Christianity this people insisted upon the dignity and right of the individual to seek his God his own way.

To safeguard these rights claimed to be inalienable by the individual, the social order developed the writ of habeas corpus, the greatest legal process man has devised for the protection of his individual freedom.

In its spread to America this civilization began and developed in the United States a public school system wherein the children of all citizens are educated at public expense. The idea of the common school system was and is that it is better for all the people to be educated so as to better participate in their government, than it is to raise to higher levels of education a portion or favored class of society. It is better to have millions learning by their own mistakes to govern themselves, than to have an educated oligarchy.

These peoples adventuring into all portions of the earth, have carried with them always, their English language, until today it is used throughout the world, and may be in time the official language in all international relations, governmental and business, reserving for cultural purposes other languages, to avoid any misunderstanding among peoples of definitions or meanings of words used to express an idea or ideology.

In the United States this civilization learned the art of production, which, coupled with the right of the individual to develop his own capacities by freely engaging in enterprise, has developed a standard of living and a way of life the rest of the world covets and envies. This freedom has, here only, been guaranteed to the individual by a Bill of Rights written into the Constitution.

It is arguable whether a man in a free society with private ownership of property can lose the right of ownership of property and still retain his freedom. Does the passing of ownership of property from the individual to the state, of necessity, require proportionately the passing of the freedom of the individual? This touches upon communism, which in practice is the rule of few over many.

Today the English speaking civilization is challenged. Because this civilization has uniformly emphasized the worth of the individual and his freedom, as opposed to the claim of godless communism that all rights derive from the state, it has always been tolerant of other peoples' rights, ideology, and social conduct. Hence the Moscow Communists have successfully imposed upon the good will and tolerance of the English speaking peoples. By making a mockery of the English words in common use in discussing social and governmental conduct, the Communist propaganda confuses many.

If peoples are to develop mentally from ignorance to light, and physically from slavery to individual responsibility, this surge of the Orient against the Occident must be met and overcome by force, if that is the only thing they respect, and today happily the English speaking civilization combines strength and freedom, but the hour is getting late. The Moscow Communists have reintroduced into modern statecraft the discredited and repudiated Machiavellian theory of misrepresentation and deceit between governments. They know that the 10 percent of the peoples of the world owning two-thirds of the wealth of the world, must respect the values upon which their civilization was built. They know pride of race has always existed and the English speaking society in this world cannot absorb all the rest into their blood stream. They should know this civilization has offered too much hope to mankind to be diluted and drained of its substance and character.

In its march to whatever destiny it may have, the English speaking people has demonstrated that it is the world's best hope for a continuous unfolding of the individual's capacities in an environment of mental and spiritual freedom so that man can improve always his creature comfort and spiritual well-being, while lending a helping hand to the less fortunate and pointing the way for an ultimate of mankind at harmony in health, in comfort, and in spiritual freedom to work out its fate under God.

Birthday Tribute to Earl Godwin, Dean of Washington Commentators

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. COLMER. Mr. Speaker, recently Mr. Morgan Beatty, noted NBC correspondent, paid a highly deserved tribute to his colleague, Earl Godwin, dean of Washington commentators on the occasion of Mr. Godwin's 75th birthday.

When Mr. Godwin appears out there in the Speaker's lobby to visit with Members someone invariably addresses him as "the Congressman at Large." This endearing greeting shows the high esteem in which he is held by scores of Members here on the Hill.

Mr. Speaker, Earl Godwin has long been one of my favorite newsmen. I have the most profound respect and admiration for him. Along with unmeasured thousands of other Americans I join in a salute to him on the occasion of his arrival at another milestone in his career of responsible and conscientious reporting. May he continue for many years to come as the dean of Washington reporters.

I am happy to insert Mr. Beatty's broadcast in the RECORD.

This is Morgan Beatty, and tonight I hope I am speaking for you rather than to you.

Perhaps you have heard the story of the pretty young thing who told the veteran reporter, "You have such a wonderful job, meeting all those interesting people." The news veteran replied, "Yes, I have met hundreds of interesting people, all of them reporters."

In all my days as a newsman, I have met few people as interesting, as lovable, as Earl Godwin. So as an Earl Godwin fan, let me be your representative and wish our friend Earl a very happy birthday on this his 75th birthday.

Our Earl Godwin fan club is a large organization. Some of the members are Alben Barkley, Speaker Sam Rayburn, former Speaker Joseph W. Martin, J. Edgar Hoover, Senator Harry Byrd, Congressman Joel Broyhill, Fishbait Miller, Doorkeeper of the House, and others too numerous to mention.

Any true Godwin fan knows that Earl is the No. 1 citizen of Bailey's Cross Roads, Va., and the No. 1 booster of the Bailey's Cross Roads Fire Department.

Not too many years ago it would have been possible to fire a cannon near Bailey's Cross Roads without attracting any attention. Indeed, legend has it that during the Civil War a battery of Union cannon was set up on Earl Godwin's farm.

Perhaps Earl will tell the legend about that Civil War battery on a broadcast some night soon. It's a fascinating story whether it's a fact or fiction. Bailey's Cross Roads has seen many changes. And Earl Godwin has accepted each change and continued to grow in stature himself.

Our esteemed Earl Godwin was born in 1881, when the Civil War or the War Between the States was still fresh in the minds of Washingtonians. Earl's birthplace was a house that stood across the street from the United States Capitol, the site is now occupied by the United States Supreme Court.

Earl attended Washington schools and the Emerson Institute here, but while still in his teens he took a job in Bridgeport, Conn. Marconi hadn't sent out his first radio signal yet, but Earl, even in his early days, must have been struck with a fascination for speech communication. His Bridgeport job was in a talking-machine factory. The talking machine of those days used round cylinders as records.

Earl saw no particular future for himself in the talking-machine business, so he became a cub reporter on the weekly newspaper at Passaic, N. J. Soon after he returned to Washington and his first bigtime newspaper job, with the Washington bureau of the Baltimore Sun. The year was 1908, and for the next 20 years reporter Earl Godwin was a familiar sight anywhere that news could be found in Washington. In 1928, the Republican National Committee needed someone in Chicago to help manage press relations for the Herbert Hoover presidential campaign. Earl Godwin was selected for the job. Earl's broadcasting career began in 1936, when he joined the news staff of NBC in Washington.

There are few prominent people in our city who are not known to Earl personally. I recall that the late President Roosevelt accorded to Earl the privilege of sitting at the edge of the President's desk during White House press conferences. Not that Earl needed to sit down, I rather think FDR enjoyed having Earl sitting close up where a Roosevelt statement or quip would bring a Godwin reaction.

All of us in the broadcasting industry honor Earl Godwin today as the dean of Washington commentators, and for his many other accomplishments as a founder and past president of the National Press Club, and former president of the Radio and Television Correspondents Association, of which he was a founder.

I want to make one distinction clear, however. We honor Earl Godwin not because he has been with us so long. True, he was here first, with the most. More importantly, Earl Godwin has always maintained a fresh outlook on world events. He has been a faithful and accurate reporter, with a gifted ability to draw on the lessons of the past. But he lives very much in the present. His concern for the future is a matter of public record, he has received scores of distinguished honors for his vigilant exposure of the Communist threat against American freedom.

Commentator Godwin has informed us, counseled us, and delighted us with his reports on—you've guessed it—"Busy" the cat.

To us who know him personally, and to you who have met him through your radio, Earl Godwin is a true and valued friend.

I would like to thank another Godwin friend, Mr. W. Franklin Morrison, executive vice president and general manager of the First Federal Savings and Loan Association of Washington, and my wife has had an account there for 7 years, for his courtesy in permitting me this birthday greeting to Earl Godwin. Earl, a happy birthday from all of us, and many happy returns. And that is all from Beatty at this time.

Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DINGELL. Mr. Speaker, on February 12, we celebrated the anniversary of two great men, who both contributed so much to the freedom which we Americans enjoy today. Indeed, Mr. Speaker, that day was not only the birthday of Abraham Lincoln, but also of Tadeusz Kosciuszko. It is well said that although born in different times, and on different continents, the two men shared the same philosophy and the same love of freedom for all. Their ideals are no less perfect today than they were in their times, and indeed, they are as vitally necessary to our American civilization as they were in the trying times in which these two great men lived.

Benefiting from a broad education at Warsaw, Brest-Litovsk, Mezieres and Paris, 30-year-old captain of artillery, Tadeusz Kosciuszko, sailed in 1776 to fight for America's freedom. Through his talents, he became a general officer in the United States Army and earned the confidence and respect of his Commander in Chief. He served with distinction at Saratoga and Yorktown. Thomas Jefferson was his especial friend and the executor of his will. No mercenary he, Kosciuszko willed all his American property to a fund for the education of Negroes. He recognized their problem and advocated education as a means of solution which commended itself to Washington, Jefferson and, later, to that great Virginian, Robert E. Lee. We should prudently follow this path today by improving and extending education to all.

In Poland's hour of need, Kosciuszko fought Prussian and Russian armies with great courage and skill. The combined forces of both these autocratic states were required to destroy Poland's independence in 1795, but the freedom which Kosciuszko loved continued to burn in his breast and in the hearts of all his fellow Poles.

When Napoleon and the Tzar sought to use Kosciuszko's influence with the Polish people, he rated the tyrants' overtures at their proper value and refused to become their pawn. Washington, in his farewell address, spoke for Kosciuszko and for all mankind who have learned by bitter experience how high to value the tyrant's pledge.

The morality of tyrants of his day did not confuse Kosciuszko. Rather, it led to broader understanding and a profound respect for the individual paths by which free and independent men find a common front in the struggle for a decent world order.

Kosciuszko literally died in the saddle; at the age of 71, his death was the result of a fall from his horse. A doer as well as a thinker, it might be said of Kosciuszko, as Pericles described the men of Athens, that he was a lover of wisdom and of beauty without affectation.

In saluting Kosciuszko, we of the 20th century salute the best of the 18th—the men who first made America free. Yet each of us knows within himself that so long as Soviet Russia continues to ruthlessly dominate the lives of free men, no one is truly free.

Americans carry the burden of billions of dollars spent each year for arms. Our young men are taken away from their homes and their peacetime pursuits to serve as citizen soldiers for the defense of their country, and our factories turn out materials of war instead of goods for peace and a better life for all.

And yet we bear our load in the happy knowledge that it is far less heavy than that of our brothers in the Poland which gave us Kosciuszko and Pulaski. Men who were once free citizens of other countries also know how Russia makes mockery of freedom and democracy.

Let us rededicate ourselves to the proposition that all men can and must be made free. To that end we must continue to press vigorously for the right of self-determination guaranteed in the Yalta Agreement which Soviet Russia scorns.

That right we will secure, not only for our American people but to others, by all means short of war.

It is in this dedication, and in the vigorous pursuance of it by all possible means, that we most honor the two great men whose birthdays we celebrated on February 12.

The Answer to Our Nation's Problems

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I would like to include in the CONGRESSIONAL RECORD a splendid editorial from the Fort Lauderdale Daily News entitled "The Answer to Our Nation's Problems." Mr. Jack W. Gore, who is the son of Gov. R. H. Gore, is editor and co-publisher of the Fort Lauderdale Daily News, one of the outstanding newspapers in my district. Mr. Gore has won many honors in the editorial field for his editorials on Americanism.

It was my thought that it would be very appropriate at this time to bring this fine editorial to the attention of the Members of Congress, and I respectfully bring it to their attention.

The editorial follows:

THE ANSWER TO OUR NATION'S PROBLEMS

Today the people of America welcome in another New Year with a hope and a prayer that the peace and prosperity most of us enjoyed during 1955 will continue to be with us during 1956.

It cannot be said that the New Year dawns without any somber clouds on the horizon. International tensions are still with us. In fact, over the past few weeks they have increased rather alarmingly and no prospectus of the new year could be complete without taking into consideration the possibility that the uneasy peace we are now enjoying could suddenly and tragically be shattered.

Much the same is true of our present prosperity. Some economists feel that we are now riding the crest of the postwar boom with a downturn sure to come sometime during 1956. Others don't feel that way. They are just as certain that 1956 will continue to set new prosperity records and that the Nation is only on the verge of shoving our standard of living up to almost undreamed of heights.

But regardless of whether we continue to have peace and prosperity there is one thing in common which we think all Americans want the new year to bring. That one thing is better government all the way down from the Washington level to the individual community level.

What can give us this better government that all of us so deeply want and cherish? A poet by the name of Josiah Gilbert Holland wrote the prescription for better government some time ago. His poem, entitled "Wanted," was one of the late Dwight L. Rogers' favorite quotations and he thought so much of it that he submitted it the Congressional Anthology as the one piece that best represented his own views on government.

What does this poem say? Read it and see if it doesn't contain the answer for most of this Nation's troubles today:

"God give us men. A time like this demands
Strong minds, great hearts, true faith and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie;
Men who can stand before a demagogue,
And damn his treacherous flatteries without winking.
Tall men, sun-crowned, who live above the fog
In public duty, and in private thinking:
For while the rabble with their thumb-worn creeds,
Their large professions and their little deeds,—
Mingle in selfish strife, lo. Freedom weeps,
Wrong rules the land, and waiting Justice sleeps."

Who is there today who can read those words without feeling that the want expressed in them is not only symptomatic of what is wrong with our Nation but literally with the whole world? We have too many small men in high places today—men whose selfish ambitions, whose lust for more power and whose unending desire to perpetuate their position at the public trough make them a menace to the world rather than the saviours they make themselves out to be.

The problem facing this Nation and all other nations aren't insoluble. They could be easily overcome if the leaders of this and other nations could drop their pretenses and their shams and meet with each other in a true spirit of friendliness and cooperation.

Perhaps that is too much to hope for in this day and age as there is no indication anywhere in the world this first day of 1956 that such a spirit can or will prevail in the months ahead. But if even a small start is made toward such an objective, then 1956 could be the year in which the civilized nations turned off a course that can only lead to everybody's destruction and started off on a path of mutual trust and friendship.

And what of our situation right here at home? This will be a year of great decision in America and the politicians, big and little, will be roaming the land, breathing fire and brimstone, mouthing worn platitudes, and

engaging in all the traditional hocus-pocus that surrounds a political campaign.

Among the thousands who will take the political stump, how many will there be of strong mind, great heart, true faith, and ready hands? How many will there be whom the lust of office does not kill and whom the spoils of office cannot buy? How many will be tall men, sun-crowned, who live above the fog in public duty and in private thinking?

We don't know how many of this type there will be, but we do know this country of ours can use plenty of them and the more we put to work in Government at all levels the better off we will be, not only in 1956, but in the years to come as well.

Secretary Quarles Speaks at Goodfellow Air Force Base

EXTENSION OF REMARKS
OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. FISHER. Mr. Speaker, I was very happy that I could accompany the Secretary of the Air Force, Mr. Donald A. Quarles, to San Angelo, Tex., in my own 21st Congressional District, last Wednesday, and be present when he spoke before the San Angelo Chamber of Commerce. The occasion for the Secretary's visit was ground breaking for new, permanent buildings—the first in several years—at Goodfellow Air Force Base. The visit was also a recognition of the importance of Goodfellow—and Texas—to the United States Air Force and to the defense of the United States.

One-sixth of all our air bases in the United States are in Texas. So many pilots are trained in Texas, that the basic training plane, the T–6, has been officially named the Texan.

The visit had additional significance, however. In 1940 Goodfellow was thought of as a temporary base, and temporary buildings were erected. Now Goodfellow has been declared a permanent base, and permanent buildings are being erected. We recognize that Goodfellow and other elements of our military strength, will be needed for defense as long as we can foresee. As Secretary Quarles said, this is a situation new in our history.

Goodfellow's special contribution to the strength of the Air Force—and the fense of the United States—is that it helps to train leaders, the fledgling pilots who from the start are prepared for the responsibilities of command they must, from the start, be prepared to assume.

San Angelo's special contribution to the Air Force is a recognition of its importance to the United States. Secretary Quarles was generous in his praise of what the good people of San Angelo and the 21st Congressional District do for the officers and airmen stationed at Goodfellow. He paid special tribute to our able mayor, my friend Mr. M. D. Bryant. But he was rightly generous. What the community does for its airbase neighbors are things which, as Secretary Quarles said, make Air Force personnel even better prepared to perform their military duties. These things are important, not merely to the Air Force but to all Americans.

An important measure of the effect of good community relations, is the improvement in the reenlistment rate, not only at Goodfellow but elsewhere. I am proud that this Congress also had a part in stabilizing and improving the reenlistment rate. The pay bill passed at the last session of the present Congress was important.

The problem confronting San Angelo, and all of us, is to keep up the good work. The threat is one of a duration that cannot be measured. The challenge is one that will continue. So we must be prepared to support the Air Force, in every way it needs support, for the indefinite future.

Mr. Speaker, I am sure that the people of the 21st District are prepared to do that. I am sure they will continue to be an example to good Americans everywhere. For that reason, I ask the unanimous consent of my colleagues to extend my remarks and insert in the CONGRESSIONAL RECORD Secretary Quarles' speech of February 8, 1956. It is a tribute to San Angelo. It is a skilled presentation of the challenge to the people of the United States. It is an unvarnished statement of the seriousness of the struggle to prevent the kind of war which could endanger and perhaps destroy our civilization. Secretary Quarles' speech follows:

ADDRESS BY DONALD A. QUARLES, SECRETARY OF THE AIR FORCE, BEFORE THE SAN ANGELO CHAMBER OF COMMERCE, GOODFELLOW AIR FORCE BASE, SAN ANGELO, TEX., WEDNESDAY, FEBRUARY 8, 1956

Governor Shivers, Congressman Fisher, distinguished people of San Angelo, and my colleagues of the Air Force, it is a particular pleasure for me to be here in Texas with you today. While I grew up in Arkansas and lived for a time in New Mexico, thus sort of bracketing Texas, I'm probably not entitled to call myself a Texan. Nevertheless I always feel I am homeward bound when I strike out for this part of the country, and your warm welcome has certainly helped to make me feel that way. I am afraid some of my friends back in the Pentagon suspect me of having other motives for coming out here. You know Congress is working us over right at the moment on our military budgets, not to mention a lot of other Air Force matters that the representatives of the people seem to be particularly interested in or concerned about, and there may just be a suspicion back in Washington that I was glad to get away.

The coincidence that our Chief of Staff, General Twining, is finding it necessary to keep a speaking engagement in Waco right at this same time adds some weight to this point. This is mighty fine, clean, fresh air you have out here in Texas.

Still, your climate can get pretty rugged at times. I understand that the blizzards which hit to the north of here last weekend were as bad as any the area has encountered in this century. Our Air Force bases at Amarillo and Lubbock, and across the State line at Clovis, have been working with local authorities to assist stranded people and to drop feed to cattle.

Amarillo Air Force Base has dropped more than 50,000 pounds of hay near Wildorado and Bushland, operating in coordination with the county agricultural agent there. At Clovis, a woman was rescued on the highway and rushed to the base hospital where she gave birth to an 8-pound girl. At Lubbock, a newly organized Civil Air Patrol squadron is maintaining surveillance in the area and private pilots have dropped food and medicine to isolated families.

These incidents gave me a better appreciation of the assistance our Air Force units can provide for their neighbors in such emergencies.

Of course, you might say neither General Twining nor I need any excuse to visit Texas almost anytime. I wouldn't like to mention this in Washington because the Senators and Representatives of about 47 other States seem to resent the idea, but it is a fact that Texas has a very special place in our airpower picture.

One-sixth of all our air bases in the United States are in Texas. The first military airplane was based at Fort Sam Houston, virtually all of our pilots were trained at Brooks, Kelly, and Randolph Air Force Bases in this State between World Wars I and II, and at Fort Worth you produced the world's biggest combat airplane, the B–36, which has held the line—not quite singlehandedly, we must agree—as a global deterrent to war for the past decade. So many pilots were being trained in your State that we named our T–6 training plane in its honor. I don't know offhand whether there are more Texans in the Air Force than residents of any other State, but I am quite sure there are more Air Force wives from Texas—and let no one underestimate their importance to the Air Force.

Today we are signalizing a major step in our Air Force activities in Texas—the conversion of Goodfellow Air Force Base to a permanent Air Forse installation. We now expect to be a part of the San Angelo community for many years to come.

We hope we will always be as welcome as you have made us feel in the years since the base was first established here in 1940. The addition of Goodfellow to our growing list of permanent installations was certainly encouraged by your friendship and cooperation.

But this event we are celebrating has a wider significance. In 1940 we put up temporary buildings here at Goodfellow because we believed they would not be needed after the war. Now we are erecting permanent buildings because we recognize that Goodfellow, and other elements of our military strength, will be needed for as long as we can foresee. This is new in our history.

The armed services we have today are designed to meet the threat of global or limited war, and, by doing so, to keep such wars from starting. To perform our part of this vital deterrent mission, we have an Air Force that possesses immensely more fire power and global capability than we have ever known before. It is deployed at home and overseas where we join with our allies in more than 40 nations in mutual defense against Communist aggression.

We have a strategic striking force second to none, equipped, trained, and ready for retaliation against any aggression. With the Army and the Navy playing their parts we have an air-defense system in depth to guard against sudden attack upon this country. It ranges out over the oceans off both our coasts and, with the help of our Canadian friends, far up into the Arctic. We do not yet have a comparable radar-warning network along our southern border, primarily because a thrust from that direction would be a very long way around for any likely attack on the United States.

While we intend to improve our radar coverage of this area before long, we have it on good authority that there is no need to worry. Recently in Washington, while we were briefing a group of civilian leaders on our air defense, one of them asked what we

were doing about our Southern approaches. Before General Twining could reply, a voice in the back of the room spoke up with a pronounced Texas drawl: "General," he said, "any Russian bombers attacking from that direction—they'd pretty near have to fly over Texas, wouldn't they?" That settled the argument.

Here at a base of our Training Command is perhaps the appropriate place to discuss the totality of Air Force capabilities. One hears today many statements regarding the number of bombers in our Air Force as compared to the number of bombers in Communist air forces. The public is often advised to believe that if the Communists exceed us in a single element of the hardware associated with an Air Force, all is lost. Permit me a few moments to place the matter of Air Force capabilities in perspective.

First of all, let us realize that bombers do not fight bombers. This illustrates the occasional irrelevance of alarmed comparisons of one element of the Communist air force with the same element in our own. The rational way to approach the question of Air Force capabilities is on the basis of the capability of an air force to perform its own missions. Note that the air defense problem of the great, sprawling Communist land mass is quite a different one than the air defense problem of the United States. The Communists will require many more radars, many more interceptors, to provide an air defense of their vast land areas equivalent to that we provide for air defense of the United States.

The capability of an Air Force to perform its assigned missions is a product of a great complex of factors, including bombers, fighters, missiles, air bases, communications, the level of training of its personnel, the skill of its leadership, its deployment in the world at large, the effectiveness of its supply system, the number and quality of atomic weapons in its stockpile, and a host of other considerations. Because there is a tendency nowadays to greatly overemphasize the hardware element in this group of factors which constitute an Air Force capability, I would like for a moment to dwell upon a more abstract element—that of skilled leadership.

The corps of officers and airmen of the United States Air Force includes thousands of veterans of both World War II and Korea. It includes men who are the only military leaders alive today to have developed, organized and employed in war air forces comparable to the size and power of the United States Air Force today. These men have an experience level, in the employment of air power in war, which is not only without parallel in the world today, but is not even approached. There will never be, moreover, a group of Air Force leaders who possess the tested experience in the leadership of air power in war equivalent to that of the leaders of the United States Air Force, unless there is another great war. This skill in the employment of air power, this experience, this sure knowledge, is one of the great elements of our United States Air Force capability which no other Air Force can possibly achieve. It is one of the great factors of our air power strength that will remain with us for many years to come regardless of technological developments. This is one of many reasons why I have such confidence in the deterrent pressure of the United States Air Force against Communist aggression. In spite of all one hears about the danger of our losing the technological race—and we certainly must continue to take this race very seriously—I see no possibility that any technological development now conceived could upset our very broadly based deterrent position, assuming of course that we presss ahead with our own programs.

In some measure, the effectiveness of our weapons is diminished every time we lose a trained specialist. To get full benefit from the superior equipment produced by our industrial technology, we must do better in keeping qualified people in the Air Force.

The pay raise passed by Congress last year—and sparkplugged incidentally by Congressman Paul Kilday, of San Antonio—was a step in the right direction. It has contributed to an increase in reenlistment which has more than repaid the higher cost. But we are finding that, if we are to hold good men, we must be able to compete more effectively with the financial and other benefits of civilian life.

To to this we must sponsor and support such projects as housing, recreational facilities, medical care for dependents, and survivors' benefits. We must get away from the concept that it is reasonable and proper for a serviceman's pay and benefits to be well below civilian standards. This concept might be all right in time of war when the entire Nation is mobilized for victory. But we are engaged in the long pull, when we must maintain forces in being for an indefinite period. We cannot, and should not, expect patriotism and pride of service to outweigh a big difference in pay, particularly when it affects a man's ability to provide reasonable comforts and security for his family. I appreciate the support that the Texas delegation in Congress, and particularly your own Congressman FISHER, has given to legislation designed to improve these conditions.

These things are important to morale, that intangible factor which has an important bearing on the airman's combat effectiveness. Within the Air Force, too, we are doing many things to improve morale.

We have established an airman career program which makes it possible for every airman with ability and ambition to advance in his field of work. We keep the airman and officer informed on all developments that affect him and his unit, through regular meetings with his commander. His opinions and suggestions are welcomed, for we have found that the best management improvements come from the man actually doing the job.

Most important of all, perhaps, we are constantly striving to fit our personnel for their vital roles on our Air Force team, and to show each man his importance to that team, whether he pilots a plane, maintains its engines, or runs a supply warehouse.

This is a point of particular interest to the Air Training Command, which operates Goodfellow Air Force Base, for it is responsible for providing all Air Force commands with men who have been brought to the peak of their ability through proper selection, motivation, and training. As you may know, our commander here, Colonel Crawford, is one of the Air Force's top authorities in this field. Before he assumed command here he was in charge of Air Training Command research to improve its training program. Now, with an opportunity to apply his techniques at this base, we have good reason to expect it to be a model of training effectiveness.

By the time the aviation cadet now at Goodfellow completes his training and takes his place in our air crews, he knows his job in reaching the target, carrying out his mission, and returning to a friendly base. If he should go down in enemy territory, he knows how to take care of himself until he reaches safety or, if he is captured, he is steeled to face enemy interrogation and mistreatment without endangering his fellow countrymen.

These thing we can do for our people. But there are things you people of San Angelo can do which we cannot, things which will make him even better prepared to perform his military duties.

Not so long ago, an Air Force captain, a pilot decorated for service in combat, was assigned to Goodfellow to instruct aviation cadets. He arrived with his wife. They spent several days searching without success for a place to live. One afternoon they returned to the hotel. The discouraged captain sounded off in the lobby about his troubles.

An individual in dusty boots and levis jotted down an address where, he said, the Captain and his wife might be able to stay until they found a place of their own. Doubtful, but willing to track down any lead, they hailed a taxi and gave the driver the address. He drove them up a long winding drive to an impressive residence.

To the servant who opened the door, the captain apologetically explained that some cowhand had referred him there. While he was talking, the lady of the house appeared. Yes, she said, they had a guest house they didn't use too often. How long would they like to stay?

Only long enough to find a place to live, the captain said. They stayed there for 3 months, until they found just what they wanted. When they left, the owner, who turned out to be that dusty cowhand, wouldn't accept a cent in payment.

I don't know where the captain is today, but I'll guarantee that he did a better job of instructing cadets at Goodfellow because of that fine example of San Angelo hospitality. As for the cowhand, he's here tonight—your Mayor, Mr. M. D. Bryant.

Not all of you have spare homes to loan to our people, but I know that you are doing many other things to make our airmen welcome. I want you to know why these things are important to us and to all Americans. The average airman and cadet at Goodfellow has been away from home perhaps less than a year. You do a lot just by a friendly greeting, to show that he is welcome in your community. If he needs help, you have given him that help as you would to any other member of your community.

This is a two-way street, of course. The personnel of Goodfellow are expected to observe your laws and your customs just as your own citizens do. They know they are entitled to no special privileges as servicemen. But I am sure you have discovered that when you treat servicemen like members of the community you have no more trouble with them than with your own young men—perhaps less.

One important measure of the effect of all these things is in our reenlistment rate. We recognize, of course, that some of our Air Force people will prefer to return to civilian life when their terms of enlistment expire regardless of anything that can be done to encourage them to remain. But a man who likes his job and who feels he belongs in his community is an excellent prospect for reenlistment. I am proud to report that Goodfellow's reenlistment rate is well above the Air Force average, and that average has shown a sharp rise in the past year.

So you see, being a good neighbor is rewarding not only in a community sense but in a national sense. It gives us more effective air power, and at a time when it is sorely needed.

The men now being trained at Goodfellow are the stuff of which heroes are made. Texas has known many illustrious heroes, and San Angelo and the surrounding communities have contributed more than their share. They include men like Jack Mathis, who was posthumously awarded the Congressional Medal of Honor, and his brother, Mark, who took his place and was also lost in combat. This base is named for one of your sons, Lt. J. J. Goodfellow, Jr., who was killed in action over France in World War I.

I might mention many others who have upheld in combat the fighting spirit of all Texans—like Maj. Horace Carswell, Jr., of Fort Worth, who entered the Air Force here in San Angelo and won the Medal of Honor for exploits in which he gave his life in the Far East, and Maj. George Davis, of Dublin, our top jet ace in Korea before he

was lost in combat. And I am sure we won't forget here that our illustrious Commander in Chief, President Eisenhower, was born in Texas.

These are but a few of the names that are inscribed in the honor rolls and the hearts of Texans and all Americans.

The men now being trained here are such men. They, too, have volunteered to serve their country at this critical time in its history. Despite the fact that President Eisenhower, in his earnest search for an enduring peace, has made it perfectly clear that we will not be the aggressors, someone else may start a war—perhaps the most frightful war ever.

But, if we are resolute in keeping our forces strong, if we will stand firm and united with our allies against Communist aggression, and devote our energies and resources to achieving a lasting, just peace, we will have reason to hope that world war III will not have to be fought. The struggle in which these young men are taking part is one with less glory for themselves but infinitely more for all mankind—the struggle which we must carry on for as long as it may be necessary, the struggle to prevent the kind of war which could endanger and perhaps destroy our civilization.

Our objective is clear. We must build and maintain at the ready the military strength which any potential enemy will respect, and we must have the moral determination to work and sacrifice for the kind of peace which heroic Americans have always been willing to fight and die for—looking forward to that brighter world in which man can live, with purpose, in freedom and harmony with his brothers and his God. This is a cause to which we can all dedicate ourselves and in which we must not fail.

Thank you.

Billy Graham Serves Well in Cold War

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present herewith an editorial taken from a recent issue of the Shreveport Times, a daily newspaper with general circulation over 100,000, in reference to the magnificient work which is being done by Rev. Billy Graham on his overseas tour. The editorial is entitled "Billy Graham Serves Well in Cold War" and is as follows:

BILLY GRAHAM SERVES WELL IN COLD WAR

Accompanying Billy Graham on his evangelistic tour of India is George Burnham, staff writer for the Chattanooga News-Free Press. In a recent dispatch from Delhi, Mr. Burnham wrote:

"The triumphant tour by Billy Graham has created more good will for America in India than all the millions of lend-lease dollars.

"He is a clean-cut American that people can see. They can listen to what he says. He isn't some vague figure in the national budget that never filters down to the people in a language they can understand. The people of India like what they see in Billy and they have been listening with rapt attention to what he says. In less than three weeks he has talked to over a half million in person.

"At every city and hamlet he has been met at the airport by civic and church leaders and ordinary people. He has had enough flower garlands to make him hump-shouldered. Five little girls got up at 4 a. m. to watch him catch an early morning plane. He has drawn crowds of 10,000 at 7 a. m. and 100,000 at 7 p. m. to hear him preach. A man walked 400 miles to shake his hand."

Unquestionably Billy Graham has brought to India and to many another foreign lands a better understanding of the United States and its people—certainly a clearer understanding than is conveyed in foreign aid statistics and a more accurate understanding than may be derived from free-spending, self-centered American tourists.

If, as has often been said, the cold war is a war for minds more than anything else, Billy Graham is serving as a good soldier in the American cause. His youthful vigor, his abounding faith and his tireless energy are an invaluable aid to his country.

To all of this I say, may Billy Graham have God's richest blessings.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ROGERS of Texas. Mr. Speaker, one of the most heartbreaking aspects of the manner in which we have too often tackled the problem of the mentally ill, is the way we have treated the emotionally disturbed child. This phase of the mental health problem is the subject of the sixth of a series of articles printed in the Amarillo Globe-Times. Under leave to extend my remarks, I include A Break for Johnny Doe.

THE MENTALLY ILL CAN BE CURED—A BREAK FOR JOHNNY DOE

(By Louise Evans and Mary Tom Rasco)

Case history: Johnny Doe, white male, recently turned 15, IQ 132 (superior). Mother deserted. Father served penitentiary sentence for rape, assault and petty larceny. Boy put in Kansas Boys Industrial Home after escaping several times from children's home. Stabbed another boy at industrial home. May be dangerous.

These were the heartbreaking facts in a case history read at a recent conference in the Children's Unit of the Kansas State Hospital.

At the table were 5 doctors, 2 nurses, 3 teachers, a therapist and a social worker. Before each was a sizable stack of records which had been accumulated as these staff members had worked with Johnny Doe. An occupational therapist and a child welfare case worker who ordinarily would attend the case conference were absent.

Presiding was Dr. Joseph Noshpitz, chief of staff for the Children's Unit, a young psychiatrist graduated from Columbia University of New York City. That is, Dr. Noshpitz appears young—in his middle thirties—but he is not young in experience. He served on an Army psychiatric team and for several years was with Veterans' Administration neuropsychiatric hospitals before coming to Topeka.

What was Johnny doing in a State hospital for the insane?

First, he was getting a chance that no highly disturbed emotional Texas youth could have—expert diagnosis and treatment at a special center for children.

Secondly, after he had assaulted another boy inmate of the boys industrial home with a knife, a battery of psychological tests had shown he might have an underlying psychosis.

CONFINED 11 OF HIS 15 YEARS

Johnny is a very real person, not a make-believe case history. Big for his age, 5 feet, 10 inches tall, he weighs 180 (the staff is concerned that Johnny, for too long skinny, now is gaining weight too rapidly). He is too pale—but Johnny has spent 11 of his 15 years in State institutions, from the time he was sent to the children's home at the age of 4.

His black hair is too long, not a ducktail exactly, but somehow he thinks the straggly locks make him more noticeable, and the staff agrees to this effort to establish his identity. His fingernails are bitten to the quick but the children's unit staff expects Johnny to retreat into many childhood traits before he starts to grow up under guidance.

He wears glasses, after many years of refusing to do so in the industrial school even though he is nearsighted. One day recently when the frames were broken, he wouldn't allow the aide to take them for repair. He was afraid he wouldn't get his glasses back. Johnny doesn't believe that anyone could be kind.

Johnny's medical history isn't a happy one: Scabies, impetigo, rheumatic fever. But Johnny's life history is shudderingly unhappy.

His mother at the age of 16 had married a man 18 years older than she—over her parents' objections. There were four children. The mother, following long mistreatment by her husband, deserted the children.

Thereupon her husband moved in with his mother-in-law and shortly after raped her, possibly in the presence of the small children. He was sent to the penitentiary. Johnny was put into a children's home at the age of 4, because even then he was creating a behavior problem in the neighborhood.

Time and again he ran away from the children's home and usually was caught in some minor criminal act, such as petty thievery. At last there seemed nothing to do but send him to a correctional institution—the Kansas Boys Industrial School. There his personality continued to be thorny, until the stabbing which brought his transfer to the State hospital.

For more than three-fourths of his life Johnny had been in State institutions. His future looked as though it might include a lifetime in either a State insane asylum or, if released with rehabilitation, in the State penitentiary.

SECURITY FOR THE FIRST TIME

But the children's unit workers already have reached the conclusion that Johnny Doe probably is not psychotic but is an emotionally disturbed youngster, reflecting the environment from which he came, unable yet to live with his own kind.

At first Johnny resisted treatment and wanted to go back to industrial school. Then slowly he seemed to gain some sense of security. The staff feels that probably for the first time in his life Johnny feels secure. He seems to be reaching the point at which he can be treated, and there is hope for eventual rehabilitation.

The conference goes on. How does Johnny respond in school? (The children's unit has teachers for school subjects.) How does he react to therapy? Have his behavior patterns changed?

The way to useful life may be long. Johnny must be retrained, and that is a longer process than training. If the doctors

and staff are successful, they will overcome the results of the first 15 years of Johnny's life—and could anyone have a more terrible handicapped past than Johnny has had?

"It is from the children that we are going to learn about the human mind, and, therefore, about mental health."

These were the words of Dr. Ernest Southard, one of the great leaders in American psychiatric work, and a teacher of Dr. Karl Menninger. Menninger set to work to put that teaching into effect. The Southard School at the Menninger Foundation in Topeka was established in 1925, designed especially for the treatment of children.

With this excellent pattern at hand, the Kansas program was set up to incorporate a children's unit.

"These are the sickest children in the State," says Dr. Noshpitz, as he surveys the 40-bed unit at the Topeka hospital for children's care. The ward was set aside in 1952 to house and treat disturbed adolescents, to take them from the adult wards where they were a disruptive influence and to provide a self-contained unit where the special problems of childhood could be studied and treated.

Original plans called for the treatment of youths from 12 to 16 years of age but today there are 11-year-olds and 18-year-olds in the unit. Boys and girls are housed on separate floors. There are security rooms for highly disturbed patients, who might have suicidal tendencies or who, on admission, are causing serious trouble.

Most of the children are sent from other State institutions, such as the State industrial and reform schools, where their personality disorders and possibly latent psychoses are discovered. There also are direct admissions from communities.

There are 34 children in the ward. Here is the highest staff-patient ratio in the hospital: 36 staff to 34 patients. The unit is served by 2 doctors, 2 social workers, 3 teachers, 2 nurses, 2 psychologists, 4 resident psychiatrists-in-training, 2 therapists, 18 aids, and a secretary.

But many of these staff members are "in training" (later the overall training program in Topeka's 3 hospitals will be explained).

Even so, the program is costly—$120,000 for the staff alone, plus proportionate cost of the housing, food, clothing, and the kitchens and maintenance staffs provided by the State hospital. The people of Kansas admit it is a costly program, but Kansans feel the children's unit will pay its way in lessened future costs to the State.

EARLIER THE BETTER

The Kansas State Council for Children and Youth has sponsored a unit for even younger children. At present, two cottages, containing 15 beds, are being built to house children under 12. It is hoped this unit eventually will contain 90 beds.

"As we have developed skills and knowledges in this field of mental health, we learn that the fundamental principle of medical treatment holds true—the earlier the ailment is found, the better the chance that treatment will bring recovery," says Dr. Noshpitz.

There have been no long-range plans in policy made for this unit. Now, it is thought it will serve as a central diagnostic center, with treatment carried forward in scattered centers throughout the State.

If Dr. Southard's rule holds true, it is in this unit set aside for the youngest of children, that the greatest strides in treatment and in research will be made.

And it is in this Kansas plan of a central children's treatment center we may find the solution to our Texas problem. Recently in Armarillo, there were 5 children desperately in need of resident treatment in a mental hospital, according to the Potter County Child Welfare Unit. One needs only to trace the recurrent news stories in the Globe-Times of juvenile delinquency, of children who come from homes so badly broken that it can be assumed that no training—or worse, very bad training—has been given, to know that we must face—and solve—this problem.

A MUST FOR TEXAS

Doctor Noshpitz feels that all children cannot be "cured" in the sense of being brought to vital mental health. Certain neuroses and psychoses stubbornly resist the terminal note: Cured. But most of these children in Kansas are being helped to the extent they can make marginal adjustments to people and social adjustments sufficient to prevent crime.

Unless there is such a central diagnostic and treatment center in Texas, planned guidance centers in the individual cities will have no place to send the more emotionally disturbed found in the city centers. Those will need the resident hospitalization and skilled treatment that cannot be provided at the local level, no more than the highest specialization in physical disease can be found in each community.

Child guidance centers play a big role in the overall picture of the care of the mentally sick child. They can give treatment to many children, but they always will need to refer patients to the State treatment center.

Some Texas cities already have such guidance centers for children but, as the Texas Research League report points out, a State center devoted only to care of children—separated from the adult treatment wards—is a must.

ONE VITAL GOAL

The children's unit has an outpatient clinic, and many children are served so well here that hospitalization is avoided.

Boarding homes are maintained for children just as they are for adults. If the children can be taken from the institution and put into the boarding home, which more nearly approximates the world of reality, away he goes.

The children's unit, like the other wards of Kansas State hospitals, has one goal toward which each staff member, from aid to psychiatrist, works.

Cure them if possible. Rehabilitate them to the point they can lead relatively normal lives. Get them out of the institution as soon as possible. Move them along the road back to reality by easy stages. Lose, if you must, to incurable insanity, win, if you can.

The Goals of My Soil Conservation District

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. GATHINGS. Mr. Speaker, recently a most forceful and informative speech was delivered by Hon. James McDaniel, of Jonesboro, Ark., titled "The Goals of My Soil Conservation District." Mr. McDaniel, a successful practicing attorney for a number of years, won top State honors in his presentation. This address is incorporated below in its entirety:

THE GOALS OF MY SOIL CONSERVATION DISTRICT

(By James McDaniel, Jonesboro, Ark.)

I am always proud to call Craighead County, Ark. my home. My family has been here since 1839, so it is truly my home. Also, it is different from most of our other counties in this or any other State. The western part of the county is almost entirely level, or nearly level, and growing rice. The eastern part is mostly sandy delta land. Through the center, from north to south, is a narrow strip of lush soil called Crowley's Ridge. The ridge averages 4 miles in width and is about 100 miles long. I live on a 410-acre cattle farm on the ridge where I grow Aberdeen Angus cattle. Then off the ridge I own and farm some 840 acres in rice, cotton, feed crops and pasture.

The earliest settlements in this county were on the ridge. The ridges were very fertile. Yellow poplar, white oak, red oak, gum, and hickory covered the hills and supplied every timber need for these pioneers. To the east the Mississippi and its tributaries flooded the bottoms annually up to Crowley's Ridge; to the west the swamp lands which are now fertile farm lands seldom dried up. There were pestilences and diseases in the east and west bottoms. So these early families settled on Crowley's Ridge, which they called God's levee. As the land was cleared, cotton, corn, clover, fruits, and other crops produced a bountiful harvest. I have heard my father speak of the red clover on the ridge that was knee high.

As word of this delightful location spread, more people came. They came from Missouri, from Tennessee, and from South Carolina for the most part. More and steeper hills were cleared and some began to clear lands in the bottoms. There was so much good soil that no one was worried about muddy water running down the hills. Straight rows and clean cultivated crops were the mark of a good farmer. If their land washed away, they could clear more.

The progress of sheet erosion was so gradual that no one noticed it. Production on the ridge declined, and more bottom land was cleared. In the 1920's huge drainage projects were carried out on the bottom land. The ditches were new and again every prospect was pleasant. However, this condition didn't last long. Soon the ditches nearest the ridge were filling up with soil carried by the ridge water. About this time, huge gullies began to appear on the hillsides. Sheet erosion had destroyed most of the topsoil and the subsoil was leaving the hills by the millions of tons. As the ditches filled, floods came frequently and devastatingly.

In 1935 a Civilian Conservation Corps camp was established at Jonesboro, to do soil conservation work. Thousands of acres of eroded land were treated with trees, vines, sod, terraces, and many other ways. However, this was not the most important help the county received. In 1939, the farmers of the county voted to organize a soil conservation district and ask for technical assistance from the Soil Conservation Service. This was accomplished in September of that year. However, only the ridge section of the county was included in the district. Within a short time, many farmers realized that the problem of soil and moisture conservation was not limited to the ridge. Thousands of acres of the high-priced east bottoms, which now sell for $300 and $400 per acre, were blowing away, and other problems plagued farmers in every section of the county. So, in 1945 all of the county was included in the district, by vote of the farmers involved. It is about this district, its origin, its problems, and its goal that I want us to think.

With the help offered by the district, farmers have vigorously attacked the enormous job of saving soil and controlling water. The farmers set up their own program and do their own work. The district provides technical assistance and some equipment which the average farmer does not have. But most important of all, it provided them with means of working out their own particular problems. This is done by discussion

meetings, demonstrations, tours, field days, and just farm visits. We have asked and received the cooperation of the Extension Service, the FHA, the ASC, the PCA, and 4–H, and FFA clubs, the chamber of commerce, the Boy Scouts, and the vocational agriculture teachers. The Lions Club annually provides the banquet for the district for winners of the save-our-soil contest. The bankers, the lumber dealers, the local oil companies, and the farm-equipment dealers take turns in providing substantial prizes for these winners. The county quorum court has been most liberal in helping pay for equipment. This year it appropriated $1,000 to help us make our payments. The local newspaper and radio stations have been more than generous in giving us publicity in our vital work.

As of January 1, complete conservation plans had been made on more than 1,800 farms. On these farms, 28,000 acres had been planted to some form of permanent vegetation; 132 miles of terraces have been built, 400 miles of farm ditches have been dug, draining more than 50,000 acres. On jobs where several farmers were involved, we have had 40 different groups who pooled their resources to get the job done for the good of the community.

Just recently we had nine farmers who, working together, obtained help from the county judge, the State highway department, the Agricultural Stabilization Commission, and the soil conservation district to drain their farms. The complete job couldn't have been done without the help of all, and nowhere but in a soil conservation district would there be the machinery set up for such cooperation.

These are just a few of the 41 soil and moisture conserving practices being carried out in the county. The most important thing that has happened is that people in cities and on farms have become soil conservation conscious. We are proud of what we have done, but we also realize that we have barely scratched the surface. No one, who really loves the land, can travel over Crowley's Ridge and not be saddened by the sight of thousands of acres damaged or destroyed by erosion. It took a hundred years for it to get this way, and it can't be brought back in one. But by constant planned, coordinated effort, we expect to see it brought back. Many of the farmers are already growing clover again. And we look to our own soil-conservation district, made up of the farmers of the county, operated by supervisors elected by them, to provide the leadership and other assistance we need. Incidentally, we have 375 of these supervisors in Arkansas and 12,500 in the United States who are giving freely of their time and talent with no hopes of any reward except the satisfaction of a vital job well done. Our debt to them can never be paid. We know it will be a long and expensive job to bring our soil back. Some may doubt if we can afford to do it, but we all know that we can't afford not to do it. The soil is not ours to waste; we are merely stewards of it and we must daily give an accounting of our stewardship. No longer can we follow the practice of cut, burn, plow, destroy, and move on.

I said in the beginning that I was proud to call Craighead County my home. The rest of the people in this county feel the same way about it. We need to solve our own local problems and believe we are capable of doing it. We would hate for any State or Federal agency to come in and force us to save our soil and control our run-off. We would much rather do it as we are now, on a strictly volunteer basis, under local leadership, with the best technical assistance available. Our districts now stand as a democracy, as opposed to a dictatorship, which we will have if we don't do the job ourselves. If the farmers will not do the job themselves, the Government will compel us to do it and this would result in our losing part of our democracy.

Many of us have built stock ponds up to an acre in size to stop the fast flow of water which carries away our soil and fills up our ditches. I have six such ponds on my cattle farm. This means that we not only protect our hill soil and the drainage ditches on our bottom lands off the ridge, but the cattle have water close by wherever they might be in the pasture. And we farmers have a ready source of fish since our ponds are stocked by the Soil Conservation Service. There are nearly 400 of these ponds on Crowley's Ridge, covering 1,600 acre-feet and holding one-half billion gallons of water.

These men of the Soil Conservation Service who work so patiently with the farmers have not been properly recognized for their work.

For centuries man has failed God in his stewardship of the land. His sins against the soil have been visited upon his children down through countless generations. God forgives sin, but not the results of sin. One can read the results of sins upon the pages of history, or the sands of Asia-Minor—more than 500 cities and villages where once fertile lands supported millions, now lie buried under the sands. We can read it in the faces of millions of Chinese who never had a square meal, or the thousands in India every year who starve to death. Surely the wages of sin against the soil has been death to these. I will not insult your intelligence by suggesting that this is going to happen here. We are firmly resolved that it shall not. But we, as a Nation, have a very poor record for conserving our natural resources. And this seems incongruous, since our country was founded by a people who believed in giving an accounting of their stewardship to their God. No other nation in the world has wasted its resources as rapidly as we have. As a civilization we are very new, yet we have already destroyed 280 million acres and damaged 700 million more so badly that it requires intensive treatment to keep them in production. When the Mississippi River is at flood stage, enough good soil goes down it every hour to cover an 80-acre farm 8 inches deep. Our population is increasing at the rate of 7,500 each day. Eroded soils and over population brought misery and death to India and China. Whither are we going? I repeat, we have wasted our natural resources faster than any other nation in history, but we are now soil-conservation conscious, and are now leading the world in that work.

It won't happen here, because we are gaining in the fight against it. We will never rest until every farm in this county has a conservation plan and until each farmer is following the plan.

This is the goal of our soil-conservation district. Our district has helped us in overcoming our major water problems; the bottom lands are no longer flooded and the hills are no longer washing away. We have discussed the accomplishments. It has enabled our farmers to work out their own land and water problems. You have been told how our district office coordinates the work of Government agencies and private organizations. So we pride ourselves in the job we are doing to help ourselves.

It is hard for a man to be very religious or patriotic on an empty stomach. Down through history, people have given up their political and religious freedom to dictators because they were hungry. They were hungry because their farmlands couldn't support them. We will remain a strong nation just as long as our soil remains fertile. "When the soil is gone, the people perish," has been a true saying for centuries. We expect to remain strong. We do not expect to give up our civil or religious liberties for the promise of food. One of our great poets gave us Horatius' saying:

"How can one die better than facing fearful odds
For the ashes of his fathers and the temples of his Gods."

I ask you, "How can one live better than facing fearful odds for a chance to make a living and the right to worship God."

Edison: The Man Behind the Genius

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend by remarks in the Appendix, I would like to have included in the RECORD a speech given by Mr. George E. Stringfellow, senior vice president of Thomas A. Edison, Inc., West Orange, N. J., during the pageant of light festival at Fort Myers, Fla., at the Edison memorial service. Mr. Stringfellow's speech throws light on the feelings of Edison, the man behind Edison the genius. The people of my district have revered Edison ever since those many years past when he became a part of the community of Fort Myers. It was here that he built a home and a workshop and contributed so much, not only to America, but to Florida and, in particular, to Fort Myers. He is greatly revered and loved by the people of Fort Myers and each year they commemorate his birthday with a festival known as the Edison pageant of light. The pageant is held at the climax of the Fort Myers' winter season and attracts visitors from everywhere. I believe the remarks of Mr. Stringfellow, who knew this great man so well, will be of interest, and I ask that they be reprinted below:

EDISON: THE MAN BEHIND THE GENIUS

(Address by George E. Stringfellow, senior vice president, Thomas A. Edison, Inc., West Orange, N. J., and longtime business associate of Thomas A. Edison, at the memorial service for Thomas Alva Edison, the Edison pageant of light, February 6, 1956, Fort Myers, Fla.

You have invited me, a layman and a businessman, to take part in this memorial service for Thomas A. Edison, and I am honored. In trying to select an appropriate subject for this occasion, I discovered how difficult it is to say anything about Edison that hasn't already been said. Those of you who are present at this service are here because of your respect and admiration for that great man, and I am sure that you are familiar with all the known facts regarding his life, his struggles, and his achievements. However, because it had been my privilege to have worked closely with Thomas Edison during the latter years of his life, it occurred to me that I might be able to give you a few closeups of him that have not already been recorded by his biographers.

We all recognize, of course, that Edison was a genius. We know him as a great American, as a benefactor to mankind, as an inspiration, and as a wizard. Let's see what the combination was that made him all these things.

Except for his deafness, he was remarkably sound physically, no doubt due to the kind of life he lived. He didn't use alcoholic beverages. His principal dissipation was strong coffee, chewing tobacco, and cigars.

A number of years ago an intimate friend of mine visited me and expressed a desire to see Mr. Edison. Mr. Edison was a very easy person to see. Appointments were never necessary. All we had to do was to find out where the "old man" was. About 80 percent of the time he was in the chemical laboratories, so we looked there first, and if he wasn't there, we went to the library where we usually found him.

On the way to present my friend to the great inventor, he remarked, "I understand Mr. Edison chews tobacco. Wouldn't it be a joke if I asked him for a chew." Now to get the point of my story, my friend neither smoked nor chewed tobacco.

Soon after the introductions, I remarked to Mr. Edison, in all seriousness, "My friend would like a chew of your tobacco." The "old man," as we reverently called him, ran his hand down his right pants pocket, pulled out a plug of tobacco in a little case, laid it on his desk, ran his hand in his other pants pocket, pulled out a knife, opened it, took the plug of tobacco out of the case, and handed the knife and the tobacco to my friend and invited him to cut off a good hunk. My friend didn't want to decline and yet he didn't want the tobacco. Bravely he cut off a piece about the size you could put in your eye, but Mr. Edison insisted that he take a much larger piece. When my friend took a larger piece, it still didn't suit the "old man's" generosity, so he took the knife and tobacco and cut off a good hunk and passed it to my friend and said, "Try this. You will get the true flavor if you take a mouthful, as I do." My friend got the full flavor all right. He got out of Mr. Edison's library as quickly as he could and got rid of the tobacco on the steps of the building. Edison's generosity with chewing tobacco just wasn't appreciated.

Mr. Edison was opposed to smoking cigarettes for he felt that inhaling the smoke was bad for the lungs and that the chemicals in the paper were injurious to health. He felt so strongly about it, he issued instructions that no one in the library or laboratory should smoke cigarettes. Those instructions still appear on the time clock in the laboratory:

"Cigarette smoking in the laboratory must be stopped. Anyone disobeying this will be dismissed. (Thomas A. Edison.)"

His friend Henry Ford was equally opposed to cigarettes and together they wrote a book on why people should not smoke cigarettes. The book created so much publicity for cigarettes, it had an opposite effect to what the authors intended. As a result, so far as I know, both of them refrained thereafter from talking about the injurious effects of cigarettes.

Edison was 5 feet 9½ inches, and weighed around 175 pounds. He spent more hours at work and less at sleep than most people. In common with Napoleon, he slept more soundly and got more rest in a given time than the average person. He was serene and relaxed—seldom agitated. However, I remember one time, when he really lost his patience. The machine shop of the Edison laboratories is on the first floor and the drafting room on the second floor. Mr. Edison used to commute between those two departments many times each day. He would run up the stairway as often as he would use the slow freight elevator.

The elevator was an old contraption. On one occasion, Mr. Edison yanked the rope and the elevator started. Halfway up, the belt came off and Mr. Edison and the elevator were suspended midway between the two floors. It was about 20 minutes before we could lower the elevator and its occupant to the machine-shop floor. During that time Mr. Edison was anything but serene. He used some selected language and he made sure he could be heard throughout the two departments. So far as I know, he never used that elevator again, with or without an operator.

Mr. Edison's step at 80 was a spry as that of most men of 40. He liked to repeat the story Chauncey Depew told when Depew was in his 90's and still going strong. When asked, "How do you get your exercise?" The wit replied, "by acting as pall-bearer for my young athletic friends."

Edison got most of his exercise in his laboratory. He rarely sat at his desk. He moved around from one instrument to another, going from scale to tube, from report to drawing board, and from building to building covering as many yards as most businessmen cover on their round of golf.

Edison had great patience and determination. His most difficult invention was the nickel-iron-alkaline storage battery. After conducting more than 45,000 experiments without any measure of success, an associate asked, "Are you not discouraged?"

"Discouraged" responded the genius. "Certainly not. I have learned 45,000 ways the job cannot be done and I am, therefore, 45,000 ways nearer my goal."

Although recognized for his prodigious industry as well as for remarkable intellect, the old man loved a joke, not so much the sophisticated, sharp-witted kind, but more of the homespun variety of Abraham Lincoln. For example, he would with humility walk into his legal department and apply for a job as an inventor. Or, he could and would imitate the accent of a city low-brow, or the pompous manner of the holier-than-thou reformer, or a smooth promoter.

Edison contended that integrity is man's greatest asset, and he valued his integrity and his honor above material gains. On learning that a product bearing his name had developed defects in service, Edison closed one of his factories and requested his customers to return their purchases and get their money. The inventor felt that his integrity was involved, and this priceless ingredient was not for sale. He was always careful to see that his customers received a little more than he promised.

I am sometimes asked if Edison was a religious man. He was indeed, but he cannot be made to fit into the frame or pattern of any of our orthodox denominations. He felt that he was favored by some higher power. He was frequently asked, "Where do you find all those wonderful ideas of yours?" In response he generally remained silent, but a smile would pass over his face as he raised his finger and pointed upward.

Edison was not a materialistic thinker. While he was a master magician in dealing with material things, he was awed by what he called "the mystery of life," which he found it impossible to comprehend or fathom in terms of matter and physical concepts. While he admitted his uncertainty as to the meaning and scope of life after death, he did believe in the fundamental premise of eternal life.

Many of Edison's inventions and discoveries are based on nature's phenomena, particularly in the realm of light, sound, and chemistry. He saw vast possibilities in applying these wonders for the benefit of man, and nature was kind and revealed to him some of her secrets enabling him to develop the many things that made life easier and pleasanter for humanity.

Edison was many times a winner and an acknowledged champion in many fields, but he was a modest winner and a good loser. He suffered many failures with calm and stoicism. His concern was for the present and the future. He did not live in the past.

He knew and ever practiced the motto: "Sweet are the uses of adversity." For example, he turned his deafness into an asset in helping Alexander Graham Bell convert the telephone from a scientific curiosity into a practical instrument. He made his deafness a courtship asset. He taught his best girl the Morse code. In noisy, chattering social groups, they conversed by hand pressure. That was an excuse for them to sit closer together. Overcoming his natural shyness Edison built up the courage to propose when he could do so by hand pressure rather than by sales pressure.

Edison's pleasures were simple—his books and his music, and greatest of all was his pleasure in work. He gave the world light, warmth, joy and a higher living standard. He asked only for the opportunity to carry on his experiments for the benefit of mankind.

I like to think of Edison as exemplifying the faithful servant in the parable of the talents. You have read the story in St. Matthew's gospel: how the master, before going to a far country, called his servants to him. To one he gave 5 talents, to another 2, and to another, 1. The servant with 1 talent buried his in the ground. He who had 2 gained still another 2 and he who had 5 gained still another 5. Wherefore, when their master returned, he was pleased with the stewardship of the two servants who had made the most of their gifts, and because they had been faithful over a few things, he set them over many.

Edison was indeed a faithful servant. Vision, imagination, genius, industry, and character were the potentialities with which he was endowed. By the wise use of the talents committed to his care, the world has been enriched a thousandfold. Little wonder that his memory commands the devotion rooted deeply in human gratitude.

Chiang Kai-shek and Our Postwar Policy

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock, appearing in the New York Times of February 10, 1956, entitled "Chiang Kai-shek and Our Postwar Policy":

CHIANG KAI-SHEK AND OUR POSTWAR POLICY

(By Arthur Krock)

WASHINGTON, February 9.—General MacArthur's statement, in his retort to former President Truman's explanation why he dismissed MacArthur as Far East Commander in Chief in the Korean war, that Averell Harriman "cautioned me of the extreme dislike with which the President regarded Chiang Kai-shek" vividly recalls the official line on China in Washington at that period.

In his letter of July 30, 1949, to President Truman, transmitting what became known as the China white paper, Secretary of State Dean Acheson laid the burden of blame for the loss of China to the Communists on the Generalissimo and his Nationalist Government. The following sentence in that letter is typical of this official defense against the widespread charge at the time that China was lost to the West because of the administration's failure to give Chiang Kai-shek the economic and military support which the critics insisted would have prevented the disaster:

"The reasons (for the disaster) do not stem from any inadequacy of American aid. * * * The fact was that the decay which our ob-

servers had detected in Chungking (the Nationalist capital) early in the war had fatally sapped the powers of resistance of the Kuomintang (the Chiang party). Its leaders had proved incapable of meeting the crisis * * * its troops had lost the will to fight, and its Government had lost popular support."

THE OFFICIAL VILLAIN

This was the period in which Acheson announced in a public speech that our policy in China was now to "let the dust settle," and in which the critics of the administration's policy record in China assailed the white paper for alleged omissions and distortions of pertinent facts that would have demonstrated the validity of their criticisms. The net result was that the generalissimo, for whom MacArthur as late as 1951 "openly expressed admiration and personal regard," became the official villain of the administration.

In August 1949, Dr. Philip C. Jessup, who was the editor of the much-denounced white paper, was appointed 1 of a committee of 3 to review the China policy and make recommendations. He sought the views of known experts in the field, among them Walter S. Robertson, of Richmond, Va., now Assistant Secretary of State for the Far East in the Eisenhower administration. Robertson, then in retirement, had served 18 months, part of it as chargé d'affaires, in our embassy in China.

THE ROBERTSON LETTER

His reply, dated October 8, 1949, began:

"In justice to ourselves as well as to whatever friends we may have left in Asia it would seem to be imperative that we clarify our objectives and pursue them with fidelity. Chiang Kai-shek has now been made the official scapegoat not only for China's sins but for ours as well. His back is hardly broad enough to bear such a burden. * * * In my opinion, at least, it can be fairly demonstrated that the confused and confusing inconsistencies of our own vacillating policy, however well-meaning it may have been, contributed directly and indirectly to the debacle which engulfed him and his government, our ally, and brought to power the Communists, our long-avowed enemies."

"THE CASE AGAINST US"

In those days and since, the administration and its defenders humped many of its China critics and supporters of the Generalissimo as the "China lobby," and sinister impressions of their activities were encouraged. But Robertson was not, and could not be, put in that line of fire: his record in the Far East, his high character and his established objectivity as an observer would have refuted such an implication. His letter, however, had no apparent influence on the administration's review of policy, which is not remarkable when these blunt passages are considered:

"Both the Nationalist Government and the Communist Party can make out a case against us of having run with the hare and ridden with the hounds. The confusion is explicable. Officially we were committed to a policy of expediency which was constantly being challenged by reports from certain foreign service officers in the field denouncing the Kuomintang, praising the Communists and recommending a course of action directly contrary to the one we were pursuing. And the fact that some of our official observers whose reports later influenced changes in policy completely failed to recognize the nature and character of the Communist movement only served to compound the complications already inherent in the situation."

Robertson then traced the origin to Yalta, and to the summer of 1945 when devasted China stood in dire need of economic assistance. "We withheld our help," he wrote, "and tried instead to bring about a coalition with the Communists. The collapse which followed was inevitable."

This kind of criticism, even though requested, and from such a source, moved the administration more firmly to the stand that Chiang Kai-shek was the culprit; otherwise it would have been obliged to concede inexcusable policy errors that the white paper in toto denied.

The Gasoline Price War in New Jersey

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14, 1956

Mr. HUMPHREY. Mr. President, close study of the economic history of the United States reveals that the relation of government to business is predicated upon the principle of free and competitive private enterprise. The wise and beneficial nature of this public policy seems clearly demonstrated by its long and firmly established acceptance by the American people.

Last fall, I had occasion to listen to an admirable exposition of the social principles which underlie the public policy concerning the relation of government to business. At the time, my Subcommittee on Retailing, Distribution, and Fair Trade Practices of the Senate Small Business Committee was sitting in Newark, N. J., to receive testimony on the New Jersey gasoline price wars. One of the witnesses who testified during those public hearings was Father William J. Smith, S. J., a Catholic priest familiar not only with the peculiar competitive problems of the New Jersey gasoline retailers but also with the basic social principles which distinguish free competition from the law of the jungle.

In inserting Father Smith's statement into the Appendix, I wish to call especial attention to the passage beginning on page 99 in which he warns that when private business fails in its responsibilities, then the Government has a duty to remedy the situation. On this point I have noted the many bills recently introduced for the purpose of checking competitive evils in the automobile industry. In my judgment, there would have been no necessity for such measures if certain corporations had properly fulfilled their responsibilities toward those with whom they did business.

I ask unanimous consent that the statement by Father Smith be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF REV. WILLIAM J. SMITH, S. J., DIRECTOR, ST. PETER'S INSTITUTE OF INDUSTRIAL RELATIONS, JERSEY CITY, N. J.

It would be well at the outset, I believe, to state the purpose of my appearance before your committee this morning. I have come at the request of the committee to point out some of the social principles which may underlie the solution of the problem currently concerning the committee, namely, that of the gasoline price wars which have been plaguing the State of New Jersey for a long time.

My appearance is in the capacity of an individual and entirely unofficial both in relation to the Catholic Church, of which I am an ordained priest, and more specific work in which I am engaged as director of St. Peter's Institute of Industrial Relations. I make no claim to the title of expert or authority on any of the matters under consideration.

The invitation from the committee, as I understand it, grew out of an article of mine in my syndicated column Spotlight on Social Reform which was published in the Advocate, the Catholic weekly of the Archdiocese of Newark, on August 14, 1955. Prior and subsequent to the publication of this article I have met in conference with a number of the gas dealers both individually and in groups. It was with the thought of giving encouragement to these men and women in their efforts to find a solution to a difficult problem, of manifesting a spirit of cooperation with this committee and of fulfilling a civic duty, that I have responded to your request to appear here this morning.

For almost 20 years I have been engaged in social action and as an apostolate of social reform, particularly in the field of industrial relations, and social education through the medium of labor schools and institutes, conferences for management, and forums of various kinds for the general public. The work of informal adult education has been implemented by extensive writing and the spoken word in the pulpit and on lecture platforms. Beyond that, I possess no special qualifications to comment on the current subject other than those of an informed citizen desirous to cooperate in the solution of a common social problem.

The subject of price wars in the gasoline industry has at least a threefold aspect: It is an economic problem, a legislative problem, and a social problem. These three phases of the subject are interrelated but are not necessarily identical.

From the economic angle, the aspect is more or less a technical one. It concerns itself with the production of gasoline, the administrative agencies of large corporations in the processing and distributing of the product, the retail sale and distribution of it by dealers who man the service stations, and the eventual use of the product by the motoring public.

In its legislative phase, the problem centers around the need of investigating prevailing conditions in the industry as they relate to Federal and State law for the purpose of determining whether present legislation is adequate both in existing statute and enforcement or whether further salutary legislation is deemed advisable.

The social aspects of the subject relate to people—to the groups involved, the public welfare, and the moral connotations which may be attached to the activities of the participants both as individuals and as social groups.

It should be made clear at the outset, I believe, that there is a difference between economics and moral law. One is not the other. They are not identical. If we are to live truly human lives, however, it cannot be denied that there is a strong relationship between the two.

There is no such thing as an economic man either in the area of economic activity or in any other sphere of human society. As a human being, every person is at one and the same time a member of human society, a citizen of the country of his birth, and a participant in the economic activities in which the people of a Nation engage to sustain life and material well being. His rights and duties extend to all three domains—namely, the social, the civic, and the economic. He is likewise a citizen of two distinct worlds—the world of time, the present, and the world

of eternity, the goal of his immortal destination.

Insofar as economics is a science or, at least, a quasi-science, it has postulates, if not laws of its own. It is possessed of scientific theories and the possible application of them in regard to production, distribution, and the consumption of goods and the rendering of services.

Economics in itself is neither moral nor immoral. It is a branch of the tree of knowledge. It is good or bad, as a science, in proportion as it is based upon true facts and valid conclusions. It is good or bad, morally, depending upon the use men make of it. Economic science steps into the jurisdiction of the moral law when it is translated into economic activity. When theory is reduced to practice, it is immediately clothed in the robe of a human action. It steps upon the playing field of rights and duties. It must be contained by the chalk marks of justice and injustice just as two football teams must confine their activities to the white lines marking off the goalpost at each end of the field.

Economic life and an economic system that develops through economic activity are not some sort of mechanical routine, isolated and divorced from the rest of human society. Laissez faire capitalism tried to pretend that it had a right to act on that false assumption. Some faint vestiges of the savage theory still remain. It is an insult to divine law and human dignity.

Economics did not create the universe and material elements of production. Economics did not create the power and genius of men to devise technological improvements. Economic activity, insofar as it is human action, must fit into the overall objectives of human life itself, just as political, military, educational, and domestic activities must be measured by definite standards and norms of human right and wrong, of justice and injustice, of charity and the lack of it.

The principles of social order are all inclusive of human activity. They must be applied to family and domestic life if the Nation is to survive. The family is the first social unit of society. They must apply to civic life if chaos and anarchy are to be avoided. Industrial society is a segment of the national life—the material basis of the whole cultural, educational, and spiritual life of the Nation. There is no divine dispensation or exemption from the rules of human living for economic activity. It must be guided by the same social principles as any other form of organization in human society, or it defeats the very purpose for which it exists.

Capitalistic economics are based on the profit motive. There is nothing wrong with the profit motive in itself. There is everything wrong with a profit obsession. There is a great deal wrong with an industrial society or a civilization that is based exclusively on the profit motive.

Free competition is a good and necessary element of industrial society. Both the wisdom of the scholars of the ages and the horrible effects that have followed from modern examples of totalitarian economics attest to the fact that you must have a free-enterprise system if you are to have a free nation. You cannot have a truly free nation, however, if the very term "freedom" is not correctly understood and interpreted.

There is no word in the American language that is so adored as "freedom." There is no word that has been so abused. "Obedience to just law is liberty. Freedom is the awesome responsibility of doing what we ought—not as we please.

The word "competition" itself can have either a rational or an irrational meaning. War is a form of competition. Organized gangsters engage in competition. The beasts of the jungle are in constant competition.

The only type of competition entitled to the proud adjective of "free" is fair, just, socially sound, and morally defensible competition. Unfair, unjust competition has no right to the claim of freedom. Unfair, unjust competition is an infringement upon the rights of men who were created by Almighty God to enjoy justice. Every human being, every last one of us, has a divine right to justice—as a matter of fact, that is the very definition of "justice": to give to each man what is his due.

Unjust competition has its source in greed and a lust for power; it feeds on injustice; it grows strong through conflict; it thrives on chaos and ends in monopoly for the strongest and the most unscrupulous.

In the current issue of the disorder in the gasoline industry it is not my obligation nor that of any individual citizen to ferret out the facts and determine whether unjust competition and its illegitimate offspring, monopoly, exist. That is the responsibility of the oil producers, the gas dealers, and public authority representing the public and the public welfare. This hearing this morning is evidence that public authority is accepting its responsibility. The recent formation of an organization of gas dealers intent upon showing by example their good will and sincere purpose of helping to solve the present problem is evidence of concern on the part of the gas dealers themselves. The organization is called the Petroleum Businessmen's Association.

A second organization, in the form of an incorporated service for gas dealers, called the Amalgamated Gas Dealers of America, is intended to give assurance to the motoring public that the service station displaying the approved AGDA dealer emblem is worthy of patronage.

The major oil industries may be equally concerned with the implications to the public welfare embedded in this problem. To date, however, no public action on their part has come to my attention.

What legislative action may eventually be taken by Government or whether legislation will be needed, must be determined by the facts unearthed in this investigation and others of similar type. The determination of the question is not the responsibility of the individual citizen, but rather the duty of the legislators, the organizations directly affected by present conditions and the voting public at large.

My present concern, and the stipulated purpose expressed by the committee for my appearance this morning, relates to the social aspects of the problem. It should be perfectly clear to anyone who understands the meaning of the word "social" that the economically unhealthy conditions now existing in the retail gasoline industry are not exclusively economic in nature. It is not merely a question of efficient and inefficient gas dealers. This is a social problem. It is a problem that affects the public welfare and the families of a great number of men engaged in this particular economic activity. The problems will not be solved by some naive individual waving a mystic wand.

Social problems can be solved only on social principles and by social action. It is of the very essence of social action that the common good of all be accepted as the common and mutual objective. A solution can be effected only by hard work, good will, and united cooperative action. The participants who must play a part in the solution of this particular problem are the representatives of the major oil industries, of the gas dealers, the motoring public, and public authority as represented by the Government. A few of the social principles that must be invoked—and they might be called commonsense, democratic guide rules which should prevail in a democratic society—are the following:

1. The principles of freedom. This means the right of citizens to conduct private enterprise without coercion or dictation by Government. Only when private groups are unable or unwilling to accept and act upon their own social responsibilities should Government exercise authority to correct abuses or restrict freedom. The true concept of freedom, however, is one that respects the rights of others. It is common to all parties, yet the private property of none. It is a common freedom that must be shared within the guide rails of justice, decency, and just law. Such freedom is a natural right of the citizens of a nation.

2. With equal emphasis it must be brought home that it is the positive duty of Government to promote and protect the public welfare and the common good. It is the solemn obligation of legislators and the judiciary to correct abuses in the social order. Far better, as a matter of fact, would it be for foresighted lawmakers to anticipate, through experience, the delinquencies that crop up in industrial society and incorporate natural rights and duties in the national policy before abuses can arise.

It is not a primary right of Government, however, to dictate economic activities. It is both its right and duty to establish a national social policy, based on principles of practical justice, within which the private groups may exercise a freedom proportionate to their own sense and execution of social responsibility. "Obedience to just law is liberty."

3. When proper standards of law and social order have either been neglected for long periods of time or have not been opportunely enforced, and social maladjustments have set in, it becomes the social obligation of all parties involved, both private and public, to cooperate one with another and correct those social disorders. The adage is very old that "God helps those who help themselves." It is equally true that those who are reluctant to help themselves have little reason to expect help from others.

We can likewise put it down as an enduring truth that, if human values are to be sacrificed for monetary gain, if power and domination are preferred to justice and good order, if men are determined to live by a law of the jungle rather than by a law of reason and the light yoke of moral responsibility, any plea for respect for sound social principles will fall on deaf ears and the expression of it will be wasted in thin air.

Those, in high places or low, who stand to profit by disordered social conditions may be disinclined to cooperate in the correction of them. They may prefer to tolerate economic chaos with an illicit profit rather than to work for order, justice, the common good, and the comfort of a clean conscience.

If that is the prevailing philosophy in the oil industry and those in a position of influence are determined to perpetuate it, any appeal to reason, conscience, the moral law, or the beneficial fruits of the common good and social order would be but a voice crying in the wilderness. A philosophy of this kind contains the seeds of its own destruction. Eventually it must boomerang.

4. A social problem such as the one that now plagues the oil industry in the State of New Jersey can be solved only in 1 or 2 ways. It will be solved either on the principle of self-discipline or a compulsory solution will be imposed upon the participants under the guise of establishing order and regularity. That compulsion will come either from within the industry itself or from without.

If a compulsory solution from within were to be attempted, it could be done only by the exercise of a monopolistic power of some kind or through physical coercion. From the legal implications alone such a solution would be self-defeating.

The gas dealers would not be able to compel compliance without running into violations of anti-price-fixing, and other laws.

The producers could not attempt to exercise a monopolistic power of any kind without running afoul of the antitrust laws.

The internationally famed expert on social ethics, J. Messner, writes:

"When a people loses its power of self-discipline, its doom is inevitable."

The prediction is applicable to specific industries as well as to a nation as a whole. The inevitable doom that might descend upon an industry or a segment of it would not necessarily mean its total destruction. It could not mean less, however, than its loss of freedom.

The practical alternative for a modern industry that has lost its power to govern itself is that of Government regulation. The road to Government regimentation is paved with the blocks of social disorder and social irresponsibility. An evident conclusion is: There are avenues to socialism other than that traveled by the avowed Socialists.

5. The first steps toward the solution of the problem of price wars should be the self-disciplinary reform of the respective parties themselves. The evidence, I think, will bear out the fact that there is substantial need of reform. The primary obligation of the gas dealers is not to attempt to reform the producers or the producers to correct the deficiencies of the gas dealers. Each in their own respective fields should first endeavor to institute reform in their own house. Codes of ethical conduct are in order.

6. If competition is to be the norm for establishing a just price, the norm should apply to the wholesale price as well as to the retail price. If fair and just competition is to prevail, the practices of economic jungle warfare must be eliminated. Some form of what might be called built-in social control must be established to prevent these practices which lead to cutthroat, jungle warfare competition.

The only ones who can organize and execute such a plan as a built-in social control are the representatives of the producers and the representatives of the gasoline dealers, with as much aid and assistance from the public and public authority as may be needed.

If either or both of the major participants in the distribution of gasoline are unwilling or unable to engage in mutual cooperative action to bring about a self-disciplinary solution of the present problem, the right and duty falls upon the legislators, both Federal and State, to step into the picture and impose upon both parties the obligation of fulfilling their social responsibilities through a compliance with necessary legislation.

Economic activity in industrial society is not some form of human life distinct, independent of, divorced and separated from the overall social and civic life of the Nation. The producers of gasoline are entitled to an honest and an honorable profit—nothing more. The gas dealers have a right to a decent profit. The employees of both have a right to a living, saving wage in keeping with the standard of life of the American way. The motoring public has a right to gasoline and motor services at a just price offered to them by honest dealers and repairmen in whom they can place their confidence.

The motoring public, on the other hand, must be educated to the fact that they cannot have their cake and eat it. We cannot have unreasonably cheap, price-war gas under present conditions, except at the expense of justice to many gasoline dealers, their families, and their employees. The public has both the right and the duty to demand that all the facts of the present chaotic conditions be made known to them. The hidden causes of the price wars, whatever they may be and wheresoever they are initiated and perpetuated, should be made known to the public.

A just and honest price can be established by just and honest competition. It is incumbent upon the representatives of all concerned to make every effort that is humanly possible to establish such a norm. If through private initiative and effort it is found impossible for practical social justice to withstand the onslaught of corruption, it becomes the solemn obligation of public authority to regulate the industry in the most practical and reasonable manner possible. An approximation to justice at least, can thus be achieved. Freedom is "the awesome responsibility of doing what we ought—not what we please."

Poison Penwomen

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BARTLETT. Mr. Speaker, a campaign based on misunderstandings, misconceptions, and plain fiction has been launched against H. R. 6376, the Alaska Mental Health Act. H. R. 6376 was passed by the House of Representatives on January 18, 1956, and is now before the Senate Committee on Interior and Insular Affairs for consideration. This act is humane. It is long overdue. It is in the public interest. I am completley at a loss in attempting to fathom the reasons why certain individuals and certain groups have now started a letter-writing campaign to many Members of Congress aimed most obviously at an attempt to defeat the act. I am sure that if the letter writers would consult facts, they would join with all others not only in hoping this act would become law but in working for its speedy passage and approval.

The Scripps-Howard newspapers have taken editorial note of this deplorable letter-writing campaign in an editorial which reads:

POISON PENWOMEN

Probably we should not be surprised at anything fanatics do, but it is hard to imagine any group of Americans attempting through scurrilous literature to hold back the progress of Alaska, our great and vital northern Territory.

Yet newspapers and public officials all over the land are being deluged with a crude circular denouncing the bill now pending in Congress to authorize the building of a mental hospital in Alaska.

Some of the circulars are stamped "California State Chapter, Minute Women of the U. S. A." with a Los Angeles post office box. Others bear no identification.

The authors seek to give the impression that the allocation of a million acres of land for support of the proposed Alaska hospital means the institution will be proportionately large. It also is contended ridiculously that the provision for reciprocal agreements between Alaska and the 48 States means that any State governor can order sent to this "Siberian" establishment anyone he considers insane.

Actually it always has been the practice in the Western States to set aside sections of public lands, the income from which can be used for the support of the schools and other State institutions. It is especially logical in the case of Alaska, with its vast land area.

Likewise, reciprocal agreements among States for the care of citizens who become insane while away from home are commonplace, and Alaska's large number of visitors and seasonal workers make such an arrangement logical.

This bill is supported by the Eisenhower administration and by leaders of both parties in Congress, as well as by virtually every organization which is concerned with Alaska's prograss. It has passed the House and now is pending in the Senate.

It would give Alaska, which has no mental hospital now, an institution similar to those in States with like populations and needs. It is difficult to understand how anyone who knows the facts could oppose it.

Eisenhower Facing Both Ways

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an article from the February 13 issue of Newsweek entitled "Facing Both Ways."

The article follows:

FACING BOTH WAYS
(By Henry Hazlitt)

Like his budget message, President Eisenhower's Economic Report seems to preach two mutually contradictory philosophies at the same time. It pays lipservice to Government economy and free enterprise, and ends with scores of recommendations for increased spending and more governmental controls.

It is perhaps forgivable, especially in an election year, that the administration should congratulate itself on the astonishing economic record of 1955, and imply that the result came about because, as Franklin Roosevelt once boasted, "we planned it that way." "Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's great economic achievement."

But what caused this result? The report begins, modestly enough, by admitting that "lasting prosperity of the Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them." It adds: "Today we believe as strongly in economic progress through free and competitive enterprise as our fathers did, and we resent, as they did, any unnecessary intrusion of Government into private affairs." Then a qualification is added which, as it turns out, practically nullifies this statement: "But we have also come to believe that progress need not proceed as irregularly as in the past and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy."

Under the multitude of measures the report proposes, however, the Federal Government would obviously become the dominant factor in our economy. For the President and his economic advisers are now apparently convinced that "wise and timely actions by the Government" and "soundly conceived and well-timed governmental policies" can smooth everything out, give us exactly the

right rate of growth, and "prevent a minor contraction from turning into a spiraling depression." In order to do this, it seems that some 53 new laws or policies on the part of the Federal Government would be required. Most of these would greatly increase Federal powers. They imply interventions in the private economy at a thousand points and a constant stream of Government subsidies and handouts.

Moreover, even the specific governmental policies proposed contradict each other. This is most clearly brought out in the recommendations for credit controls. The Federal Government should be empowered to set "minimum down payments and maximum maturities on installment credit," because installment credit sometimes accentuates swings in the buying of automobiles, furniture, television sets, and other consumer durables, thereby exposing the rest of the economy to the hazards of widened fluctuations.

But the same Government that fears the too-rapid growth of installment credit, even when financed by private lenders at their own risk, has promoted an enormous housing boom by itself guaranteeing mortgages on shoestring margins that make the installment-credit terms on automobiles or television sets look like the acme of conservatism. It has forced Americans who want to invest in American corporations to pay down 70 percent of the purchase price, while it uses the taxpayers' resources to encourage other Americans to buy houses for 7, 5, 2, or 0 percent of the purchase price.

The Federal Reserve authorities, bluntly, have not had the courage to exercise a sufficiently firm control over the total volume of bank credit. They have kept down interest rates below the levels to which they would otherwise have gone. It is this that has encouraged and made possible the huge growth in consumer credit. It is futile economically, and dangerous politically, to give governmental authorities the right to increase the total supply of credit to make it cheaper and easier, and then to ration the oversupply by stepping in to say who shall and shall not have credit and on what terms. This substitutes bureaucratic judgment and favoritism for the judgment of the market place.

Tribute to a Great American

SPEECH
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. MILLER of New York. Mr. Speaker, I would like to pay tribute to my former chairman, dear friend, and colleague, CHAUNCEY REED.

It was with deep sorrow and saddened heart that I learned the news of his passing. To have had the privilege of knowing and working with such a great chairman, able lawyer, true and devoted friend, and sagacious legislator is one of the pleasures I have received through being a Member of this great body.

Those of us who served with him on the Judiciary Committee respected his wisdom, sincerity, integrity, and conscientious devotion to the responsibilities and tasks that confronted us. CHAUNCEY REED'S untiring efforts and true and loyal dedication to principle rose far beyond the ordinary line of duty. His service to his district, State, and country was outstanding. I shall always cherish my friendship with such a distinguished American.

My heartfelt sympathy goes to Mrs. Reed and his family in their bereavement.

Arab-Israel War Peril: Russians Gain Influence

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Arab-Israel War Peril: Russians Gain Influence," written by John Cowles, president of the Minneapolis Star and Tribune.

I have not always found myself in agreement with Mr. Cowles, and on many questions he and I have had a friendly agreement to disagree. For some time, however, Mr. Cowles has been making acute observations on the deficiencies in our foreign policy, and suggesting constructive alternatives. He has just returned from Asia and has written an eight-point summary of his observations and proposals. This is a succinct and significant statement, to which I wholeheartedly subscribe. I commend it to the attention of the Senate and the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARAB-ISRAEL WAR PERIL; RUSSIANS GAIN INFLUENCE

(By John Cowles)

After a month of concentrated question-asking and observation in South Asia and the Middle East, I am convinced most Americans are unaware of the gravity of current developments in that part of the world.

First. The Israeli-Arab situation is imminently critical. If war breaks out—and some responsible, informed authorities believe there is a 50–50 chance of that happening within 90 days—no one can foretell where it might spread.

If such a war is not averted, most of the Middle East might quickly be lost to the free world. Even if such a conflict did not rapidly develop into world war III, as it might, the loss to Great Britain of its Middle East oil reserves, if that happened, would be a catastrophe of incalculable dimensions.

Not only would the Communist world's war-making potential be enormously increased, but economically Great Britain would be reduced to the position of a second-rate power.

If an Israeli-Arab conflict is to be avoided, real concessions will have to be made by both sides. Since the Arabs will not negotiate directly with the Israelis, either the United States or Britain, or both, must act promptly as go-between.

No matter how sympathetic most Americans are with Israel, we must realize that all justice is not on one side. Moreover, not only Israel but conceivably the whole free world might face disaster if a settlement, which can only be atained through mutual compromise, is not speedily reached.

Second. The Bulganin-Khrushchev tour of India, Burma, and Afghanistan was a major success for the Russians. The Communists are clearly gaining throughout much of Asia. Communist propaganda is diobolically clever and effective. Unless the United States adopts a much more imaginative and understanding psychological aproach toward Asia, and enlarges the scope of its economic aid, the probability is that much, if not most of Asia, will gradually slip into the Communist orbit.

Third. Most Americans have no comprehension of the psychological importance throughout Asia of the phrase "western colonialism." It is of supreme importance that the American Government try in every possible way to dissociate itself from all aspects of colonialism.

For example, official statements that can be interpreted, no matter how erroneously, as implying American approval of continued Portuguese occupation of Goa and other enclaves on the Indian subcontinent do the free world incalculable harm.

Fourth. Our paramount concern in Asia should be to try to prevent the presently neutral or uncommitted nations from slipping into the Communist orbit. India, with its 370 million people, is overwhelmingly the most important country in this category and Nehru the most influential Asian leader.

Nehru believes deeply in the principles of democracy. He is sincerely convinced that the course he is following is the most likely way of averting world war III.

Americans who criticize Nehru for being a Socialist and for not giving at least lip service to the American principles of free enterprise overlook the stark fact that the average Indian has an income of only about $55 a year.

India must be developed industrially but there are no pools of private savings, as there are in the United States, for this purpose. The Indian Government must therefore either get foreign loans or go totalitarian, as Russia and China have done, and depress an already unbelievably low standard of living, to extract from its miserable people the funds necessary for national development.

In my opinion, the United States in the interests of its own national security, cannot afford not to give India substantial financial aid.

I favor our giving India a line of credit of a billion dollars, payable at the rate of about $200 million annually, to help India with its new 5-year plan. Withdrawals on this loan should be made with the approval of the American ambassador as the 5-year plan progressed.

The granting of such a loan would not of course guarantee that India might not slip into the Communist orbit, but it would greatly reduce that likelihood.

In proposing such a loan, we should neither ask for nor expect any shift in India's present political alinement of neutrality. We should make the loan for two reasons:

Because of a sincere desire to try to help India develop itself and raise the almost incredibly low standard of living of its people without India being forced to abandon democratic processes to accomplish it.

Because our own national security would be gravely jeopardized if India were forced into the totalitarian orbit in order to satisfy the material aspirations of its people.

Fifth. We should put less emphasis on our military pacts in Asia. Certainly we should continue to supply arms to those friendly nations desiring and needing them to prevent possible Communist infiltration and subversion.

Some of our Asian military pacts, however, wholly in addition to providing effective propaganda material for the Communists, are causing discord in two other ways. On the one hand, the recipient nation doesn't get the amount of military equipment it, per-

haps naively, assumed it would get; on the other hand, a neighboring nation frequently fears that the arms that we have provided may be used against it.

In addition, there is ground for the belief that some of our military pacts with Asian countries may have tended to induce the recipient nation to use a larger proportion of its own national income and manpower on its armed forces than it can afford.

If the recipient nation is thus economically weakened, its government may be more susceptible to being overthrown than would have been the case had we given it a smaller amount of military aid.

Sixth:. Some Congressmen have expressed the view that our foreign economic aid should be greatly reduced or eliminated.

Unless we are willing to reconcile ourselves to letting all Asia slide under Communist rule, which to me would be sheer insanity, we should recognize that our foreign economic aid is going to cost us large amounts for many years to come. I am not suggesting billions more than the present level, but perhaps a few hundred million more for economic aid. Possibly such an increase can be fully offset by reduced foreign military aid.

While we should plan our overall economic aid on a long-term basis, the bulk of it should not be earmarked for specific countries in specific amounts at specific times, so that those recipient nations get the feeling that they have a right to it regardless of their own government's actions.

Perhaps half of our total economic aid appropriations should be given to the President to spend where, when, and how he thinks wisest. Our ambassadors would then have authority to increase, reduce, delay, or withhold aid depending on how effectively the recipient government was making use of the aid, and whether the recipient government was genuinely endeavoring to do the things it might have committed itself to do, such as tighten tax collections, eliminate graft in connection with the distribution of our aid, reduce fiscal deficits, carry out agreed-upon land-reform programs, etc.

Our foreign-aid dollars could be far more effectively and productively spent on such a flexible basis, and in addition the President would have the greatly needed authority to divert dollars from one country to another as relative needs changed.

Seventh. The American people should realize that an overwhelming proportion of the Asian countries, including even those like Pakistan with which we have military pacts, want Red China admitted to the United Nations. Leaders throughout Asia say that since the Red government is securely in control of China's 600 million people (one-fourth of the world's population) and since Russia is accepted as a member of the U. N., they can see no valid reason why Red China should not also be seated.

Some argue that if Red China is seated in the U. N., Peiping might become more reasonable. Some argue that if Red China were made a member of the U. N., that would tend to increase the likelihood of China and Russia taking divergent lines on some matters of foreign policy.

Some definitely non-Communist Asian leaders even express the view that the admission of Red China to the U. N. would tend to accelerate the possibility of an eventual split between China and Russia.

Asians who argue for Red China's admission to the U. N. largely agree that it would be proper to continue Nationalist China's (Formosa's) membership in the U. N. as an independent nation. Several Asian leaders told me emphatically, however, that Red China would not publicly accept this as "a solution," but that if the Nationalist Chinese withdrew from Quemoy and Matsu, they doubted that Red China would go to war with the United States in order to try to regain Formosa.

Americans should realize that within a year the pressure for Red China's seating in the U. N. will probably become so overwhelming that only a United States veto, if a veto is legally appropriate in such a proceeding, could prevent it.

Eighth: The American people should realize that historians a century hence, if there are historians then, will probably record that a new chapter in the conflict between the Communist and free worlds began in the year 1956.
